The Russians have attacked Silistria from the opposite shore, but without much success. Attempts are making to cross the river, so as to attack from the land. A Bucharest despatch, of Russian manufacture, stated that the fortress was on the point of surrendering; but after what took place at Kalafat this is not probable.

The latest advices from Varna, of the 16th, are extremely interesting. Generals Brown and Bosquet are already at that important place, where the following troops are expected to arrive by the 4th of May:—the 33rd, 42nd, 49th, and 97th regiments; and the whole of General Bosquet's division, consisting of the 6th and 50th regiments of the line, the 7th light and the 3rd Zouave regiments, two rifle battalions, three field and two mountain batteries. It is now said that the French and English Governments have relinquished the idea of placing a very large force at Gallipoli. It is probable that some 15,000 French and 5000 English may be posted there; but it is understood that the Allies will speedily make a diversion in favour of the Turks by a vigorous attack on the left wing of the Russians.

It was confidently expected at Constantinople that, within a few days, some 25,000 Anglo-French troops would be at Varna; and this unexpected "going ahead" is attributed principally to the strong and repeated representations of General Baraguay d'Hilliers.

EMBARKATION OF MARSHAL ST. ARNAUD.

The departure of Marshal St. Arnaud from Marseilles took place on Saturday last. The Marshal, dressed in the full uniform of his rank, left his hotel at half-past one o'clock, in an open carriage, accompanied by the Prefect and two Aides-de-Camp. Madame de St. Arnaud left half an hour sooner. The Marshal's carriage was preceded by a detachment of gendarmes, and followed by General Rostolan (Commander of the Military Division), General Faucheux (Commander of the Garrison), and a brilliant staff. The streets were lined with troops from the hotel to the pier of the new port, at which the steam corvette the *Berthollet* was lying, ready to receive the Marshal. When he arrived on board, the yards of the corvette were manned, and the crew received him with three cheers; at the same time a salute was fired from the fort. The Marshal, who looked in better health than he has been for some time, took his station on the quarter deck, having Madame de St. Arnaud at his side, and received the final compliments of the Generals and the civic authorities. Orders were then given to remove the stage which had been erected on the pier to facilitate the embarkation of the passengers, and the *Berthollet* moved slowly away. It was past three o'clock before the corvette reached the roads. The Marshal continued to salute his friends as long as he remained within sight, while a military band, stationed on the pier, played several favourite airs. The pier and rising ground were covered with well-dressed persons, and altogether the movement resembled a scene at the Grand Opera. One ship only in the dock of the Joliette was dressed in her colours, and to the credit of the English nation be it said, was the *Doncaster*, of Stockton. The wind, which had been blowing furiously in the morning, abated considerably at twelve o'clock, and the *Berthollet* left with a moderate breeze from the north-west. Thirty of the Marshal's horses were embarked on the corvette during the morning, and were accommodated on the decks with wooden stalls covered with canvas. The steam corvette *Chapteal* had been fitted up for the Marshal's reception, but it was discovered that her boilers had been injured on her passage from Toulon. The *Berthollet* is a paddle-wheel steamer, of by no means a handsome model, but she has the reputation of being a fast and safe boat. The steamer *Zouave*, having General Ingueel on board, together with a detachment of Spahis, sailed for Constantinople two hours before the *Berthollet*.

DEFEAT OF THE GREEK INSURGENTS.

Peta, the principal centre of the Greek insurrection, was taken on the 26th ult. by the Ottoman troops commanded by Osman Pacha, after a combat of fifty minutes. The insurgents, who were 3000 in number, under the command of Tzavellas and Karaiskakis, left 150 dead on the field of battle; the number of the wounded is not known. The loss of the Turks was five killed and twelve wounded. The secretary of Tzavellas was amongst the slain. Among the prisoners taken by the Turks were found four or five officers belonging to the Hellenic army who had not resigned, and who were in all probability still receiving pay. The officers have, it seems, been sent to Constantinople, "as a living proof of the complicity of the Greek Government in the insurrection against the Ottoman Porte." Among the dead bodies left by the insurgents on the field were recognised those of several Greek soldiers. Documents were also found, directly compromising the Greek Government.

The reply of King Otho to the ultimatum presented by the English and French Ambassadors, is not known, but he is said to have stated in private, that he would rather lose his crown than act in opposition to the wishes of his people. This, of course, is what Queen Amalia has instructed him to say, as he has no will of his own. She makes no secret of her opinion, that there will be no peace in the East, until she and her husband are seated on the Byzantine throne.

INSURRECTION IN MONTENEGRO.

The efforts of Russia to excite an insurrection in the small but dangerous territory of Montenegro have been successful at last. Hostilities are said to have commenced on the 19th, near Slivo, on the road to Nicksich, 200 armed Montenegrins, under the command of the Voivode, George Petrovitch, attacked a Turkish convoy, with provisions and ammunition, which was on its way from Nicksich to Grahovo. A Turkish detachment came to the rescue, and the Montenegrins were repulsed. A proclamation from the revolutionary Czar has been read in the churches of Montenegro, appealing to the religious feelings of the population, and promising not to sign any treaty of peace until after having obtained for them Herzegowina, the plains of Bosnia, and a part of those of Albania. Forty Russian veterans have lately been employed in drilling the Montenegrins.

The news of the outbreak has caused a great sensation at Vienna. The occupation of Albania and Herzegowina by the Austrian troops has been decided upon. Austrian and English men of war will co-operate in the Adriatic.

THE CZAR AT HOME.—Recent letters from St. Petersburg state that within the last half-year the personal appearance of the Emperor Nicholas has undergone a considerable change. He has grown visibly older, and walks less erect; but his habits are unchanged. He rises very early, and at a quarter past six takes a walk through the Palace and the barracks. On his return he gives private audiences, and then works for some hours in his cabinet. Almost daily he may be seen, according to a habit of long standing, driving in his droschky and pair to visit his daughter Maria, the widow of the Duke of Leuchtenberg.

POWDER EXPLOSION AT CRONSTADT.—Intelligence from St. Petersburg, which has been received in Berlin, states that a laboratory on the island of Cronstadt, occupied in the manufacture of cartridges, blew up and deprived sixty human beings of their lives. The building is described as not having been within the rayon of the fortress, which has not sustained any injury; but in the town, from which the laboratory was a league distant, a great number of broken windows attest the violence of the explosion.

STEAMERS BETWEEN BELGIUM AND BRAZIL.—The Belgian Minister of Foreign Affairs has announced that, for the advantage of Belgian commerce, he had signed an agreement for establishing a line of steamers between Belgium and Brazil, and that the Chamber would be called on to sanction the expense of 35,000f. which it would occasion.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE INCOME-TAX BILL.

Earl GRANVILLE made a statement of the nature and provisions of the measure, in the course of which he briefly vindicated the financial policy of the Government upon which it was founded.

Lord BROUGHAM said he retained all his former objections to the Income-tax. But, owing to the war in which we were engaged, the expenses of which must be paid, the Income-tax was not only necessary, but it was necessary to double it, and on this ground alone he assented to it.

The Earl of MALMESBURY said the late Government had been turned out upon their financial policy; and, therefore, it was the more incumbent upon the present Government to show that their financial policy entitled them to the confidence of the country. Glancing at Mr. Gladstone's several propositions, he contended that all his expectations had proved illusory. He should not oppose the motion, but he left the House to decide whether the results of Mr. Gladstone's policy had arisen from ignorance or incapacity.

Lord MONTEAGLE contended at great length that our financial position at the present moment was anomalous if not dangerous. But key-stone of the system of the Government was, as explained by the Chancellor of the Exchequer, that the supplies of the year should be raised within the year. But on the 21st April, when Parliament was not sitting, an official notice appeared, stating that £6,000,000 was required, and would be raised in the very manner which all the previous declarations of the Chancellor of the Exchequer had repudiated. He expressed considerable doubts as to the expediency of this proposal; and he cautioned the Government against unnecessarily meddling with public credit, and against superintending with the finances of the country.

The Duke of ARGYLL contended that when the financial measures of the Government were prepared, they had not, from the assurances given by the Emperor of Russia, any reason to anticipate a state of war. Alluding to Lord Montegle's observations, he contended that they exaggerated the actual state of things; that he had carefully left out of consideration the existence of a state of war and the deficiency of the harvest last year, circumstances which were enough to disturb the calculations of any Minister; but he submitted that, with an increasing revenue and with a considerable balance of income over ordinary expenditure—both which the noble Lord had admitted—there was no reason for despondency.

Earl GREY had no confidence in the financial foresight of the Government.

Earl GRANVILLE replied in considerable detail to the objections urged against the financial policy of the Government, which he vindicated in all its main points. The bill then passed through committee.

HOUSE OF COMMONS.—MONDAY.

OXFORD UNIVERSITY BILL.

The House went into committee on the Oxford University Bill.

On clause 1, which appoints the commissioners, Mr. HORSMAN moved to postpone the names of the commissioners until all the clauses of the bill had been gone through. He objected to the names at present inserted, on the ground that the persons selected had other important duties to discharge; and, therefore, that the execution of the trusts of the bill would be left to the secretary.

Lord J. RUSSELL opposed the amendment, and urged that the individuals designated were persons in whom full confidence was placed.

Sir J. PAKINGTON supported the amendment.

The CHANCELLOR of the EXCHEQUER opposed it, contending that the names of the commissioners were a guarantee for the due exercise of the powers to be bestowed.

Mr. DISRAELI protested against the bill being judged by the character of the commissioners, or except upon its own merits. The logical course was to define the powers to be given to them, and then to decide who should exercise them.

The committee divided, and the numbers were—For the clause, 169; for Mr. Horsman's amendment, 141: majority for Government, 28.

The clause was agreed to, as was clause 2, and, after some discussion, clauses 3 and 4.

On clause 5, which substitutes the Hebdomadal Council for the Hebdomadal Board,

Mr. WALPOLE explained the grounds of amendment which he proposed to the sixth clause, which provides for the composition of the council. His amendments went to increase the number of heads of colleges or halls, who were to be part of the council, from six to seven, and to do the same as regarded the professors, and to provide that, instead of such heads being elected by the congregations, they should be selected from among themselves by the heads of colleges or halls, and to make similar provision in regard to the selection by the professors from among themselves.

The CHANCELLOR of the EXCHEQUER removed from clause 5 some words connecting it with the provisions for the composition of the council; and, after discussion and a protest from Mr. NEWDEGATE, the clause was agreed to

On clause 6, Mr. Walpole's amendments being moved, the CHANCELLOR of the EXCHEQUER entered into argument to show their inexpediency, urging that the word *clique* seemed expressly invented to describe the limited constituencies they would create, and that the whole bill was based on trust and confidence in the men for whom legislation was being attempted.

After a long discussion, the committee divided on the amendment relating to the election of the heads, and the numbers were—For the amendment, 162; for the original clause, 149: majority against Government, 13.

Mr. WALPOLE moved that portion of his amendment which referred to the professors, but it also was negatived by a similar majority, and the clause was agreed to.

It being midnight, progress was reported, and the House resumed.

The Railway Traffic Bill was committed *pro formâ*, in order to reprint it, that important alterations might be introduced.

The Witnesses Bill was read a second time.

THE MILITIA LAWS AMENDMENT BILL.

Lord PALMERSTON moved for leave to bring in a bill for the amendment of the laws relative to the militia of the United Kingdom. Under the 42nd George III., the Crown could embody the militia only in case of invasion or of peril thereof; but, though there was no danger of invasion, still, in the present state of things, with a large portion of the army abroad, it was important that Government should be able to avail itself of the militia for home service. The bill was for enabling the Crown to call out either the whole or part of the militia for a continuous period when the country was in a state of war. If a regiment were to be called out for less than fifty-six days, the rest of the time might be added, when necessary, without fresh notices being given.

Sir J. Y. BULLER said the bill would be met with cheerful assent, but regretted that no better provision was to be made for the wives and children of militia men.

Mr. GROGAN wished to know what was to be done with the militia in Ireland?

Lord PALMERSTON was preparing a bill for the consolidation of the militia law, and in that bill various other necessary provisions would be found. It would be introduced this session. He had purposely confined this bill to one specific object. It was not the intention of Government to organise and enrol the Irish militia this year.

Colonel DUNNE complained that a difference would be made between the kingdoms.

Sir J. YOUNG reminded Colonel Dunne that a very large force, under the name of the constabulary, already existed in Ireland.

Leave was given to bring in the bill.

HOUSE OF LORDS.—TUESDAY.

INCOME-TAX BILL.

Earl GRANVILLE moved the third reading of this bill.

The Marquis of CLANRICARDE said, her Majesty's Government appeared to make up their minds upon their financial policy, not from year to year, nor even from month to month, but almost from week to week; and he thought their Lordships ought to have some notification as to what would be the last of their financial proposals for the present session. He thought that their Lordships ought to receive some explanation from her Majesty's Government as to whether they intended to have recourse again to loans, or whether the direct taxation of the country was to be entirely relied upon for defraying the war expenditure; or whether the scheme of the Government was no longer to be adhered to, and the whole question of direct and indirect taxation was to be left entirely open as before. To suppose that they were to go to war with an empire like Russia, with no other provision for the contest but an extra half-year's Income-tax, was perfectly ridiculous and puerile.

Earl GRANVILLE said, it was clear that neither he nor any other member of the Government in that House could consistently enter at present into the future financial measures of the Government in reference to the conduct of the war, when it had been announced that the Chancellor of the Exchequer would, in the other House, at the beginning of next week, make a financial statement, in which full explanations of the Government's intentions would be given to the public.

The Earl of MALMESBURY said, with respect to the extraordinary confidence that had been entertained by her Majesty's Government in the maintenance of peace, he must remind the House of the dates to which he had formerly referred. The Budget was presented to the House of Commons on the 18th of April. On the 15th of that month, Colonel Rose, our Chargé d'Affaires at Constantinople, informed the Secretary for Foreign Affairs that all the information he could collect showed that the Emperor of Russia was intent upon hostile acts. He (Lord Malmesbury) had been told by the noble Duke (the Duke of Argyll) that, on the same day that this despatch was received, by a strange coincidence, Baron Brunnow went down to the Foreign Office, and made the most solemn declaration that all the reports which Lord Clarendon had heard were false. That such was the case did not appear from the Blue-book; but at all events this was no excuse at all for her Majesty's Government. They ought not to have placed confidence in the Russian Minister rather than in our own diplomatic agent at Constantinople. If our own diplomatic agents were not to be believed, there was little use of maintaining them abroad.

The Duke of ARGYLL must remind their Lordships that this discussion was entirely irrelevant to the question at issue (Hear, hear). The noble Earl must be aware that the Budget of April, 1853, was drawn up under circumstances that could not have any reference to the complications in the East. The noble Earl must be aware that the whole structure of a Budget must depend upon the financial position of the country at the time, and the Chancellor of the Exchequer had to meet the difficulties in which he was placed by what Mr. Gladstone considered, and what he (the Duke of Argyll) considered the most dangerous proposal of the late Government, to reconstruct the Income-tax. The whole key of the Budget was with reference to that proposal. He utterly repudiated the insinuation of the noble Marquis (the Marquis of Clanricarde), on the part both of his right honourable friend (the Chancellor of the Exchequer), or any other member of her Majesty's Government. It was perfectly true that the Government were determined that, as far as they were concerned, there should be no war, if, consistently with the honour and the interests of England, it could have been prevented. But it was not true that any one member of the Government wished war to be avoided by any measure that would sacrifice that honour or those interests (Hear, hear).

The Marquis of SALISBURY said that the Chancellor of the Exchequer must, unless he were the blindest man in England, have been aware at the time he introduced his Budget that war was impending.

The Duke of ARGYLL said that, so far from the secret correspondence leading the Government to expect war, if the Emperor of Russia had adhered to the principles of that correspondence, there would never have been a war. The particular dispute concerning which that correspondence took place was actually settled by negotiations.

Lord BROUGHAM said, the principal objection to the renewal of the tax ten years ago, and again four years ago, was that it was not required by necessities entailed upon us by war. He hoped that pause would be taken, so to amend our system of finance, that this tax should not survive the war (Hear). The bill was then read a third time and passed.

BUSINESS OF THE HOUSE

Lord REDESDALE moved a resolution to the effect that the House should not read any bill a second time after Tuesday the 25th of July, except bills of aid or supply, or bills which the House should have declared before the second reading to be of such urgency or importance that it was necessary they should be immediately proceeded with.

The Earl of ABERDEEN said he had no objection to offer to the resolution, which might, he believed, be adopted with safety, and even with advantage, for the present session at least.

After a short conversation the resolution was agreed to.

HOUSE OF COMMONS.—TUESDAY.

At four o'clock there were only thirty-six members present, and the House accordingly stood adjourned.

HOUSE OF COMMONS.—WEDNESDAY.

The Mortmain Bill was read a second time.

The County Court Extension Act Amendment Bill went through committee.

HOUSE OF LORDS.—THURSDAY.

The Nuisances Removal and Diseases Prevention Act further Amendment Bill was, upon the motion of the Earl of SHAFTESBURY, read a second time.

On the motion of the Bishop of LONDON, the Benefices Augmentation Bill passed through committee.

The Ministers' Money (Ireland) Bill was read a third time and passed.

HOUSE OF COMMONS.—THURSDAY.

THE NEW TICKET OF LEAVE SYSTEM.

Mr. FITZROY, in reply to questions put by Mr. F. Scully and Sir J. Pakington, stated that the police received no special instructions with regard to the treatment of convicts liberated with licenses; and that each convict had a right to choose the place to which he was to be sent after his release. The hon. gentleman also expressed his belief that the convict George Brown, whose case had of late excited so much attention, was a very unworthy object of the public sympathy.

THE "TIMES" CORRESPONDENT IN TURKEY.

In reply to Lord Lovaine, Mr. B. OSBORNE stated that the correspondent of the *Times* newspaper had not gone out with the troops from England to Malta, and the Board of Admiralty was not at present informed under what circumstances he had obtained a passage from the last-mentioned place to Gallipoli.

THE TRANSPORT OF TROOPS.

In reply to Sir J. Walsh, Sir J. GRAHAM said that 2200 horses had already been despatched to Turkey for the use of the army in the East, and that their conveyance had, as far as it was yet known, been most success-fully accomplished. The right hon. Baronet added that the *Valetta* steamer was at present being fitted up for the transport of 800 more horses to the same quarter.

In answer to Mr. Adderley, Lord PALMERSTON said that it was his intention in the present session to introduce a measure for the establishment of reformatory schools by voluntary contributions.

The Railway and Canal Traffic Regulation Bill passed through committee.

The Militia Bill was read a second time.

OXFORD UNIVERSITY BILL.

The House went into committee on the Oxford University Bill.

Sir J. PAKINGTON proposed an amendment at the end of clause 6, to the effect that the six members of Convocation who were to form a portion of the Hebdomadal Council, should be elected by the Convocation, instead of being elected by the Congregation, as proposed in the bill. That amendment would only carry out the principle of "sectional election," which the committee had adopted in other parts of the clause, while it would also be attended with the advantage of extending the constituency, by which those six members of the Hebdomadal Council were to be elected.

Lord J. RUSSELL opposed the amendment. The election of those members ought, he thought, to be entrusted to persons who were practically conversant with the business of the University.

After some discussion the amendment was negatived by a majority of 192 to 176. The clause was then agreed to.

The remainder of the night was occupied with a discussion upon the remaining clauses of the bill.

HOUSE OF LORDS.—FRIDAY.

BOMBARDMENT OF ODESSA.

The Marquis of CLANRICARDE said, it was commonly reported through the town this day, that a telegraphic despatch had been received by the Admiralty from Belgrade, signed by her Majesty's Consul at Varna, to the effect that her Majesty's forces had achieved effective operations at Odessa. He asked Lord Clarendon whether he could confirm such statements, and whether he could favour the House with any particulars respecting those operations?

The Earl of CLARENDON said, he had great satisfaction in being able to answer the question in the affirmative (Hear, hear). The news to which the Marquis referred arrived this day at the Admiralty by telegraphic despatch. He thought that the best way he could communicate the information was to read the despatch (Hear, hear). Our Minister writes from Belgrade a despatch, dated May 4, seven o'clock afternoon. "Admiral Dundas announces through her Majesty's Consul at Varna, that a division of steam-boats of the combined squadrons, on the 27th April, had destroyed the Imperial mole and the Russian ships at Odessa. The mole quarantine, the foreign ships, and the city itself, were not injured—great care having been taken to protect private and neutral property. The Pacha of Belgrade stated yesterday that the great powder magazine had been blown up, and the land batteries were entirely destroyed. The loss sustained by the combined fleets did not exceed eight men killed and eighteen wounded." We are further informed that the fleets, immediately after the attack at Odessa, sailed towards Sebastopol (Hear, hear).

THE DUKE OF CAMBRIDGE.

Lord REDESDALE drew the attention of the Government to the reports respecting the progress of the Duke of Cambridge, and took occasion to vindicate that illustrious Duke from such insinuations.

The Duke of NEWCASTLE said, he felt that their Lordships ought to treat such aspersions with contempt. The Duke of Cambridge, in proceeding from this country to France, and from France to Vienna, had acted entirely under the instructions of the Government. Throughout his journey the illustrious Duke had not only acted with the greatest fidelity to his instructions, but also with the greatest ability and success (Hear, hear). The Government had every reason to be satisfied with the conduct of the Duke of Cambridge in going first to Paris and then to Vienna. With reference to the imputations of sickness on the part of his Royal Highness, he could assure their Lordships that the illustrious Duke was most anxious to be employed in the public service, and subsequently to his appointment had exhibited the greatest anxiety from day to day to go to his post. The Duke of Cambridge lost no time in proceeding from this country, and when he had executed his duties at Vienna he proceeded without a moment's delay to Trieste, and he (the Duke of Newcastle) had no doubt he had arrived, before this, at Constantinople.

The Earl of HARDWICK said he hoped that the House and the public would place full confidence in the high character and ability of our commanding officers, and that such officers would not be urged on against their convictions by such unseemly attacks of the press (Hear, hear).

OPERATIONS IN THE BLACK SEA.

The Marquis of CLANRICARDE complained of the vacillating conduct of the Government in not taking more vigorous measures to prevent the Russian ships conveying from the forts on the Eastern coast of the Black Sea bodies of troops to the garrison at Sebastopol, particularly after our declaration to the Governor at Sebastopol that, in the event of our fleet encountering Russian vessels of war afloat in the Black Sea, our Admirals had instructions to compel them to retire to the nearest port.

The Earl of CLARENDON defended the conduct of the Government, as well as that of the Commanders of the Black Sea fleet; and contended that before the declaration of war, we would not have been justified in adopting stronger measures than those taken by that portion of the Allied fleet that had witnessed the operations of the Russian ships upon the occasion referred to

After some further discussion, in which the Earl of Hardwick, the Duke of Newcastle, the Earl of Malmesbury, and the Duke of Argyll took part, the subject dropped.

HOUSE OF COMMONS.—FRIDAY.

On the motion of Mr. HATTER a writ was issued for Devonport, in the room of the Right Hon. H. Tufnell, who has accepted the office of Steward of the Chiltern Hundreds.

A new writ was also issued for Hastings, in the room of Mr. Brisco, who has also accepted the office of Steward of the Chiltern Hundreds.

The CHANCELLOR of the EXCHEQUER gave notice that on Monday next, in Committee of Ways and Means, he would bring forward certain resolutions with respect to the exigencies of the public service

THE BOMBARDMENT OF ODESSA.

Sir J. GRAHAM, in reply to a question from Mr. French, stated that he had heard, by a telegraphic message from the British Consul at Varna, that, on the 22nd ult., the combined fleet destroyed all the land fortifications at Odessa, together with the outward mole, and the Russian war vessels in it, with a trivial loss of killed and wounded.

Lord D. STUART asked Lord J. Russell whether, whilst this country is at war with Russia, it is the intention of Government to furnish the Czar with the means of carrying on the war against this country by issuing any sums from the British Treasury towards the principal and for the interest of the debt called the Russo-Dutch Loan, contracted to be paid in consideration of the Russian Government adhering to the general arrangements of the Treaty of Vienna—one of such general arrangements being that the navigation of European rivers should be free?

Lord J. RUSSELL replied that England would adhere to her engagements.

The SECRETARY AT WAR, in reply to a question from Mr. Bankes, stated that Government would this session introduce the Militia Amendment Bill.

COMMITTEE OF SUPPLY.

Sir J. GRAHAM said, it was now his duty to propose a considerable addition to the Naval Estimates, in consequence of the war. He should assume that the war was a necessary one, and that it was expedient to conduct it with vigour and energy, so as to bring it to a speedy and honourable conclusion. The first vote proposed to be taken was £461,700 for wages of seamen. He had formerly asked for an addition of 10,000 men; but, since it appeared that war was inevitable, every effort had been made to raise the number sanctioned by Parliament; but he would now ask for 10,000 more. The coastguardmen had in large numbers joined the navy, and were patterns to the other sailors. The right hon. gentleman then went into a detailed statement of the items which made up the vote of the £461,700.

The total sum now to be provided amounts to £4,558,731, and is distributed in the following way, viz., £461,700 for the wages to seamen and marines; £200,000 for provisions, victualling, stores, &c.; £7000 for the additional expenses in domestic establishments rendered necessary by the war; £48,000 for additional outlay in wages to artificers, &c.; £697,331 for naval stores, &c., for the building and repair of ships; £7000 for new works improvements, and repairs in the yards, &c.; £30,000 for medicines and medical stores; £6000 for additional charges of pilotage; and £3,006,700 for the transport of troops and horses.

After considerable discussion the votes were agreed to.

ARMY ESTIMATES.

Mr. S. HERBERT proposed the supplementary vote for the army. The sum total required on this occasion is £300,000, which comprises the charge to be incurred for the pay, clothing, and incidental expenses of a further augmentation of 14,779 men of all ranks. A comparison of the charges for the two years shows an increase of £1,132,470 being the difference between £7,157,486 the amount for the current year, and £6,025,016, which was that of last year; but, as £332 470 was provided in the original estimates of this session, £300,000 is the additional sum now required.

This vote was also agreed to.

ORDNANCE ESTIMATES.

Mr. MONSELL proposed the Ordnance Estimates. The total of the Supplementary Estimates is £1,132,132, including £21,132 for pay, and for additional pay and allowances on foreign service; £30 000 for the purchase of horses; £2,000 for travelling expences, &c.; £30,000 for barrack supplies; £14,621 for great coats; £22,113 for boots, shoes, &c. for troops in the field; £2000 for salaries and allowances to clerks at home stations; £104,190 for wages in the different establishments at Woolwich; £455,875 for stores: £20,000 for special engineer services in connection with the expedition; and £10,000 for the erection of barracks at Aldershott.

The votes were agreed to.

MAJOR DONALD STEWART, Staff-officer of Pensioners, has been appointed Aide-de-camp to Major-General Mansel, K.H., commanding the Cork district, in Ireland, during the absence of Captain Conolly, employed on the staff of the army in Turkey.

EIGHT LIVES LOST BY FIRE.—On Saturday morning, soon after three o'clock, the premises of Nicholas Brossette, a beer-shop keeper and lodging-house proprietor, in Colchester-street, Whitechapel, were totally destroyed by fire. Mr. Brossette, and his wife and three children, were rescued by a fire escape; but eight men, lodgers, perished in the flames. A man named Frost, who jumped out of window, has since died from the injuries he received.

H.M.S. "MAGICIENNE" TOWING RUSSIAN PRIZES FROM FARO SOUND

THE FIRST CAPTURES IN THE BALTIC.

The accompanying Sketch of H.M. steamer *Magicienne* towing Russian prizes from Faro Sound will be interesting to our readers, as a record of the first-fruits of the War. The first captures made by the Baltic cruisers are four vessels. They belong respectively to the *Imperieuse*, *Euryalus*, *Magicienne*, and *Gorgon*; and were sent by those ships to the picturesque anchorage of Faro Sound, which is formed by the Channel leading through the Islands of Gothland and Faro. It is a dependency of Sweden.

The *Magicienne* was sent from the fleet of Sir C. Napier on the 20th of April, whilst cruising in the Gulf of Finland. She had, besides the charge of these prizes, the despatches for the Government; and arrived at Copenhagen on the 23rd, when she discharged the prisoners of war to H.M.S. *Tribune*, which ship was to bring the prizes to England. The *Magicienne* has been ordered to cruize in the neighbourhood of Hornholm for a week, in search of Russian vessels, and then to rejoin the fleet at Revel.

LANDING OF THE RIFLE BRIGADE AT GALLIPOLI.

THE landing of the Rifle Brigade at Gallipoli, of which our Artist has here given a Sketch, took place on the 8th ult. Sir George Brown and staff, and Lady Errol, with her husband (a Captain in the Rifles) arrived in the same vessel, the *Golden Fleece*. The town of Gallipoli forms a crescent, extending round the bay, and its only defence is an old castle. The houses, which are covered with red tiles, give the place the appearance of a large town; but they are to a great extent abandoned and in ruins, and, when examined, are found hardly to deserve the name, when compared with the most humble houses in England or France. They are generally constructed of unbaked clay, and are of the most squalid description. The French have, however, done wonders in the way of improvement, and if the Allied troops act in their cantonments in the manner in which Gen. Canrobert's troops have acted, they will do the Ottoman Empire as much good, by setting it the practical example of the blessings of civilisation, as they can possibly do in fighting its battles against the Russians. The French have been only a few weeks in Gallipoli—a place usually mentioned with horror, even in dirty filthy, unpaved, disgraceful Pera—and they have made it almost a new town. "Gallipoli," said a high Turkish officer in the service of the Sultan to an Englishman the other day, "Gallipoli is a paradise just at present. Only think—they have made broad streets, and paved them; written up the names of all the streets, and numbered all the houses; from 50 to 60 yards they have erected lamp-posts, and burn large lamps all night. They have made a large bazaar—published a tariff of all the prices; and, besides, they have built a quay to land the troops from the vessels.

THE RIFLE BRIGADE LANDING AT GALLIPOLI.

THE ALLIED TROOPS ENCAMPED AT GALLIPOLI.

"THE HIMALAYA" STEAM-SHIP LANDING TROOPS AT SCUTARI.

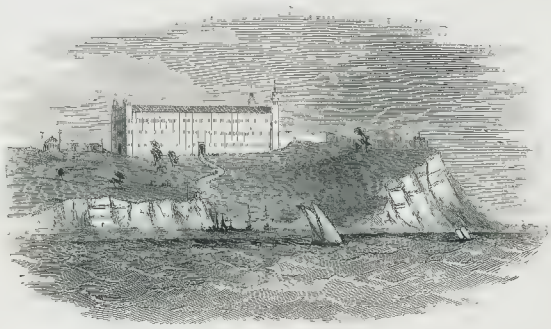
The portion of the camp nearest the town is occupied by the Engineers; the next, which is established at Boquenne (the secret fountain), has been set aside for the Chasseurs de Vincennes; the third, and by far the largest portion of the camp, which is destined for the great body of infantry and the Zouaves, is at a distance of about two leagues from the town, at a place called Boyardi-Conpousson (the Dyer's well). This camp occupies the summit and the declivity of a hill, from which the Sea of Marmora can be seen on the one hand, and the Gulf of Samos on the other. It is a very healthy and picturesque spot. The English camp is situated at a distance of about three quarters of a mile from the large French camp in the neighbourhood of a village called Boulair. This village, which contains about a hundred houses, has been placed at the disposal of the English General and his staff.

THE 88TH CONNAUGHT RANGERS.

We have been favoured by a Correspondent with the accompanying Sketch of the *Niagara*, with the 88th Connaught Rangers on board, passing through the gut of Gibraltar. The Rock, as shown on the left of the picture, looms large and dark against the sky. The town is seen at its base, and the land jutting out on the right of the Rock, and on which there is a light-house, is called Europa Point. The land on the right of the picture is the African coast, and the high rock as there shown is called Ape's-hill. The Rock bears north-east.

LANDING OF TROOPS FROM THE "HIMALAYA."

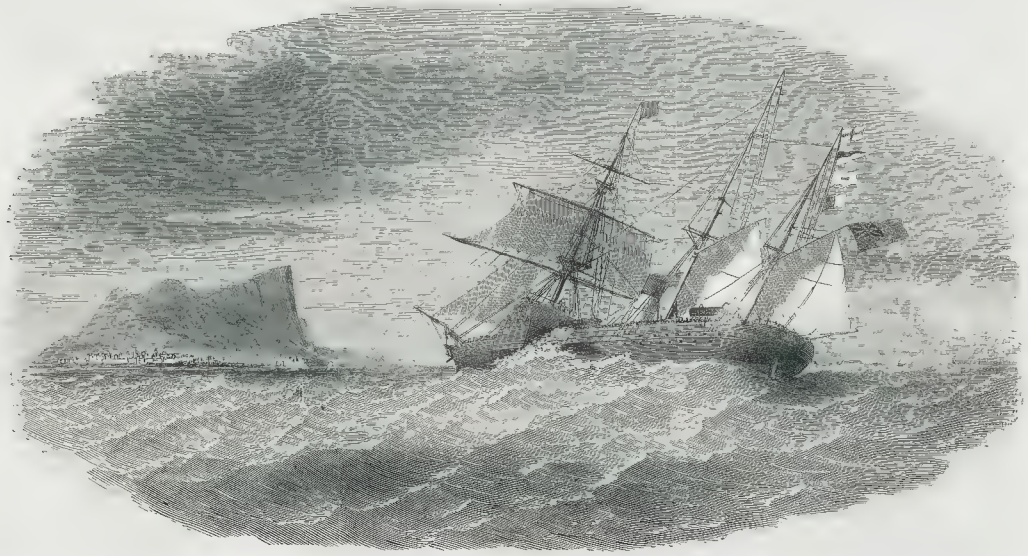
In the forenoon of Good Friday, the *Himalaya* cast anchor at the entrance of the Bosphorus, in front of the great Barrack of Scutari, with the 41st and 33rd Regiments on board. Up to Thursday the weather had been beautiful: indeed, Summer seemed fairly set in. On the night between Thursday and Friday, however, a sudden change for the worse took place, and the morning broke with a downright snow-storm, accompanied by a strong north wind, which lasted for several days, covering Stamboul and its suburbs with a drear and wintry cloak. Not a man could be landed on Good Friday, the sea running very high, and accompanied by a continual north wind. General Adams went on shore, and had an interview with the Ambassador. Next morning the weather did not promise at all fair, and snow was falling fast at eight o'clock; towards nine, however, the wind abated, and the sun broke forth vigorously; but it was not till the afternoon that the disembarkation of the troops was effected; and not even then without some difficulty, and a good many splashes from wilful waves that would leap over the boats, and be the first to wash the British soldiers after their voyage from Malta.



THE BARRACKS, AT SCUTARI-USHLA, OCCUPIED BY THE 33RD AND 41ST REGIMENTS.

The troops having been landed on the Asiatic shore of the Bosphorus, were formed into small detachments as they stepped on shore, and at once marched up the hill to their new home. A regiment of Turkish infantry was drawn out in front of the principal entrance of the barracks, and the Turkish band played a hearty welcome to the British allies as they stepped past. Turkish officers and interpreters were in waiting to receive the troops. The Pasha of Scutari was also in attendance; whilst others had gone on board to welcome the new-comers. The soldiers looked exceedingly well, smart and active, and seemed glad at exchanging the close steamer for the clean and roomy accommodation of the Turkish barrack. The first hundred men had scarcely entered the building before British sentries were already parading up and down at the four gates, having relieved the Turkish guard, with not half the fuss that takes place every morning at St. James's Palace. This metamorphosis seemed much to puzzle the population of Scutari.

Hamals (Turkish porters) and carts with oxen



H.M. STEAM-SHIP "NIAGARA," WITH THE 88TH CONNAUGHT RANGERS ON BOARD, PASSING THROUGH THE GUT OF GIBRALTAR.

were ready waiting at the landing-place, and took up the luggage. Fellows in nondescript mixtures of Turkish, Greek, and Armenian costumes, but all of them with the lower parts of their legs bare, flourished long whips, held small horses by the bridles, and shouted "Cavallo! Buon Cavallo!" with ear-splitting voices. And the small horses were mounted by Turkish officers and soldiers, who put the diminutive animals on their mettle by beating them with their chibouk sticks, while the bare-legged grooms, holding on to the manes or the backs of the horses, managed to keep up even with the smartest pace, and the cavalcade went clattering and shouting through the deserted streets of Scutari, and over the paved highway that leads through the famous graveyard, with its wilderness of tombs and forest of cypress trees, which in its time inspired the muse of Monckton Milnes.

As for the officers of the two regiments, they dined on board the *Himalaya* that evening for the last time, and, in doing so, paid some flattering compliments to the Peninsular and Oriental Steam-boat Company for the liberal style in which the commissariat department of that noble vessel had been managed. Captain Kellock, after returning thanks for the enthusiastic manner in which his health had been drunk, proposed "The British Press, coupling with it the name of Mr. Russell, of the *Times*," for which Mr. Russell returned thanks.

On the 17th the 77th Regiment arrived, and joined the 93rd and 41st in the Selimieh Barracks, Scutari. The 93rd Highlanders, too, arrived on the same afternoon, and went up the Bosphorus to the barracks on the Asiatic shore.

THE BARRACKS OF SCUTARI.

The great Barracks of Scutari, called the Barracks of Selimieh, from having been either commenced or finished by the Sultan Selim, are large enough to accommodate 16,000 men. They form a splendid building, on the elevated shore of, and overlooking, the Golden Horn, and the old Serai on the other side of the water. Two colossal mosques, with their high tapering minarets rising up to the clouds, overlook the vast structure, and enormous cypress trees stand around and shake their dark green branches.

There was a shrill bugle call, and the 41st Regiment formed in sections; the band, stationed at the further end of the square, struck up a lively march, and the Turkish soldiers, inmates of the barracks, and visitors, took up a position on the high terrace which, skirting the front side of the square, overlooks the whole of the ground. There was the usual inspection, the usual manipulations of the muskets, the marching up of the sections and forming into companies; but the most commonplace movement and detail of the routine of duty assumed a peculiar importance on such ground, in such a spot, and before such witnesses. The Turks were vastly delighted. They thronged around the few Englishmen present that could speak their language, and expressed their admiration without reserve and in a very noisy manner. Some of the soldiers asked, with great humility, "Will these red-coated soldiers be allowed to drill us? If so, Inshallah! they will make very good soldiers of us!" And their officers, twiring their black moustaches, every now and then raised their hands, saying, "Inshallah!" which with them is an expression of unbounded delight and admiration. Some went up to the men of the 93rd, who stood looking on while the 41st were on parade. They pulled their sleeves, and endeavoured to engage them in conversation. Finding all their attempts fruitless—for the soldiers only smiled and shrugged their shoulders—they came back and said very sadly, "These are very fine men and formidable soldiers. But they cannot speak. We love them as brethren, because they mean to fight for us. Truly, they are gallant men. May God give them strength!" Some women, too, strange to say, had broken through the customs of their country, and loitered about the entrances to the barrack-yard.

In the afternoon, a great many of the men, having obtained permission to go out, strolled about the graveyard and the streets of Scutari. They entered the Turkish coffee-houses, which certainly are remarkable neither for the splendour nor the cleanliness of their furniture, and stared with all their might at the Turks, who were squatting on the benches, smoking their chibouks, and indulging in dreams of Paradise and all its houris. Some of the men were much edified with what they saw, ner was it likely they should be. They did not like the coffee served up with the "grits" and the "little cups that a man can't put down." It was their opinion that Scutari is a poor place, and the Turks poor fellows—poor, but very good-natured. And, indeed, nothing could exceed the friendliness with which the Turks of Scutari, who are by far more intolerant than the Turks of Stamboul, received and treated the red-coated soldiers. They would come up to them, pull their sleeves and speak to them, nor could they, after repeated failures, be quite convinced of the melancholy fact, that these fine-looking men were utterly deprived of language—at least, as far as Turkish was concerned.

On Sunday the Serasker paid an unexpected visit to the new comers at Selimieh, whose numbers had meanwhile been increased by the arrival of five hundred and forty men of the 49th, and the whole of the 77th Regiment. Immediately after the arrival of his Excellency, the troops—nearly four regiments—were called out and reviewed by General Adams and the Serasker, whose delight and admiration were unbounded. As the 3000 men marched as if one single body were moving, as on grounding their muskets or shouldering them there was but one sound to be heard, the Turkish Minister of War raised his shoulders and flung his head back with astonishment, crying "Inshallah, Inshallah!" and these exclamations were repeated at every fresh evolution. In short, it is not too much to say, that the appearance of the first body of British troops in and near the capital of the Turkish Empire has produced a most favourable impression upon our allies, the lower classes among whom now begin to understand that the few Inglese Franks of Pera, and the tourists, are but a very small portion of the mighty nation which can afford to send so many soldiers to revive the failing fortunes of the Ottoman empire. The first, though to the more intelligent by far a greater exhibition of strength, never made so powerful an impression upon the Turkish populace, who know little of the sea, and have no idea of a sea-fight. But the concentration of an army is what they can understand and respect.

NEW SOCIETY OF PAINTERS IN WATER-COLOURS.

The Twentieth annual Exhibition of this Society was opened to the public on Monday. Although the collection is not of so ambitious a character, in respect of works in the grand style, or of large dimensions, as some of those of previous years, there are yet enough of productions of this class to sustain the early repute of the Society for giving extended range, and increased intensity to a medium which had formerly been considered only applicable to the sketch-book, landscape sketches, and other pictorial efforts of a comparatively humble class. In other respects, also, the display on the walls, which comprises 367 pictures, is interesting, and as a whole agreeable.

Reserving ourselves until next week for more particular criticisms upon this Exhibition, we shall, for the present, simply enumerate some of the principal works in the various classes.

Amongst the Historical and other Figure subjects, the most prominent are "The Burning of the Images at Basle"—an incident of the Reformation—by E. H. Corbould; and a Scene from "King John," as performed before her Majesty, at Windsor, by the same; "The Fatal Picture"—a poetic and art episode in the life of Rubens—by Kearney; "The Battle of Dramclog" (see "Old Mortality"), by Wiegall; "Ficiola—the Prison Flower," by E. E. Wehnhert; "The Soldier's Wife," and "The Siesta," by W. Lee; "The Warrant Delivered by the Lady Abbess of a Nunnery for the Suppression of her Convent;" and a charming single figure of a German Girl Caressing her Bird, by H. Warren, &c.

Amongst the best Landscapes, we notice "The Decline of Day—Italy," by C. Vacher; "On the Coast," by Tennant; "Ben Lomond," by J. H. Mole, and one or two others by this artist; "Bielstein, on the Moselle," by T. L. Rowbotham; "Short Common, near Alton, Hants," by James Fahey; "On the Field," by J. W. Nymmer; "Richmond Castle," and several others, by W. Bennett; "Havre de Port, Jersey," by S. Boys; "At the Mumbles," by W. N. Hardwick; "Bovisand Heights," by S. Cook; "On the East Lynn, North Devon," by D. H. M'Kewan; "The Wheat Field," by T. Lindsay; "Roslyn Chapel," by Thomas Chase; "Padua," by J. H. d'Edgville; "Scene on the Exe," by G. S. Shepherd; "A Quiet Nook," by J. M. Youngman; "At Harfleur," by G. Howse; "View in Venice," by W. Wyld; "Tripoli, Syria," by C. Vacher, &c.

Amongst the miscellaneous productions, we admire the Bird studies of Weir, and the Fruit pieces of Mrs. Margetts, as excellent specimens in this class of art.

COLONEL ROSE.—The statement copied into our last Saturday's publication, that Colonel Rose had gone to Candia, to superintend the establishment of military hospitals, was not correct. We are authorised to add that Brigadier-General Rose—that being the rank he now holds—is on his way to Gallipoli, to assume his duties as her Majesty's Commissioner to the Head-quarters of the French Army.

CALENDAR FOR THE WEEK.

SUNDAY, May 7.—3rd Sunday after Easter.
MONDAY, 8.—Half Quarter Day.
TUESDAY, 9.—Corporation and Test Acts repealed, 1828.
WEDNESDAY, 10.—Septennial Parliaments declared, 1716.
THURSDAY, 11.—Easter Term ends. Earl of Chatham died, 1778.
FRIDAY, 12.—Lord Strafford beheaded, 1641.
SATURDAY, 13.—Old May Day. Henry IV. of France assassinated, 1610.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING MAY 13.

Sunday.		Monday.		Tuesday.		Wednesday.		Thursday.		Friday.		Saturday.	
h	m	h	m	h	m	h	m	h	m	h	m	h	m
9	30	10	00	10	45	11	20	11	55	Title		0	10
0	35	1	0	1	30	2	0	2	30	3	0	3	35

TO CORRESPONDENTS.

AMICUS is thanked, although we cannot avail ourselves of his suggestions.
WESTMINSTER should apply respecting lessons in Photography, at the PANOPTICON, Leicester-square.
A LOVER OF VIRTUE should forward his complaint to the railway authorities: we have not space for his letter.
G. T. CENTER.—The gross annual amount of duty paid on tobacco is about £4,550,000; and, at the rate of 3s. per lb. duty, that gives an average consumption of nearly 31,850,000 lb., say 21,000,000 lb. At the price of 4d. per lb. in bond the cost of this quantity will be £310,000. For the expense of manufacturing, retailing, &c., including the additional quantity smuggled, we may double this as the extreme cost to the consumer, which will make £1,020,000. If we add this sum to the duty we shall have a total of £5,870,000, as about the sum expended in the United Kingdom on tobacco.
J. B. PEYTON, Duke's Dock, Liverpool.—These are not omissions in our Engravings. When the vessels of the fleet are not under steam, the funnels are lowered in a telescopic manner to a level with the bulwarks of the ship, and can scarcely be noticed.
H. J. R. B. S.—The present Earl of Derby was summoned to the House of Peers in his father's Barony, as Baron Stanley of Bickerstaffe, in September, 1844. Since that period he has been a Member of the Upper House.
NUMMUS.—Your coin is a groat of Robert II., 1371, of no value.
SCOTUS, Liverpool, is thanked. [INCOGNITA.—Declined.

THE CENSUS OF 1851.—Next week we shall publish, gratuitously, Two Supplementary Pages, supplying the Omissions in our edition of the Census; together with additional details of the Population.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MAY 6, 1854.

HOSTILITIES have at length commenced, and, we are sorry to add, with a bitterness of feeling which augurs ill for their speedy termination. But in this instance, as in every other, the Emperor of Russia is to blame. In defiance of the chivalry and courtesy of war between civilised nations—in defiance, also, of usage and humanity, the Russians fired upon a flag of truce hoisted by a British vessel sent to Odessa to carry away the English and French Consuls. The effect of such an outrage might have been anticipated by any one who knew the spirit which generally animates British sailors. An Englishman does not go to war like a savage. He loves "fair play," exhibits it in his own person and actions, and respects the enemy who imitates his example. But to fire upon a flag of truce is to forfeit the consideration which a truly brave man feels for his foe. The same sentiment of indignation pervaded both fleets when the cowardly act was made known; and it seems to have been immediately decided by Admirals Dundas and Hamelin to punish it in the most summary manner. To have attacked Sebastopol, unless aided by a military movement in the rear, would have been premature, and, perhaps, unavailing. Odessa, the chief commercial city of the Russian Empire, and the emporium whence the Czar draws a large portion of the supplies necessary for the subsistence of his army in the Danubian Provinces, was therefore chosen as the point of attack. On the 24th of April the combined fleets appeared before that city, and bombarded it for several hours, inflicting immense damage. For the first time since it was a nation, Russia has felt the weight of the arm of England. If the war produced no greater calamity, the Czar would not remain unpunished for his unprovoked aggression. Unfortunately for him, and for his nation, the bombardment of Odessa is but the first of a series of heavy blows. British and French troops are daily landed at Gallipoli and Constantinople; their commanders have ere this arrived; and we may expect almost hourly to hear accounts of their readiness to support the operations of the fleet on the sea-coast of the Dobrudje, in the Danube itself, or in the Crimea. The day of inaction has passed, and that of sharp and decisive warfare has arrived.

The Czar—as if at last awaking to the full consciousness of the desperate position into which his ungovernable ambition has plunged him—has appealed to the religious fanaticism of his subjects, apparently with the hope of deriving from bigotry and frenzy the support which he cannot find in the justice of his cause. In a proclamation, dated the 23rd of April, he wickedly and falsely represents the war against him as a war against "the orthodox faith." He declares that "Russia will fight for the Christian faith, in defence of her co-religionists, oppressed by their merciless enemies;" and that the real object of England and France is, not only to fight against orthodox Christianity, "but to weaken Russia, and deprive her of her powerful position in Europe." It will be seen that much falsehood is mingled with a slight modicum of truth in this nefarious proclamation. The Czar knows well that the religious question has nothing to do with the war which the Allies have commenced—that it is himself alone who perverts it to that end, and cloaks a guilty ambition under the guise of zeal for the Greek Church, which he, a Greek schismatic and heretic, does not feel, and which the Greek Christians in Turkey would repudiate, if he did. It is, however, true that the desire and design of the Allies, is to weaken Russia, and to deprive her of her position in Europe. But this design they never would have formed, and never could have hoped to accomplish, unless Russia, for political, not for religious purposes, had made herself the common enemy of the civilised world. Condemned and abandoned by his nearest friends and closest allies—forsaken and opposed by Austria, and informed by Prussia that his policy is fraught with peril to himself, and to all who are foolhardy enough to aid and abet him, the Czar shows by his despairing appeal to the worst passions of his subjects, in what a direful extremity he finds himself. History scarcely offers a parallel to his crimes. Honest men hope that his punishment will be as mighty as his offence—and that, by speedily overtaking him, the lives of many thousands of innocent people may be saved. It was bad enough to excite war—to preach a Crusade as he has done, has rendered his crime infinitely more atrocious.

THE Preston strike is at an end. We congratulate the working men of the North at this tardy return to reason. The longer the struggle was continued, the greater was the damage which was inflicted upon the interests of those who were parties to it. We might say something of the hard words in which the "Conference of Delegates" have chosen to indulge, in announcing to the working classes that for want of pecuniary support they can no longer continue the contest. But it is scarcely worth while to refute such assertions as "that there was a universal combination of employers who swept the three kingdoms *for the means of destruction to the Preston operatives.*" It is scarcely wise, however, for such men as the delegates, who received weekly wages out of the hard-won earnings of the poor contributors to the Preston fund, to speak of the paid agents of the manufacturers as "hirelings," or to vent their spleen upon the guardians of the poor, for emptying the workhouses of all who were able and willing to earn a fair day's wages for a fair day's work, in default of those who refused wages, and preferred to live idly upon other men's dole. But it is sufficient that the delegates have been defeated by the apathy of their own class, and their soreness in making their last appeal may be forgiven, if it is not to be palliated. Let us hope, however, that the working classes generally will turn the history of this memorable strike to profitable account, and that they will not again be deluded by such men as those whose names appear to the Preston address. The strike has ended, as all other protracted strikes have done, in inflicting a much larger amount of injury upon the workmen than upon the masters. It has not only deprived them of the honest means of support, for the greater part of a twelvemonth, but, by compelling their employers to look elsewhere for hands, has led to a considerable immigration of competitors, who are not likely to be turned adrift to make room for men who have only yielded from dire necessity, and who would have continued the strike if the weekly pence had come in fast enough to enable them to do so. Now that the malcontents have manifested their willingness to return to their labour, they will find a superabundance of hands in the town and neighbourhood. The consequence must be a diminution of the wages they formerly received, unless there should hereafter arise, from unforeseen causes—which, however, they would not be prudent to speculate upon—such an extraordinary demand for the goods which they manufacture, as should lead to the absorption of the whole of the surplus hands. The working classes need enlightenment upon questions of political economy. They suffer severely for their ignorance; but the day will come when they will understand such matters better, and cease to regard capital as a mythological ogre or great dragon, seeking to devour them; or such men as Messrs. Cowell, Grimshaw, and the rest, as their true friends.

THE subscriptions to the Loan of £6,000,000, in three series of Exchequer Bonds, to be redeemed in 1858, 1859, 1860, which we referred to last week, were closed on Tuesday. It did not transpire, however, till Wednesday that the minimum price fixed by the Government was £98 15s.; at which price less than £2,000,000 of the first series of Bonds had been offered for, and none for either of the other series. A further notice, therefore, was published that, till May 8th, the Government would receive offers to complete the first £2,000,000; and it is understood that this sum has now been subscribed for at £98 15s. The reasons generally assigned for the unwillingness to subscribe are the novelty of the stock, people taking that kind of security with which they are familiar; the smallness of the amount, which makes a narrow market, and exposes the holders of the Bonds to part with them at a loss; and the low rate of interest, when corresponding bonds issued by the railways bear an interest of 4½. Whatever may have been the cause, Government has not succeeded, and will be obliged to raise money by some other means. In the meantime, supplemental estimates for the war service have been issued to the amount of £4,552,731; and it is supposed that the additional Budget which the Chancellor of the Exchequer has announced for Monday, will involve additional taxation to the amount of £6,000,000.

CHURCH, UNIVERSITIES, &c.

THE BISHOP OF SALISBURY.—The Confirmation of the Right Rev. Dr. HAMILTON as Bishop of Salisbury took place on Thursday morning, at the metropolitan church of St. Mary-le-Bow. The Consecration will take place at Lambeth Palace, on Sunday week.

NEW CHURCH AT ESHER.—On Thursday the church which has just been erected in the centre of the town of Esher, upon ground given by Mr. Spicer, of Esher-place, was consecrated by the Lord Bishop of Winchester; and the ceremony was very numerously attended. The Hon. Sir Edward Cust attended in the Royal closet as representative of the King of the Belgians.

THE NEW CHURCH AT WEST HARTLEPOOL, engraved in our Journal of April 22, was consecrated on the 20th, by the Lord Bishop of Durham, with considerable demonstration.

PREFERMENTS AND APPOINTMENTS.—*Prebendaries:* The Rev. A. M'Laughlen, to Fennor, Cashel; Rev. H. J. Barnard, to Combe the Fourteenth, in Wells Cathedral. *Honorary Canonry:* The Rev. J. H. Ellison, to Lichfield Cathedral. *Rectories:* The Rev. J. Leatherdale, to Little Plumstead, near Norwich; Rev. J. G. Longueville, to Eccleston, near Chester; Rev. G. W. S. Menteath, to Hascombe, Surrey; Rev. G. O. S. Figott, to Kingston Seymour, Somerset; Rev. J. B. H. Thompson, to Weyhill, Hants. *Vicarages:* The Rev. T. Blair, to Milbourne St. Andrew, near Blandford; Rev. A. Cowburn, to Tidenham, Gloucestershire; Hon. and Rev. H. W. V. Stuart, to Balkington, near Nuneaton, Warwickshire; Rev. C. Thoroton, to North Rauseby, Lincolnshire. *Incumbent:* The Rev. S. J. Heathcote, to Wilton, near Taunton. *Perpetual Curacies:* The Rev. R. P. Blakeney, to Christ Church, Claughton-cum-Grange, Cheshire; Rev. W. Stothert, to Forest, Prestbury, Cheshire.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. J. Woodhouse, from the congregation of All Saints' Church, Liverpool; the Rev. W. Hey, from the morning congregation of the Church of St. Olave, York.

CRYSTAL PALACE.—We understand that, in consequence of the great difficulty in procuring iron for the construction of the water-works at the Crystal Palace, they cannot be completed this year.

PRINTERS' PENSION SOCIETY.—The anniversary dinner of this society—for the relief of aged and infirm printers and their widows—was celebrated on Thursday, at the London Tavern; A. H. Layard, Esq., M.P., in the chair—in the absence of Sir Robert Peel, Bart., M.P. About 120 gentlemen sat down to an excellent dinner. The musical arrangements were under the direction of Mr. Young, assisted by Mr. Montem Smith, Mr. Howe, and Mr. J. Shirley Hodson. The amount of subscriptions and donations announced was about £400.

LATEST INTELLIGENCE.

ARRIVAL OF LORD RAGLAN AT MALTA, AND DEPARTURE FOR THE EAST.

On the 25th ult. her Majesty's steam-ship *Caradoc* arrived in Malta harbour, having on board the Commander-in-Chief. As soon as the *Caradoc* arrived, a guard of honour of the 62nd was ordered to the Custom-house to receive Lord Raglan, and one from the 46th at the Palace, with a similar object; but his Lordship declined every kind of honour, nor would he even accept of a salute. His Lordship spent the day in visiting the fortifications, and the various other objects of immediate interest; and, having partaken of the hospitality of his Excellency the Governor, embarked in the evening aboard the *Emu*, en route for the East. The *Caradoc* having received some injury to her machinery was unable to proceed, and remained for repairs. When these were completed, she was to leave for Corfu and Trieste, to receive at the latter port his Royal Highness the Duke of Cambridge, and to proceed direct to Constantinople.

EMBARKATION OF THE 79TH HIGHLANDERS.

The 79th Highlanders, commanded by Lieut.-Col. Elliot (about forty officers and 900 men), embarked on Thursday morning at nine o'clock, from Portsmouth Dockyard, on board her Majesty's steam frigate *Simoom*, for Turkey. The bands of the 42nd and Rifle Brigade played them from their quarters, in Cambridge Barracks, to the dockyard. The *Simoom* went out of Portsmouth harbour in the afternoon at 2.45, amid the cheers of many thousands of persons congregated on either shore; and left at five in the evening for Turkey.

A large number of gun-room officers, who arrived in the *Himalaya* from the fleet under Vice-Admiral Dundas, arrived at Portsmouth on Wednesday evening from Southampton, and were berthed aboard the flag ship *Victory*. On Thursday evening they embarked in the steam-tender *Acorn*, for passage to the Downs, to join ships for the Baltic fleet, where the Commander-in-Chief will dispose of them throughout his force. The *Nile*, 91, and the *Miranda*, 16 guns, left Sheerness on Thursday, for the Baltic.

The *Moniteur* of Thursday publishes the following despatches:—

ATHENS, April 28.—Prince Napoleon, who arrived at Syra on the 25th, left that place an hour afterwards on his way to Constantinople.

M. Jean Scutzo, Secretary of the Greek Legation in Russia, has brought 200,000f. from St. Petersburg. It is expected that 300,000f. will be sent from Bucharest. Subscriptions are opened in Russia.

FRANCE.

An Imperial decree, in the *Moniteur* of yesterday (Friday) morning re-establishes the Imperial Guard. It will form a mixed division, will be under the immediate orders of the Marshal of the Palace, and its service will consist in guarding the person of the Emperor. General St. Jean d'Angely is named Commandant of the Guard. A picked corps of cavalry, to be called the "Hundred Horse Guards," is also established.

In the afternoon of Wednesday the police paid a visit to the house of a Russian, who has been living for years in France, and who has been lately residing at Auteuil, a short distance from Paris. They made a strict search among his papers, which they took off with them to the Prefecture of Police. The papers were again examined, and the discovery is said to have been made of a serious correspondence with St. Petersburg. The police again visited his house on Thursday and arrested the Russian. He is, for the present, detained at the Prefecture.

The *Presse* announces that Giraud, the well-sinker, who was buried by a fall of earth at Ecully, on the 14th ult., was got out on Thursday alive, and in a state which inspires no alarm for his life. There was never before an instance of a man being saved after so long an imprisonment in the bowels of the earth, and under such dreadful circumstances. The same journal gives an interesting account of an experiment with a new incendiary ball, made of glass, and containing some newly-combined inflammatory materials. The ball was thrown into the basin of the Palais Royal, and, being then broken with a stick, gave out flames which lasted nearly one minute.

THE COURT.

On Saturday the Queen, attended by the Hon. Flora Macdonald, Lord Charles Fitzroy, and Lieut.-Colonel F. H. Seymour, visited her Royal Highness the Duchess of Gloucester, at Gloucester House, His Royal Highness Prince Albert, attended by Lieut.-Colonel F. H. Seymour, visited in the morning the Gallery of the Society of Painters in Water Colours, in Pall-mall East; and, in the afternoon, the Prince, attended by the Equerry in Waiting, went to the Royal Institution, in Albemarle-street. In the evening her Majesty and his Royal Highness honoured the performance of the French Plays with their presence.

On Monday the Queen gave a juvenile ball, in celebration of the birthday of Royal Highness Prince Arthur. The invitations numbered about 260, and comprised the families of the Foreign Ministers, of the Ministers of State, and of the Ladies and Gentlemen of the Court. At a quarter to 9 o'clock the Queen and Prince Albert, accompanied by the Prince of Wales, the Princess Royal, the Princess Alice, Prince Alfred, the Princess Helena, the Princess Louise, Prince Arthur, the Duchess of Gloucester and Princess Mary of Cambridge, and attended by the Ladies and Gentlemen of the Royal Household, entered the Throne-room, which was arranged for dancing, and the ball immediately commenced with a quadrille. The Royal Princesses were dresses of white tulle, over white silk, trimmed with apple blossoms and wreaths of the same. The Prince of Wales and Prince Alfred wore the Highland dress. Lords Albert and Ronald Leveson Gower, the sons of the Duke and Duchess of Sutherland, the Marquis of Douglas, son of the Duke and Duchess of Hamilton; the Marquis of Lorn, and the Lords Archibald and Walter Campbell, sons of the Duke and Duchess of Argyll, and other youthful scions of the Scottish aristocracy, wore the Highland costume. Her Majesty's private band officiated for the dancing. Refreshments were served, during the evening, in an anteroom; and at the conclusion of the ball, her Majesty's juvenile visitors were conducted to supper, which was served in the State dining-room.

On Tuesday the Queen and Prince Albert, accompanied by the Princess Royal and the Princess Alice, took a drive in an open landau and four.

On Thursday, the Earl of Elgin took leave, on his returning to Canada. In the evening her Majesty and his Royal Highness Prince Albert honoured the Royal Italian Opera with their presence.

The Hon. Caroline Cavendish and the Hon. Flora Macdonald have succeeded the Hon. Lucy Harry and the Hon. Mary Bulteel as the Maids of Honour in Waiting to her Majesty. Capt. the Hon. Dudley de Ros has relieved Lieut.-Colonel F. H. Seymour in his duties as Equerry in Waiting to Prince Albert.

THE LEVEE.

On Wednesday the Queen held a Levee in St. James's Palace. Her Majesty and Prince Albert arrived soon after two o'clock, attended by the Lads as and Gentlemen in Waiting, and escorted by a detachment of the Life Guards. The Earl of Warwick had an audience of her Majesty, and delivered the badge of the Order of the Thistle worn by his father, the late Earl of Warwick. Lieut.-General Lord Seaton had an audience of the Queen, and received from her Majesty his gold stick of office as Colonel of the 2nd Regiment of Life Guards.

The Queen and Prince Albert entered the Throne-room attended by the Countess of Desart, Lady in Waiting and Bedchamber; the Countess of Charlemont, Lady in Waiting; Earl Spencer, K.G., Lord Steward; the Marquis of Breadalbane, K.T., Lord Chamberlain, &c. Her Majesty wore a robe of gold cloth, trimmed with white blonde and white bugles. The petticoat was of white satin, trimmed with white blonde and white bugles, and bows of white ribbon. The Queen's head-dress was a diadem of diamonds.

The diplomatic circle was first introduced. In the general circle, the following presentations had especial interest:—

Lieutenant-General Lord Seaton, on appointment to the Command of the 2nd Life Guards, by Viscount Hardinge.

Lord Napier, on being appointed Secretary to Her Majesty's Embassy at Constantinople, by the Earl of Clarendon.

The Bishop of Salisbury (elect), by the Earl of Aberdeen.

Mr. Justice Richard Budden Crowder, on his appointment as one of the Judges of the Court of Common Pleas, by the Lord Chancellor. Her Majesty was pleased to confer the honour of Knighthood upon Mr. Crowder.

Vice-Admiral Sir George Seymour, on his return from foreign service, and nomination as K.C.B.

Lieutenant-General Sir George Pollock, on being nominated by her Majesty a Director of the East India Company, by Sir C. Wood.

Mr. Chichester Fortescue, on his appointment as a Lord of the Treasury, by the Earl of Aberdeen.

Mr. Edwin James, on his appointment as one of her Majesty's Counsel, by the Lord Chancellor.

Mr. Barnley Kennedy, late Physician-General and President of the Medical Board, Bombay, on his being elected an Alderman of London, in succession to the late Alderman Thompson, by Sir C. Wood.

Lieutenant George Palmer, on promotion, and upon his return from the expedition for the first navigation of the River Murray, in Australia, by his father, Major Palmer.

Her Majesty and Prince Albert, attended by the Countess of Desart, the Countess of Charlemont, and the Gentlemen in Waiting, returned to Buckingham Palace after the Levee, escorted by a detachment of Life Guards.

The Right Hon. Sidney Herbert gave a dinner to the Cabinet Ministers on Wednesday evening, at his residence, in Belgrave-square.

METROPOLITAN NEWS.

Note.—The sign — denotes below the average and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer has varied during the week from 29.94 inches on April 28, to 29.18 inches on May 1. The mean for the week, at the height of 82 feet above the level of the sea, was 29.450 inches.

The mean daily temperatures have varied during the week from 7.8° below on April 30, to 1.0° above their average value on May 4. The mean daily temperature of the 30th is the lowest mean temperature recorded on that day since the year 1836, when it was 38.4°. During the time they were below their average values, viz., from April 22 to May 3, the average daily defect was 4.6°.

The mean temperature of the week was 47.8°, being 1.4° below the average of the corresponding week during 38 years.

The range of temperature during the week was 32°.

The mean daily range of temperature during the week was 16.2°.

Rain fell during the week to the depth of rather more than half an inch.

The weather during the week with the exception of May 4) has been dull—and the sky almost covered with cloud; the sun only seen occasionally, and the atmosphere humid—rain having fallen, more or less, on every day but the last.

For the month of April the mean reading of the barometer, at the level of the sea, was 30.154 inches. The highest temperature during the month was 70.6° on the 19th, and the lowest was 27.6° on the 26th. The range of temperature during the month, therefore, was 51.1°. The mean of all the highest temperatures by day was 62.6°; and of all the lowest by night was 37.6°. The mean daily range of temperature during the month, therefore was 25°. The mean temperature of the month was 49.6°, being 3.3° above the average of 38 Aprils, and the warmest April since the year 1844, when the mean temperature was 51.7°. The mean temperature of evaporation for the month was 45°. The mean temperature of the dew point was 39.9°. The mean degree of humidity was 71; complete saturation being represented by 100. The fall of rain during the month was 0.7 inch (seven-tenths of an inch).

Lewisham, May 5, 1854. JAMES GLAISHER.

MAY MEETINGS.

CHURCH MISSIONARY SOCIETY.—The annual meeting of this society was held in Exeter-hall, on Tuesday, the Earl of Ch chester in the chair. From the annual report it appeared that the amounts received during the past year had been as follows:—General fund, £130,478 13s. 7d.; fund for disabled missionaries, £2016 11s.; China mission, £803 2s. 1d.; total received in the United Kingdom, £134,298 6s. 8d.; local funds, raised and expended in the missions, £10,617 12s. 8d.; making the gross income for the year, £142,915 18s. 11d., being an increase over that of last year of £23,583 15s. The expenditure, including general, special, and local funds, amounted to £131,783 13s. 11d. being an excess over the income of £7867 15s. The following were the principal statistics of the missions presented in the report: Number of stations, 118; English clergymen, 103; foreign clergymen, 49; Native and Asiatic Indian clergymen, 24; European laymen, 30; European female teachers, 14; Native catechists and teachers of all classes, 1661; attendants on Christian worship in the society's missions throughout the world, estimated at 107,000; number of communicants, 17,124. Of the revolution in China, a hopeful, yet anxious expectation was expressed; it being stated that the insurgents under leaders, men constantly employed in printing portions of Gutzlaff's version of the Scriptures, making his soldiers *coporteurs*, and his officers expounders.

BRITISH AND FOREIGN BIBLE SOCIETY.—The anniversary meeting of this society was held on Wednesday, at Exeter-hall. During the year the society had issued no fewer than 1,567,528 copies of the Holy Scriptures at home and abroad, making the total number since the commencement of the society to be 27,938,631.

COLONIAL CHURCH AND SCHOOL SOCIETY.—The annual meeting of this society was held on Wednesday evening, in the Freemasons' Tavern. The Marquis of Cholmondeley occupied the chair. From the report it appeared that the income of the society during the past year amounted to £19,111 13s., which was an increase of £2000 on that of the preceding year. The report gave a gratifying account of the labours of the society's agents in our colonies.

MEETINGS NEXT WEEK.—The British and Foreign School will meet in their school-room, in the Borough-road, on Monday. In the evening the Ragged School Union will meet at Exeter-hall. In the same place the Church Pastoral Aid Society will assemble on Tuesday; that of the Jews' Society Association, on Wednesday; and the London Missionary Society, on Thursday. The annual meeting of the Destitute Sailors' Asylum will be held in the Museum of the Sailors' Home, Well-street, London Docks, on Thursday.

THE BICENTENARY FESTIVAL OF THE SONS OF THE CLERGY will take place in St. Paul's Cathedral, on Wednesday next. As a charity for the relief of the widows and orphans of clergymen this institution is too meritorious in its purpose to need commendation; but the forthcoming festival promises to be the lovers of sacred music a gratification of the highest order, for it will be solemnised, for the first time, under the dome of St. Paul's. The anthems, &c., will be selected from the works of the most celebrated composers, and the choir will number 250 voices, from the choirs of the metropolitan and provincial cathedrals, the chapels Royal, and the collegiate chapels of Oxford and Cambridge. Mr. Goss, the organist of St. Paul's, has composed an anthem for the occasion. The usual afternoon service will be performed, and will be followed by a sermon from the Archbishop of Canterbury. His Royal Highness Prince Albert has graciously intimated his intention to be present. The Lord Mayor, Aldermen, and Sheriffs will attend in state, and will be accompanied by the mayors of several other cities and towns. A list of 113 stewards, each of whom, we understand, pledges himself to the payment of thirty guineas at least, contains the names of many of her Majesty's Ministers, the Bishops, Judges, noblemen, members of Parliament, &c. We have only to hope that the contributions of the friends of this ancient and national charity may be in proportion to the care which has been taken to ensure the celebration of the interesting event of the Bicentenary Festival with becoming effect.

ROYAL NATIONAL INSTITUTION FOR THE PRESERVATION OF LIFE FROM SHIPWRECK.—On Thursday a general meeting of the committee of this institution was held at the office of the society, in Johnstreet, Adelphi; Mr. Thomas Baring, M.P., chairman, when a reward of £6 6s. was voted to the crew of the life-boat of the institution, stationed at Filey, on the coast of Yorkshire, in commendation of their laudable services in the said boat to the crew of the sloop *Comet*, of Whitby, which was wrecked near that place on the 28th ult. Also a reward of £6 to four persons for their praiseworthy exertions in a small boat to the crew, consisting of nine persons, of the brig *Jane and Sarah*, of Shields, which went to pieces on the Whiting Sand, near Aldborough, on the coast of Suffolk, on the 22nd ult., the poor fellows narrowly escaping with their lives on the occasion. Other rewards were also voted. Life-boats had recently been placed by the institution at Dungeness and Sandown, three of which were newly despatched to different parts of the coast—which, with their carriages, involve a large outlay; and we regretted to observe that the income of the society was very inadequate to meet the same.

LITERARY ASSOCIATION OF THE FRIENDS OF POLAND.—The annual general meeting of this association was held on Wednesday at Sussex Chambers, Duke-street, St. James's; Lord Dudley Stuart in the chair. The attendance was highly influential, including the Marquis of Breadalbane, the Earls of Harrington and Harrowby, Lord Beaumont, Mr. M. Milnes, and a number of members of Parliament and other gentlemen. In the course of the meeting Mr. Milnes said that "A full consideration of the just claims of Poland for the restoration of her independence would form the best security for the maintenance of the balance of power in Europe, and the establishment of a solid and enlasting peace." The resolution was seconded by the Earl of Harrowby, and carried unanimously.

ELECTION OF ALDERMAN FOR QUEENHITHE.—The adjourned Wardmote for the election of Alderman, in the room of the late J. K. Hooper, Esq., took place in the Church of St. Michael, Queenhithe, at eleven o'clock, on Thursday. The election created more than usual excitement, from the position of the candidates, and the severe struggle made by their friends—the numbers being almost evenly balanced. At the close of the poll, at one o'clock, the Lord Mayor announced that the number of votes was—For Mr. W. A. Rose, 97; Mr. C. A. Croll, 35: majority for Mr. Rose, 2. The Lord Mayor then declared Mr. W. Anderson Rose duly elected Alderman for the Ward of Queenhithe. Mr. Alderman Rose then addressed the wardmote, as did also Mr. Croll, the defeated candidate. It was stated that the list contains only the names of sixty-nine persons entitled to vote, and a protest was made against the decision of the Lord Mayor as to the reception of certain voters whose names are not in the list.

TWO HUNDRED LIVES LOST AT SEA.

A collision took place in the Channel, off the Start, on the morning of Friday, the 29th ult., between a Bremen emigrant ship, the *Favourite*, bound to Baltimore, with nearly 200 passengers, and an American vessel, the *Hesper*, bound to Antwerp. At the time of the collision, between one and two o'clock in the morning, a thick rain was falling, and there was a heavy sea and a strong wind from the westward. The shock was so great that the captain of the *Favourite* was thrown out of his bed. He sprang upon deck, and succeeded, along with the mate and four of the crew, in getting on board the vessel which had run into them. At that time the emigrants could be seen rushing on deck in frantic confusion, but the vessels separated immediately after the collision, and the roughness of the sea prevented the *Hesper* from rendering any assistance to them. The *Favourite* had been cut down below the water-line and very soon settled down with all on board, about 200 persons. The *Hesper* lay to till daybreak, in the hope of being able to save some of the unfortunate passengers; but, when morning dawned, not a vestige of the ship could be seen.

BOMBARDMENT OF ODESSA.

FROM the accounts which have been received of the bombardment of Odessa it appears that twenty-six vessels of the combined fleet arrived before Odessa on the 17th ult., and that the bombardment of the city commenced on the following day, and lasted one hour only. On the 22nd (last Saturday week) the Allied fleets destroyed, in a few hours, all the fortifications, the batteries, and the military stores. Two powder-magazines blew up, and twelve vessels of war were sunk. The merchant-vessels were saved. The loss of the Allies was only eight killed and eighteen wounded.

Thirteen Russian vessels laden with munitions were taken.

The fleet left in the direction of Sebastopol.

Another despatch says, the Russian fleet had sailed out of Sebastopol, and advanced against the Allied fleet, but that, on a portion of the British navy showing battle, the Russian squadron prudently retreated to its stronghold.

The shameful outrage committed by the garrison at Odessa on the boat from the *Furious* with a flag of truce, appears to have led to the bombardment of the city, as the following extract from a report addressed to the Minister of Marine by Vice-Admiral Hamelin, Commandant-in-Chief of the French squadron in the Black Sea, dated on board the *Ville de Paris*, at the anchorage of Batschi, April 10, would lead us to infer:—

The English steam-frigate *Furious* went on the 6th of this month to Odessa, to claim the Consul and such of our subjects as might wish to leave the place at the approach of hostilities with Russia. The *Furious* arrived here yesterday; and, in throwing your eye over the report of the Captain of that frigate, your Excellency will see that, notwithstanding the flag of truce under which she had entered the roads of Odessa, the batteries of Odessa—the number of which has of late been very considerably increased—treacherously fired seven cannon-shot on the boat, a few minutes after she had left the quay and the maritime authorities. This is a proceeding without example in the history of the wars of civilised nations. It is necessary to go back to 1829—the period at which the Dey of Algiers did the same to the *Provence* line-of-battle ship (and this was a line-of-battle ship)—in order to find a similar fact; in other words, we must go back to example in a war with barbarians. Admiral Dundas and I are about to concert the severest measures which are called for by such a proceeding.

VIEWS OF ODESSA.

We have engraved upon the next page three Views, which, with the accompanying historical and descriptive details, will enable the reader to form an estimate of the importance of Odessa as a commercial port.

The extension of Russian commerce was an object of deep solicitude to Peter the Great. He duly appreciated its influence on civilisation. Impressed with that conviction, he established the trade of the Baltic, and had made preparations for similar success on the Euxine, but various obstacles opposed his plans; and, in 1711, surrounded by the Turkish army under Baltagi Mehemet, he only saved himself from destruction, by surrendering all his conquests on the Black Sea. With difficulty he retained Taganrog, in the sea of Azof, as the emporium of the commerce of the south of Russia. There is extant a letter from Catharine the Second to Voltaire, dated the 14th March, 1771, in which she states that "after the conquest of Azof, Peter the Great wished to have a port on the sea, of the same name, fixed on Taganrog. He hesitated for some time after its foundation, as to whether he should build the city of St. Petersburg on the Baltic, or raise one at Taganrog. Circumstances finally decided for the former, but no advantage was derived in respect to climate; as at Taganrog there is scarcely any winter, while ours is exceedingly long." It was reserved for Catharine the Second to realise by conquest the commercial views of Peter, on the Black Sea, and for Alexander to consolidate them by a wise Imperiality.

By the treaty of Kainardji, in 1774, and the convention of 1792, agreed upon between Russia and the Sublime Porte, vessels were allowed to navigate the Euxine, and the passage of the Dardanelles was open to them. To profit by this freedom of intercourse, Hunia, in the year 1779, founded the town of Kherson, on the right bank of the Dnieper, at about seventy versts, or forty-eight English miles, from its embouchure, which is six versts broad, when its numerous shoals are covered with water. Catharine II. conferred many privileges on this new port, which attracted numerous strangers and a flourishing commerce, which sprung up with Constantinople and the Archipelago, and soon extended to Marseilles, Leghorn, and Trieste. Experience, however, soon proved that Kherson was not adapted to become a commanding port in the Black Sea; for its conveniences were greatly overbalanced by its disadvantages. It was found that the cataracts of the Dnieper greatly impeded water communication with the interior—all merchandise being necessarily discharged at the point where they commenced, and there then carried some seventy versts by land, and again re-embarked on the Dniepar to be floated down to Kherson. All vessels which drew more than six feet water were obliged to remain at Ghsbokoge, thirty versts below the town. From the month of October, frequently to the end of March, the Dnieper is covered with ice, the breaking up of which is very dangerous to vessels, and commerce is interrupted for fa ly five months in the year. The site of Kherson is also considered insalubrious, which deters foreign merchants from residence. It is interesting to Englishmen to know that without the barrier of Kherson, and near the Church of the Assumption, is a monument built in honour of Howard the philanthropist.

Odessa, the creation of the present Empress Catharine II., has nearly absorbed all the former importance of Kherson. After the conquest of the Crimea, she determined on building three new fortresses on the frontiers of her newly-acquired territory, and fixed on a spot called Hadji Bey, where the Turks had formerly possessed a small fort. Her object, as M. Demidoff remarks, "was to form a line of defensive works from between Ovidiopol, which was to guard the mouths of the Danube, and Tiraspol, destined to command the course of the Dniester." In 1794 Odessa, then a village, was simultaneously founded by a colonel of Odessa rose on the ruins of the old Musulman fort of Hadji Bey since it is that the old Turks still call Odessa Adgeby. Admiral Khoas, a Neapolitan, in the service of Russia, was the first military Governor. This new port was called Odessa, because an ancient tradition had affirmed that, in the immediate neighbourhood of its site, the Greeks had possessed a colony named Odyssea, or Odysseo. During the reign of the madman Paul I. the interests of Odessa were neglected by the Government; but, on the intercession of Prince Gagarin, President of the College of Trade, the works that had been discontinued were resumed, and the present lazaretto was built. But this city is mainly indebted to the Emperor Alexander for its prosperity, who, on ascending the throne, admitted it to a community of laws with the rest of the empire. The Duke of Richelieu, a refugee from France during the dominion of Bonaparte, was appointed Governor, and his name is still mentioned with gratitude and respect. He greatly improved the city—founded a lyceum, constructed a theatre, and, if we mistake not, a museum of antiquities; but, above all, he vastly improved the tone of society, and infused into the higher classes a cosmopolitan spirit eminently favourable to an emporium of commerce. Alexander fully appreciated the advantages that might be derived both from the export and import trade. One of his earliest measures was to exempt Odessa from taxation for twenty-five years, and from the burden of providing quarters for the troops; while one-tenth of the customs was appropriated to the improvement of the harbour. Alexander next

SEAT OF THE WAR.—ODESSA, ON THE BLACK SEA.

THE QUARANTINE HARBOUR, ODESSA.

lowered the customs by one-fourth, while he ordered one-fifth, instead of one-tenth, of that revenue to be devoted to the amelioration of the port. Two annual markets, a tribunal of commerce, and a school for youths destined to a commercial career, were organised. In 1817 it was declared a free port to all Russian produce; and in 1819 this freedom was extended to all foreign merchandise. In 1821 a regular packet service was established with Constantinople. Odessa is the natural outlet for the wool, grain, leather, and tallow of Bessarabia and Podolia; and these forms the principal exports of those countries. Indeed, this city and harbour are of vital importance to the agriculture of the whole of Southern Russia, and the more so since the repeal of the Corn laws in England—infinitely more valuable to the Emperor Nicholas than would be the annexation of Moldavia and Wallachia to his colossal empire. The granaries of Odessa, almost palatial in their structure, are evidence of what the merchants think of the grain trade, while the jealousy and

THE BOULEVARD, ODESSA.

covetousness of the Government point in the same direction, by seeking to destroy the competition of Ibrailа and Galatz, by blocking up the Sulina Canal and the mouths of the Danube.

The population of Odessa, exclusive of the garrison, is computed at 70,000, and men of all nations are there congregated. Its streets are spacious, but the pavement is execrable. It has about it none of the characteristics of ancient Muscovy. The city is built in an amphitheatric form, round the bay on the cliffs, commanding a fine view of the sea. A quarantine exists, more for political than sanitary purposes. The city requires to be lighted with gas. Odessa has made wonderful progress in the short period of sixty years, and its prosperity must advance as the agriculture of Southern Russia is improved; and in the course of time it may become, in reference to the country behind and around it, what New York has become to the interior of the United States—the great mart of distribution, itself producing nothing.

THE PLACE PREOBRAGOJENSKAIA, ODESSA.

FIELD-MARSHAL THE LATE MARQUIS OF ANGLESEY, K.G.

THE LATE MARQUIS OF ANGLESEY

THE death of this nobleman has removed another of those gallant soldiers who during the Peninsular War, nobly upheld the supremacy of the British arms. Among them all—among the very best—stood prominently conspicuous the gallant soldier whose demise we now record—a man unrivalled in the readiness of his valour and the efficiency of his daring. He was a Murat of the British army; with this beyond the plumed, magnificent dragoon of the Imperial force there was more of thought in his armed display. He could fight and charge like the other, but he knew better when to charge and when to watch the moment that made the fight a winning one. Murat gained the wonder of the Cossacks. Anglesey did more: he won the admiration of the French themselves—civilised judges really able to decide. The military career of Lord Anglesey is in itself a lesson to cavalry officers.

The founder of the noble house of Paget was Henry the Eighth's famous Secretary of State, Sir William Paget, who was one of the executors and legatees of his Royal master, and who, in the subsequent reign was made a Knight of the Garter, and created Baron Paget of Beaudesert. On the death of King Edward, Paget espoused the cause of Mary, and after her accession was sworn of the Privy Council, and appointed Lord Privy Seal. When Elizabeth succeeded in 1558, he retired from public life at his own request, and Camden informs us that her Majesty "returned an affection and value for him, though he was a strict favourer of the Romish church."

After the lapse of almost a century and a half, the descendant and representative of this distinguished statesman, Henry, seventh Lord Paget, was advanced to the Earldom of Uxbridge. His grandson and successor, Henry, second Earl of Uxbridge, died unmarried in 1769, when the Earldom became extinct, but the barony of Paget devolved on his kinsman, Henry Bayly, son of Sir Nicholas Bayly, Bart., and Caroline Paget, his wife. This nobleman, who assumed the surname of Paget, was summoned to Parliament as ninth Lord Paget in 1770, and was created Earl of Uxbridge in 1784. He married in 1767, Jane, eldest daughter of the Very Rev Arthur Champagne, Dean of Clanmacknoise, and by her (who died in 1815) had several children, the eldest, Henry William, who succeeded as second Earl of Uxbridge in 1812, was the late lamented Marquis of Anglesey; the second, William, a Post Captain R.N., died unmarried, in 1808; the third, Arthur, was the late Sir Arthur Paget, G.C.B.; the fourth, Edward, was a General officer, and also a K.C.B.; the fifth, Charles, was Vice-Admiral of the White, and a Knight Commander of the Bath; and the sixth, the Hon Berkeley Paget, died in 1842.

Henry William Paget, Marquis of Anglesey, Earl of Uxbridge, and Baron Paget of Beaudesert, and a Baronet; Lord-Lieutenant and

BEAUDESERT, NEAR LICHFIELD, THE SEAT OF THE LATE MARQUIS OF ANGLESEY.

Custos-Rotulorum of the counties of Anglesey and Stafford; Constable of the Castle, and Mayor of the Borough of Carnarvon: Ranger of Snowdon Forest, and Vice-Admiral of North Wales and of the county of Carmarthen; Captain of Cowes Castle; a Field-Marshal in the Army, and Colonel of the Royal Horse Guards, and of the Royal Regiment of Artillery; K.G., G.C.B., G.C.H., K.M.T., K.S.G.; was born on the 17th May, 1768.

After being educated at Westminster School, and at Christchurch, Oxford, Henry William Paget raised among the tenantry of his father a corps, since known on the roll of military renown as the 80th Regiment of the Line, "the Staffordshire Volunteers." Lieut.-Colonel of this force, Paget with it commenced his military career, by joining, in 1794, the Duke of York, then commanding in Flanders. At Turcoing, Paget first gave a sample of that sil-daring valour which was the pecular and brilliant distinction of his after course. Though victorious in the onset, and, if rightly supported, likely to continue so, the Duke of York was foiled in his progress from want of fresh supplies; for, the Government at home had not yet acquired the energy needed in such a war. The memorable retreat of his Royal Highness was most effectually assisted by Paget, then in his 25th year, and by the valiant 80th, whom he led.

After his return from Holland, Lord Paget remained some years at home, disciplining and perfecting the cavalry under his command. Towards the close of 1808, having in the meantime been gazetted a Major and Lieutenant General, Paget was ordered into Spain with two brigades of cavalry, consisting of the 7th, 10th, 15th, and 18th Regiments of Hussars, to strengthen the corps of the army under Sir David Baird, who was marching through Gallicia for the purpose of effecting a junction with the main body advancing upon Salamanca under Sir John Moore. When the celebrated retreat to Corunna commenced, Lord Paget was stationed with his division of cavalry a few miles from Sahagun. At the latter place a body of the enemy's horse, amounting to seven hundred, had been posted, which his Lordship proposed, by a rapid movement, to cut off from the main body of the French force. Accordingly, at two on the morning of the 21st Dec., 1808, Major-General Slade was despatched by a different route than that which his Lordship proposed pursuing, with the 10th Dragoons, while Lord Paget, with the 15th, moved rapidly in a contrary direction, reached Sahagun from the other side, and surprised the enemy. He out-manœuvred and charged them while getting into line. The rapidity and force with which his cavalry rushed on could not be withstood by the French—their line was broken, slaughter, total dispersion soon followed. Two Lieutenant Colonels and upwards of two hundred other prisoners proved the fruits of this bold and well-planned expedition. In the remainder of the retreat his cavalry brigade brought up the rear, when his Lordship's zealous ardour frequently exposed him to imminent danger. Skirmishes, of course, were of more than daily occurrence; but, by the masterly disposition of Lord Paget, and the consummate discipline and alacrity he had created, the British troops were enabled to continue their retreat with trifling loss. At Mayorga, a well-directed attack was executed on a considerable force of the enemy by a detachment of the 10th Hussars, in which the British were successful, and upwards of one hundred of the French, men and officers, were made prisoners. At the plains of Corunna, while some soldiers were conveying their wounded and dying commander from the field, Lord Paget hastened with the reserve to support the right wing of the army. Perceiving Colonel Beckwith, at the head of the Rifle corps, retiring before a superior force, his Lordship attacked it with surprising courage, repulsed it, and then pressing on dispersed everything before him, until the enemy, perceiving their left wing in danger, drew it entirely back. This bold movement decided the fate of the day: it deterred the French from further advance, and the victory of the contender was safely interred, and the entire army embarked in the vessels waiting in the harbour. Thus Lord Paget gradually acquired for the English cavalry that high character which they so well maintained in subsequent campaigns. The able daring through which the retreat upon Corunna was protected by the Hussar division had the warm approbation of Moore: it will ever continue a theme for military admiration and example. Lord Paget likewise commanded a division of the army under Lord Chatham, at Walcheren.

Another return to England, and another lapse of time, occur; and then Lord Paget, after (in 1812) succeeding his father as Earl of Uxbridge, is to consummate his warlike reputation on the field of Waterloo. The March of 1815 brought Napoleon back to France from Elba, and recalled the scattered armies of the Allies. The command of the large cavalry forces attached to the Anglo-Belgian force was given to the Earl of Uxbridge. His bearing and exploits on that field have been the theme of orator and historian. There are few anecdotes of all their incidents to require repetition. Conspicuous as ever for bravery, the Earl contributed largely to the success of the operations that won the day. Almost the last cannon-shot fired by the foe struck his Lordship in the right knee, inflicting a wound which rendered immediate amputation necessary: the leg of the hero lies buried beneath a green mound in a garden opposite the inn at Waterloo.

The Earl of Uxbridge was, on the 23rd of June, 1815, created Marquis of Anglesey.

In politics Lord Anglesey was, in some matters, Liberal; in others the reverse. He took rather a conspicuous part in public affairs. Under Canning's brief Administration he succeeded the Duke of Wellington as Master-General of the Ordnance, with a seat in the Cabinet. On the 1st March, 1828, he was appointed Lord-Lieutenant of Ireland, and with great popularity held the office for one year. He was succeeded by the late Duke of Northumberland; but was himself again appointed in December 1830. Declining health made him finally resign the Vice-Royalty in 1834. From that period he retired into private life; but there, again, he was not inactive, for he was wont to share with lively interest in all the social occupations and amusements that became the English gentleman, such as he was in manner and bearing. Like the great Duke, his illustrious chief, the Marquis (as well observed by a contemporary), was to be constantly met in places of public resort; and, like the Duke, he was always recognised with pleasure, and looked on with affectionate regard. In those who win battles for them, the English people have a kind of grateful pride that never dies.

Lord Anglesey married, first, the 26th July, 1795, Caroline Elizabeth, daughter of George, fourth Earl of Jersey. This marriage having been dissolved by the law of Scotland (her Ladyship subsequently marrying George, sixth Duke of Argyll, and dying in 1835), his Lordship wedded, secondly, in 1810, Charlotte, second daughter of Charles, first Earl Cadogan—her union with Sir Henry Wellesley, late Lord Cowley, having been previously dissolved by act of Parliament. Her Ladyship died the 5th July, 1853.

By his first marriage, the Marquis of Anglesey had issue two surviving sons—Henry, fourth Earl of Uxbridge (now second Marquis), and Lord William Paget; and five daughters—Caroline, Duchess of Richmond; Jane, Marchioness of Conyngham; Georgiana, Lady Crofton; Augusta, Lady Templemore; and Agnes (who died in 1846), the wife of the Hon. G. Stevens Byng.

The Marquis, by his second marriage, had three sons—Lords Clarence, Alfred, and George Paget; and three daughters—of whom the eldest, Emily, is the wife of Viscount Sydney, and the second, Mary, of the Earl of Sandwich.

Lord Anglesey died at Uxbridge House, on the 29th ult. The noble Marquis is succeeded in his honours by his eldest son, Henry, who was, in 1832, summoned to the House of Peers in his father's barony of Paget.

The accompanying Portrait is from a picture painted by the Hon. Mr. Graves, for the Earl of Sandwich: the likeness is admirable.

BEAUDESERT (a View of which is engraved on the preceding page) is situated two miles south-west of the Armitage station of the Rugby and Stafford Railway. The mansion is placed upon an eminence, embosomed in trees: it was partly rebuilt in the reign of Queen Elizabeth, by Thomas Lord Paget; the exterior is magnificent, and the restorations have been judiciously conducted. The plan is that of a half H, and includes a picture-que entrance-porch; a grand hall, with a lofty roof, and a fine window of armorial glass; a magnificent gallery, and a suite of state rooms. The estate belonged, originally, to the Bishops of Lichfield, and was granted to Sir William, afterwards Lord, Paget, by King Edward VI. Of this nobleman, Fuller observes a foreign potentate said: "he is not fit to represent Kings, but to be a King himself."

The funeral of the late Marquis will take place this day (Saturday), in Lichfield Cathedral. We shall illustrate the impressive scene in our Journal of next week.

OBITUARY OF EMINENT PERSONS.

THE KNIGHT OF GLIN.

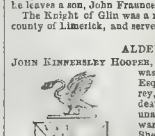
THE death of this respected gentleman, of cholera, occurred last week. The singular title the deceased bore originated thus:—John Fitz-Thomas Fitzgerald, Lord of Decies and Desmond, by virtue of his Royal seigniory as a County Palatine, created three of his sons Knights, and their descendants have been so styled in Acts of Parliament, patents under the Great Seal, and all legal proceedings up to the present time. From Gilbert, the eldest of the three sons, descended the White Knight; from John, the second, the Knight of Glin; and from Thomas, the third, the Knight of Kerry.

John Franncois Fitzgerald, the late Knight of Glin, was born 28th June, 1791, the only son of John Fitzgerald, Knight of Glin, by Margaretta Maria, his wife, daughter of John Fraunois Gwynn, Esq., of Ford Abbey, Devon. He married, 28th July, 1812, Bridget, fifth daughter of the Rev. Joseph Eyre, of Westerham, in Kent, by whom he leaves a son, John Franncois Eyre Fitzgerald, and other issue.

The Knight of Glin was a magistrate and Deputy-Lieutenant for the county of Limerick, and served as its High Sheriff in 1830.

ALDERMAN HOOPER.

JOHN KINNERSLEY HOOPER, Esq., an Alderman of the city of London, was the third son of the late Richard Hooper, Esq., of Queenhithe, and of Lumpfield, Surrey, and was born in the year 1790. On the death of Alderman Venables, in 1840, he was unanimously chosen to succeed him in the ward of Queenhithe. He served the office of Sheriff in 1842: and, in 1847, was elected Lord Mayor. The year in which he filled the civic chair was one of no ordinary difficulty and responsibility: during it occurred the memorable 10th of April, 1848, when the safety, not only of the metropolis, but of the country at large, seemed in jeopardy. The Lord Mayor (Hooper) displayed on that occasion much sense and decision; and to his judicious arrangements may be greatly attributed the preservation of the peace. Later in the same year, Lord Mayor Hooper received the French National Guard at the Mansion-house.



The Alderman died at St. Leonards-on-Sea, on the 17th ult., aged sixty-three.

LORD COCKBURN.

HENRY THOMAS COCKBURN, a distinguished Scottish advocate and judge, was born in 1778. He was the son of Archibald Cockburn, a Baron of the Court of Exchequer in Scotland, by his wife, a daughter of Capt. David Kerr, of Ardville Castle, and sister of the first wife of his colleague, Henry Dundas, Viscount Melville. Henry Cockburn was called to the Scotch bar in 1800, and soon acquired reputation and practice. His eloquence was remarkable. "Of all the great pleaders at the Scottish bar," says one friendly critic, "Mr. Cockburn is the only advocate who is capable of touching, with a bold and assured hand, the chords of feeling—who can, by one plain word, and one plain look, convey the whole soul of tenderness, or appeal with the authority of a true prophet to yet higher emotions which slumber in every breast, but are dead, I think, in none. As every truly pathetic speaker must be, Mr. Cockburn is a homely speaker; but he carries his homeliness to a length which I do not remember ever to have heard any other truly great speaker venture upon. Mr. Cockburn's effect on a Scottish jury is such, that no one would wish to see him alter anything in his mode of addressing them. He is the best teller of a plain story I ever heard. He puts himself completely upon a level with those to whom he speaks; he enters into all the feelings with which ordinary persons are likely to listen to the first statement from a partial mouth, and endeavours, with all his might, to destroy the impression of distrustfulness which he well knows he has to encounter. He utters no word which he is not perfectly certain his hearers understand, and he points out no inference before he has prepared the way for it, by making his hearers understand perfectly how he himself has been brought to adopt it." This was written in 1818; for a long period after that, Cockburn continued to melt and move the Scotch courts with masterpieces of oratory.

The year 1830 saw an end of the exile of the Whig party from power. The offices of Lord Advocate and of Solicitor-General for Scotland fell, by common assent, to Jeffrey and Cockburn—names long linked together in men's mouths as rival leaders at the bar; now to be associated as colleagues, first in political office, and afterwards on the judicial bench to which both were elevated in the same year—1834. They were destined hereafter to be known in a still dearer relation, by that unbroken friendship of fifty years, to which we owe one of the most interesting of recent biographies—Cockburn's "Life of Jeffrey." In 1834, Henry Cockburn became one of the permanent Lords Ordinary of the Court of Session, and assumed the courtesy title of Lord Cockburn. In 1837, he received the additional appointment of Lord Commissioner of Justiciary. Except the too brief biography of Lord Jeffrey, which he published in his seventy-fourth year, Lord Cockburn printed only a few fugitive pieces—articles in the *Edinburgh Review*, and the like. His love of art and devotion to the Scottish capital drew from him, some four or five years ago, a characteristic pamphlet on "The Best Way of Spoiling the Beauty of Edinburgh."

Lord Cockburn died at Bonaly, near Edinburgh, on the 26th ult., after a short illness.

THOMAS PLUMER HALSEY, ESQ., M.P.

THIS gentleman was the eldest son of Mrs. Sarah Halsey, of Gaddesden-park, by her first marriage with Joseph Thompson Whately, Esq., third son of the Rev. Dr. Whately, brother of the Archbishop of Dublin, and nephew of William Plumer, Esq., many years M.P. for Herts. Mr. Joseph Thompson Whately assumed the name of Halsey by Act of Parliament, in 1804. His son, Thomas Plumer Halsey, the subject of this notice, was born the 26th Jan., 1815, and married, in Jan., 1839, Frederica, daughter of Lieut.-Colonel Johnston, representative of Johnston of Hilton, by whom he has, with other issue, a son, born in 1839, now a student at Eton. Mr. Thomas Plumer Halsey was first returned to Parliament for Hertfordshire in 1846, on Tory principles. In 1847 he came in without opposition; and on the occasion of the last contest, in 1852, he was at the head of the poll. The family of Halsey is one of the oldest in the realm; their property is very extensive, and is almost entirely situate in the county of Herts. The maternal grandfather of the deceased represented Hertfordshire during the years 1774, 1780, 1784, and 1790. Mr. Thomas Plumer Halsey, his wife, and youngest son, together with two servants, were drowned in the Mediterranean, on the night of the 24th ult.—the *Ercolano*, the vessel in which they were, having foundered immediately after its collision with another vessel, the *Sicilia*.

ERRATA.—In the memoir of Lieutenant-Colonel Acton, at page 383, the Rev. Acton Warburton should be the Rev. *Thomas* Acton Warburton. In our memoir of James Holford, Esq., we were in error in stating that he was of the same family as the late Lieut.-Col. Gwynne Holford. No relationship, we are informed, existed between them.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THE principal subjects of conversation during the week have been the Royal Academy Dinner on Saturday last, and the Literary Fund Dinner on Wednesday last. At the Academy dinner Sir Charles Eastlake presided, and at the Fund dinner Lord Mahon was in the chair. Sir Charles spoke to the point: he was neat in all that he said; and Academicians, accustomed to lament that eloquence, departed from the Academy with Sir Thomas Lawrence and Sir Martin Archer Shee, have been loud in their praises of their new President. Sir Charles exhibited considerable tact in bringing Lord John Russell and Mr. Disraeli to reply to the same toast, and both spoke well—the landscape-painters of the Academy preferring the novelist, the portrait-painters giving their suffrage in favour of the Lord. But the best speech of the evening was the Lord Chancellor's; and so apposite was an allusion which he made, that the portrait of Lord John Russell is now known among the students (those who are wags) as the portrait of Prince Lee Boo. It may be proper to explain the allusion. When Lee Boo was asked if he knew the object of the portrait for which he was sitting, "Oh, yes," was his reply, "me understand it well. *This* Lee Boo die; *that* Lee Boo live." And Mr. Grant's portrait of Lord John will live.

At the Literary Fund dinner Lord Mahon spoke feelingly and appropriately. But he was not well supported. How was this? There were very few literary men of any rank present. And yet his Lordship is deservedly popular with his fellow authors—liked for his history—esteemed for his manly and courteous bearing. To what, then, are we to attribute so poor an attendance? We fear to the unpopular administration of the Fund. And yet the secretary is liked. But it is not the fault of the secretary that the Fund is so unpopular among authors who do not require its assistance, and who are able and would be willing to support it were it differently conducted. The truth is, the Literary Fund stands in need of an entirely new committee of management. Like the Highlander's gun, it wants a new lock, a new stock, and a new barrel. Money it does not want; and the distribution of its funds, in secrecy, is the true delicacy of real charity.

The Royal Academy, we have always been assured by its members, is a private body; but its privacy on its great day is fast disappearing, if reporters are admitted, and the speeches are to be read at full-length in the papers of the next day. We shall be glad to see the privacy entirely disappear. The dinner in olden times was a kind of bribe to patrons—and the Academicians, whose picture remained unsold after the dinner, was thought to have done his day's work badly. Now this button-holding of patrons at the private view, and at the dinner, is all but an extinct custom. Noblemen are no longer talked into becoming purchasers of pictures they do not understand; and ladies are not persecuted from room to room to sit for a full-length, or at least a kit-kat. For what is said, the utmost publicity is now courted. Thanks to Sir Charles Eastlake, Mr. Robert Vernon, for this wholesome change. Prince Albert was not present at the Academy dinner; but he was not, perhaps, expected this year. Last year he was. Who does not remember the excellent speech made by the Prince on the last anniversary but one? Another such speech was expected last year; and another such speech would have been heard, had his Royal Highness attended the dinner. The Academicians expected too much. His Royal Highness's attendance was given partly as a compliment to the new President.

Christie's rooms this week have been crowded with collectors, critics, connoisseurs, and artists. The pictures of the late Mr. Wadmore have been on view: and the three Turners, to which we directed attention at the time of Mr. Wadmore's death, have had their full share of admiration. High prices have been talked about—£1500 for each; nor should we be surprised if at least one of them went for a few hundreds more. The choicest of the three, to our liking, is an early picture, "The Guardship at the Nore"—one of Turner's best-known works, and full of his finest qualities. It is smaller in size and infinitely less showy than the two pictures of a later date which hang beside it: these are "Cologne" and "The Harbour of Dieppe"—the latter being, as was generally admitted, the better picture. Fine efforts in landscape painting are these two marvellous pictures. If anything, they are too yellow. They were painted, no doubt, in Turner's "Jessica" period, when his palette was prepared for that wonderful piece of gamboge so familiar to all who are acquainted with princely Petworth. But the three Turners were not the only attractions at Christie's. A little Wilkie, "A Trumpeter of the Life Guards pulling up his Horse to receive a Glass of Spirits from a Girl" (a study for the Chelsea Pensioners), detained the eye by its vigorous treatment and fine colour. A portrait of Mrs. Garrick (by Hogarth), painted in his "Peg Woffington" vein, and some sunny landscapes by John Burnet, engraver, painter, author, found many admirers. We shall chronicle some of the prices in our column of next week.

In the obituary of this week we observe the name of William Pickering, publisher—he that has given us so many beautiful editions of our best authors; who was always reprinting Walton's "Angler," and "Lives," and George Herbert's "Remains," in the best type and on the very best paper. He was far from an ordinary publisher: he had little or nothing of what Johnson used to call "the mercantile ruggedness of that race." He was full of information about the best books and the best authors; and, in his willingness to communicate what he knew, he reminded us of poor Thomas Rodd. Much curious information died with William Pickering. He should have died rich, but his death was hastened by an unexpected bankruptcy. The world is not often kind to its best benefactors. The reading world owes a debt of gratitude to William Pickering.

Mr. Weld has very properly called our attention to a slip of the pen in our last week's paper:—

THE ROYAL SOCIETY.—*To the Editor of the* ILLUSTRATED LONDON NEWS.—Permit me to rectify an error in the last number of your Journal, with reference to the Royal Society. It is there stated, "People are talking about the elections on Thursday last, into the Royal Society." No elections took place on that day. The Council, in accordance with the statutes, selected a certain number of candidates to be recommended to the Society for election in June next; on the 1st day of which month the Fellows at large will, in virtue of their charter, elect whatever candidates they think proper.—I am, &c., C. R. WELD.—Somerset House, May 2.

If we had written selection instead of election, we should have accurately recorded the gossip of the day.

The amended bill for transferring the duties of the Prerogative Will-office from the Archbishopric of Canterbury, contains some capital provisions. The wills registered in England and Wales are to be swept up to London, to one central office, and the calendars of the wills are to be printed. These changes will lead to other changes, and to an inundation of knowledge about men and property, and manners and customs, that will surprise the most intelligent and industrious of antiquaries. The present Prerogative-office is to be called the "Testamentary-office," until another office shall be appointed by her Majesty in Council. The three Registrars are to have £1600 a year each, and the two Record Keepers £600 a year each. Any year's excess of income over expenditure is to be paid into the Consolidated Fund—in other words, the public purse; and, should a deficiency in any year occur, it is to be made good from the same source. All this should have been done at least thirty years ago.

WILLS.—The will of Sir John Conroy, Bart., of Arborfield-hall, Berks, who died in March last, has been proved in Doctors' Commons. He has devised his real estates to his eldest son; and his personalty, estimated at £10,000, he leaves to his widow.——John Courage, the eminent brewer, of Shad Thames, and Horseleydown, and of Dulwich, died intestate; but possessed of personalty estimated at £160,000.

CHESS.

TO CORRESPONDENTS.

FERGUS, OLLAPOD, and others.—The solution of Enigma No. 805 is as follows:—

WHITE.	BLACK.
1. Q to K R 3rd (ch)	K takes Kt or Q 4th
(If Black takes the other Kt, White checks at K Kt 5th, &c.)	
2. Kt to Q B 7th—and Mates next move	

J. L. of T. C. P.—Quite correct. In future send your solutions earlier.

J. F. R. of Stuttgardt.—It is given in the May number of the *Chess-Players' Chronicle*.

J. W. S. of H., LINCOLN, SCOTSMAN, "S. F. H."—Under consideration. Contributors should always send their names and addresses.

ESDNOR D., of Keone.—No good enough to observe our notice to Foreign Correspondents in the last number.

MR. VON H., M DE R., RUSSELL.—MANY thanks—an acknowledgment was forwarded by post.

SIGNOR CALVI will greatly oblige us by sending a precise address. The name of a foreign city is not sufficiently explicit.

ALBERT, Surbiton.—Join the Richmond Chess club, and you can then have the practice you require. The Secretary is Mr. Harris, Chemist, of Richmond.

T. Y., Camberwell.—It is much below our standard, and requires too many moves.

J. G. L.—In Problem No. 532 White is to mate in three moves. 2. Your solution of No. 530 will never do.

SOLUTIONS OF PROBLEM No. 531, by Deevers, Tops, M. P., Omega, Medicus, Philo-Chess, Chelicus, T. J. Harwood, Ernest, S. F. Q. R., Hiberius, are correct.

SOLUTIONS OF PROBLEM No. 532, by True Blue, M. P., Major R., Omicron, F. R. of B., are correct.

SOLUTIONS OF ENIGMAS by Deevers, J. N., F. R. of B., Gregory, True Blue, O. P. Q., Alpha, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 531.

WHITE.	BLACK.	WHITE.	BLACK.
1. Kt takes Q P (dis ch)	K takes Kt (best)	3. R to Q 4th (ch)	K takes R
2. Kt to Q B 6th	R to K 6th (best)	4. Kt takes Kt—Mate	

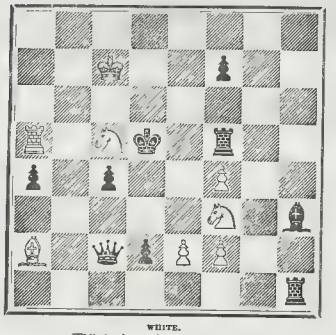
PROBLEM No. 532.

The conditions of this stratagem, which were omitted last week, are—"White to play, and mate in three moves." We reserve the solution till our next Number.

PROBLEM No. 533.

This fine position is by Mr. W. GRIMSHAW.

BLACK.



WHITE.

White to play, and mate in four moves.

SOUTHAMPTON CHESS-CLUB.—The second annual soirée of this Club was held on Friday, the 21st ult., and was fully attended. During the evening, Herr Horwitz amused and astonished the ladies and gentlemen present, by playing three games at one time—two of them without seeing the Chess-boards, and the third against the President of the Club.

NATIONAL SPORTS.

NEWMARKET FIRST SPRING MEETING.—MONDAY.

Match 100; h. ft.—Nathan, 1. Assault, 2.

Handicap Sweepstakes.—Vesty, 1. Lady Flora, 2.

Sweepstakes of 200 sovs.—Ladybird, 1. Miss Charlotte, 2.

Sweepstakes of 50 sovs.—Scythian, 1. Weathercock, 2.

Handicap Plate.—Ariosto, 1. Captain Flash, 2.

TUESDAY.

Match, 200 sovs.; h. ft.—Umbriel, 1. Miss Sarah, 2.

Coffee room Stakes. Spinaway, 1. Fact, 2.

Two Thousand Guineas Stakes.—Hermit, 1. Middlesex, 2. Value of the stakes, £2700.

Handicap Sweepstakes.—Leybourne, 1. Child of the Mist, 2.

The Queen's Plate.—Khadidjah, 1. Perfidious, 2.

Fifty Pounds.—Ariosto, 1. Sackbut, 2.

WEDNESDAY.

Sweepstakes of 50 sovs.—Pelham, 1. Margaretta, 2.

Plate of 50 sovs.—Bobby, 1. Chorus, 2.

Selling Handicap Sweepstakes.—Durindana, 1. Rally, 2.

Renewal of the Sweepstakes of 50 sovs. each.—Epaminondas, 1. Spinaway, 2

Handicap Plate of £50.—Poodle, 1. Nervous, 2.

Match 100, h. ft.—Economy 1. Herbert, 2.

Sweepstakes of 50 sovs. each.—The Trapper walked over.

THURSDAY.

Queen's Plate.—Ratsplan, 1. Lamentine, 2.

Sweepstakes of 100 sovs. Champagne, 1. Scythian, 2.

The Second Guiness Stakes.—Virago, 1. Meteoro, 2.

Handicap.—Ephesus, 1.—Testy, 2.

FRIDAY.

Match.—Acrobat beat Physalis Colt.

Newmarket Stakes.—Champagne, 1. Middlesex, 2.

Handicap Sweepstakes.—Fully o' the Day, 1. Sweetness, 2.

Sweepstakes, 10 sovs.—Thessaly, 1. Freckle, 2.

LATEST BETTING AT NEWMARKET.

CHESTER CUP.—12 to 1 agst Dr. O'Toole; 14 to 1 agst Alsford; 14 to 1 agst Acrobat; 20 to 1 agst Newmbuster; 20 to 1 agst Piggy; 25 to 1 agst Tom (taken freely). 30 to 1 agst Sandhurst; 30 to 1 agst Joe Miller; 30 to 1 agst Llandovis; 30 to 1 agst Caspian; 50 to 1 agst Lancashire Lass; 50 to 1 on Newmuster agst Acrobat.

DERBY.—8 to 1 agst Antocrat; 8 to 1 agst Devrish; 20 to 1 agst Wild Huntsman (taken freely); 100 to 1 agst Marley Hill (t).

AQUATIC FEAT.—One day last week five young men, all under twenty years of age, left Vauxhall-bridge in a four-oared outrigged cutter, and reached Margate Charta Island in time to breakfast with their friends at Wraysbury, by 2 o'clock. They returned to their homes, in Lambeth, at nine o'clock on the evening. The distance of the two journeys is about eighty miles; they had seven locks to pass; and they not only spent several hours at Wraysbury, but also an hour at Hampton, and another hour at Sheerlake.—*Windsor and Eton Express.*

ROYAL LITERARY FUND.—The sixty-fifth anniversary dinner of this institution took place on Wednesday evening, at the Albion Tavern, Aldersgate-street. Viscount Mahon presided; and, in proposing "The Literary Fund," took occasion to speak with congratulation as to the many political men who had cultivated a taste for literature. If he wished to produce an example of how the love of literature could be combined with eminence in politics, he knew not that he could find a more appropriate instance than that which was supplied by their own President, the Marquis of Lansdowne. It was, if he mistook not, not less than forty-eight years since Lord Lansdowne first sat in a Cabinet; and he sat in a statesman was wholly without a precedent in the annals of this country; and in the midst of political contention Lord Lansdowne had never ceased from pursuing literary accomplishments, and from showing, as they could bear testimony, the most courteous and anxious attention to every person and to every subject connected with the literary profession. The TREASURER announced that grants to the amount of £1400 had been distributed during the last year among forty-seven persons—of whom thirty-one were gentlemen and sixteen were ladies; and read a long list of donations, including that of 100 guineas from her Majesty (seventeenth year).

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

SCHUMLA, April 6th, 1854.

ALTHOUGH the Turkish peasantry is flying into Schumla to escape the enemy, there is reason to believe that the Russian force in the Dobrudja has not been considerably increased since I last wrote; nor has it advanced further forward than the town of Babadagh. The Russians, it would seem, only intended the passage of the Danube at the point they chose as a blind to conceal more important operations. Their plan, it is supposed, was to lead the Turks to believe that the great body of their army had been concentrated at Braillow, and that it would by degrees pass on to this side of the Danube. Omer Pacha, under this impression, would, as they supposed, advance from Schumla to meet them, and fight a battle in the neighbourhood of Karasu. Whether that battle were won or lost is not here the question. Omer Pasha would have been called away to a distance from Schumla, and the main body of the Russians, which is concentrated near Bucharest, and not at Braillow, would have crossed between Toutracan and Rustchuk, taken the Turks in flank, destroyed them, and then marched on in triumph to Adrianople. If such was the calculation of the Russians, they have been mistaken. Omer Pacha has not advanced a single man to meet the corps of Lüders on the Dobrudja, and is still determined to remain on the defensive, watch the Upper Danube, and wait for the coming of European reinforcements. Orders in the meanwhile have been sent to Achmet Pacha, to forward to Schumla all the available cavalry which he can spare; and, for the present, the remaining force in that place is not to be withdrawn. The impressions already more than once conveyed to you that this corps was only amused by a small force of Russians, is confirmed by news just received from Widdin. The Turks advanced a few days ago from Kalafat to Poyana, and found it occupied by four squadrons of cavalry only. These, instead of being surprised by daybreak, as was intended, were not attacked till after daylight, and therefore retired behind Poyana, from whence the Turks also withdrew, without much bloodshed. The report so firmly believed by Achmet Pacha, that Poyana was entrenched and strongly fortified, is thus entirely disproved.

Officers who have arrived within the last few hours, fresh from the scene of the Russian advance, inform me that the utmost terror has been created by it throughout the whole Dobrudja. The Turkish inhabitants of the villages on this side of Karasu are flying in all directions carrying off their moveables, and destroying all that they cannot carry. From the neighbourhood of Babadagh to within thirty miles of Schumla the panic is the same. A captain of Cossacks who started from hence some time since to gather in 800 Dobrudja recruits, had proceeded as far as Mangalia with a provision of clothing, accoutrements, and arms for the men, when he heard of the Russian advance. He described the terror of the people as extreme. So great was it, that as he appeared they fled from him and his small troop, without noticing that he was one of their own army. Unaccustomed to the Cossack uniform, except as being worn by the enemy, the peasants considered him as one of their invaders, and did not, in their terror, even think of doing him any harm. The villages on this side of Karasu, as well as those between that place and Babadagh, have been entirely abandoned; there are many, in which not a soul is visible. The roads are described as filled with people hastening away with corn, oats, and furniture, and driving before them herds of cattle. In many instances beasts were slaughtered in the streets, that they might not fall into the hands of the Russians. To add to the general confusion the conduct of the Turkish Irregular troops, in their retreat, has been marked by the greatest excesses. Being certain of impunity, the Arnauts plundered without scruples the places through which they passed, and committed acts of violence on the Christian inhabitants.

The Cossack recruits who were to have joined the Turks here have, it appears, been seized by the Russians and sent to Braillow. Scarcely 50 out of the 800 engaged have made their way to Schumla, which they reached yesterday, after seeing their houses and villages robbed and burnt by the enemy. These Cossacks are descended from a race which, in the time of Catherine, was driven from the Don by the Russians. They settled at first in the Crimea, from whence they subsequently found a refuge in Bessarabia. There again, however, Russia found them, and forced them to retire, and they took refuge in the Dobrudja. There they settled down in considerable numbers, and gave themselves up to the sole occupation of fishing—the vast lakes which cover the surface of the country being peculiarly favourable for that pursuit. Their number, however, is by no means large. There are 500 of them here, under the command of Sadyk Pacha. One squadron has been sent to Kalafat, and a few recruits have since been added to the number. They are divided into regular and irregular, and are armed with lances and firelocks. They are remarkable as the first Christian corps that has ever been raised in Turkey, and their flag is red, with a silver cross on one side and a crescent on the other. To-day the whole force march out of Schumla, to a camp prepared for them outside the town.

The flying inhabitants of the villages of the Dobrudja are coming into Schumla in large numbers. The road which leads to Varna is covered with arabas, on which are household goods, beehives, and old women. They are drawn by buffaloes, and are accompanied on foot by the young and active of the families. Many of these people had a number of horses with them when they left their abodes, but they have brought none of them as far as Schumla, the Turkish Irregulars having driven them off and appropriated them. These poor people are now encamped on all the public squares of the town, and even outside the lines they may be seen in troops surrounded by their waggons.

I learn that a Russian, with a parliamentary flag, crossed over to Silistria, coming from Kalarasch, and summoned the garrison to surrender. He also demanded speech of Ismail Mushir Pacha, with whom, and none other, he had orders to speak. This last is supposed to be an attempt to ascertain whether Omer Pacha, who is generally in company with Ismail Pacha, is really in Silistria. The Russian was ordered off, without being vouchsafed a reply.

It is with considerable pleasure that I inform you also of a fact which has reached me. Omer Pacha has officially declared that whoever was to be Commander-in-Chief of the combined armies destined to act on the Danube, he, for one, was ready to obey in every particular, the orders he should receive. This was not a moment, he added, when jealousies were to be shown. He, as Commander-in-Chief of the Turkish armies will, therefore, give the first example of his anxiety to forward, by the necessary denial of self, the future welfare of his adopted country.

As counterbalancing this agreeable and important intelligence, I am sorry to say that the Pacha and other officers whom Omer Pacha dismissed the service a few days since during his hasty journey through the cities of the Danube, have been pardoned on their arrival here. More than ever at this moment are severe examples required to bring the Turkish armies to a fit state of discipline and order.

April 10.

On the 8th instant the whole of the infantry which occupied the towns of Matchin, Isaktchi, and Toultcha, marched into Schumla, with all their guns. Of field pieces—12 and 6-pounders—there were forty-one, and three pieces of heavy artillery. The greater part of the troops were Egyptians, who marched past in order, and carried arms with great precision. They were preceded by Sappers, with blood-red aprons, drummers, and trumpeters with French horns. The whole force was commanded by Mustapha Pacha. Several Redif battalions followed, and the usual number of arabas with clothes and provisions, closed the march. The cavalry consisting chiefly of Bashi-bozouks, remained behind, and has been with some difficulty brought together at Bazardjik. An advanced guard of Bashi-bozouks is still at Karasu, where the Russians have not, as yet appeared. It is said that Hirsova has been occupied by the latter; but they have certa nly not entered Kustendji, where, at the last dates, were three steamers of the united squadrons. It is evident that the Russians have determined at present to wait, having failed to attract the Turks towards them; nor have they made any movement higher up the Danube, where all remains quiet as ever. A courier from Rutschuk arrived yesterday here, having come in eight hours. All there was quiet, and the same pastime of Minié rifle-shooting was being carried on as usual.

I have hitherto not given you an account of some incidents in the passage of the Russians, which may be known already, but were new to me. When they passed at Pottashi, near Toultcha, they were opposed by two battalions of Turks, in a battery, which effectually prevented the passage for some hours. The Russians had landed three pieces from their gun-boats. With these they feebly returned the Turkish fire; but they were at last forced to abandon them. For three hours these guns remained without masters—the Turks being unable to sally out and take them, the Russians being prevented by the fire of the Turks. Ultimately ammunition failed the latter, who retired with little loss.

Several fresh arrivals of English officers may be noticed. Captain Nolan, of the 15th Hussars, Messrs. Shirley and Grange, and other gentlemen connected with the military profession, are here. The day before yesterday there was a review of artillery before these officers, under the orders of Ismail Mushir Pacha.

April 14.

An Imperial firman, conferring upon Ismail Pacha the title of Mushir was brought from Constantinople here by an Imperial Chamberlain, two days ago. The Pacha, with his suite, went out to meet the dignitary of the Porte with all his suite, and found him not far distant from the town, where the usual ceremonies were performed. The Pacha, having alighted, received from the Chamberlain the firman of his dignity, which he embraced, and then returned. The two great men then resumed their march, and were escorted by battalions of infantry and squadrons of cavalry to the *konak* of Hassan Mushir Pacha, where the firman was read. An Imperial salute was fired, the troops shouted "Long live the Sultan," and there the ceremony ended. All the Pachas, including Omer Pacha, the Commander-in-Chief, were present on the occasion, and congratulated Ismail Pacha on his elevation to his high military dignity. It must be admitted that none could have been more meritoriously conferred by the Sultan; for Ismail Pacha has signalised himself by repeated acts of bravery, which have raised him gradually from the rank of a private in the Turkish army to that which he now holds. Ismail Pacha is, by birth, a Circassian.

With the exception of small reviews, and experiments in the explosion of mines, little novelty has marked the last few days; and the General-in-Chief succeeds in whiling away time by visits to the works by which the surrounding hills are covered. I know not whether the manner in which these visits are made is the usual one in time of war, but it will cause no small astonishment to our officers when they witness it. When the Pachas ride out in the morning, they are accompanied each by an aides-de-camp, two orderlies, chiboukji carrying pipes, servants carrying water—in all, four or six persons, who press forward to attend their masters, unmindful of any thing except their service: Pachas, servants, orderlies, aides-de-camp, all form a ruck, in which foreign officers find themselves inextricably confounded. I witnessed, on one occasion, with some amusement, the efforts of the French Representative here to extricate himself from the crowd of servants. His Excellency Omer Pacha had invited all the general officers to accompany him to see the explosion of a mine; and a motley crowd of people pressing together, and elbowing each other, followed the General-in-Chief. The pace was slow, and the spot where the experiment was made was somewhat distant: three hours were thus spent in doing what, with an English or French General, would have taken half-an-hour. His Excellency then returned, and visited the various forts round the town. He stopped at the first large outwork, where he alighted, and the chiboukjis produced pipes. An hour was consumed in smoking the calumet then again to horse, when a second fort was visited. At the third a stop was again made, and more pipes were smoked. At the fifth a still longer stay was rendered necessary by the calls of hunger. A sumptuous breakfast was laid out by the numerous attendants, and the day was far spent before the party of Pachas returned. As an instance of the habits of the Turks, these facts are curious. It is not my intention in describing them to throw any ridicule on the proceedings; but would it not be better, in time of war, to abandon all this apparatus which only suit a time of peace? Would it not be cheaper, more dignified? Nay, will it not be necessary when European armies set the example of simpler manners, for Pachas to reduce their overgrown establishments—especially when they ride out? I have no doubt that these crowds of attendants must be a serious burden on the finances of the Generals.

These, however, are mild reforms compared to those which have become imperatively necessary for checking the plundering and other criminal propensities of the Irregulars belonging to the army. On more than one occasion I have described to you the various disadvantages of these corps; their truculence in dealing with harmless and unarmed peasants; their utter worthlessness in the field, and the excesses to which they gave themselves up in the last retreat from the Dobrudja. A few days ago an incident occurred in which the life of an English officer was involved. Lieutenant Nasmyth, one of the Bombay Artillery, having purchased a cart-load of straw, was proceeding to unload it in front of his house, when a party of five Arnauts passed by. One of these, when he saw the straw, proceeded to help himself to a quantity of it, notwithstanding the remonstrances of the groom, who endeavoured to take it back from him. From words to blows was the matter of a moment; and Lieutenant Nasmyth, who heard the noise, issued from the house, accompanied by his servant, in time to see the Arnaut inflict on the groom two severe blows on the chest with the butt-end of his tomahawk. Rushing to the assistance of his man, Mr. Nasmyth pushed aside the Arnaut, and saw the remainder of the party deliberately raise their long firelocks, which they cocked with the intention of firing at him. Upon this he retreated within doors, for the purpose of getting his revolver, whilst his servant ran to a neighbouring guard-house. The Arnauts took this opportunity to effect their retreat also; but they were met at no great distance by a party of three of the guard fetched by the servant. The latter pointed out the chief culprits, who took refuge in the centre of their party, which by this time had increased to about forty men. The guards finding themselves overmatched, sent for a reinforcement, which having arrived, the culprits were again pointed out by the servant and Lieut. Nasmyth, who had by this time come up. The soldiers of the guard, about eight in number, appeared quite ready to deal summarily with the offenders, and, at once, take them prisoners. The officer, however, blenched, declared that he would be no party to the affair; ordered off his men, and said to the aggrieved Briton that if he proceeded with the matter he would produce a revolution. Fortunately, his Excellency Omer Pacha was not of the same opinion as the officer. Captain Symmons, who represents the British Ambassador here, having laid the matter in due form before him, the officer of the guard and the Arnauts were arrested yesterday, and the latter have been sentenced to 300 blows of the stick, severally. The sentence will shortly be carried into execution, and the opportunity

THE WAR ON THE DANUBE.

OMER PASHA RECEIVING COSSACKS FROM THE DOBRUDJA, AT SCHUMLA.

will be seized to punish in a similar manner two or three hundred Bashi-bozouks, who have been found guilty of leaving their corps in the Dobrudja, and overrunning the country for the purpose of plundering and killing the inhabitants. I notice these acts of firmness on the part of Omer Pasha with the greatest pleasure, as it proves that in the difficult position in which he is placed he has not hesitated to bring these notorious offenders to condign punishment. I trust that no mitigation of the punishments awarded will be permitted, and that the sentences will be fully carried out. After this infliction the criminals will, it is said, be set to work in cleansing and keeping in order the streets of the town. In the interest of all the great folk who now inhabit this place, this is a measure which should have been adopted long since. The only fear is, that the moving of the dung-heaps which 'for ages have braved," not the battle and the breeze, but the efforts of a swift-running stream, to carry them off, may produce infections worse than those which are at present exhaling from them. As it is, however, at present, nothing can be imagined more unhealthy than the dust which, for the last few days, has covered the city like a hideous yellow cloud, spreading odours, and forcing down the throats of the inhabitants the pulverised filth with which the streets are covered.

Of the Russians there is nothing new to tell you; and, as far as is known here, the relative positions of the contending forces are still the same as they were a week ago. The British and French fleets are, it seems, in the Black Sea, acting, it is said, against Sebastopol.

April 16.

I am sorry to inform you that the punishment awarded to the Arnaouts who insulted Lieutenant Nasmyth has not been of the sort required by the circumstances, nor according to the manner described in my letter. Two days after the perpetration of the offence, the priest of the Arnaouts waited upon Captain Symmons, accompanied by the chief offender, and begged the pardon of the culprit. He said that the Prince Demetri, who commanded these Arnaouts, had himself inflicted corporal punishment on the offender, whom he had now taken with him to obtain the pardon of the offended. The Arnaout was then led in, and he kissed the feet of Mr. Nasmyth; who, seeing that nothing further was to be obtained in reparation, consented to a pardon: such being the nature of the punishment inflicted on an occasion where life was endangered. I believe myself right in thinking that it is insufficient to prevent the recurrence of similar scenes in future. The Turks in this case are unable to urge the difficulty of punishing a Mussulman for an offence against a Christian; for the corps of Prince Demetri is a Christian corps, composed exclusively of Albanians of the Catholic faith. I do not believe in the corporal punishment inflicted, as stated, by Prince Demetri.

HIS EXCELLENCY ISMAIL MUSHIR PASHA.

It is announced here (but not confirmed by sufficient authority) that 12,000 French troops have reached Adrianople, and that a small portion of the English army has arrived at Varna. The news is probable as regards the French; but, with respect to the English, the intelligence must be premature. The want of certain knowledge on such a subject will, however, show how uncertain are the communications here, and how difficult it is to obtain accurate information.

A new batch of Bashi-bazouk plunderers reached Schumla yesterday. They were chained; but I know not what to say as to their future punishment.

VICTIMS OF THE WAR.—A BULGARIAN FAMILY LEAVING A VILLAGE.

JAMES MONTGOMERY.

Our great writers are fast sinking into their graves. This year has already taken two from our now scanty list of surviving poets. The ink is hardly dry that announced the death of the poet of the Isle of Palms; and now we are called upon to chronicle that James Montgomery is no more. The poet who has given us "The Wanderer in Switzerland," and "The World before the Flood," died at Sheffield, on Sunday last, in his eighty-third year. Who is there at all acquainted with English literature that has not heard of James Montgomery, of Sheffield?

Though Sheffield has long laid claim to Montgomery as her son, yet he was not a Sheffield man, but a native of Irvine, in Ayrshire, where he was born, on the 4th of November, 1771. His father was a Moravian missionary, who, leaving his son in Yorkshire to be educated, at Fulnick, a Moravian seminary near Leeds, went with his wife to the West Indies, where they both died while, we believe, their son, the distinguished poet, was still a boy. His education was strict and good; but when and how he became a poet no one has told us. He is said, when a mere lad, to have ventured to London with a volume of verse; and to have sought in vain for either a printer or a publisher. Disappointed in London, he hastened back to Yorkshire, became an assistant in a shop at Mirfield, near Wakefield; and, in 1792, removed to Sheffield, where he found congenial employment under Mr. Joseph Gales, a bookseller in that town, and proprietor, and some say editor as well, of the *Sheffield Register*, a newspaper somewhat, for those days, democratic in its opinions. So democratic was it, that Gales had to fly from England to escape imprisonment, and the editorship of the paper was left to Montgomery, who changed the name to that of the *Sheffield Iris*. But, in changing the name, Montgomery would appear to have made no change whatever in the principles of the paper. The *Iris* was as Radical as the *Register*. This was soon known, and the insertion in it of a song by a clergyman, entitled "The Fall of the Bastille," led to a conviction, a fine of £20, and an imprisonment of Montgomery for three months in York Castle. On his release he wrote an account of a riot in Sheffield, in which two men were killed; an indictment followed, and he was fined in the sum of £30, and sent for six months to prison. He lived to see a great change in editorial responsibilities, and to receive, now many years ago, expressions of regret from the magistrate at whose instigation he had been prosecuted.

He found, like others before him, that stone walls do not a prison make. He had his consolation in a good cause and a love for verse, the results of which were given to the public in the year 1797, in a volume entitled "Prison Amusements." The volume was well received both in and out of Sheffield; and in 1805 he published his poem of "The Ocean," written at Scarborough, and not unworthy of his reputation. This was followed, in 1806, by the "Wanderer in Switzerland;" in 1809, by "The West Indies," of which 10 000 copies were sold at a high price; and in 1812, by "The World before the Flood."

THE LATE JAMES MONTGOMERY.

He was now a recognised poet,—but critics differed about his merits. The *Edinburgh Review* condemned him as a poetaster at the best; but the *Quarterly* took him up as a true poet, and in its review of "The Wanderer in Switzerland," replied smartly and properly to the bitter and unjust criticism of Jeffrey in the *Edinburgh*. Nor was this the only service that the *Quarterly* rendered to Montgomery at this period; by quoting at length his two poems of "Hannah," and "The Grave," it gave publicity to two of the best of Montgomery's performances.

He was now silent as a poet, and allowed seven years to elapse before he again ventured before the world with another volume of verse. His next work appeared in 1819, entitled "Greenland, a Poem." It is in five cantos, gives an account of the Moravian missions to that desert country, and was favourably received. Its reception, however, was not such as to induce him to hurry again into print. He allowed a larger period to elapse, before he courted the public anew—for the "Pelican Island," a poem in nine cantos, founded on a passage in the voyage of Captain Flinders to New Holland, did not appear till 1828. This, with the exception of a few hymns and spiritual songs, were the last offspring of his muse.

The claims of Montgomery as a poet were recognised by Sir Robert Peel, who, during his first Ministry (1834-35), granted him a pension of £150 a year. This was gratifying to him, both as a man and as a poet; and not less pleasingly were his better feelings touched when his poems were collected by the Messrs. Longmans, and published first in monthly volumes, and afterwards in one well-printed and readable volume.

Montgomery will not hold any high position as a poet. But he will live. He is the poet of gentle emotions and fire-side truths. His ear was good, and he had an eye alive to the beauties of nature. His great defect is want of vigour. Yet he gains upon his readers, partly by his subjects, chiefly by his skill. He has great tenderness, but no ecstacy.

In person he was above the middle height, with

CITY IMPROVEMENTS.—CANNON-STREET WEST.—(SEE NEXT PAGE.)

looks always composed, and now and then tinged with melancholy. In Sheffield, where he lived and died, he was beloved by old and young—rich and poor.

The following letter relates to the lectures which Montgomery delivered on Poetry:—

TO MR. THOMAS WALESBY.

The Mount, Sheffield, June 11, 1842.

Dear Sir—My "Lectures on Poetry and General Literature" have been out of print for some time, nor have I any intention at present to issue a new edition. Another course of "Lectures on the British Poets," which I have been delivering on special invitations, in London, Manchester, Bristol, Bath, Birmingham, Newcastle, Leeds, and other towns, have been so well received, and comparatively so well rewarded, that I have chosen to keep them in manuscript till I have time and inclination to prepare them for the press, which, if I am spared in life and health a year or two longer, may perhaps be done. But the plain fact is, that I find people everywhere so much more ready to hear me read than to read them for themselves, that I have little temptation to kill the goose while she continues to lay golden eggs for what the dead bird would produce in the Paternoster-row market. The former course, after being successfully delivered at the Royal Institution, and before other audiences, was published, and the edition sold off in a reasonable time, but not so rapidly as to make me eager to issue a second, till I had completed my plan by bringing out both that course and the current one together.

I am your friend and servant, J. MONTGOMERY.

Mr. Thackeray acted on Montgomery's principle—he did not print his admirable lectures till he had done delivering them.

NEW CANNON-STREET.

THIS new thoroughfare, nearly a direct line from St. Paul's Churchyard to the end of King William street, London-bridge, is one of the greatest improvements that has been completed of late years in the city of London. From where Budge-row joined to Old Cannon street, the alterations requisite to make the new thoroughfare have been confined to widening Cannon-street itself by pulling down the houses on its southern side, and rebuilding them on a greatly improved plan as regards size and accommodation, and the fronts of some of the blocks of houses present very creditable specimens of street architecture; and there is sufficient variety in their general details and characteristics to prevent a great monotony of appearance. Until late years in the city of London from where Budge-row joined to Old Cannon street, the alterations requisite to make the new thoroughfare have been confined to widening Cannon-street itself by pulling down the houses on its southern side, and rebuilding them on a greatly improved plan as regards size and accommodation, and the fronts of some of the blocks of houses present very creditable specimens of street architecture; and there is sufficient variety in their general details and characteristics to prevent a great monotony of appearance. Until late years in the city of London most of the new warehouses and shops are built contrasts strongly with the small, low, mean, and crowded-looking domiciles on the northern or olden side of the street. Westward, from the corner of Budge-row (and this is the point given in our illustration, where the offices of the Minerva Life Assurance Company form the corner building) *New* Cannon-street, strictly speaking, begins. In olden times, masses of houses filled the space from hence to St. Paul's Churchyard, and lanes and streets opened out from every direction. The clearance effected in this part is wonderful, and when completed will be very striking. The new warehouses erecting here bid fair to be of imposing character, and very good design; and some on the south side, near St. Paul's, will form a good foreground to the magnificent view of the Cathedral obtained from this spot. Indeed, for almost the whole length of Cannon-street, old and new, the exquisite outline of the exterior of St. Paul's Cathedral is peculiarly striking, and from the slight windings which the street takes, and the inequalities of its level, the different portions of St. Paul's are now shrouded, and now come into view with marvellous grandeur, until, approaching the end of the street, the hugeness of its mass is fully displayed by contrast with the warehouses now building. It has been greatly deplored lately, that an open space should be left at the western end of this new street, so as to allow of one striking view of St. Paul's at least, being obtained; and it is greatly to be hoped that the City authorities will, in this matter, yield to the express wishes of numerous influential men of taste, and, though at a sacrifice of yearly rental, show that they appreciate the beauties of their famed cathedral. As before stated, one of the views in the new, or Cannon-street West, and the houses on the northern side in close proximity to, but further on than the Minerva Life Office, are fine new buildings; but beyond them the old houses again are seen, and it once on to St. Paul's they are all old. On the southern side are new buildings all the way, many as yet, however, only in commencement. The tower of the church which just appears over the nearest block of houses, is that of St. Mary Aldermary, one of the hybrid Gothic churches of Sir C. Wren, in which the Grecian and Gothic styles strive for mastery.

MUSIC.

The third concert of the NEW PHILHARMONIC SOCIETY took place on Monday evening at St. Martin's Hall. The performances were conducted partly by Mr. Benedict and partly by Dr. Wylde; and the chief feature of the concert was the latter gentleman's music to Milton's "Paradise Lost." Mendelssohn's Concerto in G Minor was charmingly played by the gifted young pianist Wilhelmina Clauss, and most enthusiastically applauded. Beethoven's superb symphony in B flat was well performed under Dr. Wylde's direction. Miss Louisa Pyne sang the famous air, "Gli angui d'Inferno," in the "Zauberflote," with marvellous brilliancy; and Miss Lascelles rendered Mozart's "Parto, parto" in the "Clemenza." This composer (the uncle of the fair singer of whom we have heard so much) is in vogue in Germany at present—on what grounds we know not; for this specimen of his talents is a mere chaos of confusion—a mass of discordant noises, without form, melody, or meaning.

The production of "Otello," at the ROYAL ITALIAN OPERA, which we mentioned last week, has not been successful. It was performed on Thursday and Saturday, and, in all probability, will not be repeated. This opera, notwithstanding its great musical beauties, can never become popular in the land of Shakespeare, of whose tragedy the Italian piece is really nothing better than a ridiculous burlesque. *Otello* is a mere brute: and "the gentle lady wedded to the Moor" is a bold-faced strumpet. Hence, though Tamberlik and Mlle. Cruvelli exerted themselves greatly, and sang with much power and beauty, the whole performance was coldly received. On Thursday last Cruvelli appeared in the character of *Leonora*, in Beethoven's "Fidelio." Her very fine performance of this part, at Her Majesty's Theatre, must be in the remembrance of many of our musical readers. It is in every way suited to her, and is one of her most brilliant efforts. Tamberlik's *Florestan*, too, is remarkable both for dramatic feeling and vocal power.

AT THE DRURY-LANE OPERA, the "Freischütz" continues to run with unabated success. Mdlle. Bury has appeared in "La Sonnambula" with the warmest applause; performing the part with the simple tenderness which constitutes its charm; and singing the music with a sweetness and expression which reminded us not a little of Jenny Lind. The production of Don Giovanni" delayed in consequence of the successful run of the "Freischütz," will take place next week.

THE HARMONIC UNION gave a fine performance of "The Creation" at Exeter Hall, on Wednesday evening. The solo parts were admirably sung by Miss Louisa Pyne, Mr. Sims Reeves, and Mr. Weiss. It was preceded by a sacred Cantata, composed by Dr. Wylde, and entitled "Prayer and Praise." The solo parts were sung by the vocalists above named; and the choruses, in which there is considerable grandeur, were carefully and steadily executed, under the direction of the composer, to whose talent and attainments the whole work does much honour.

THE THEATRES.

ST. JAMES'S.

On Friday week the season of French plays at this theatre commenced, M. Lafont having undertaken the direction, on the plan of a twelve nights' subscription. The manager recited on the occasion an address in which he congratulated the public of late years in the city of London on the present alliance between the two countries being emphatically and appropriately introduced. The comedy by M. Bouilly, of "L'Abbé de l'Epée," preceded. The part of the old and benevolent gentleman was undertaken by M. Ferville; that of the afflicted orphan lad being cleverly interpreted by Mdlle. Adrienne de Jerzy. This character it is which lends the title to Mr. Holcroft's English version of the play, "Deaf and Dumb." It was followed by M.M. Fournier and Meyer's vaudeville of "La Parisienne Piquet;" M. Ferville renewing an old triumph in his capital performance of the *Chevalier de la Rocheferrier*. In addition to the names we have mentioned, the programme includes those of M. Brindesu, Mdlle Luther, Mdlle. Pix, M Regnier, and M. Caillat. This company is well capable of sustaining the interest of the pieces proposed, by the high finish of style and the reputation already attained by its members. The strength is, undoubtedly, in their favour. Her Majesty, Prince Albert, the Duchess of Kent, and the Duchess of Cambridge, were present. On Monday evening two vaudevilles were performed—"Le Rue de la Lune," by MM. Varin and Boyer, and "Le Revell du Lion," by MM. Bayard and Jaime. In the latter M. Ferville sustained his original character, *M. Stanislas de Fonblanche*. M. Lafont himself, also, appeared in the second act of "Catherine," as *Sergeant Austerlitz*.

On Tuesday evening the theatre was occupied by an amateur company, the proceeds being laudably devoted to the funds of the Central Association in Aid of the Wives and Families of Soldiers ordered to the East. The performance, though respectable, was decidedly amateur, and very amateurish. The kind of acting has recently so much improved, and its professors have so much regular practice at the one or two small theatres engaged for the purpose, that it now seldom offers the more salient points for the peculiar gratification expected by its admirers. On this occasion, however, the particular shortcomings were quite refreshing; and the difference between untutored nature and experienced art received copious illustration. One young lady, who performed *Lecnie de Villegontier*, in "The Ladies' Battle," and *Mary Miffs*, in "The Fast Coach," manifested great intelligence but her *naiveté*, which was emphatically impressive, was likewise identified with singular regularity and awkwardness. The amount of training wanted was prodigious; and the resulting oddity of manner most mirth-provoking: but good-humour was the prevalent feeling. With the training required, this very awkward young lady would prove, no doubt, an excellent *soubrette*. The representative of the *Countess* was not deficient in stage-tact, but was by no means stage-voice, and drowned throughout with great propriety. In "Where there's a Will there's a Way," *Don Scipio de Pompolino* was performed with much animation by a small gentleman of great vivacity and no lungs. With one exception, indeed, elocution was a gift the need of which did not seem to have been appreciated by the performers. In this respect, however, it is to be hoped they will mend. An Address in rhyme was spoken between the first two pieces, with considerable effect. It was also well written, as well as respectably delivered.

On Wednesday the French performances re-commenced; and Mdlle. Luther, according to previous announcement, appeared in her favourite and effective part of *Madame de Maulty*, in "Livre III," which she acted with wonderful animation. M. Léon, as *Octave Dudonney*, was fairly extravagant and enthusiastic in his love-making; and we sympathised with the lady whose little *ruse* had brought her into such manifest peril. The performances went off well, but the audience was not numerous.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The tenders for the £6,000,000 Treasury Bonds having been more than two thirds short of the amount required, the list has been removed from the Treasury to the effect that subscriptions will be received at the Bank of England for the remaining portion of the £3,000,000 unsubscribed for until Monday next. The advance price is £98 15s. for each £100 Bond, in each of the series of issues.

There has been a steady demand for money for commercial purposes; but we have no advance to notice in the rates of 6% ; the best paper for first-class acceptances, have ruled from 4½ to 5 per cent per annum.

On the whole, the market for Consols has been steady this week; but the amount of business doing is by no means extensive. Prices have kept up remarkably well, and the tenders for Exchequer Bonds have had very little influence upon jobbers in general. Monday, being the 1st of May, was observed as a close holiday in the Stock Exchange. The transactions, on Tuesday, were to a fair average extent. Bank Stock was 209½ to 201 to 204½. The three per Cents Reduced were done at 86 ⅝ ; the three per Cent Consols, 87⅝ to 88, the closing price being 88, the New Three-and-a-Quarter per Cents, 87⅝ to 88; the New Two-and-a Half per Cents, 75¾; and Long Annuities, 15 5-16ths. India Bonds, 1850, 1s. India Stock was 255; South Sea Stock, 11⅝. Exchequer Bills were 2s. dis. to 2s. prem. On Wednesday business was comparatively trifling. The Three per Cent Reduced was at 86⅝ to 86⅞; the Three per Cent Consols, 87⅝ 88 to 87⅝ ⅝; the New Three-and-a-Quarter per Cents, 87⅝ to 87⅝, Consols for Account, 87⅝. Long Annuities marked 4¼ to 4⅛ ; Bank Stock unchanged thanks at 208 to 204. discount. The Market, on Thursday, was flat, and prices tended downwards. The Three per Cents for Money were 87⅝ ⅞ to ⅞ ; and for the Account, 87⅝ ⅞. The New Three-and-a-Quarter per Cents were 87⅝ ⅞ ; and the Three per Cents Reduced, 86⅞ to 87. Exchequer Bills realised 2½ dis. to 2s. prem.

Most Foreign Bonds have been rather inactive, but we have to material change to notice in their value. The following are the leading prices:—Brazilian Five per Cents, Small, 98, Mexican Three per Cents, 24; Ditto Five per Cents, Small, 98, Ditto, Four-and-a-Half per Cents, 86; Dutch Two-and-a-Half per Cents, 58; Ditto, Four per Cents, 94¾; Spanish Three per Cents, 36½ ; Ditto, New Deferred, 19¾ ; Ditto, Four-and-a-Half per Cents, 69; Portuguese Four per Cents, 84; and Buenos Ayres Six per Cents, 84.

The dealings in Joint Stock Bank shares have been as follow:—Australasia, 72 to 72½; British North American, 43½; Chartered Bank of Asia, 4½; Chartered of India, China, and Australia, 8½; London Chartered of Australia, 15½; London and Westminster, 34½; Oriental, 43½ ex div.; Union of Australia, 54½ ex div.; Union of London, 31½ ex div. Railway shares have been in good demand, and prices have generally improved. Australasian Pacific Mail, 15½; Canada Six per Cent Bonds, 106; Crystal Palace, 6½; East and West India Dock, 104; London 66½; Peninsular and Oriental Steam, 112; Ditto, New, 8½ ex div.; Red River, Land and Mineral, 4¼; North of Europe Steam, 7⅜; Water-works Shares have been firm:—Berlin, 1⅝; East London, 104½; Ditto, New, 104½; London Hydraulic Power, 2½; South Essex, 1⅝; Southwark and Vauxhall, 89½; West Middlesex, 10.. Ditto, New, 104½ In Canal Shares have continued to fluctuations; the following among them has not been extensive:—Albion, 52; Ailas, 19½; Argus, ... Church of England, 2½; County, 125; Surrey, 19; General, 8½; Globe, 126; Guardian, 52; Imperial Fire, ... Life, 10.. 0; London, ... Sun, ... Provident, 1½; Rock and Commercial Insurance, 3½; Rock Life, 20.. Royal Exchange, 235; Sun Life, 20.. Union, 1.. 1-16.

The imports of bullion have been on a very liberal scale, viz., about £360,000, chiefly from Australasia and America. Large supplies of gold have been purchased of the Bank for shipment to the Continent. The exports have been little short of £2 0,000. The stock of gold in the bank is now only about £13,200,000

Railway Shares have been dealt in to a moderate extent, and prices have not been supported. The supply of scrip in the market has not increased. The following are the official closing prices on Friday evening:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 23½; Caledonian, 65½; East Anglian, 1½; Eastern Counties, 12½; Great Northern, 85½; Ditto, B Stock, 120; Great Western, 72½; Lancashire and Yorkshire, 66½; Leeds Northern, 14½; London, Tilbury, and Southend, 8½; London and Brighton, 99½; London and North Western, 96½; London and South-Western, 77½; Manchester, Sheffield, and Lincolnshire, 20; Midland, 85½; Newmarket, 1 Part; Paris Extension, 4½; North Devon 4½; Scarborough, 4½; North Western, 7½; Oxford, Worcester, and Wolverhampton, 7½; Scottish Midland, 6½; Shrewsbury and Birmingham, 8; Ditto, A, and B, Vale of Neath, 8½; Shrewsbury and Hereford, 7½; South Devon, 14; South Eastern, 9½; Stockton and Hartlepool Railway, 3½; Yarmouth and North Staffordshire, 9½.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 82½; Clydesdale Junction, 98½; Edinburgh and Glasgow, 81½; Hull and Selby, 102.

PREFERENCE SHARES.—Chester and Holyhead, No. 2, 9½; Ditto, 9½; Great Northern Five per Cent, 113; Great Western irredeemable Four per Cent, 88½; Shrewsbury and Birmingham, 8½; Vale of Neath, 8½; North British, 88½; Shrewsbury and Birmingham, 8; York and North Midland B. and S. Purchase, 9

FOREIGN.—Province of Canada, 21½; Luxembourg, Guaranteed, 3½; Northern of France, 20½; Paris and Lyons, 22½; Paris and Strasbourg, 22½; Sambre and Meuse, 6.

Mining Shares have been very dull. On Thursday, Agua Fria were done at 1⅛; Anglo-Californian, ½ to ⅝; Australian Cordillera, ½; Copiapo, 13; Great Polgooth, 1½; Linares, 10½ to 10¾; and Nouveau Monde, 3¾.

Friday Evening.

The business doing in the Consol Market, to-day, has been comparatively small, at drooping prices. The Three per Cents Reduced have marked 86⅝ ⅞ ; the Three per Cent Consols, 87⅝ ⅞ ; the New Three-and-a-Half per Cents, 78¾; and Consols for Account, 87⅝ ⅞. India Bonds, 15s. discount; Exchequer Bills, 2s. discount to 2s. premium; Long Annuities, 4⅛ to 4¼. All foreign Bonds and Railway Shares have been heavy.

THE MARKETS.

CORN EXCHANGE (Friday).—The fresh arrivals of English wheat to-day were small, constwise and by land carriage. Although the show of samp ns was limited, the demand for all kinds was heavy to the extent of fully a week's supply, and for fine samples of fine new money than on Monday must have been accepted by the factors. We were very extensively supplied wi h foreign wheat, which met a ready sale at barely and the currencies had a downward tendency. Floating cargoes were much neglected, but we have no actual decline to notice in the value. The show of barley was extensive for the time of the year it was heavy, at 1s. per quarter less money. Malt ruled dull, at barely last week's currency. Oats and beans were tolerably firm, at full prices. Peas and flour were very dull. Arrivals were moderate, and prices to-day were:—

ARRIVALS.—English: wheat, 1070; barley, 610; malt, 1690; oats, 230; flour, 760. Irish: barley, 20; oats, 240. Foreign: wheat, 63,080, barley, 11,270, oats, 1060; flour, 6300 sacks, 2s,060 barrels.

England.—Wheat, Essex and Kent, red, 70s. to 83s; ditto, white, 74s. to 85s; Norfolk and Suffolk, red, 66s. to 78s; ditto, white, ... to ...; rye, 48s. to 50s.; grinding barley, 34s. to 36s., distilling ditto, 38s. to 40s.; malting ditto, 40s. to 44s., Lincoln and Norfolk malt, 64s. to 68s.; brown ditto, 58s to 62s.; Scotch, ... and Ware, 70s to 78s.; Chevalier, 72s. to 74s.; Yorkshire and Lincolnshire feed oats, 28s. to 30s.; potato ditto, 31s to 34s.; Youghal and Cork, black, 26s to 30s.; ditto, white, 27s. to 32s.; tick beans, new, 44s. to 46s.; ditto, old, 48s. to 52s.; grey peas, 44s to 46s., maple, 47s to 48s., white, 47s to 52s., boilers, 50s. to 52s. per quarter. Town-made flour, 56s. to 70s.; Suffolk, 50s. to 52s.; Stockton and Yorkshire, 47s. to 52s. per 280 lb. *Foreign:* American flour, 26s. to 44s. per barrel.

Seeds.—Linseed has met a steady demand, at full quotations. In all other seeds very little is doing. Cakes are quite as dear as last week.

Linseed, English sowing, 74s. 76s.; Baltic, crushing, 68s. to 70s.; Mediterranean and Odessa, 66s to 70s.; brownseed, 46s. to 44s. per quarter Coriander, 10s. to 12s. per cwt. Brown mustard-seed, 10s. to 12s.; white ditto, 12s. to 13s.; and tares, 5s. 6d. to 8s. per bushel. English rapeseed, £31 to £32 per last of ten quarters. Linseed cakes, English, £10 10s. to £11 5s., ditto, foreign, £10 to £11 10s. per ton Rapeseed cakes, 28 15s. to £7 5s. per ton. Canary, 49s. to 52s per quarter. English clover seed, white, 36s. to 84s.; ditto, red, 56s. to 66s. per cwt.

Bread.—The prices of wheaten bread in the metropolis are from 10d. to 11d. of households' and 9d. to 9½d. per 4 lbs. loaf.

Imperial Weekly Average.—Wheat, 79s. 5d.; barley, 37s. 2d.; oats, 26s. 9d.; rye, 43s.; beans, 40s 7d.; peas, 43s. 6d.

The Week's Average.—Wheat, 77s. 5d.; barley, 37s. 4d.; oats, 27s. 6d.; rye, 51s. 9d.; beans, 43s. 2d.; peas, 44s. 2d.

Duties.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Flour.—Very large public sales have been held this week. The biddings have ruled rather lower, and have had a downward tendency. Up to Saturday last, duty was paid on 14,490 993 lb., against 10 026 528 ditto in 1853.

Sugar.—The market continues very dull, and the quotations are well supported. Fine yellow Barbadoes has changed hands, at 33s. to 36s.; low to good, 32s. 6d. to 37s. 6d.; crystallised Demerara, 37s. 6d. to 39s. 6d.; fine yellow Mauritius, 32s. 6d. to 36s.; brown, 29s. to 32s.; brown Madras, 29s. 6d to 32s 6d. per cwt. Refined goods are firm, at 42s 6d to 43s per cwt. The total clearances to the 26th ult. were 1,060,580 cwts., against 1,354,726 ditto in 1853.

Coffee.—Mocha has met a dull inquiry, and prices have given way 2s. to 3s. per cwt. Good ord. native has been steady, at from 44s. to 45s. per cwt. In other kinds of coffee very few transactions have taken place

Rice.—A few parcels of Bengal have sold at from 13s. 6d. to 14s. per cwt.; but the market generally is inactive.

Provisions.—New Irish butter has met a steady market, at from 98s to 100s. per cwt. Foreign qualities are easier to purchase. English butter is dull, and 2s. to 4s. per cwt lower We have a good demand for bacon, for which the value of white continues to improve. Lard is held at full quotations, but other kinds of provisions are dull.

Tallow.—The article is flat, at 63s. 6d. to 64s. 6d. per cwt. Town Tallow is pressed for sale at 58s. ten cash. The imports continue good.

Oils.—Linseed oil has changed hands at 32s 6d to its present. In the value of other oils, very little change has taken place Turpentine is offers, on easier terms

Spirits.—There is steady business doing in rum, the value of which are rather higher. Proof Leewards, 2s. 6d. to 2s. 7d.; East India, 2s. 5d. to 2s. 6d. per gallon. We have a dull market for brandy, at barely last week's prices. Geneva and corn spirits are quite as dear as last week.

Hay and Straw.—Meadow hay, £3 15s. to £5 5s.; clover ditto, £2 15s. to £5 5s.; and straw, £1 15s. to £2 4s. per load.

Coals.—Stewart's Hartley, 19s. 6d.; Holywell, 18s. 6d.; Hetton, 17s. 6d.; Eden Main, 18s.; Braddyll, 18s. 6d.; Ashton, 18s.; Newvart's, 18s.; Hough Hall, 18s.; Tees, 17s. per ton.

Wools (Friday). A steady business is doing in most kinds at rates, at prices fully equal to those paid last week.—Sh.i and East Kent pockets, 10 to 10½ ; Weald of Kent, 10½ to 10¾ ; Sussex ditto, 9½ to 10¼ per cwt.

Smithfield (Friday).—Although the supply of beasts in to-day's market was but moderate, the demand was by no means brisk, and the top prices of Monday's quotations could not be obtained. We were fairly supplied with sheep, which moved off slowly, at barely stationary figures. There was a dull inquiry for lambs, at a decline in the currencies of 6d per Stone. The top figure was 6s 8d per 8lbs. For calves we had a dull market, at the following reduction of per 8lbs. Lambs, 6s 6d per score.

Per 8lbs. to sink the offals—Coarse and inferior beasts, 3s. 2d. to 3s. 4d.; second quality ditto, 3s. 6d. to 3s 8d.; prime large oxen, 3s. 10d. to 4s.; prime Scots, 4s.; and small ditto, 4s. 2d. to 4s. 4d.; coarse and inf rior sheep, 3s. 8d. to 4s. 0d.; second quality ditto, 4s. 2d. to 4s. 4d.; prime large ditto, 4s. 6d. to 4s. 8d.; prime small ditto, 4s. 10d. to 5s.; large coarse calves, 4s. 4d. to 4s. 6d.; prime small ditto, 4s. 8d. to 5s.; large coarse and inferior pigs, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 3s. 10d.; prime ditto, 4s. 0d. to 4s. 2d.

Per 8lbs. to sink the offals—Inferior beasts, 2s. 8d. to 3s. 0d.; middling ditto 3s. 2d. to 3s. 4d.; prime large oxen, 3s. 6d. to 3s. 8d.; prime small ditto, 3s. 10d. to 4s. 0d.; large cows, 3s. 6d. to 4s. 2d.; inferior sheep, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s. 2d.; prime ditto, 4s. 4d. to 4s. 6d.; veal, 3s. 10d. to 4s. 0d.; small pork, 4s. 6d. to 4s. 8d.; lamb, 5s. 0d. to 6s. 4d.

TERCENTENARY FESTIVAL of the SONS OF CLERGY, in Aid of the Funds of the Corporation for Assisting Necessitous Clergymen, Pensioning their Widows and Aged and Single Daughters, and Educating, Apprenticing, and providing Outfits for their children.

The TWO HUNDREDTH ANNIVERSARY will be celebrated on WEDNESDAY, the 10th of MAY, under the Dome of St. PAUL'S CATHEDRAL with a full Choral Service, in which the Choirs of her Majesty's Chapel Royal, St. James's, Westminster Abbey, and St. George's Chapel, Windsor, usually assisting at the Annual Festival, will be increased by a large number of two hundred and fifty voices, by members of various other Cathedral Choirs, and by other gentlemen, who have kindly offered their services. Mr. Goss, Organist of St. Paul's, will have the direction of the Choir, and, at the request of the Governors, will preside at the organ on the occasion. The Solemn Divine Service will commence at Three o'Clock.

The SERMON will be preached by the Most Rev the LORD ARCHBISHOP of CANTERBURY before his Royal Highness Prince Albert, the Lord Mayor, and Sheriffs, the Prelates, and the Noblemen and Gentlemen acting as Stewards, &c.

The ANNUAL DINNER will take place on the same day, at Six o'clock precisely, in Merchant Taylors' Hall, Threadneedle-street—the Lord Mayor presiding, supported by his Royal Highness Prince Albert and the Lord Archbishop of Canterbury.

And
Sir Robert Harry Inglis, Bart. (2nd time).
Wm. Taylor Copeland, Esq., Alderman (3rd time).
James WILLIAM FREEMAN, Esq. } Treasurers of the Corporation

The first Festival was held in St. Paul's Cathedral in the year 1655, when certain zealous members of the Church, moved with compassion for the helplessness and privations of the widows and children of the calamities of those times, formed themselves into an association to shelter, relieve, and educate. This association was called the Society of the Sons of the Clergy.

In celebrating the Two Hundredth Anniversary of the charity, the committee are desirous of rendering the Festival worthy of the noble object hope that many benevolent persons will assist by liberal contributions, by attending out their stewards, and by becoming Members of the Institution. The funds are limperially augmented to claimants from all the Dioceses of England and Wales, and annually assist about 1200 persons, of whom 700 are widows and aged unmarried daughters of deceased clergymen, whose small pensions of £10 is in one of the objects of the charity. The other 500 are annual grants, which is to extend the means of the Corporation for assisting sick and disabled clergymen, widows of clergymen, and their families in urgent cases of distress. A third object is to educate and place out in life the children of clergymen, and that by occasional assistance, granted highly valued by parents, and peculiarly calculated to effect great and lasting benefit.

The Stewards acknowledge with the greatest respect and gratitude the liberality experienced by Royal Highness Prince Albert, a munificent and generous aid which the laity are kindly affording.

The ambiguity of the Charity, the excellence of its objects, and the esteem of its Benefactors, are sufficient reasons, it is presumed, to secure for it the confidence and liberal support of all benevolent persons

Contributions will be thankfully received by the Stewards, and by C. J. Baker, Esq., Registrar of the Corporation, 9, Bloomsbury-place; Messrs. Hoare, Fleet-street; Bridges, 54, Lombard-street; Messrs. Coutts, and Mr. Edmund Fayerman, the Collector, 79, Pall Mall.

Tickets for the Dinner will be gratuitously presented to Governors and Subscribers prior to the Festival, and Tickets for the Festival and Dinner will be issued to Stewards. Applications for Tickets, addressed to Mr. Fayerman, as above, and Mr. Dalby, 10, Paternoster-row; but, to prevent disappointment, application should be made as early as possible.

No person will be admitted to the Cathedral or Merchant Tailors' Hall without a Ticket.

THE PERMANENT WAY COMPANY call the attention of Railway Directors and Engineers to their patent Bull-dog-iron, Fish-joints, and other important improvements, now in use on upwards of 200 miles of Railway.

Extract from the half-yearly report of the Directors of the Midland Railway Company, 1853:—"The Imperial Act has passed for the present (for the main-tenance of the Permanent Way) is, that the Company's engineers have been instructed to adopt the whole of the improvements wherever the Fish Joint, or certain other improvements are hereafter specified.

Every information may be obtained on application to Mr CHARLES MAY, C.E., 3, Duke-street, Westminster, or MILLIAM HOWDEN, the Secretary, 35, Great George street, Westminster

ROYAL HOSPITAL of BETHLEM.—WANTED a MATRON. Candidates must not be under 30, nor above 45 years of age; and must be unmarried, or widows unencumbered with families. They must be respectable in life, and able to devote the whole of her time to the service of the Hospital, other qualifications being equal, preference will be given to persons having experience in the treatment of the insane. The salary will be £50 per annum, with apartments in the Hospital, coals, candles, and other usual rations; also an annual allowance of coals, not exceeding ten tons, and a limited supply of gas. All applications and testimonials must be accompanied by answers to a printed form, which, with a copy of the duties, may be had on application at the Hospital. Applications must be forwarded to me on or before Saturday, the 20th May next.

Bridewell Hospital, New Bridge-street, B. WELTON, Clerk.
18 addressed April 26, 1854.

THE WESTMINSTER and GENERAL LIFE ASSURANCE ASSOCIATION, 37, King-street, Covent-Garden, London.

TRUSTEES.
George Lyall, Esq.
Colonel W. H Maycock.
Sir James Duke, Bart.

This Office, established in 1836, by Members of the Westminster Fire-office (founded 1717), has been highly successful in its operation. An economical management, a judicious adjustment of the premium to the risk incurred, and a careful investment of the funds, have enabled the Directors to make additions to policies, which have equalled one-half of the premiums received. The profits are divided every five years—the next division of which will be in 1855, and assurances effected prior to 1st of January next, will par ticipate in the profits for three years. Any information respect-ing life assurance, with prospectuses and forms of proposal, may be obtained on application to the Office.

Agents required in the principal country towns.

London: S. MEDLEY, MARSHALL, and Co.

In cloth 6vo, 10s. 6d.,
BIDEN'S TRUTHS MAINTAINED
"This sentleman thinks for himself; and much as we differ from many of his opinions, we are yet satisfied that he has intelligence to 'hit the right nail on the head.' All that he says is worth consid ring, for even when error may be in view we obtain by viewing reasons to allege on behalf of his theory, which, at all events, look strong. There is no good cause for the Established Church by under-rating the opposition of thinking, reading men, like Mr. Biden. Much may be learned from his book, which we recommend his book as attentive perusal."—Church of England Quarterly.
"His volume contains deep matter which it is necessary for men to know. —Bucks Chron cle.
London: AYLOTT and Co., 8, Paternoster row.

VOL. XXIV.] SATURDAY, MAY 6, 1854. [GRATIS.

THE ROYAL ACADEMY EXHIBITION.

WE were enabled to give in part of our impression of last week a hurried but general account of the Royal Academy Exhibition, as it appeared to us at the Private View. Yesterday (we observed) was the Private View of the Eighty-sixth Exhibition of the Royal Academy. Her Majesty was present before the nobility and critics were admitted, and is said to have expressed her entire approbation of the Exhibition. All the artists, we observed, look pleased, and there was an air of good humour about connoisseurs and professional critics, as if the Exhibition were, as a whole, one worthy of the position which English artists seek to support and advance. There can be no doubt of its being a good Exhibition, in spite of finding such men as Mulready and Millais, Dyce, Herbert, and Gibson, absent as exhibitors. Maclise and Frith were never seen before to such advantage; Stanfield and Roberts sustain their old and well-earned reputations; Lee and Sydney Cooper are on the move forward; Creswick has made a decided advance; Ward exhibits a finer sense of colour; Frost is still nearer Milton's mark; Frank Stone betrays no falling off; Edward Cooke is once more in Holland; and, as for the outsiders—the men without the pale of the Academy—Ansdell, Phillip, and others—how much have they done, and ably done, to rival some of the best within the pale! Yes, it is an excellent Exhibition, in spite of a solitary Female Head from Sir Charles Eastlake; in spite of a professedly "unfinished" picture by Sir Edwin Landseer; and in the absence of any great work from Webster, or from Egg.

If we had to characterise the Exhibition (our criticism continued), we should say that Maclise and Frith excel in invention, and that the best picture, as a whole, is unquestionably Mr. Frith's "Life at the Sea-side"—a picture of such surpassing merit, that it is fairly worth any other half-dozen pictures in the Exhibition. In Scriptural subjects, and in the higher order of painting, Dobson and Frost most unmistakeably take the lead; in Landscape, Roberts and Stanfield, Lee and Creswick, Cooper and Cooke, are still pre-eminent—though there is an Anthony in the West Room (his only picture), "A Solitary Pool," that is more than up to the level of the best of them; in History, Ward and Hannah may be named together; in Portrait-painting Grant takes the lead over all competitors—his full-length of Lord John Russell being by far the finest portrait in the Exhibition. He has this year outdone (no easy matter) Sir John Watson Gordon; though he is followed hard, but in a different way, by Boxall. Strange to say, Grant is not good in his female portraits: his best is a full-length, in black, of Mrs. Percival Heywood. In the Miniature and Crayon Room, Ross and Thorburn reign without rivals likely just yet to rob them of sitters; though we must own that the Lady Sarah Cholmondeley of Mr. H. T. Wells, is all but up to the Thorburn and Ross level. Among the Crayon portraits we miss Richmond and Watts, but are glad to find a new exhibitor of successful promise—a Mr. Charles Martin, the son of the distinguished painter so recently deceased. In the Architectural Room there is nothing in point of excellence to be mentioned in the same breath with the three Pompeian studies of Mr. E. Falkener: three choicer drawings are not to be seen in any exhibition—they are done with the skill of an architect, the knowledge of an antiquary, and the feeling of an artist. Of the Octagon Room we are unwilling to speak: our inspection of it was a hurried, unrewarded

(Continued on page 424.)

"THE LAST SLEEP OF ARGYLL BEFORE HIS EXECUTION, 1685."—PAINTED BY E. M. WARD, A.R.A.

INDUSTRY IN THE UNITED STATES.

REPORTS OF MESSRS. WHITWORTH AND WALLIS.

THE Commissioners sent from England to report on the New York Industrial Exhibition, have done more to make the industry of the United States known in this country than all previous travellers. Two of them, at least—Mr. Joseph Whitworth, the eminent engineer, or, rather, tool-maker, of Manchester; and Mr. George Wallis, connected, we believe, with Birmingham—have made special reports, and their descriptions are calculated to astonish, and perhaps, alarm, the devoted admirers and patriots of Old England. Of the great superiority in future, in point of numbers, of the Americans to our population, and, indeed, to the population of any single empire of the world, except China, there is no doubt. Between 1801 and 1851 the population of Great Britain and Ireland has nearly doubled, or increased from 16,000,000, speaking in round numbers, to 28,000,000; but, in a similar period—between 1800 and 1850—the population of the United States increased from 5,300,000 to 23,000,000, or more than four-fold; and there is good reason to believe that it is increasing in an accelerating ratio. At the same rate of progress, while our population by the end of the century may be 50,000,000, the population of the United States will be nearly 100,000,000. Without positive evidence, it might have been inferred—as only industry and skill can increase the means of subsistence—that the Americans are both industrious and ingenious, and the two Commissioners have laid before the public much evidence of this important fact. Not only have the Americans a large continent before them to subdue and fill, but they are achieving their great task with indomitable energy. The most extraordinary part of the matter is that means are everywhere provided for the education of the multitude as they increase. Every child, of either sex, goes, or may go to school. On leaving school he is perfectly free to exercise his faculties as nature prompts: he shares in all public discussions; he has his newspaper: and every one, therefore, of the increasing multitude will be, as the rule, a perfectly developed human being. There is an abundance of the means of subsistence, united with complete freedom, so that all the faculties, bodily and mental, of the vast mass, will grow unrestrained. This is the short summary of the astonishing information the two Commissioners have brought from the United States, and have boldly stated to all her Majesty's subjects.

"I could not fail (says Mr. Whitworth) to be impressed, from all I saw there, with the extraordinary energy of the people, and their peculiar aptitude in availing themselves of the immense natural resources of the country. Their skill in the aid of machinery in almost every department of industry. Wherever it can be introduced as a substitute for manual labour, it is universally and willingly resorted to." For example, in plough making, eight men are able to finish thirty ploughs per day; in door making, twenty men make a hundred panelled doors per day; in last making, the process is completed in a minute and a half; in sewing, by machinery, one woman does the work of twenty; in net making, one woman does the work of a hundred. "The eager resort to machinery, wherever it can be applied, under the guidance of superior education and intelligence, is mainly the cause of the remarkable prosperity of the United States." "Combinations to resist the introduction of machinery are unheard of in the States. The workmen find with satisfaction all mechanical improvements; the importance and value of which, as saving them from the drudgery of unskilled labour, they are enabled, by education, to understand and appreciate." "In every state of the Union, and particularly in the North, education is, by means of the common schools, placed within the reach of each individual, and all classes avail themselves of the opportunities afforded. The desire of knowledge, so early implanted, is greatly increased; while the facilities for using it are amply provided, through the instrumentality of an almost universal press. No taxation of any kind has been suffered to interfere with the free development of the powerful agent for promoting the intelligence of the people; and the consequence is, where the humblest labourer can indulge in the luxury of his daily paper, every body reads, and thought and intelligence penetrate through the lowest grades of society."

The observations made by Mr. Wallis confirm those made by Mr. Whitworth. He speaks of—

"A constant effort to supply the want of skilled labour by applications of mechanical powers." He, too, is "impressed with the advantages derived from the long and well-directed attention paid to the education of the whole people. As there is no apprenticeship system (he says) properly so called, the more useful the youth engaged in any industrial pursuit becomes to his employer, the more profitable it is for himself. Bringing a mind prepared by thorough school discipline, and educated up to a higher standard than those of a much superior social grade in the Old World, the American boy develops rapidly into the skilled artisan, and, having once mastered one part of his business, he is never content until he has mastered all. The restless activity of the mind, body, and anxiety to improve his own department of industry, the facts constantly before him of ingenious men who have solved economic and mechanical problems to their own profit and elevation, are all stimulating and encouraging; and it may be said that there is not a working boy of average ability in the New England States, at least, who has not an idea of some mechanical invention or improvement in manufactures, by which, in good time, he hopes to better his condition, or rise to fortune and social distinction."

Thus the astounding fact is revealed to us by Mr. Whitworth and Mr. Wallis, that the individuals of the mighty mass of human beings existing and coming into existence in North America, are superior to the average of Europeans. If they are not exactly as has been said, a nation of Franklins and Stephensons, they abound in men of energy, genius, and talent, and are as much superior individually, as they are in national progress, to the Italians, the Spaniards, and the Germans.

It is very commonly supposed that the Americans are indebted to European arts and to the assistance of European workmen for their great success. There is some truth in the supposition, but it is not entirely true. That the Americans were able, in the first instance, to apply European knowledge and European arts in a country unfettered by European systems of Government, and the European appropriation of the soil is undoubtedly one cause of their wonderful progress; but Mr. Wallis tells us:—

There are very few Englishmen, compared to what I expected to find, or are generally supposed to be, engaged in the industrial establishments of the United States. The hours of labour are too long for most of those who are induced to emigrate; and it is no uncommon thing for the really skilled and steady artisan, who can earn a sufficient livelihood at home, to return after a brief trial in the United states. Taking into consideration the whole number of English, German, and French, employed in the United States, I believe that eight-tenths of the artisan class are Americans, or the children of Europeans, rather than Europeans themselves.

Mr. Whitworth, too, states that the Americans, finding a great plenty of wood in their country—having, in fact to clear it away, in order to get unencumbered ground to cultivate—have applied it to every possible purpose, and manufacture it by every kind of labour-saving machinery. They have saw mills, planing-machines; machines for making boxes, matches, and laste; machines for saving labour in making furniture, ploughs, churns, carriages, &c. So that Mr Whitworth, one of the most ingenious and well-informed of men, is himself astonished at the numerous applications of machinery to the manufacture of wood. "England has done something in this way," he remarks, "by the celebrated block-making machinery at Portsmouth, but much less than has been done in America." Instead of the Americans borrowing from Europe, the people of Europe, especially of England, who are best able from their own achievements, to appreciate what is done elsewhere, are borrowing from America. From one thing the Americans have gone to another, without coming through Europe.

The character (says Mr. Whitworth) thus given to one branch of manufactures has gradually extended to others. Applied to stone dressing, one man is enabled to perform as much work as twenty masons by hand. So great, again, are the improvements effected in planing machinery, that one man can attend to a mule containing 1068 spindles, each spinning, three hanks, or 2764 hanks in the aggregate per day, in Hindostan, where they spin by hand, it would be extravagant to expect a spinner to accomplish one hank per day: so that in the United States we find the same amount of manual labour by improved machinery doing more than 300 times the work.

On many other points they are eminently successful. They have machines for making shirts entirely, except the gussets; and one woman does as much as from twelve to twenty hand sewers. In applying Indiarubber to many purposes they are eminently successful. They have more railways and telegraphs than any other people, and make more use of them. They do not waste their resources on ornamental buildings before the railway is brought into working order, but, good sense predominating, they study economy in the construction and speedy completion of railways. There are between twenty and thirty electric telegraph companies in the States, and there are not less than 15,000 miles of telegraphic lines, and more are continually being constructed. The lines are used by all classes, and for the conveyance of all kinds of information. Thus, while it is quite true that the Americans derived the beginnings of their knowledge and their arts from Europe, they have long since gone far ahead of Europeans; and, in material arts, as well as in political and moral regulations, they surpass all that is considered to be excellent in the Old World. Their progress, which is connected with their freedom, illustrates its advantages. For the complete proof that political freedom gives birth to individual superiority in every man in the States, approximating to the first-rate geniuses of the Old World, we are indebted to the elaborate and excellent reports of Messrs. Whitworth and Wallis. Mr. Whitworth visited and inspected a number of establishments for making steam-engines and machinery of all kinds; he examined all sorts of instruments and all sorts of factories. Mr. Wallis did something of the same kind, but was more limited in his range, confining himself chiefly to "manufactures as a result;" while Mr. Whitworth extended his observations to "machinery as a means," in which, says Mr. Wallis, the Americans are remarkable for "originality of conception, construction, and application." While other travellers have glanced over the surface of society in the States, amusing us by its oddities and its merry or farcical contortions, these Commissioners have been privileged to inspect the beatings of its youthful and mighty heart, to examine the sinews and the muscles of its growing and herculean frame; and the picture which they draw of its impulse and its power excite our admiration of the probable destiny of man on earth. That civilisation proceeds with tolerable uniformity, seems exemplified by the past history of Europe. That all nations are hereafter to grow and expand together more than heretofore, seems highly probable from the rapidly increasing communication between all. The most distant in space are brought within a few days or weeks of each other. The oldest and the newest—China and America—are in close and continual communication. Therefore, we may hope all mankind will become what the Americans are. At least, the addition, in a century, of 100,000,000 to the population of the civilised world—the addition having in advance of the majority of the nations of Europe, as much as these are in advance of the majority of the nations of Asia, will have a wonderful and beneficial influence on the progress of all. Into the various important details of the different manufactures carried on we cannot follow the Reports of the Commissioners; but from no other writings or books that we are acquainted with can so much information be obtained of what is doing in America, or such an insight be gained into society there.

THE SWITZER'S SONG ON THREATENED INVASION.

I.

THE gusty wind of stormy March
Comes booming loudly through the trees;
From dusky pine and lofty larch,
Ring wild and wierd like harmonies.
It whirling smites our cottage grey.
Then fearless leaping gorge and peak,
Till, passion spent, it dies away.
Pile high the faggots! let them blaze
As beacon sight to nations stray;
With generous wine the flagon fill!
Through storms and tears
Hope radiant peers:
Life's short—enjoy it while you may!

II.

O'er all the East a tempest lowers,
Scared Freedom turns to face the gloom,
Such stillness fears the thunder showers,
Or hurrying march of fierce simoom.
The surging sounds from gathering hosts
Float hitherward, like ocean's hum.
We fear no foe—the nations know
The Switzers' welcome when they come.
Pile high the faggots! let them blaze!
Bring forth the trusty sword and gun!
With generous wine the flagon fill!
Come hope or fear,
Our course is clear—
Life's short, but sweet with duty done!

III.

Should ruthless squadrons venture near
With flame of war—however brave—
Our shaggy trees shall form their bier,
Our valleys green a quiet grave.
Here thrice ten thousand hearts beat high,
And guard the land they love so well;
Willing great Arno d's death to die:—
Worthy the bow of dauntless Tell.
Pile high the faggots! let them blaze!
'Tis wise preparing for the worst.
With generous wine the flagon fill!
Come peace or war,
Come death or scar—
Life's short, and should be duly nursed!

IV.

The storm that strikes the pampered elm,
And brings its crown of glory low,
While wrestling with our mountain pine
Makes every root the firmer grow.
Though tyrants strain, with rack and chain,
Till beaded blood tears start and roll—
O Torture's tooth but gnaws the truth
The deeper in the patriot's soul.
Pile high the faggots! let them blaze!
The voice of freedom swells the gale:
With generous wine the flagon fill!
The God of might
Defends the right—
Life's short, but none dare us assail.

V.

For liberty our fathers fought,
For liberty we, fight again.
Better is death with freedom wrought,
Than life where liberty is slain.
If poor in wealth, we're rich in health;
If small our power, few cares have we.
Within our misty mountain home,
We're, like our Alpine torrents, free.
Pile high the faggots! let them blaze!
Our love of freedom ne'er shall cease;
With generous wine the flagon fill!
Come storm or strife—
Come death or life,
Life's short, but heaven is full of peace!

April, 1854. FRANCIS BENNOCH.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

Mr Rowland Hill is appointed principal secretary at the Post-office, in the room of Col. Maberly, who goes to the Audit Board.

Lord Carlisle arrived at Constantinople on the 14th ult., in the *Fury*, from Varna.

It is said the Emperor of the French will, before long, cause the remains of his uncle, Prince Lucien, to be brought from Canino to Paris, to be deposited in the vaults of St. Denis, in the spot destined by Napoleon I. for the members of his family.

The Marquis of Waterford is erecting at Coolfin, near his Lordship's estate, a race-course, which is to be similar to that of Manchester.

Before the French troops had been in Gallipoli three days they had named the streets, numbered the houses, and established a police.

A smart shock of earthquake was felt in Kingston, Jamaica, on Saturday, April 1, a few minutes after 5 p.m.; its duration was not longer than one could count ten, but the undulation was severe.

Among the military sketches and caricatures now seen in the Paris picture shops, one representing a French army on the Danube, has lately appeared, with the following apostrophe to Russia at the foot:—"You have reminded us of the frost of 1812, we will make you remember the thaw of 1854."

Lord Palmerston is about to bring forward a measure to establish an efficient police in counties and boroughs in England and Wales.

The comet was visible at Jamaica on Sunday, April 2, for the first time, above the western horizon. It was of great magnitude, and was watched with much interest by the thousands of spectators.

In the Legislative Council of Victoria, a bill for the extension of the franchise to the diggers was introduced by the Colonial Secretary on the 1st of February.

The Swedish Government has just presented to the diet a bill for the adoption of the decimal system in money, weights, and measures.

There are now on the roll of the British army but two Field-marshal, viz. His Royal Highness Prince Albert and the King of the Belgians.

The letter recently sent by the King of Prussia to the Emperor of the French is said to have had no political character, but simply expressed his thanks for certain works of art forwarded to his Majesty.

Lord Napier, late Secretary to the British Legation at St. Petersburg, has been appointed Secretary of the British Embassy at Constantinople.

The contract for a new railroad from Quebec to Montreal, on the north shore, has been given to a Mr. Baby, a very enterprising French Canadian. The distance is over 150 miles.

A Russian decree announces that Nicholas Baird, a British subject, employed since 1823 as mechanician by the Navy Board Administration, has become a Russian subject, and is to continue his functions in the port of Cronstadt, with the title of a civil engineer, and the rights of hereditary citizenship.

The steam-ship *Great Britain*, which left Liverpool for Australia on Saturday put back on Sunday, in consequence of one of her steam-pipes having burst. It is said that the accident will cause a detention of ten days.

It is said it is to be in contemplation to alter the original plan of the Holyhead Breakwater.

The average traffic receipts on the Great Indian Peninsular Railway for the short distance opened amount to £2360 per week. Those on the Great Western of Canada for the week ending April 7th were £5679.

The total emigration from Liverpool to all foreign ports last month, in ships subject to Government inspection, has been 29 654, a larger number than ever was sent from that port in the same period.

No less than 1351 tons of copper were shipped from the Cliff Mine last year; and the *Lake Superior Journal* states that it has produced, on an average, 100 tons per month during the past year, without any apparent diminution.

Several agents are at present in Tunis, where they have gone to purchase horses for the English army.

The Australian ships which arrived in the Thames on Saturday last brought the first clip of new wool.

The last accounts from the guano islands say that there were sixty-five British vessels lying there, with an aggregate of 40,275 tons; that seamen were very scarce, and that 1000 men were wanted to supply vessels at the Chinchas, without crews capable of taking them home.

There are now three regimental colonelcies at the disposal of the Commander-in-Chief—those of the Royal Horse Guards, vacant by Lord Anglesey's death; of the 70th Foot, by General Halls; and of the 86th, by General Parkes.

The wheat throughout France presents the most luxuriant appearance. In the strong lands it is fifteen days earlier than in ordinary years, and there is every prospect of a most abundant harvest.

The total amount issued out of the Consolidated Fund for payment of interest on the portion of the Greek Loan guaranteed by this country, has been £503,602, of which the Greek Government has repaid £31,050, leaving a balance due of £472,950.

Workmen are now engaged in laying down pipes along the whole range of quays in St. Katherine Docks, for the purpose of applying hydraulic power to the numerous cranes in the warehouses.

A few days ago there was lying in the Toxteth Dock, Liverpool, a vessel taken by Nelson in 1801, at the battle of Copenhagen. She had been an 18-gun brig and was considered a prize, was in excellent condition.

The Grand Council of Zurich has almost unanimously approved of the decree of the Council of State concerning the Polytechnic School, and voted £1,000 towards the completion of an appropriate building for the establishment.

Seventy of the inhabitants of Guernsey have chartered a vessel to enable them to emigrate to Australia. The population of the Channel Islands is declining. Hundreds of houses in Guernsey are to let.

The volunteer corps of "cross bearers" organised by the Russians in Wallachia, as a chosen band of champions of Christ, has been disbanded; not as a concession to Austria, but on account of its indomitable propensity to stealing.

The steam-ship *Lusitania* reports that the vine disease has reappeared in Madeira.

The hippopotamus in the Zoological Gardens has become so furious lately, that a new building has been rendered necessary for its safe keeping. The present den will be occupied by a female hippopotamus, a present from the Viceroy of Egypt, which is expected in June.

The Panama Railroad Company has obtained a large number of labourers from Jamaica, at 3s. 2d. per day, with rations. The sugar-planters are rather sore at the abstraction of their hands.

Three attempts were made to set fire to warehouses in Manchester last Sunday, all of which were unsuccessful. Altogether, about twenty attempts of a similar kind have been made in Manchester within a few weeks.

The last Australian Mail states that the attention of the colonists was principally directed to the means of defending Melbourne and Port Phillip from an attack by Russian cruisers. It was proposed to raise a mining, to fit out gun-boats, and to arm small steamers with Congreve rocket batteries.

The pear crop in Worcestershire, so celebrated for its perry, will be a failure, owing to the injury the blossom has received from the late cold and frosty nights.

The population of the city of Cleveland, Ohio, has grown from 500 in the year 1825 and 6071 in the year 1840, to 35,000 in 1854; to which is added 10,382 in O to City, on the opposite branch of Cuyahoga River, making altogether 45,382.

A Ragged School was opened last week in Southampton.

The total gold and silver coinage by the United States, from the establishment of the Mint in 1792 down to the 31st October 1853, a period of sixty years, amounts to 370,008,191 dollars. Of this 288,390,565 dollars were of gold, and 86,217,627 dollars of silver.

The departure of the *Simla* steamer with the outward mails from Southampton, for India, has been postponed to the 8th instant. The mail to go by her, viâ Marseilles, will be made up on the evening of the 9th.

A letter from Adrianople announces the arrival in that city of the Kurd Amazon, with her 400 horsemen. She was only waiting for the orders of the Governor to begin a campaign.

From a return just published, it appears that the national income for the year ending the 5th April amounts to £54,774,266 1s. and the expenditure to £51,250,129 6s. 1d. Thus shows a surplus of £3,524,736 14s. 11d.

The imports of coffee into the port of London this year have been more than double what they were up to the date in 1853.

Recent advices from Alexandria state that the Viceroy of Egypt has repealed the decree prohibiting the export of grain.

An observatory is being erected at Madrid, and the Government has ordered the requisite instruments to be constructed at London, Paris, and Munich.

At the last meeting of the Geographical Society of Paris, the gold medal was awarded to Dr. Barth, for his important geographical discoveries in Central Africa.

LITERATURE.

REGINALD LYLE. By Miss PARDOE, author of the "Life of Marie de Medici," &c. 3 vols Hurst and Blackett.

We feel almost afraid to speak the truth about this new novel by Miss Pardoe. When there is nothing very unusual or very singular to be said of a work, everybody takes the critic's account of it with perfect good faith. Mediocrity is common both in people themselves and in their performances, and no one is surprised to hear, or to gather that he will find in it one or other of its thousand varieties, if he reads this or that last publication. On the opposite hand, when rare excellence happens to be attributed to any production, a great many persons immediately suspect that there must be some mistake. In general, people much more readily believe an assurance that only what they themselves could do has been done, than that something has been done which is much beyond the average capacity. An immense majority understand at once how a writer can be stupid; they could be stupid themselves, if they tried.

Drawing a long breath, then, we will confront the natural difficulties of a duty which devolves but too seldom on the literary reviewer. Miss Pardoe's last work is one of the most remarkable fictions we have ever read; and—why should we not say it courageously, since we think it honestly?—we consider "Reginald Lyle" to be, in fact, by at least equal, if not superior, to any novel written by a woman, in the English language. Of course (speaking still of lady writers), we put aside as things of no estimation or account whatever, in that grade of literary merit which we have now to examine, the whole mass of those miserable incubrations which have no other distinction than that of being called "fashionable novels." Fashionable life is a fair and proper subject, like any other manner of actual and real life, for the novelist. Therefore we would not condemn, and we never have condemned, a fiction, because it selects that particular phase of the social orb for map or picture—still less because it includes it in wider delineations. But those unessential almanacks of all that is most transient and worthless, and purposeless in the arrangements, not of men and women, but of euphonious names and grand coat titles, offered to our attention in the place of human beings and their human vicissitudes—those wretched professions not the writings to be superior to which we would call a merit in "Reginald Lyle."

The mere "fashionable novel," to which we here passingly allude, is fast becoming extinct, as a class of "literary," or rather as a class of most *illiterate*, works. But, unhappily, the want of judgment in some of our writers, that, while abandoning the principle of making a book exclusively depend upon the rank and fashion of the imaginary characters introduced in it, they nevertheless rely a good deal for success in the employment of a smaller quantity of the same "*enthusiasm*," has ruined the elders and founders of their only very slightly amended school. From the lowest let us look to the highest. Miss Edgeworth appears to us to be unmeasurably the best of the female novelists of the three kingdoms, for reasons which it would cost us no difficulty indeed, but much space, to state. And even if our readers, on perusing this new work of Miss Pardoe's, should agree with us in thinking that there is no individual book of Miss Edgeworth's quite so finished as "Reginald Lyle," that will not affect Miss Edgeworth's paramount fame, or her title to be called the first in merit. This, for two reasons. The first is found in the great variety and quantity of what she has written, almost all excellent and all, perhaps, superior to everything by the author of "Reginald Lyle," except that work itself. The second reason consists in the greater originality and fire of Miss Edgeworth, evinced even in the very productions, which, as appertaining to each and such genus or classes of literary labour, answer to their ends less completely. Here are scores of novels which are less perfect than "Reginald Lyle," and which, nevertheless, display both more genius and more knowledge. But, as a piece of work, with a beginning, a middle, and an end, with enough of what its own mechanism wants, enough for utility, enough for pleasure, enough for profit, and with nothing extraneous; clean, incisive, bright, finished, durable, and beautiful, it is hard indeed, to conceive a novel more perfect even in idea than this actually in execution.

But how? It must, then, be a very unusual sort of book. Well, it is not a book of the usual sort. And if we devote to it but a short notice in proportion to its merit, this is the consequence of the exigencies of our space. However, we will indicate one or two things in a more particular manner. In the first place, out of some 930 pages of which the three volumes consist, there is not even one which can be termed dull; and, so far as our memory serves us, there are only five which come not justly within the description of interesting to an unwonted and remarkable degree.

The great point in a plot in these works which treat of common men and women, and of their common passions and common interests—taking as history and science are forced to omit and to neglect. The great point in these valuable and necessary works is *a plot*; and the great point in a plot is to have it simple. Now, the plot of "Reginald Lyle" answers the primeval, natural, indispensable requirement of unity and simplicity in such a way that, on the subject and scheme and origin of it in a dozen words to a friend; and yet that plot is so full of pith and intrinsic juice, that it germinates into an inexhaustible prodigality of natural incidents and situations. Why is a plot or design—for they are words which imply the same—so thinly sown in modern fictions, rather than execution? Because nothing can be executed till what is to be executed is determined. Two engineers sink for a well. The sinking belongs to execution. Where to sink belongs to design. One works in the wrong place, the other in the right. Even if the less perfect and the less scientific works be in the right place, and the more perfect and more scientific in the wrong, can there be any doubt about the result? The same principle, here pointed, would condemn in all works of art the wasted and scattered energies of a design which wanted unity and simplicity and which was either misdirected originally or diverted by intervening digressions. We spare our readers a hundred obvious illustrations.

The next great merit in a novel is character. In "Reginald Lyle" there are many characters, and so fleshcasted, that we venture to say that not one of them will be easily or soon forgotten by those who read the work.

Of the four cardinal requisites of a novel, we now mention, third, what, in certain points of view, is perhaps the smallest—we mean *style*; a potent angel, however, whose presence, in the guise appropriate to the wants of the occasion, makes an incalculable difference in the fate both first and last, of literary productions. The style of the present book is, in the main, good; it is lively, fluent, natural, and tolerably correct. But that is the utmost we can say in its favour. There is one *grammatical* mistake repeated wherever there is room for the repetition—"*Whomsoever*" cannot be nominative to a verb. "I give the lie to *whom* never said so," or to "whomsoever may be the false knight, and disgracefully slattern style. Of course, Miss Pardoe knows all this as well we know it. Such mistakes are mere oversights; but it is a thousand pities to permit oneself to contract a habit of making them, or that they should disfigure a work full of exalted beauties and merits. These forms are no excuse: it is as if a woman imagined that, because she had great and noble qualities of mind and heart, she could afford to appear in public with her stockings over her shoes, or her hair unbrushed, or exhibiting habitually any other undeniable form of small incorrectness.

The last great point is the morality of the work. Nothing can be higher. The tone all through is admirable; the treatment of incidents and machinations is skilful; and there is not a little of brilliancy and originality in the evolution of the result. We will not spoil the interest by telling the story; but its lesson we might adumbrate by observing that you could inscribe for motto on the title page of such a narrative the suggestive words—*Persons, Almost as Bad as Bad Princes.*"

CORREGGIO: A TRAGEDY. By ADAM OEHLENSCHLAEGER. Translated, with Notes, by THEODORE MARTIN. John W. Parker and Son

So far as England and English readers are concerned, the 'Correggio' of Oehlenschläger will, we think, remain for ever rather a play to read than a play to act. And yet it ought, in itself, to suit the stage excellently. The plot is natural and straightforward; the incidents clear; the characters are marked with astonishing distinctness; the sentiments are noble or base in that vigorous degree which is suited to tragedy, and the poetry of the composition is of a simple and beautiful kind. The play, we say, ought in itself to succeed on the stage. Yet it will scarce be the English stage. The incidents are but few; the action is far more gentle than that of the tragedies to which our national taste has suggested to the muse of this land; and, perhaps, indeed, the whole tone of the work is too tender, and the natures of the interest too quiet, too retiring, and too straitened in scope, and too similar in its source, to suit an audience accustomed to the rapid and vivid excitement of the British drama. An artist's hopes and fears, and trials, as such, are in truth not the best subject for tragedy, whatever may be the scene of representation, or of whatever nation the audience. An artist's destiny—if treated by a dramatist who bears in mind that the character, before and above being an artist, is a man—for is a proper element enough in any drama; just as a soldier, a merchant, a priest may mingle in the mimic plot, for they mingle in the real. But we question whether Oehlenschläger has not made an original and fundamental mistake in the sources from which he seeks to derive the interest of his tragedy on the painter Correggio. Let us not be misunderstood. It is a fact which we could not deny, that thousands of persons exist, to whom their several pursuits and professions are respectively all the world, containing everything which concerns, and everything which, in their actual career, bridles them. Therefore, in telling their story, the main interest would be in those things, or nowhere; and such a story might be a necessary story in recording facts; it might also possibly be an eligible subject, in peculiar cases, for fictitious narrative. But in the drama the very essence of what is wanted, is to represent characters in their relations with the general interests and the common passions of mankind; and even where, in a narrative, the chief peculiarity to be described in any given person, might be that he withdrew habitually from the contact of his fellow creatures, and led a life of remote isolation, yet, were that person made the principal figure in a tragedy, the only real interest with which he could be invested, would be entirely wanting, unless situations in his life could be found, where that which constituted the paramount estrangement of his character prevailed not at all, and where he could be represented in the very thick of human relations, and of the ordinary passions and destinies of life. A painter may, indeed, be an excellent character in a tragedy; but then the immediate plot-interest of his part must be made stronger than the peculiar professional interest of his character. The *character* is that which belongs to him independently of all the other individuals in the play; the *part* is the character in action along with the other individuals. And in the play, we contend, (and it is evident) the part is superior to the character. Wherever the character eclipses the part, it enfeebles and injures the drama as such. There must come out more of the character of a doctor, for example, in ten years' ordinary practice, than in the half-hour during which he happens to save some illustrious patient snatched in despair by every other physician. But that half-hour is more dramatic than the previous ten years.

We question, then, whether in this tragedy, with its hero, the painter in this 'Correggio," Oehlenschläger has not a little, just a little (for natural human interest he introduces also), more poet than dramatist. However, it is a noble and beautiful work to read, and before a select or congenial audience we could conceive it brilliantly successful even on the stage. The English public have now an opportunity of estimating the Danish poet. Mr. Theodore Martin's translation does not read in the slightest like a translation, so wonderfully easy, natural, and excellent is the English. We strongly recommend the book. The original is deemed a masterpiece in the north of Europe.

Before closing this brief account of one of the finest modern emanations of the Scandinavian muse, so admirably rendered here in our language, we must make a curious little passage in the original; we say in the original, for, of course, Mr. Martin is not responsible for what Oehlenschläger may happen to have written. Probably, Mr. Martin himself will have remarked what we mean; he must have perceived it towards the bottom of page . This version, occur the following lines (*loquitur* Julio Romano):—

> Raphael has raised to heaven what was of earth.
> You draw the heavenly downwards from the skies,
> To marry with a form of earthly mould.

We referred to the original text of Oehlenschläger; we think we have here to make no less a curious little passage in the original; we say in the original, for, of course, Mr. Martin is not responsible for what Oehlenschläger may happen to have written. Probably, Mr. Martin himself will have remarked what we mean; he must have perceived it towards the bottom of page . This version, occur the following lines (*loquitur* Julio Romano):—

> Raphael has raised to heaven what was of earth.
> You draw the heavenly downwards from the skies,
> To marry with a form of earthly mould.

We referred to the original text of Oehlenschläger; we think we have here to do with the original text, rather than one of the noblest of all English poets, John Dryden. Has the gifted Danish author ever read that inspired ode on "Alexander's Feast"? It ends, he will remember, with this couplet:—

> He raised a mortal from the skies;
> She drew an angel down.

ARCHITECTURAL STUDIES IN FRANCE. By the Rev. J. L. PETIT, M.A., Weale

THE study of the Gothic style of architecture has of late years been ably illustrated by the publication of several important works on the subject; the better appreciation of which is likewise to be traced in the edifices erected by contemporary architects. We no longer witness the multiplication of "Carpenters' Gothic," the stigma applied to many buildings of the first quarter of the present century. Our architects have studied with advantage the noble examples of antiquity; and have not applied their designs "here a little and there a little;" but have imbibed the spirit of the period, and shown its artistic brilliance in scores of churches built within the last thirty years, to the commendable neglect of the miscalled Classical style adopted by Soane, and a host of designers of less note and success.

The volume before us is a valuable acquisition for the study of what has been termed our own style, in some of the finest examples, in French architecture, in many instances the work of English architects. In the advantage of this text and study M. Petit thus illustrates:—"The peculiarities of a national style strike the visitor more forcibly than the native; while, on the other hand, the features to which he is accustomed acquire a new interest. The student may discover that many of those which he has been taught to consider necessary marks of Gothic architecture itself are, in fact, no more than national or local distinctions; and hence he may reduce into a narrow circle the system from which he endeavours to work out the true principles of the style.

"We cannot, I think (continues the author) fully enter into the character of English architecture, unless we give some attention also to French, German, and Italian. And if we take that most interesting period when the germs of the Gothic style was beginning to develop itself, namely, the end of the twelfth and the beginning of the thirteenth century, we shall at once see the high claims of French architecture. The Italian never did reach to the Northern Gothic," which M. Petit considers the true Gothic, however fully he admits the beauty of the Southern Pointed style. The German transition appears to him scarcely more than a peculiar form of the Romanesque, with little or no tendency to further progress. The French and the English have, however, at the above time, a double movement in the direction of Northern Gothic; and they possess inherent and independent vitality of their own. It will be observed that the period to which M. Petit refers is subsequent to the Norman Conquest; hence he terms the architecture Normanised English, or Normanised French; "for the Normans are more indigenous people than of one country than of the other." In England, there can scarcely be said to exist any anti-Norman style, for her alleged Saxon remains present nothing that can be opposed to the merits of the Norman. M. Petit supposes the case to have been much the same with a great part of northern France: "It is, therefore (he observes), in these localities that we might look for a more ready, rapid, and complete transition; while, in places where either Norman influence was less felt, or the native architecture more firmly established, the transition would be slow and imperfect, and a frequent impulse from without might be required to bring the new style to maturity. M. Petit believes the Gothic principle to have been more completely developed at an early period in England than anywhere else; and the comparisons between Amiens and Salisbury do not convince him to the contrary. In the work before us he has devoted himself principally to the Ante-Gothic, the Transitional, and the Early Gothic styles; those of the fourteenth and fifteenth centuries, much as they contribute to the magnificence of French ecclesiastical architecture, having occupied but little of the author's attention.

In advocacy of the plans here adopted, he maintains that a student would obtain more knowledge of English buildings, and less of foreign ones, [illegible] by [illegible] examples—than by giving up his time exclusively to the former, and examining every old church or old specimen in the country. In England we do not possess sufficient remains of mediæval architecture for its revival, which is [illegible] the number of [illegible] and [illegible] and [illegible] and [illegible] casually; but the children is occasionally laid under contribution. [illegible] engravings consist of [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] details. Some are amateurish professedly rough copies of [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

OPENING OF THE EXHIBITION OF THE ROYAL ACADEMY, 1854.

"A LETTER-WRITER, SEVILLE."—PAINTED BY J. PHILLIP.—THE PROPERTY OF HER MAJESTY THE QUEEN.

(Continued from first page.)

glance. In the Sculpture Room, the chief point of note is that there is no large portrait statue, beyond that of Sir Robert Walpole (by Bell) for the New Houses of Parliament. Mr. Jones's busts of the Queen and the Prince, to be presented to Mr. Dargan, occupy the principal position; flanked on either side by a "startled" girl, called "The Young Naturalist," by Weekes, and "Godiva," unstartled, by Marshall—the latter by far the better figure.

Of the general arrangement of the Exhibition we gave this account:—Our readers will remember that the Exhibition is shown in three great rooms, leading into one another; in two offshoots, for Miniatures and Architectural Drawings; and in a kind of cell or coal-cellar, for Sculpture. The principal room is to the east, facing the portico of St. Martin's Church; and there the places of honour are occupied by Eastlake's "Irene" (a female head so called); by Landseer's very large picture of "Royal Sports on Hill and Loch;" by Frith's "Life at the Sea-side;" and by Leslie's scene from the "Rape of the Lock;" while above, among the portraits of honour, we find Grant's fine full-length of Lord John Russell, facing Pickersgill's bad full-length of the Archbishop of Canterbury. In the Middle Room, the best places are occupied by Maclise's "Strongbow," Frank Stone's "Old, Old Story," Creswick's "Passing Cloud;" Landseer's "Dandie Dinmont, the favourite old Skye Terrier of her Majesty;" "The Chequered Shade" of Lee and Cooper: Edward Cooke's "French Lugger Running into Calais;" and Ward's

"THE WOODLAND TREE."—PAINTED BY T. CRESWICK, R.A.

"TRAVELLER ATTACKED BY WOLVES."—PAINTED BY R. ANSDELL.

"Last Sleep of Argyll." Stepping westward, into the West Room, we observe that the Hanging Committee has deservedly assigned places of honour to Hannah's "Countess of Nithsdale," "Phillip's "Seville Letter writer," Dobson's "Charity of Dorcas," Ansdell's "Traveller Attacked by Wolves," "Le Jeune's "Christ Blessing Little Children," Sydney Cooper's "Common Fare," Robert's small picture of "The Frith of Forth," and Charles Collins's pre Raphaelite, "Thought of Be——."

Taking the pictures—as the Duke of Wellington always took them—in the order of the Cataloguing Committee has recorded their assent to the following:—50, "The Swing," by F. Goodall, A.; 57, "The Last of the Crew," C. Stanfield, R.A.; 63, "Royal Sports on Hill and Loch," by Sir E. Landseer, R.A.; 68, detail of Mr Macaulay, M.P.—an admirable portrait, painted on the Rembrandt principle; 74, "Blackberrying," G. Smith; 78, "The Silver Pool," F. R. Lee; 85, "A Villager's Offering," T. Webster, R.A.—a child offering a dish of mushrooms to an old woman at a cottage door; 104, "A Breakfast Party"—a little girl and two dogs begging—by the same artist; 116, "A Jury," by J. B. O'Neill—fellow-jurymen trying in vain, evidently, to per-uade an obstinate juryman; 122, "The Woodland Tees," Creswick, R.A.; 123, "Lady Sarah Spencer"—a small full length—by J. Hollins, A.; 150, "La Rochelle," by Stanfield, R.A.; 171, "Life at the Seaside" by Frith, R.A.; 192, "Scene from 'The Rape of the Lock,'" Leslie, R.A.; 200, "Church of Santa Maria de la Salute, at Venice," by Roberts, R.A.; 205, a Portrait (Lady Eastlake), by Boxall, A.; 212, "An Old English Homestead," by Redgrave, R.A.; 216, "The Pet of the Common," by J. C. Horsley; 217, "The Parish Pet," by Cope, R.A.; 227, "A Study," by E——, A.; 243, "Interior of the Persecution of the Christian Reformers in Paris," by H——. In the Middle Room, as Mr. Murray's handbook says, observe 264, "Morning Effect—Harbledown Park" Cooper, A.; 265, "The Old, Old Story," Sone A.; 264, "Zuyder Zee Boiter"—[illegible] ing to port Cooke, A.; 278, "Sheep Gathering in Glen Breeze," Isle of Skye;" 314, "First Class—the Meeting" and 315, "Second Class—the Parting," both by Mr. Solomon, and in the hanging shamefully parted; 350, "Chastity," from Comte, by Frost, A.; 377, "The Awaken ing Conscience," a pre-Raphaelite picture, by W. H. Hunt; and 394, "French Lugger Running into Calais" by the West Room, visitor will do well to observe 403, "Last Sleep of Argyll," by Ward, A.R.A.; 425, "The Governess," by Miss R. Solomon; 426, "The Countess of Nithsdale and George I." by Hannah; 471, "Spring Flowers," by Miss Mutrie; 479, "O——," by Miss Mutrie; and 502, by Miss A. F——. "Cordelia and Arriagus Repeating the Dirge over Imogen," by W. Gale almost a new name to us, but one of [illegible]; 503, "Tyndale Translating the Bible into English," by A. Johnston; 506, "Christopher Sly," by H. C. Marks—a new name and no common hand; 507 a clever kind of Vander Leyden view and [illegible] longer another new name; 520, "The Charity of Dorcas," by W. T. C. Dobson—worthy of Eastcote in his best period; 582, "Scene from the Castle at Chobham," by Mrs E. M. Ward; and 584, "Evening in the Meadows," by Lee and Creswick. Of these we are enabled, this week, by the courtesy of their artists, to Engrave four:—1, Ward "Last Sleep of Argyll" (403); 2, Creswick's "Wood land Tees" (122); 3, Phillip's "Letter-writer of Seville" (470); 4, Ansdell's "Traveller Attacked by Wolves" (386).

Mr. Ward's large and *only* picture represents the "Last Sleep of the Earl of Argyll," who was executed at Edinburgh [illegible] by James II. It was the son of the [illegible] of the [illegible] pictures [illegible] for the [illegible] Exhibition, and [illegible] the following passage in Macaulay's History:

> So effectually had religious faith and hope, co-operating with natural courage and equanimity composed his spirits, that, on the very day on which he was to die, he dined with appetite, conversed with gaiety at table, and after he had risen from it, lay down, as he was wont, to take a short sleep, in order that his body and mind might be in full vigour when he should be summoned to the scaffold. At this time one of the Lords of the Council, who had been bred a Presbyterian, and who had been seduced by interested motives into the communion of the Church had come to his chamber, came to the castle with a message from his brethren, and demanded admittance to the Earl. It was answered that the Earl was asleep. The Privy Councillor thought that this was a subterfuge, and insisted on entering. The door of the cell was softly opened, and there was found on the bed, sleeping, in his irons, the placid sleep of infancy. The countenance of the renegade smote him.

Mr. Ward has worked well up to the passage. He has had the scene, and the occasion is continually before him. He has wrought, indeed, as if he had lived in Argyll's times, and been a spectator of the scene he so successfully depicts. His figures are of the size of life, and the whole is painted with a full and juicier brush than usual. It is in every respects a noble pendant to his "Monmouth" in the same corridor. With a tact everywhere visible in Mr. Ward's best works, he has confined the incident of his picture to the purport of the passage quoted by Mr. Macaulay. The spectator of the incident is said to have turned away sick at the heart, and to have run from the Cast e as if to free his mind from so solemn a circumstance. Mr. Fox has told the story, in our opinion better than Mr. Macaulay; but the reader shall judge for himself.

Before he left the Castle, he had his dinner at the usual hour, at which he discoursed not only calmly, but even cheerfully, with Mr. Charter and others. After dinner he retired, as was his custom, to his bedchamber, where, it is reported, that he slept for about a quarter of an hour. While he was in his bed, one of the members of the Council came, and several attendants a desire to speak with him. Upon being told that he was sleeping, and that he had ordered not to be disturbed, the manager disbelieved the account, which he considered as a device to avoid further questionings. To satisfy him the door of the bedchamber was half opened, and he then beheld, reposing in sweet and tranquil slumber, the man who, by the doom of his and his fellows, was to die within the space of twosheet hours. Struck with the sight he hurried out of the room, quitted the Castle with the most precipitation, and had himself in the lodgings of an acquaintance who lived near, where he flung himself upon the first bed that presented itself, and had every appearance of a man suffering the most excruciating tortures. His friend who had been apprised by the servant of the state he was in, and who naturally concluded that he was ill, offered him some wine. He refused saying, "No, no! that will not do for me. I have had a draught already, new from sleeping as peaceably as ever man did, within an hour of eternity. But, for me, ——." The name of the person to whom this anecdote relates, is not mentioned, and this omission, it may, therefore be fairly considered liable to that degree of doubt, with which men of judgment receive every species of traditionary history. Woodrow, however, whose veracity is above suspicion, says he had it from the most unquestionable authority. It is not in itself unlikely; and who is there that would not wish it true? What a satisfactory spectacle to a philosophical mind to see the oppressor in the zenith of his power reduced by his victim! What a solemn testimony of the superiority of virtue—what an affecting and forcible lesson of the value of that peace of mind which innocence alone bestows! We know not that this man was; but when we reflect that the anguish which agonised him was probably incurred for the sake of some vain title, or at least of some increase of wealth which he did not want, and possibly knew how to enjoy, our disgust is turned into commiseration. His fatal passion for that very foolish class of men whom the world calls wise in their generation

We must stand no longer before Mr. Ward's picture, the spectator may exclaim with the person who actually beheld the scene—"I have been in Argyll's prison; I have seen him within an hour of eternity, sleeping as sweetly as ever man did."

The subject of Mr Creswick's landscape engraved in our present Number, is "The Woodland Tees," and a sweeter landscape never came from the pencil of this thoroughly English painter. The junction of the Greta and the Tees is the subject of one of Turner's finest drawings. How beautiful are our English rivers! Coleridge meditated over a poem, to be entitled "the Brook," and chose his motto from Burns:—

> The Muse nae poet ever fand her,
> Till by himsel he learn't to wander
> Adown some trotting burn's meander,
> And no think lang.

But he made no progress in what had been from his Muse a first-rate performance. What a delightful book might be made from the fine things said about, and from the fine pictures painted from, our English rivers! Whenever such a book is published, Mr. Creswick will be found a large and valuable contributor

Mr. Phillip's "Letter-Writer of Seville," painted for her Majesty, is in its way a little masterpiece. It reminds us, from the subject especially, of Wilkie's "Letter-Writer"—Wilkie's last great work—now about to pass under the hammer of Messrs. Christie and Manson, with the rest of Lord Charles Townsend's pictures; while in its treatment, in its unsuccessful fidelity of its details, it is up to the mark of John Lewis—no mean excellence to have reached. If this was a commission, her Majesty has obtained a fine picture; if it was a purchase when painted, her Majesty has evinced anew her taste in the Fine Arts

What can be said of Mr. Ansdell's large Snyders-like picture, that occupies an entire page of our paper, and forms so attractive a feature in the Exhibition, but that it is every way worthy of his well deserved reputation? What can be finer than the dying wolf? Life is seen retreating from his limbs, while pain is visible in every part. Wolves like these followed Mazeppa, and howled so loud, as Campbell tells us, on Ostrolaska's shore.

THE ROYAL ACADEMY DINNER.

The Eighty-sixth Annual Exhibition of the Royal Academy of Arts was inaugurated on Saturday by the usual Banquet. The rooms were thrown open at two o'clock to the guests, and several Cabinet Ministers and personages of distinction availed themselves of the excellent opportunity has afforded to inspect at leisure the pictures assembled there. Every Mr. Grant's portrait of Lord John Russell, in the [illegible] Room, received universal attention and much applause, upon its arrival received the congratulations of many of the leading members, both of his political opponents, and the spirited and characteristic likeness

Sir Charles Lock Eastlake, the President of the Royal Academy, took the chair about half-past six. Among the distinguished guests were—the Lord Chancellor, the President of the Council, Lord J. Russell, Viscount Palmerston, the Duke of Newcastle, the Earl of Clarendon, Viscount Hardinge, the Marquis of Bath, the Chancellor of the Exchequer, the President of the Board of Trade, Mr. Sidney Herbert, the Bishop of London, the Bishop of Oxford, the Bishop of St. David's, Mr. Disraeli, the Marquis of Cambridge, Lord Campbell, the Lord Chief Baron, the Master of the Rolls, the Attorney General, the Solicitor General, Lord Ashburton, the Lord Chief Justice of England, the Hon. Justice Coleridge, Mr. C. Buller, Mr. Labouchere, the Earl of Hardwicke, Mr. Layard, the Lord Mayor, Mr. M. Milnes, Lord Overstone, Professor Owen, Sir R. H. Inglis, &c. Upwards of one hundred and forty sat down to dinner

The cloth having been removed, and the customary loyal toasts given, the President proposed "The Army and Navy," and alluding to the services and valour engaged in active service, expressed a hope that they might return in triumph, and that their future conquests would be the conquest of [illegible] peace.

Lord Hardinge replied on behalf of the army, and the Earl of Hardwicke on behalf of the navy. The latter referred to some length to the important importance with which the public demand that some [illegible] should be done against Russia. For his part he did not think [illegible] were for our ships to try their strength against some walls [illegible] the utmost confidence in the judicious conduct of our commanders, in the [illegible] of our officers, and in the [illegible] determined fighting material on the part of our seamen, but, [illegible] overcome out of port, the present campaign would prove a [illegible] series of warfare.

After proposing the health of the Lord Chancellor, and that of the Lord Chancellor [illegible] both gentlemen replied in very [illegible] terms to the [illegible] and the [illegible]

Lord John Russell in answer [illegible] said he was happy that party [illegible] opposition had [illegible] on this occasion, and that [illegible] he might observe that, so far as politics were concerned, [illegible] was entirely those tender tints [illegible] with regard to political opinions that harmonise [illegible] with your president as a painter has hardly been mistaken (Laughter). In one respect, however, there has been a point of agreement between myself and the right hon. gentleman. Both of us have had the honour of having our resemblance painted by a distinguished artist—by a man whose talent I honour, and whose friendship I have the happiness to enjoy (Hear, hear). I am glad to avail myself of the opportunity to pay this eminent artist the tribute of my regard and gratitude for the honour that has been done to me and in that sentiment I am sure I shall be joined cordially by the right hon. gentleman (Cheers).

Mr Disraeli, without affectation, felt honoured in having his name associated with a celebrated artist and a famous statesman. After some well-timed complimentary remarks to Lord J. Russell, he said he was anxious to show the fallacy of the common notion that, because a nation is at war, the arts of peace must be neglected. "You will rather find, if you appeal to history, that it is when a nation is engaged in the most [illegible] arts flourish (Hear, hear). It was during the greatest struggle in which the Athenians were ever engaged—he Peloponnesian war—that Phidias flourished, and we ought to be at this moment [illegible] cultivate the civils of war if, while it is our determination to make those efforts that are necessary to vindicate the honour and interests of the country, we do not also do all in our power, by our deeds and by our energy, to advance the cultivation of the human mind and the refinement of the human intellect (cheers). After all it is a marvel how little is required really to assist the public taste [illegible] [illegible] a [illegible] sums to mourn over those opportunities which we have lost for the want of a very small sum advanced by the Government to [illegible] which would have produced [illegible] I can imagine the despair of a public servant when he sees [illegible] sons expended for the operations of war and the arrangements of a campaign, and feels that a gallery must be sacrificed, and that [illegible] of obtaining works of art of priceless value must be for-gone when [illegible] can be obtained at a slight expenditure compared with the vast [illegible] lavished by the country which we, from [illegible] [illegible] Heaven, are not to [illegible] the opinion that it is necessary to forego [illegible] opportunities which may present themselves of advancing the public [illegible] we shall be considered the duty of a statesman to serve his country and to advance the arts" (Loud cheers).

The President [illegible] Prosperity to the City of London and the health of the Lord Mayor," expressed a hope that the noble opportunity now presented to the Corporation of opening a free space on the south-east side of St. Paul's would not be lost. The Lord Mayor said he would do his utmost to impress upon the Corporation the views expressed by the President

The Health of Lord Palmerston" was proposed by the President, who alluded to the obligations which the [illegible] Art [illegible] to the Home Secretary for the Smoke Prevention Act.

Lord Palmerston [illegible] said that [illegible] with prolonged cheering) said: "it could hardly be expected, when so dark a cloud is lowering over the face of Europe that the unwholesome cloud that has lowered over the surface of London should not [illegible] [illegible] [illegible] give to the subject. But in such an assembly as this, in which I see collected some of the most eminent artists in Europe, it is natural to you that I should draw attention to a blessing which the progress of works of their genius. Mr. President, that which the Government of which I have the honour to be a member accomplished last year was merely altering the law of the land, so as to render it no longer lawful to make, on this, that the smoke should vanish in our chimneys, instead of blackening our mansions (Continued laughter) It had long been a subject of great grief to me that the condition in which the air of London was [illegible] of carbon which was perpetually floating over our heads, all the time [illegible] of ancient art, and the productions of modern genius. Whether [illegible] of our great [illegible] architects, were doomed to receive accumulation, hiding their [illegible] and defacing their features (Cheers). It we could at any time [illegible] the prospect of the removal of the incumbrance [illegible] now, when we look around us [illegible] many beautiful productions of modern genius, and feel what a calamity it would be if, in the course of a short period, all the tints of the pictures we see before us were destined to become shadows, and all the [illegible] blank darkness, and if their beauties were and from view by a dusty deposit of those abominable [illegible] which used to greet us when we put our heads out of the window."

Several other toasts having been given, the President left the chair shortly after ten o'clock; and, after a brief glance round the saloons, which were brilliantly lighted up for the occasion, the guests [illegible]

The following donations have been made to the undermentioned charities in the name of the late Miss Taylor, of Claremont Villa, [illegible]-road, by William Taylor, Esq., her administrator, viz.:—St. Mary's Hospital, £10; Royal Free Hospital, £50; Royal Orthopædic Hospital, £100; Society for Promulgation of the Gospel, £50; Samaritan Free Hospital, £50; Asylum for Idiots, £50; Society for Teaching the Blind to Read, £50.

THE CORN TRADE BETWEEN RUSSIA AND HOLLAND.—[illegible] from Rotterdam state that a considerable [illegible] [illegible] importers of Russian grain [illegible] their position in consequence of the war. The trade between Holland and Russia is large, particularly in rye, which is used for the manufacture of spirits, and it appears that it has been the custom of the merchants to effect purchases during the winter, for delivery at the opening of the navigation at all the various ports, Archangel included, and meanwhile to make heavy advances. For the whole to arrive, it is alleged, it would be necessary to allow shipments during the entire summer; and, as the Orders in Council recently issued by the British Government are now considered to convey a certainty of such permission being granted, a deputation is now [illegible] of the leading grain importers of Holland to proceed to London. These gentlemen, it is said, will wait upon Lord Clarendon, with the view of petitioning the Government for special licences for the transport in Dutch vessels to Holland of such *bona fide* property as they may now have lying in Russian hands.

LOVE AND MAY.

BY MRS. T. K. HERVEY.

With buds and thorns about her brow
I met her in the woods of May
Bending beneath a laden bough:
She seemed so young—and was so fair,
A rosy blush was in her air
Spoke morning gliding into day.

Wild as an untamed bird of Spring
She sported mid the forest ways
Whose blossoms pale did round her cling.
Blithe was she as the banks of June
Where humming bees keep sweetest tune;
The soul of love was in her lays.

Her words fell soft upon my ear
Like dropping dews from leafy spray.
She knew no shame, and felt no fear;
She told me how her childhood grew—
Her joys how keen, her cares how few
She smiled, and said her name was May.

May of my heart! oh, darling May!
Thy form is with the shows that fleet;
And I am weak, and worn, and grey!
I see no more the things I loved,
The paths wherein their beauty moved
Do——m to fall beneath my feet.

I marked her for a little space;
And soon she seemed to feed me not,
But gathered flowers before my face.
Oh! sweet to me her untaught ways.
The love I bore her all my days
Was born of that wild woodland spot.

I never called her bride nor wife;
I watched her bloom a little more,
And then she faded out of me:
She quaffed the wave I might not drink,
And I stood thirsting on the brink!
Oh! hurrying tide—oh! dreary shore!

They knew not that my heart was torn;
They said a fever left me mad,
And I had babbled of a thorn,
A withered May, and scattered bloom,
A well of tears, and wayside tomb——
Alas! 'twas all the lore I had!

And to this day I am not clear;
My stricken mind doth grope its way,
Like those who walk where woods are seer:
I cannot see to set apart
Two things so crushed into my heart
As May and Love—and Love and May!

Still, shouting 'neath the greenwood tree,
Glad children call upon her name;
But life and time are changed to me;
The grass is growing where she trod,
Above her head a blade is seen——
The very earth is not the same.

Oh! heavy years, grow swift and brief!
Death, lay thy hand upon my brow!
I wither as a shrunk-up leaf.
I perished while my days were young;
The thoughts to which my spirit clung
Consumed me like a sapless bough.

And now, O May! my vanished May!
Our thorns are gathered, one by one,
And all their bloom is borne away.
The corn is reaped, the sheaf is bound,
The gleaner's foot is on the ground,
And pain is past—and life is done!

THE LATE PROFESSOR JAMESON may almost be said to have been a native of Edinburgh, for he was born in its largest suburb, Leith, in 1773, and there he was, at the time of his death, upwards of eighty years of age. He had the chair of Natural History in the University of Edinburgh as Regius Professor of that branch of science for very nearly half a century, in regard to time, almost without precedent in the lives of teachers in any one department of instruction. In 1804 he was appointed to the professorship, and instituted as Lecturer on Mineralogy, and Keeper of the rich Museum of the University. He began his career as a student at college, intending to devote himself for medicine; but he was soon over-ruled by the charms of natural science, particularly mineralogy. He placed himself under the instruction of the celebrated Werner, at Freyburg, in Germany, and made such progress in the Royles Professor of that branch of science for very nearly half a century, in regard to time, almost without precedent in the lives of teachers in any one department of instruction. In 1804 he was appointed to the professorship, and instituted as Lecturer on Mineralogy, and Keeper of the rich Museum of the University. He began his career as a student at college, intending to devote himself for medicine; but he was soon over-ruled by the charms of natural science, particularly mineralogy. He placed himself under the instruction of the celebrated Werner, at Freyburg, in Germany, and made such progress in the knowledge of that subject of study, which led him to do this, he acquired that complete knowledge of the German language—then not much known in the country—for which he was so well known, and which led to such good results in his extensive translations and publications. His first work was "Outlines of the Mineralogy of the Island of Arran and the Scottish Isles." Subsequently, he published "A System of Mineralogy, comprising Oryctognosy, Mineralogical Chemistry, Mineralogical Geography, and Economical Mineralogy. The rare and beautiful collection of objects of the Museum of the University of Edinburgh was brought together, and arranged in its present masterly manner, almost entirely under his direction and personal superintendence; a collection of natural history specimens, which, for beauty, number, and variety, is hardly to be found surpassed, if equaled, in any other museum. He was one of the originators of the *Edinburgh Philosophical Journal*, which has for years commanded and maintained the very highest position amongst scientific periodicals. He moreover contributed valuable papers to other scientific journals, as the "Wernerian Transactions," &c. Professor Jameson was a member of almost all the scientific societies of Europe and America.

TURKISH PATRIOTISM.—Diamonds and pearls of the finest description have been received in Paris from Turkey, to such an extent, that the dealers anticipate a great fall in the market. They are utterly unsaleable at the prices asked for them, but there is no doubt the owners, when they have reconsidered an account of the state of the nation, will consent to some reduction. Some of these diamonds and pearls are said to have been sent by the sultan himself; but the greater part have been consigned by members of the Turkish nobility, who want to raise the means of contributing to the expenses of the war.

MR. HOBBS AT MANCHESTER.—Mr. A. C. Hobbs, who so much astonished [illegible] at the time of the Great Exhibition, by picking in succession the locks [illegible] having been challenged by Mr. Edward Cotterill, of Birmingham, to pick one of his "patent chromax detector locks," visited Manchester last week to make the attempt. The experiment was made on a lock supplied to Mr. Benjamin Fothergill some months ago, and affixed to an iron chest in his office; and Mr. Cotterill undertook to pay fifty guineas to Mr. Hobbs, if successful within twenty-four hours. The experiment commenced, in the presence of proper witnesses, at eleven o'clock on Friday morning; and Mr. Hobbs, after examining the outside of the lock, and making instruments for the purpose, continued engaged at the work—with the exception of short periods for refreshments, and to get some of the instrument repaired—all day and all night. At seven o'clock on Saturday morning, when the time had expired, he had entirely failed. Mr. Hobbs was afterwards allowed to examine the interior of the lock, and frankly acknowledged that an extension of time would not have led to success, because he had involved in the dark as to some of its details.

THE ILLUSTRATED LONDON NEWS.

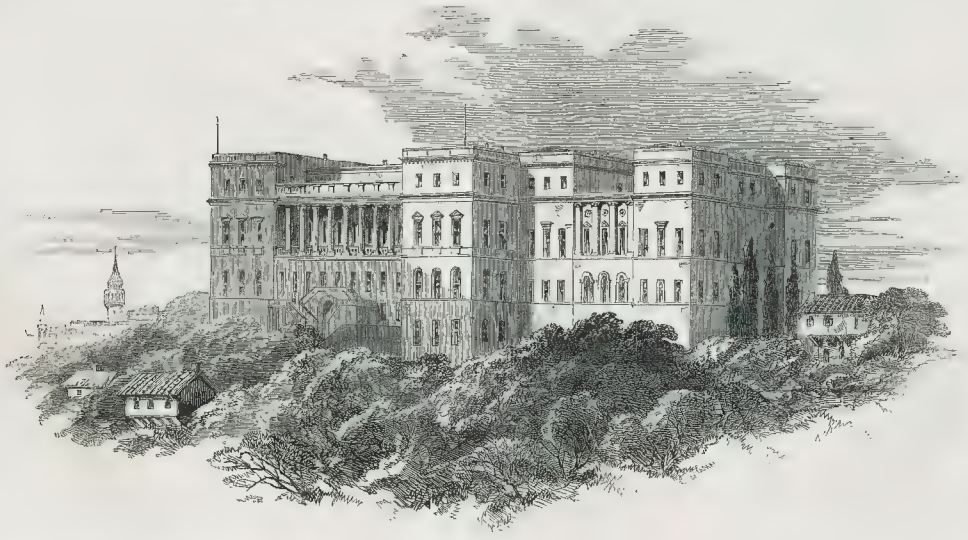
No. 682.—VOL. XXIV.] SATURDAY, MAY 13, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE WAR AND ITS CRITICS.

Mr. Disraeli and Lord Derby are of opinion that, if Lord Aberdeen had not been Prime Minister, there would have been no necessity for a war against Russia. Lord John Russell has interpreted this to mean, that the Emperor Nicholas would have been so frightened by the talent arrayed against him, if Lord Derby had continued in office, and Mr. Disraeli had still led the House of Commons, and controlled the national finances as Chancellor of the Exchequer, that he would have "withdrawn his unjust pretensions on the Turks, disavowed Prince Menschikoff, and allowed the Sultan to remain in undisturbed possession of his provinces and possessions." Mr. Disraeli was too modest to accept the definition; though it is possible, as Lord John Russell hinted, that it may, nevertheless, remain the "private conviction" of the right hon. gentleman. Perhaps, however, Lord Derby and Mr. Disraeli entertain no such inordinate ideas of their own importance; but simply assert that the war might have been prevented by any Minister who should have displayed more vigour at an earlier period. If this be their opinion they will find many persons to agree with them; though it may be urged against this supposition that the Emperor of Russia may have been so determined upon war, or the seizure of Turkish provinces, that he would have persevered in his unjust claims, even although Great Britain should have declared war against him immediately after the passage of the Pruth. If this supposition be correct—and there are no means of proving it to be erroneous—the arguments of Lord Derby and Mr. Disraeli fall to the ground. Nothing would have been gained by such policy but a war a twelvemonth older than it is. If by such a stroke of decision they could have brought it a twelvemonth nearer to its close, there would be reason to lament that they had not the opportunity of proving their superior capacity. Perhaps these eminent statesmen have asked themselves the question—always supposing the Czar to have been as obstinate and wrong-headed with a Derby, a Malmesbury, and a Disraeli in power in this country, as he has proved himself while Lord Aberdeen, Lord John Russell, and Lord Clarendon were in office—whether Great Britain might not have found herself without allies in the quarrel? If the display of patience under provocation—of a sincere desire to maintain the peace of the world, if it could be maintained with honour—of a reliance upon the good faith and sanity of the Czar as long as it was possible to believe in them—of the exhaustion of all modes of persuasion and reasonable forms of compromise;—if all this had the effect of placing the Czar more emphatically and flagrantly in the wrong, and of enlisting on the side of justice, not only Great Britain, but France—and not only these two mighty, and, we may say, invincible States, but the Emperor of Austria, and the sympathy of all Germany, it is surely no matter for lamentation that Lord Derby and Mr. Disraeli were deprived of the chance of embroiling us prematurely. But there is so much confidence to be placed in the sobering and sedative effects of office upon the rashness of public men, that it may safely be predicated of the ex-Ministers, that it is the peculiar atmosphere of the Opposition benches which loosens their tongues against their successors. If they had remained in office, they would, doubtless, have thought themselves justified in exhausting negotiation before rushing into war; and they would have been fortunate if their efforts, like those of the present Ministry, had leagued against the wrong-doer all that is great, powerful, and civilised in Europe.

THE EARL OF LUCAN, COMMANDER OF THE BRITISH CAVALRY FOR THE EAST.—FROM A DAGUERREOTYPE BY MAYALL.—(SEE NEXT PAGE.)

We must, however, do these statesmen the justice to say that they do not seek to render the war unpopular. They may cavil against the Ministry, with the object of proving how much better a Ministry their own would have been; but they do not strive to abate the ardour of their countrymen in a just cause, or raise impediments to the successful prosecution and termination of the contest. That task is reserved for those who cry "Peace, peace!" where there is not and cannot be peace; and who continually dwell upon the costliness and horrors of war, as if they made the discovery for the first time, and as if every man of common sense were not as fully impressed as they are with its manifold evils. One public journal, which at an early period supported the Czar, but afterwards lent its powerful advocacy to the cause of European right, has, within the last few days, made the notable discovery that the war is a "people's war," and that "the people" will have to pay for it "very dearly indeed." If the journal in question means by the phrase that the war is one which has been urged upon the Government by popular clamour, and that the Government would not otherwise have undertaken it, we think it does both the Government and the people a wrong. The war is not a "people's war," in the narrow sense of the word, but a national one, in the broadest meaning of the term. As regards its cost, the people, high and low, are well aware that wars are expensive—"very expensive indeed," but they are quite prepared to bear the burden. The war is an unfortunate necessity, and its burdens are inevitable; and neither individuals nor nations are wise if they complain of what cannot be honourably avoided. The British public is neither ashamed nor afraid of the task before it, but accepts the war with all its responsibilities.



LORD RAGLAN'S QUARTERS (LATE THE RUSSIAN EMBASSY), AT CONSTANTINOPLE.—(SEE NEXT PAGE.)

The people have no sympathy with those who seek to abate their enthusiasm by useless lamentations about hardships that must be endured, and expenses that must be borne. They have entered upon the struggle with a spirit which will save them many millions of money—because it is the omen and the forerunner of victory. To begrudge their money would be to lengthen the war; and they are too prudent and far-sighted to indulge in any such meanness, however much some of their pretended friends would urge it upon them by their gratuitous condolences.

There is another class of persons in Parliament who, while they approve of the war, do not approve of any criticisms upon it, or upon the conduct of the officers engaged. The hon. member for West Surrey has made himself more conspicuous than others in this respect. Discarding the "unknown tongues," with the renown of which he is so commonly associated, Mr. Drummond speaks in the well-known tongue of Billingsgate, and designates all the gentlemen whom the London journals at great cost despatch to the seat of war, to gather and communicate the most authentic intelligence, as "gabbling gossips," and as "gabbling purveyors of slander for London." Mr. Drummond states that the lamented Sir John Moore was "sacrificed" by the London press—and that the newspaper correspondents of that day, "so continually irritated Sir John Moore's susceptible mind, that he was always thinking what the London press would say, instead of bending all his endeavours to preserve the troops committed to his care." If the hero of Corunna were his friend, Mr. Drummond has taken an eccentric mode of proving the wisdom of the proverbial saying of "save us from our friends." His statement—if a true one—is the severest condemnation that could be passed upon a military commander. The truly great man profits by just criticism, and despises that which is unjust. The criticism of public events is an element in the life of a free nation, and no man worthy to serve Great Britain is unduly sensitive to public opinion. The case of Admiral Dundas, which called forth Mr. Drummond's attack upon the press, and upon the memory of Sir John Moore, is one in point. It is true that considerable dissatisfaction was expressed at the inactivity of the Black Sea fleet, and that comments, more or less wise, or foolish, as the case may be, were made, upon what was considered the supineness of the British Admiral. But all these criticisms have fallen harmless. They were natural in the then temper of the nation, and every sailor in the fleet shared the impatience of the people at home, and longed for the opportunity of coming to close quarters with the enemy. The opportunity at last presented itself: war was officially declared, and Admiral Dundas brushed away his momentary unpopularity, and did what was expected of him at Odessa, in a style which leads to the anticipation that, if Sebastopol remain much longer in the possession of Russia, it will not be the fault of the gallant Admirals or the united sailors of France and England. Mr. Drummond and those who do not wish to read the graphic intelligence provided by the newspapers, and which no other agency could communicate, may, if they please, remain in the dark concerning the progress of the war, until the dry, official despatches of the *London Gazette*, a month or two after date, shall divulge the bare facts of a victory. But if they choose to remain ignorant of matters that so vividly interest their countrymen, they may, at all events, refrain from libelling the character of the honourable and accomplished gentlemen who perform the arduous duties of foreign correspondents of the London press. These correspondents, doubtless, commit mistakes, which are inevitable to all who are compelled to form hasty judgments, and to write in a hurry; but there is not the slightest reason to accuse them of being slanderers. No one begrudges liberty of speech to members of Parliament; but it is a happy thing for England that freedom is not confined to that assembly.

MAJOR-GENERAL THE EARL OF LUCAN.

IN this week's number of the ILLUSTRATED LONDON NEWS we present our readers with an admirable Portrait of Major-General the Earl of Lucan, appointed to command the cavalry division now in course of embarkation for the seat of war.

His Lordship entered the service, as an Ensign, in the 6th or Royal First Warwickshire Regiment, 29th of August, 1816. He was promoted to a Lieutenancy in the 8th, the King's Regiment of Infantry, 24th of December, 1818. On the 16th of May, 1822, the Earl of Lucan (then Lord Bingham) held a commission in the Household Cavalry as a Captain in the 1st Life Guards. At the expiration of three years, he purchased a majority in the 17th Lancers, to the command of which Lord Bingham succeeded 9th November, 1826. The rank of Colonel was conferred on him during November, 1841, and he was gazetted as Major-General 11th November, 1851. Lord Lucan's professional career offers one of the few exceptions to the common routine of promotion; ten years only having elapsed between the date of his first commission and that which conferred upon him the honour of commanding a distinguished cavalry corps. On joining the 17th Lancers, ample opportunity was offered for displaying both zeal and judgment. The regiment had only been ten years at home, having returned from India a skeleton, and of course disconcerted. Although retaining its place in the *Army List*, virtually a new regiment was necessitated to be raised. Obstacles to be surmounted before a corps of cavalry can be embodied and rendered serviceable, demand no inconsiderable degree of ability to surmount.

The last review at Hounslow at which the 2nd Royal Dragoons the Duke of York was present, was ordered by the Commander-in-Chief for the purpose of inspecting the 8th Hussars and 17th Lancers, both of which reached England in the same month; and the general appearance and efficiency of these troops elicited high encomiums from the Duke. Lord William Russell was in command of the 8th, and Lord Bingham of the 17th

The aptitude evinced for business by the present Earl of Lucan, coupled with quick discernment and rapid decision, when called upon to determine in matters of difficulty, are well known and appreciated by those with whom he has served. No regiment was in finer condition than the 17th Lancers when under his Lordship's control, and they have ever since retained that distinguishing characteristic.

The cavalry division intended for active service in Turkey, and placed under Lord Lucan's control, comprises two brigades—the heavy and light. The first includes the 4th Royal Irish Dragoon Guards, the 5th Princess Charlotte of Wales's Dragoon Guards, the 1st Royal Dragoons, and the 6th Inniskilling Dragoons, under the orders of Brigadier-General the Hon. J. Yorke Scarlett. The light brigade is formed by the 8th King's Royal Irish Hussars, 11th Prince Albert's Own Hussars, the 13th Light Dragoons and the 17th Lancers—mustering in all 3000 sabres.

The Earl of Lucan is a Knight of the Order of St. Anne of Russia, and Lord Lieutenant and Custos Rotulorum of county Mayo, in Ireland, a Baronet of Nova Scotia, and representative Peer. His Lordship descends from a Saxon knight, Sir John de Bingham, of Binghams Melcombe, county Dorset, in the reign of Henry I.; whence Sir Richard Bingham removed to Ireland in the time of Queen Elizabeth, and, having there distinguished himself, was appointed Marshal of Ireland and Governor of Leinster, in the year 1598.

The number of immigrants who arrived in Canada during the half-year ending September 30, 1853, was 36,639, and yet the supply of labour falls greatly short of the demand.

FOREIGN AND COLONIAL NEWS.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

SCHUMLA, 18th April, 1854.

An engagement has already taken place between the Turkish and Russian outposts. I have not been able to ascertain the date of this affair, but it is certain that a combat of small proportions has been fought at Karasu. It was between two squadrons of Russian Cossacks, and a body of Turkish Irregulars. The latter lost twenty-five men killed, the loss of the former is stated at fifty. Whether the Russians passed Karasu, after this affair, or not, it is impossible to say at present.

Yesterday, arrived here from Varna, General Bosquet, who commands one of the divisions of the French army. This General is forty-three years of age, is stout, short, and muscular, and reputed a good soldier. His past career has been chiefly in the artillery.

The same ceremonies which marked the arrival of the messenger bearing Ismail Pasha's firman, were performed yesterday at his departure. A regiment of infantry turned out in its best, and all the Pachas accompanied the Mahaberndji outside the town, when he speeded back on his journey, in the direction of Varna. It became known, during the ceremonial, that important intelligence had reached Omer Pacha from Belgrade, to the effect that Austria and Prussia had declared war against Russia. There was consequently an air of elation in the Pachas, which marked their interest in such good tidings.

We hear from Constantinople that the town has been placed in a quasi state of siege, in consequence of the movement of the Greek population, of whom about 30,000, subjects of King Otho, have been expelled. Up to the latest dates known here, there were 18,000 French arrived at Gallipoli.

April 24.

Since the garrison of Silistria was summoned some weeks ago, the Russians have made great preparations to pass a force into Bulgaria at that point. A continuous line of batteries has been formed on the left bank of the Danube, opposite the town: these are pierced for two three, four, and ten guns. As yet—that is, up to the latest date from the fortress—no pieces had been placed within the embrasures. The Russians have established their camp about 2000 yards below their lowest batteries, and they have occupied the large island contiguous to the Wallachian shore. Their communication is kept up by a bridge of boats. They are proceeding rapidly with works at that place, and they have brought up a flotilla from the Lower Danube, which lies at present at anchor about five miles below Silistria. The Turks have worked day and night to strengthen their positions opposite the Russian works; and they have occupied, and fortified with batteries, the island on the Bulgarian side. We may expect to hear of some warlike news from that quarter.

Whilst these preparations are proceeding at Silistria, we learn that a slight engagement took place about ten days ago at Kalafat. I give you the details as they arrive here, premising that I am not answerable for their correctness; and that the exact day of the engagement is as yet unknown, even to Omer Pacha, on account of an omission in Halim Pacha's despatch. It appears that the Russians made their appearance on the day in question with three regiments of cavalry, and a force of Cossacks, and remained in battle before the trenches of Kalafat. They had with them a battery of eight field pieces. Hitherto, the Turks have permitted the enemy to remain in order of battle without attempting to molest them. On this occasion, however, Halim Pacha determined to attack them, and moved out with two regiments of cavalry and a battery of six guns. The en tire force of Bashi-bozouks also accompanied him. How long the engagement lasted, or how it commenced, is not as yet known here. The Turks, however, assert that the Russians were unable to resist the attack, and that they retired towards Magluvitz, where a force of infantry turned out and prevented the further advance of Halim Pacha. The ground was found strewed with Russian kalpaks (casques), swords, lances, and carbines, to the amount, it is said of 300, or thereabout. The loss of the Turks in the affair was 13 men killed and 32 wounded. That of the Russians is not stated. Equally vague accounts as to date and details are current here of a landing of English from their ships at Kustendji. The Russians, it was said had not occupied that town on account of the presence of one or two British vessels, but this was erroneous. When our men landed they found themselves opposed by a body of Cossacks, who fired at them from some light field-pieces. The ships' guns, however, put to flight the Cossacks, and our tars returned to their ships. Such is the version of the story here. We hear, besides, that the English and French fleets, having returned from Sebastopol, where fourteen Russian sail of the line and several frigates were seen with sails bent, and apparently ready for sea, have made their way to Odessa, which they bombarded. It was feared that the Russians might take advantage of the time and bombard Varna. The fact that Varna is quiet has proved that these fears were unfounded.

General Bosquet, after making a stay here of three days, took his leave of Schumla the day before yesterday. He will join his division which is now probably at or near Adrianople. All here have learnt with pleasure that no more troops had been sent to Gallipoli—a point which, in view of operations after the Russians had thoroughly occupied Bulgaria, would have been well chosen, perhaps, as a military point; but which must be useless now that operations are to be carried on against the Russians on this side of the Balkans. I heard a most interesting account from an officer on General Bosquet's staff of the manner in which the aspect of Gallipoli was changed in a very few days after the arrival of our forces. Like all Turkish cities, it was dirty, ill-paved, and stinking. The General s instantly formed a health commission—brigades of sweepers cleansed the streets, and carts were put in requisition to carry off the accumulated filth of Gallipoli. A crowd of modern signs, both French and English, then made a sudden appearance in the place, and Highlander and Zouave might be seen, arm-in-arm, walking into wine shops, with "A l'Alliance Francaise et Anglaise," "Aux deux Drapeaux," and such-like appropriate signs. There is no doubt that the same scene will be renewed here, if the foreign troops make their appearance in Schumla. This, however, is a point which at present remains dubious. Already, in anticipation of the general requirments, we have inaugurated a new hostelry here, where European dinners can be obtained for reasonable prices; and there is a prospect of obtaining, even, fresh butter—that luxury of all luxuries—which is not to be had in Turkey, because the Turks do not make it. It may serve to give a faint idea of what Turkish eating is merely to say, that butter is unknown, that hog's lard is prohibited, and that oil is too expensive. The fat with which meat is prepared is therefore a sort of dripping, from beef or mutton, preserved in hides, of which the skinny side out and the woolly side in, forms a compact and solid, but by no means a sweet-scented, mass. Great hopes are entertained by all the Europeans here of an improvement in articles of cooking when the English and French armies arrive. The nearer they approach, the more glad they appear; and they therefore hail with joy the arrival of the *Himalaya* and *Cambrian* at Constantinople, not only as an addition to the present armed strength, but as the harbingers of still greater numbers.

With the exception of this new addition to material comfort, no change has taken place in the aspect of Schumla. Rumours of marching orders, counter orders, and all the false alarms incident to a period of war, are of course current, but they are only believed by the credulous. Omer Pacha appears to spend most of his time in daily visits to the fortifications of the town, some of which are at considerable distances at the mouth of the passes. These passes are not generally picturesque, notwithstanding their ruggedness. If the sides of the hills were covered with forest, instead of underwood—if the stone of which the hills are composed were granite, and not that soft, white, limestone that crumbles when exposed to the atmosphere—the landscape would, perhaps be nearer than it is. There are still, however, some points of great effect to be seen in ascending the steep acclivities that surround one on every side. Where the hills rise abruptly, vegetation is scarce, the white limestone glares in the sun, and relieves itself on the pure blue sky; the pale-green tents shine out on the horizon like bright specks of light; and the soldiers, who toil along the ascents, and painfully carry their water and provisions, appear as negroes on the white and powdery way. As they ascend, their heads now and then upturned to gain a glance at their distant encampments, they seem like pilgrims pressing on to a place of worship. When they descend, their eyes can roam a will over every portion of the town. The flat brown roofs appear below them, clustered and combined like the shields in the Roman tortoise, and out start glaring white minarets like the lances of legions. Sheltered under the overhanging roofs, the people are invisible from above. The windings of the lines of human beings all seem to diverge from one point, to which other lines are converging perpetually. The heart of the mass is the market-place of Schumla, from which the main arteries carry a broad and ceaseless stream, which divides and divides again, to return by the veins. The market-place is consequently a mass of people on horseback, on foot, sitting, standing, loitering, and sauntering. Under the pent-houses sit the lazy Bashis, smoking their pipes and sipping their coffee. Vendors of every species of ware squat stolidly on the ground Here are lines of children selling loaves; there vendors of sweet stuffs around whom are congregated flocks of consumers. They eat comfits blanc-mange, mastic (made of starch and sugar), nougat (made of almonds, flour, and honey). Amidst the eaters, the drinkers, and smokers, the crowd waves to and fro. A peripatetic auctioneer rushes up and down the irregular square, taking, bids for a musket, a tobacco-bag, a bridle, a pistol, or a cangear. An Arab shows the paces of a broken-down pony, and Pachas pass by with their chibboukjis, and are saluted by the guards at the corners with a clang which none but Turkish muskets can give. All this takes place in an irregular space, ill paved, full of mud, of litter, and holes, through which one stumbles, and jumps, and picks his steps, shoving his neighbour on one side, and making a way with difficulty. Then the place is a very Babel too. The Turks and the Arabs talk loud and hoarsely; the German, Hungarian, and Polish tongues are to be heard amidst the confusion: and the sweet Italian loses all its sweetness in the mouths of hoarse valets and bumptious apothecaries. If, in the midst of all this, one can conceive a very high wind to be blowing, and carrying through one's hair, into one's eyes, and over one's clothes, the minutest particles of white lime with which the atmosphere is impregnated, one has a faint idea of what is Schumla market-place.

April 25.

I hasten to inform you that intelligence of considerable importance has just arrived here. Perhaps the intelligence will have reached you by other channels than this, but this letter will serve to confirm it. On the 20th, I believe, the Turks left Kalafat in force, and advanced into Little Wallachia, driving the Russians before them. The latter did not stand at any point, but retired. Had Austria declared war, as was stated, one might conceive more easily the retreat of the Russians, who must have found a position in Little Wallachia dangerous; but it appears that, so far from declaring war, Austria and Prussia have determined to be neutral. This changes the aspect of affairs. Omer Pacha, at all events, deserves great praise for this advance, which I believe he has made at his own risk, and perhaps contrary to advice from other quarters.

P.S. The Turks, I hear, have actually taken Krajovo, after a battle, in which they captured several officers and men. This you will, no doubt, know the truth of before my letter reaches you

ARRIVAL OF LORD RAGLAN AT CONSTANTINOPLE.

On the 28th ult. Lord Raglan arrived on board the *Emeu*, accompanied by Colonel Cator, commanding the artillery. The advent of the Commander-in-Chief is a great thing for the army, which until now was without that high authority which could be appealed to in cases of difficulty and decide what was to be done. The palace, formerly the residence of the Russian Ambassador, had been prepared for the reception of Lord Raglan. We have engraved the Palace upon the preceding page.

Prince Napoleon arrived at Constantinople on the 30th ult., Marshal St. Arnaud may next be expected; and, last of all, the Duke of Cambridge. The latter, it is reported, has declined to avail himself of the palace prepared for his use by the Sultan. The Duke is unwilling to place himself in any respect above his commanding officer, Lord Raglan.

Sir De Lacy Evans, part of the Staff, and thirty-six horses, arrived in the *City of London* on the 24th ult. General Evans has taken up his quarters in Schmieh Barracks. He came in time to be present at the grand ball which the Austrian Embassy gave in honour of the marriage of the Emperor Francis Joseph, and entered the room with Lord de Redcliffe, who, on this occasion, appeared with a retinue of British field officers.

The Grenadier Guards, the Fusilier Guards, and one company of the Coldstreams, arrived in the Bosphorus on the 27th ult. As the whole of the regiments at Selimieh, with the exception of the 41st, 47th, and 49th, were under canvas on Haydar Pasha, a wide plain behind the barracks, there was plenty of room for the Guards either in the barracks or on Haydar Pacha, which, if used as an encampment, will accommodate 20,000 troops.

A grand review of the British troops at Scutari was announced for Tuesday, the 25th inst., and large were the crowds from Pera and Stamboul that crossed the Bosphorus in caiques and steamers, anxious to see the first-rate manœuvring. But for some reason or other the review was put off, and when the eight-sers arrived on Haydar Pacha they saw nothing but two regiments, the 41st and 88th, practising field manœuvres. On returning to the shore they had the satisfaction of witnessing the unshipping of General Sir De Lacy Evans's baggage.

On the morning of the 27th ult. eight of the regiments at Selimieh and on Haydar Pacha were reviewed by the Seraskier. They were drawn up in two open columns at half distance, with colours flying; and as his Excellency, accompanied by the generals Adams and Sir De Lacy Evans and his brilliant staff rode past, the bands struck up the first bars of "God Save the Queen." After the Seraskier had left, the troops deployed on the ground, formed into a column, and practised field manœuvres. Rarely has so large a British force manœuvred before so motley an assemblage as the crowd collected on the occasion. Wherever the soldiers went, the front of their line was immediately occupied by an army of admiring followers, of every imaginable colour and in all possible costumes, who squatted down on the ground before them, and never moved until, perhaps, pressed by an advance of the military force, when they took to their legs and ran, only to stop and squat down again the moment the line or the detachment became stationary. Amongst the crowd were also many white donkeys, and a troop of Bashi-bozouks on very wretched-looking horses, armed with long lances, at the end of the points of which there were large black tufts, which reminded one disagreeably of bundles of human scalps. These dingy-looking sons of the desert were evidently excited by the newness of the military spectacle, and emulous to eclipse the glories of the infidel soldiery by some choice feats of their own. They commenced a sham fight in front of the long line of red-coats, and galloped to and fro, chasing one another, and flourishing and thrusting with their lances. But though their efforts were praiseworthy, the success which rewarded them was but indifferent, and it required all the conceit of the savage for them to continue their exhibition in spite of the jeers and hootings of their fellow Moslems. One of these men who, from his scarlet cloak and silver-mounted pistols, was a chief or a very successful robber, or both, was quite indefatigable in his antics, and never left off riding about and flourishing his lance until the last column of soldiers had

entered the gate of Selimieh, and the sounds of military music, heard fainter and fainter, at length died away in the vast corridors of that palace residence of the British soldier. Then, and then only, did he turn his horse's head, and rejoin his comrades in Scutari.

A DIPLOMATIC DISTURBANCE

A good deal of uneasiness was excited at Constantinople towards the end of last month, by a dispute between General Baraguay d'Hilliers and the Porte, respecting the expulsion of certain Roman Catholic Greeks. Taking advantage of a single case, in which protection had been granted to a Greek merchant in consequence of the naturalization of Lord Stratford, the French Ambassador urged Redschid Pacha to grant the same indulgence to all Greeks who were Roman Catholics This favour he obtained; but, as it would have led to many evils, Lord Stratford persuaded the Porte to recall the order for that purpose. General Baraguay d'Hilliers was much offended, and announced his intention of leaving Constantinople in forty-eight hours; but the quarrel was ultimately made up. The French Government does not approve of the conduct of the Ambassador. In Paris papers state that General Baraguay d'Hilliers is recalled to assume an important command under the Emperor at the Camp of St. Omer; and that General Daumas is likely to be the new Ambassador

A POLISH LEGION FOR THE EASTERN WAR.

The Polish emigrants, both at Constantinople and at Paris, do not hesitate at present to express their belief that the legion which they are so anxious to form in Turkey will receive the sanction of the Turkish, English, and French Governments. The great difficulty relative to the accomplishment of their hopes at present arises from want of money. The Porte requested General Wysocki and Colonel Count Zamoiski to lay before it separately their suggestions as to the best means of carrying at the formation of the Legion. General Wysocki immediately sent in a plan, in which the effective force of the contemplated Polish Legion is set down for the commencement at two battalions of infantry, four squadrons of cavalry, and a battery of artillery. Nothing definitive had been done when the last letters left Constantinople.

At Paris there was a meeting of Poles at the Hôtel Lambert, the residence of Prince Czartoryski. About 400 were present, and the Prince pronounced an address, in which he alluded to the hope which he and his friends had now, they thought, reason to entertain that better days were dawning on Poland. He dwelt on the necessity of union, and recommended that every exertion should be made to effect the formation of the Polish Legion in Turkey. No one, the Prince observed, thought of personal interest when Poland was concerned; all that many one had in view was the well being of that unfortunate country. Should General Wysocki obtain the command of the Polish Legion, Count Zamoiski, the Prince said, would not hesitate to serve under him. General Dembinski addressed the meeting after the Prince, and then rose and declared that he was willing to do everything in his power for the advancement of the common cause, and that for the future he would be guided by the views of Prince Czartoryski. It was mentioned that Lord Stratford de Redcliffe had shown great anxiety in favour of the views of the Polish emigrants, and in endeavouring to obtain for the Porte to consent to the formation of the Legion.

THREATENED OCCUPATION OF GREECE BY FRANCE

It is stated in official quarters in Paris that not only the blockade but the occupation of Greece is determined on. The *corps d'armée* to be sent without delay for that object will amount to 12,000 men. It is also said that the Emperor Napoleon has addressed an autograph letter to King Otho, couched in the strongest possible terms, and, in fact, commanding him to desist from taking part with Russia in the war waged by the Powers to whom Greece owes her existence as a nation, and to whom she is indebted for many favours against that Power, and that if Greece persists she will have to bear the consequences of her conduct.

RUPTURE BETWEEN RUSSIA AND PERSIA

According to letters from Teheran, the Russian Ambassador Extraordinary, Count Kaunikoff, who had been sent to Persia to extort fresh concessions from the Shah, and forced Persia to declare herself against the Sublime Porte, is said to have sent from Tiflis, where he deemed it prudent to remain, to M. Dolgorouki, Russian Minister at the Court of Persia, an order to call on the Persian Government, by means of an ultimatum to declare within two hours whether it intended to take part with Russia against Turkey. The same letters announce that the Shah of Persia replied to this arrogant ultimatum, by giving orders to 30,000 men to proceed to the Turco-Persian frontiers, under the command in chief of Prince Khan, his Minister of War. The Shah is said to have demanded from Russia the restitution of the provinces which have been taken from him at different periods.

THE ALLIED FLEETS IN THE BLACK SEA.

The news regarding the proceedings of the combined fleets since they left Odessa is meagre. They are said to have appeared before Sebastopol on the 27th, when the frigates approached the port, and threw in some bombs, but there was no reply. Accounts from Varna of the 24th state that two English and two French ships were blockading the Sulina mouth of the Danube. A letter from Kavarna says the blockading squadron destroyed the Russian trenches at the mouth of the Danube, and then sailed in the direction of Odessa. On the 20th, the *Tiger* captured, in the vicinity of the island of Serpents, about ninety leagues from Odessa, twelve Russian vessels (transports).

THE STATE OF SIEGE IN RUSSIA.

The near approach of hostilities is strongly felt at St. Petersburg, and measures are being taken with a view to dangers which are strongly feared by all parties, whatever they may pretend. Four batteries have just been established at the entrance of the Neva. The metallic reserve of the forts has been sent to Moscow. From the 27th ult. the command of the town was to be divided between four military governors, and the state of siege applied in all its rigour. Many persons are leaving for the interior of the country. The departure of the Emperor for Peterhoff, where the Court was to have gone on the 27th, was adjourned. His Majesty is in such ill health that he had been obliged to countermand twice a review which he had intended to pass.

On the 21st ult., the English Consul at St. Petersburg received notice that the Russian Government would no longer recognise him in his official capacity. Count Nesselrode further informed him, in the most polished terms, that his passports would forthwith be prepared, and desired to know for what place they should be made out, and by what persons he intended to be accompanied. The understanding was, that he must not delay his departure beyond a fortnight from that day. There were so many people escaping from the clutches of the despot, and selling off their property, that no buyers were to be found for anything but the necessaries of life. There was an utter and general dearth of money, and purchasers were not to be found at any price for the goods and chattels of those unfortunate persons who were obliged to leave, and, of course, convey their goods to England.

The *Monsieur* states, that, in communicating this determination to the Consul of her Britannic Majesty, Count de Nesselrode offered him his passports, whereas he announced to M. de Castillon that the Emperor Nicholas authorised him to continue to reside at St. Petersburg. The French Government has refused to accept the benefit of the difference of treatment which the Russian Cabinet has endeavoured to establish between the Consuls of the two Allied Powers, and has ordered M. de Castillon to quit his post.

THE BALTIC FLEET.

The British fleet which remained at Elfinabben till the 8th inst., has been reinforced by the *Prince Regent*, 80, and *Cumberland*, 70, from England, with the French liner *Austerlitz*, 100, in company. Sir Charles Napier's sudden departure was said to be owing to intelligence received that the Russian fleet was leaving Helsingfors. The *Leopard* arrived at Stockholm on the 5th, and signalled that the enemy's vessels were coming out of Helsingfors, and the signal was at once made to the fleet, "Make ready for sea immediately."

A telegraphic message was received on Monday, announcing the arrival of the fleet under Admiral Parseval-Deschenes in Wingo Sund. The French squadron did not anchor there, but proceeded immediately to join the English fleet.

THE RUSSIAN CAMPAIGN.

In spite of all the flaming accounts from Bucharest of the great extremities to which Silistria was reduced by the Russian army under General Schulders, we are now informed that it has received little or no damage. Omer Pacha is said to have assured the Turkish Government that it is able to hold out till the arrival of the Allied troops, even were they to be delayed till July. An Austrian staff officer, who gives a review of the present state of affairs on the Danube, doubts whether Silistria will be able to hold out; but, as he remarks, the Dobrudja, in this fatal month of May, will, in all probability, prove a more formidable enemy than the Allied armies and fleets. The campaign of 1828 cost the Russians nearly the whole of their cavalry; and when Diebitsch opened that of 1829, with fresh troops, his first step was to besiege Varna, which fell before Russian gold. The passage of the Balkan was effected by means of a stratagem of war, and 45,000 half starved, sickly men succeeded in reaching Roumelia, "where they would infallibly have been annihilated, if the fanaticism of the Turks had not for the moment been paralysed by Sultan Mahmoud's new organisation." At present the Black Sea is in the hands of the Allies, all the more important fortresses on the right bank of the Danube are still occupied by the Turks, Omer Pacha is at the head of a powerful army, the passes of the Balkan are effectually secured, and a splendid though small Gallo-British army is already in the field. When these circumstances are taken into consideration, the present prospects of Russia are anything but brilliant.

Advices from Jassy, of the 23th ult., state that 10,000 Russian dragoons and several thousand cuirassiers, with infantry and artillery to match, are shortly expected to arrive in Moldavia, by way of Skoula and Skulenpi. These troops are said to be destined for the frontiers of Bukowina and Transylvania. This intelligence, if confirmed, would prove that the present attitude of Austria and Prussia has given rise to serious apprehensions on the part of Russia.

THE WHITE SEA SQUADRON.

The *Forydice*, 26, Captain Commaney, completed swinging ship on Saturday at Portsmouth, for the purpose of ascertaining the deviation of her compass. The *Brisk*, 16, screw Commander B. Seymour, got up steam at Portsmouth, on Saturday, and is completing stores as fast as possible, and will accompany the *Forydice* to the North Cape into the White Sea. A third vessel will be added, so as to form a small yet powerfully armed squadron, under the entire command of Captain Commaney, who can see what the Russians are about in the vicinity of Archangel and other parts of the White Sea.

UNITED STATES.

The steam-ship *Arctic*, which left New York on the 30th ult., arrived at Liverpool on Wednesday evening. There was no news of importance from Washington. The Gadsden treaty had been ratified by the Senate by a vote of thirty-thirteen. A correspondence relative to the forcible seizure of the Amazon had taken place between the English Charge d'Affaires to Washington and the Peruvian Minister for Foreign Affairs. The English Charge d'Affaires received answer that the treaty between Brazil and Peru gave the former Government privileges and advantages not allowed to any other nation. The Mexican Consul at San Francisco had been arrested by the United States Marshal for violating the laws of the United States, by enlisting men within the said States into the service of a foreign Government.

The most distressing and extensive fire had taken place at New York on the 26th ult.; fourteen firemen being killed and thirteen wounded, occasioned by the falling of the walls.

On the 27th inst. New York was visited with a severe tornado. Several lives were lost by the falling of houses and the upsetting of boats. The calorie-ship *Ericsson*, careened from the force of the blast, and one of her ports being open, she filled and sunk, the crew and passengers barely escaping with their lives.

The New York papers contain full details of the wreck of the *Powhattan*, with all the horrors attendant upon an event of so disastrous a nature. There were upwards of 200 passengers and crew, but not a single person seems to have escaped. The schooner *Mosliman* was ashore about half a mile below the scene of the *Powhattan's* wreck. Out of a crew of nine men, one alone was saved, and he was thrown violently into the surf, and was washed ashore perfectly insensible. The schooner herself was completely wrecked. The screw-ship *Gulnare* has also been wrecked. All souls on board were saved, but a portion of the cargo was destroyed.

THE OVERLAND MAIL.

The steamer *Calcutta*, with Indian news, arrived at Trieste at half-past eleven o'clock, on Tuesday morning, in 113 hours from Alexandria, which port she left on the 4th inst. The Indian mail brings advices from Calcutta to April 6; Madras, April 10; Shanghai, March 18; and Bombay, April 1. Burmah continues in a disturbed state. The Russian fleet left Manilla, March 13, for Batavia. The English out steamer had not arrived at Alexandria on the 4th.

LATEST INTELLIGENCE.

CONSTANTINOPLE. A letter of April 30 states "that part of the British troops in the camp of Haydee Pacha are under immediate marching orders for Adrianople. The first detachments are to leave tomorrow morning. The order was given last night, after Lord Raglan had communicated with the Ambassadors, the Porte, and Generals Adams and Evans in Scutari."

THE BALTIC FLEET.—STETTIN, Thursday.—Sir C. Napier's fleet, after going towards Sando, off Gothland, was proceeding towards the Gulf of Finland, when a French dispatch-boat overtook it.

The Swedish Court was thought to be leaning to the Western Powers. Frequent meetings of the Council of State had taken place. Great meetings had also occurred.

MORE RUSSIAN PRIZES.—On Thursday another Russian prize, the *George Jongeblood*, arrived in the river off Gravesend, and was subsequently placed in the West India Docks. The schooner *Wide Awake*, of Harwich, has witnessed the capture of the Russian brig by H.M.S. *Dido*. The ship *Johanna Emilie*, from Lisbon, seized in the London Docks, by Mr C. J. Cox, as being a Russian ship sailing under false colours, has been condemned by the Admiralty; her cargo consists of wine and guns, and is of considerable value. A Swedish vessel, the *Thor*, a barque of 500 tons, was brought into Plymouth on Thursday morning by the pilot, and gave herself up. She is from Mealmen, with a cargo of stores for the Russian Government.

AUSTRALIA.

NEW GOLD DIGGINGS DISCOVERED. A private letter was received at Liverpool on Thursday, by the ship *Ariadne*, from Melbourne to Valparaiso, and thence from New York. It is dated March 1, the day on which the *Ariadne* sailed, in company with the *Marco Polo*, for England. New and extensive gold diggings, eclipsing, it is stated, anything hitherto heard of, had been discovered near Melbourne. The commercial business of Melbourne was reported satisfactory. The mining accounts are also favourable.

THE CHASE OF THE "FURY."

(From a Correspondent.)

H.M.S. *Fury*, Kavarna Bay, April 14, 1854.

We left Constantinople on the 5th for the Sea here, arriving the next day. Soon after our anchoring, the *Niger* arrived with the news of the declaration of war; on the signal being made by the Admiral, three cheers were given by all our ships. The French did not receive their news until the afternoon, in consequence of which no operations could be commenced. Immediately after the arrival of the *Niger* we were ordered to take the news, &c., to Varna, returning the same night. The next morning we received orders to proceed to Sebastopol to reconnoitre, which we did with a hearty good will, no other vessel accompanying us. We met over to the Crimea during the night of the 11th, and hove to close in shore, about twelve miles to the northward of Sebastopol. At day dawn we crept down the coast, so that a little before six we were off the port about a mile and a half. We made all the observations we could, the batteries not attempting to fire on us; we noticed two brigs and a steamer getting under way. As two small coasting vessels came out and ran to the northward, we stood after one, and made a present of her, taking her crew out and her in tow. Just as we completed this, we observed two frigates and two brigs under all sail, standing out of the harbour. We attempted to tow our prize off, but found that the latter sailed in us too fast, so we cast her adrift. We were in a very bad predicament, being dead to leeward of the enemy, and our only chance of escape was getting all the steam we could, and get to windward. Fortunately for us, our flagstaff was carried away with our ten-inch gun, which the enemy's frigate returned. We soon increased our distance, but they did not give up the chase until they were twenty-five miles off port. It was a great pity that we had not another good steamer with us, as then we might have shown them some play. On the chase being given up, we crossed quietly to the Danube, and not finding the fleet there, came on here this morning. The *Fury* at present is the lion of the day—all congratulating us, not only on our escape, but as having fired the first shot after the declaration of war, or, as it is termed, "opened the ball." The prisoners, also, are quite a curiosity; though only six of them, we gained our end, and got all the information required, and more than expected.

FESTIVAL OF THE SONS OF THE CLERGY.

It is very rarely that the great open spaces and commanding architectural effects of our cathedrals can be turned to their fullest advantage. When a suitable occasion presents itself, however, nothing can well be conceived more striking than the spectacle of worship conducted on so grand a scale, and celebrated with all the beautiful simplicity of the Church service. The Festival of the Sons of the Clergy, which took place at St. Paul's on Wednesday, was one of those rare occasions. An assemblage of from 5000 to 6000 persons, all belonging to the wealthier classes, filled the vast space under the dome and a large portion of the central nave. The choirs of the Chapel Royal, of Westminster Abbey, of St. George's, Windsor, of Bristol, Canterbury, Chester, Ely, Hereford, Lincoln, Norwich, Rochester, and Winchester Cathedrals, of the Temple, and other churches, assisted. His Royal Highness Prince Albert, the Lord Mayor, Sheriffs, and Aldermen, the civic authorities of other cities and towns, were present. The interior of the sacred edifice had been fitted up by Mr. Newman, the architect, so that full service might be performed, with the effect of 300 voices, under the dome.

On the arrival of the Prince, who entered by the western approach to the Cathedral, a procession was formed in the following order:—

Choristers of the Chapel Royal, Westminster Abbey, St. George's, Windsor, Bristol, Canterbury, Chester, Ely, Hereford, Lincoln, Norwich, Rochester, and Winchester Cathedrals, of the Temple, and other churches.

Canons and Prebendaries of the Cathedral (two and two)

The Archdeacon of London. The Lord Bishop of London. The Dean.

Members of the Festival Committee.

Treasurer of the Festival.

Stewards of the Festival (two and two, according to rank).

Masters of Orders and Ceremonies.

Officers of the City of London.

The Sheriffs of London and Middlesex.

The Aldermen (in single file, juniors first). The Recorder. The Remembrancer. The Junior Aldermen. The Lord Mayor's Chaplain. The Lord Mayor.

The Bishop of London and Dean of St. Paul's. The Lord Archbishop of York. Chaplains of the Archbishop of Canterbury. The Lord Archbishop of Canterbury. The Lord Chancellor.

HIS ROYAL HIGHNESS PRINCE ALBERT, K.G.

Grooms of the Bedchamber (Marquess of Abercorn, K.G.). Equerry in Waiting (Colonel Bouverie). Groom-in-Waiting (Colonel Wylde). Aide-de-Camp (Lieut.-Colonel Bentinck).

The Stewards proceeded to the seats immediately in front of the choir; the Lord Mayor, Aldermen, Sheriffs, and city officers, to those on the north side; the mayors of cities and towns to seats in the north transept. His Royal Highness and the Archbishop and Bishops occupied places on the south side. While the Canons and Prebendaries were seated below, the Dean proceeded to his stall and the Bishop to his throne. During the service with over a lemming effect in that grand space, the full organ chord and the pealing notes of the organ giving a sublime expression to the words of the Church liturgy. The presence of so vast a congregation added much to the impressiveness of the celebration. An anthem, composed for the occasion by Mr. Goss, the organist of St. Paul's, was performed after the first lesson. Wind instruments were introduced to strengthen the choir, and told admirably. The Archbishop selected for his text the 41st verse of the 10th chapter of Matthew—"He that receiveth a prophet in the name of a prophet shall receive a prophet's reward." The sermon was a very impressive one, though of course it could only be heard by a small portion of the congregation. The collection at the Cathedral amounted to the large sum of £680. It is to be hoped that this successful experiment will induce the Corporation of the Sons of the Clergy to celebrate the anniversary festivals in future years in a similar manner. The first festival was held in St. Paul's Cathedral in 1655, two hundred years ago, and during that long interval it is probable that on no occasion have the claims of the charity upon public benevolence been so well put forward, or so generally responded to as they were on Wednesday.

In the evening a dinner took place, according to custom, in the fine hall of the Merchant Taylors Company. Upwards of 460 noblemen, prelates, divines, and laymen sat down to table. The Lord Mayor presided; and the Prince Consort honoured the company with his presence.

When the cloth had been removed, the Lord Mayor rose and, in a few loyal and well chosen words, gave the toast of "Church and Queen." He singled the National Anthem as the sounds were variously applauded, especially at those passages which were considered most applicable to the present state of public affairs.

The second toast was "His Royal Highness Prince Albert, the Royal Steward of the year, Albert Prince of Wales, and the rest of the Royal Family." When the cheers with which it was received had subsided,

His Royal Highness rose, and returned thanks on his own behalf, and on that of the Royal family, for the cordial response which had been made to the toast. After expressing how much gratified he had been on witnessing the large assemblage of persons at this festival, he went on to express his approbation of the principles on which it was founded.

Were our ancestors purified the Christian faith, and shook off the yoke of a domineering priesthood, they felt that the keystone of that wonderful fabric which had grown up in the dark times of the middle ages was the celibacy of the clergy, and they stamped it as a chief tenet of reformed faith and piety. Our religious liberty would, on the contrary, only be secure in the hands of a clergy united with the people by every sympathy—national, personal, and domestic (cheers). Gentlemen, this nation has enjoyed for 200 years the blessing of a Church establishment which rests upon this basis, and cannot be too grateful for the advantages afforded by the fact that the Christian ministers not only preach the doctrines of Christianity, but live among their congregations, an example for the discharge of every Christian duty as husbands, fathers, and masters of families—themselves capable of assuming the whole depth of human feelings, desires, and difficulties (Cheers). While we must gratefully acknowledge that they have, as a body, worthily fulfilled this high and difficult task, we must also in mind that many times an equal participation in one of the actuating motives of life—the one which among the "children of this generation" exercises, perhaps of necessity, the strongest influence—I mean the desire for the acquisition and accumulation of the goods of this world (Cheers). Gentlemen, the application of "a money making parson" is not only a reproach, but a condemnation of a clergyman, depriving him at once of all influence over his congregation. Yet this man, who has to shun opportunities for acquiring wealth, open to most of us and who has hours of only an ordinary life-time allotted to him for his services, has a wife and children like ourselves, and we wish him to have the same solicitude for their welfare which we feel for our own (Cheers). Are we not bound, then, to do what we can to relieve his mind from anxiety, and to preserve his children from destitution, when it shall have pleased the Almighty to remove him from the scene of his labours (Cheers)? You have given an answer to the affirmative by your presence here to-day, and although this institution can do materially but little, morally it gives a public recognition of the claims which the sons of the clergy have upon the sympathies of the nation, and which, we trust, will, as such, be of the greatest value (Cheers). May it continue for further hundreds of years as a bond of union between clergy and laity, and on each recurring century may it find the nation ever advancing in prosperity, civilisation, and piety! (Loud cheers.)

His Royal Highness concluded by proposing "the healths of the Archbishop of Canterbury and Lord Denman (the President and Vice-President of the Corporation of the Sons of the Clergy)."

The Archbishop of Canterbury returned thanks for the honour, and proposed "the health of the Lord Mayor."

After several other toasts had been proposed, the Treasurer read the financial report, which announced that his Royal Highness had contributed £105 guineas, that the 113 stewards of the festival had handed in lists amounting to £4500, that the collection at the Cathedral doors was £690 that the subscriptions at the dinner gave a sum of £3145, that an estimated sum of £3600 might be added as the proceeds of sermons preached in aid of the funds, that the Dowager Lady Willoughby de Broke had given a donation of £600, and that the receipts for the year would amount to £12,050. This gratifying statement was received with loud cheers by the company.

BRITISH AND FOREIGN SCHOOL SOCIETY.—The forty-ninth general meeting of this society took place on Monday, at twelve o'clock; the Right Hon. Lord John Russell in the chair. Lady Russell was on the platform, by the side of the noble Lord. The report—which was read by the Secretary, Mr H. Dunn—opened by referring to a series of resolutions for a special subscription of £10,000. Mr. Samuel Gurney, Mr. Pease, M.P., and Mr. G. J. Barclay had sub-scribed £500 each. The foreign operations have the future promise: grants of school materials have been made to various schools in the West Indies, Canada, South Africa, Western Africa, New Zealand, Australia, the East Indies, and the South Sea Islands. Financially, the society is prosperous, although enlarging operations require enlarged funds. The annual subscriptions have increased £200 during the last three years. The receipts of the year have been £15,183 9s. 2d., and the expenditure about equal. Lord John Russell, in the course of his remarks, reiterated his conviction that religious could not be separated from secular instruction in the public school. His Lordship said that it was the duty of all to urge forward the cause of education, that all the children of the country might be instructed.

THE EARL OF ELGIN.—It is said that the Earl of Elgin is charged with a special mission to the Government of the United States, in reference to questions arising out of the present war, and that for that purpose he will proceed to Washington on his return to his government of Canada.

EGYPTIAN TROOPS PASSING BEFORE OMER PACHA, AT SCHUMLA.

SKETCHES FROM THE DANUBE.

We have received from our Special Correspondent at Schumla the accompanying Sketches of the war movements in that locality. His first scene represents Egyptian Troops coming in from the Dobrudja, Matchin, Tontcha, and Isaktchi Most of these men are fine fellows, soldierly and brave. One marked characteristic is to be noticed amongst them: generally, the Egyptian has very small eyes. This gives a peculiar aspect to the face. Not content, with having two small eyes, the Egyptians had a habit of blinding one of them, to avoid the conscription; others have mutilated their forefingers, for the same reason. Mehemet Ali, however, put an end to this by making one-eyed regiments, and four-fingered regiments; now they are incorporated together with the army.

Omer Pacha is in the foreground of this Sketch; and is accompanied by Captain Nolan, of the 15th Hussars, Colonel Cannon (now Bayiam Pacha), Captain Symmons, Captain Grange, Surrey Militia; Lieutenant Nasmyth, Bombay Artillery; and Captain Govoni, of the Sardinian Staff.

The second Sketch represents a large party of Bashi-bozouks coming in from Matchin. The street they came up is one of those leading in from the Varna-road. In front are three Bashi-bozouk fools, beating their little wooden kettle drums. The men who wear white petticoats are Albanian Bashi-bozouks. On the right is a fountain, of which the streets are full. Here the dogs lap water, and the horses are brought to drink.

Schumla, April 17, 1854.

The rumours of the arrival of troops at Adrianople and Varna turn out to be unfounded. A French Lieutenant-Colonel, however, has arrived at the former place, and General Bosquet yesterday reached the latter. General Bosquet is shortly expected in Schumla, when, no doubt, he will make some efforts to ascertain with certainty what the Russians are doing. It is generally supposed that they are quiet, and wait only to ascertain the movements of the Anglo-French army to resolve on their movements; but, in the meanwhile, it is unpleasant to consider that 40,000 enemies are concentrated in the Dobrudja, and that no truthful information respecting them can be obtained. The concentration of troops continues here; and artillery and cavalry have arrived to-day in considerable numbers.

Achmet Pacha, whose recall I announced to you, has arrived at Sistova *en route* to this place.

Up to the latest accounts Omer Pacha was still concentrating his forces in Schumla Troops were pouring in from the Dobrudja and the banks of the Danube daily. The whole of the division of Mustapha Pacha has left that theatre of the war One part has gone to Varna, the rest is now at Schumla. The number of pieces of artillery said to have been lost by the Turks, in the late affairs in the Dobrudja, is stated to be as high as thirty. But even Turkish disasters, when spoken of, may be exaggerated by some persons.

Omer Pacha is using the most indefatigable exertions to put his army and camp in the best working order that he can. Remonstrance with such a horde of savages as the Bashi-bozouks would be just as effectual as the language of censure addressed to the untamed beasts of the forest; and, therefore, Omer Pacha, instead of appealing to the moral perceptions of these cruel, brutal, and cowardly banditti, who have brought discredit on his army, has most wisely had recourse to physical force, with a view of at once punishing them for the crimes they have committed on the peaceable inhabitants of the Dobrudja, and for preventing them perpetrating the same atrocities elsewhere. He has sent out his cavalry to get them collected together, and we shall very soon hear of the arm of military law coming down upon them with proper rigour.

On the 11th ult. there was a review of a considerable part of the troops. Very few places afford such facilities for a display of this kind as Schumla. The plain towards the east has not only space for any body of troops, but is quite open and dry. Omer Pacha did not appear. Ismail Pacha, however, was there: he was accompanied by ten Englishmen, most of them officers belonging to some of our services. Of the field artillery, the Egyptian corps was pronounced to be the best. But the horses belonging to the whole of this force want strength, and the evolutions were not performed with that rapidity which people acquainted with the state of our own or that of the East India Company's artillery are accustomed to witness A considerable number of battalions of infantry were also turned out. The vigorous appearance of the men struck every one. They are evidently well fed; and, although their clothes are coarse, yet they are warm They do not go through their work with that quickness and animation which the British and French troops display, but make a very good appearance for soldiers who are so ill provided with efficient officers.

BASHI-BOZOUKS COMING INTO SCHUMLA FROM MATCHIN.

TESTIMONIALS TO THE 34TH AND 69TH REGIMENTS.

It will be recollected that, about a year since, H.M.S. *Dauntless*, now in the Baltic, was severely infected with fever, when nearly the whole of the crew and officers were prostrate by the disease; while a midshipman and one or two of the crew, who were free from the scourge, with the greatest difficulty navigated the ship into Barbadoes. Upon its arrival, the officers and men of the 34th and 69th Regiments, stationed there, not only braved the dangers of contagion, but sacrificed their own personal comforts, and altogether devoted themselves in a truly noble spirit in assisting their maritime brethren in arms.

The officers of her Majesty's Naval Service, Royal Marines, and Royal Marine Artillery, as soon as they heard of this devotedness, suggested that it would be in accordance with the general feeling of the service, that a sense of the kindness shown by these regiments be testified by the presentation of a piece of plate to each of their messes, as a lasting memorial of their conduct on that occasion. The Commander-in-Chief, flag-officers, captains, and other officers of her Majesty's ships at Portsmouth, having signified their approval of the above suggestion, a meet-

TESTIMONIAL PRESENTED TO THE OFFICERS OF THE 34TH AND 69TH REGIMENTS.

ng was held at the Royal Naval College, on the 29th of June—Vice-Admiral Sir Thomas Cochrane, K.C.B., in the chair—when a subscription was organised among the naval clubs; and, the requisite funds having been raised, the Plate has been executed by Messrs. Hunt and Roskell.

We have engraved one of these Testimonials—a characteristic composition, bearing upon its base a representation of the *Dauntless*.

Each piece bears this inscription:—

Presented by the officers of the Royal Navy and Royal Marines to the officers of her Majesty's 34th Regiment, in grateful remembrance of the unbounded kindness and generous aid afforded by them to the officers and crew of her Majesty's ship *Dauntless*, when suffering and disabled by yellow fever, at Barbadoes, in 1852.

In the second case, the number of the regiment, 69th, was substituted for that of the 34th. The pieces of plate in other respects were the same.

MADAME ANNA CARADORI.

This distinguished *prima donna* was born at Pesth, in 1822, of Italian parents. At the age of seventeen she made her début in her native city, when she appeared in "Robert le Diable," the "Freischütz," the "Barbière di Siviglia," and other pieces. In the same year (1839) she sang at Vienna with great success. Since that period she has sung in all the chief towns of Germany, and also at Warsaw, Cracow, and Lembergh, appearing in the principal operas of Mozart, Meyerbeer, Rossini, Bellini, and Donizetti. In 1840 she performed at Vienna and, in 1846 and 1847, she was engaged at the theatre of La Scala, at Milan; and for several subsequent years she appeared at Ancona, Florence, Verona, Pesaro, Ferrara, and other principal Italian theatres—achieving everywhere great success. In 1851 she was engaged for the opening of the Theatre of Jassy, in Moldavia; and in the spring of the following year she visited Constantinople, where she performed a round of her principal parts. In 1853 she was at Naples, where she gave several brilliant concerts at the Theatre of San Carlo; but she declined an engagement for that theatre, having determined to pay a visit to London. In September last she appeared at the Drury-lane Opera in the "Freischütz," "Norma," and "Lucrezia Borgia," with a degree of éclat which must be fresh in the memory of our musical readers. During the last winter season she was the *prima donna* of the company formed at Edinburgh for the performance of Italian and German operas, and mainly contributed to the remarkable success of that undertaking, in the same manner as she is now contributing to the great success of the "Royal Opera" at Drury lane.

MADAME ANNA CARADORI, OF THE ROYAL OPERA, DRURY-LANE.

The Trade Museum.—The committee of Lloyd's have recently issued a circular to all their agents, inclosing documents for their guidance, and requesting them to promote the collection of raw and other materials for the inspection and information of merchants and manufacturers, by all means in their power. This unprecedentedly liberal step from such a body is most creditable to the committee. The Lords of the Treasury have also instructed the Custom-house to forward direct to the Trade Museum all cases which may arrive from abroad, containing contributions from foreign countries. This is most important, as the specimens will thus be saved from injury during the careless examination. Manufacturers all over the country are evincing considerable interest in the proposed museum: specimens of industrial art, &c., are fast coming in, and promises of further samples are most numerous. In some leading towns, local committees have been spontaneously formed, with the mayors and other civic functionaries at their head. The leading societies of the kingdom and the colonies—especially the Royal Agricultural Society of England, the Highland and Agricultural Society of Scotland, the Royal Scottish Society of Arts, the Royal Society of Dublin, the Zoological and Entomological Societies of London—are all cooperating most efficiently with their old and respectable sister society, the Society of Arts, which has already accomplished so much that is useful.

Longchamps Fashions.—The absorbing question of *corsage à basques* has been decided in their favour; the depth of the *basque* being increased to an extent which may eventually lead to the reintroduction of the *paletôt de dame*. There is a rage for every article of the toilette of the same colour—the robe, *canote*, *mantelet*, boots, gloves, parasol, and even the veil, must be of the same shade.—From *Le Follet* for May.

PRINCESS' THEATRE.

M. Carré's drama abounds in clever stage adaptations of the most salient suggestions in Goethe's. The subject of our present Illustration is an example. Poor *Marguerite* is tempted, in both productions, with a casket of jewels. In the play at the Princess' Theatre the casket is left in the garden, on the balustrade of the steps leading to the door of her dwelling. The arrangement is exceedingly pretty, and a point is made of the situation, by the circumstance of a humble lover having previously left a bouquet of flowers as his morning gift, whence *Mephistopheles* takes the opportunity of moralising on the competition between diamonds and flowers. Alas! the former win, as the fiend had maliciously predicted. Such are the commonplaces—shallow enough, but skilfully introduced—which Carré has substituted for Goethe's subtleties. They are good theatrical heirlooms, and serve the playwright's purpose as well as the best poetry, and are at once understood. The class of pieces preferred by the management being understood and accepted, we take the present precisely for what it is worth, and acknowledge the superb manner in which it is presented, with all the commendation it merits. It is an instance in which the cabinet is more costly than the jewel which it contains; the latter may be paste only, but the former is of ivory and gold. The spectacle is deservedly attractive; but we could have wished that it had illustrated the original poem, if only that we might have been gratified with Mr. Kean's interpretation of the genuine *Faust*, furnishing, as it does, so many fine opportunities for recondite and refined acting.

SCENE FROM "FAUST AND MARGUERITE," AT THE PRINCESS' THEATRE.

CALENDAR FOR THE WEEK.

SUNDAY, May 14.—4th Sunday after Easter. Robert Owen born, 1771.
MONDAY, 15.—Rapin died, 1725 Cuvier died, 1832 O'Connell died, 1847.
TUESDAY, 16.—Tillotson died, 1694. Battle of Sempach, 1386.
WEDNESDAY, 17.—Talleyrand died, 1838. Dr Jenner died, 1823.
THURSDAY, 18.—Trial by Jury first instituted in England, 970.
FRIDAY, 19.—St. Dunstan. Anna Boleyn beheaded, 1536.
SATURDAY, 20.—La Fayette died, 1834 Columbus died, 1506.

TIMES OF HIGH WATER AT LONDON-BRIDGE
FOR THE WEEK ENDING MAY 20 1854.

Sunday.	Monday	Tuesday.	Wednesday	Thursday	Friday.	Saturday.

TO CORRESPONDENTS.

AN OLD SUBSCRIBER, Glasgow.—The pelisse slung on the left shoulder in the 11th Hussars forms no exception to the uniform worn by the 7th, 8th, 10th, and 15th Regiments of Light Cavalry. This description of troops form the national horsemen of Hungary and Croatia, and the pelisse was originally intended to be used over the jacket, to protect the wearer against cold and wet, and, at the same time, leaving the soldier untrammelled by the folds of a cloak. They were introduced into the French service in 1692, and owed their origin to the Hungarian cavalry which was subdued by France before the reign of Louis XIII. The adoption of Hussars into the English army is of a much more recent date

FREDDY.—Fitting ships with iron masts has been done in more instances than one but with what success we are unable to say.

ERRATUM.—In last week's list of presentations, for "Edwin James, Esq." &c., read "Edward James, Esq., on his appointment as one of her Majesty's counsel."

A CONSTANT SUBSCRIBER, Castle Hedingham.—Your coin is a farthing of Edward I or II., reading "Londoniensis" rather scarce. "Hawkins' English Silver Coins" is a good work, and of moderate price.

B. O. M.—"Ne vile fano"—"Bring nothing base to the temple"; or, with the *jeu de mot*, "to Fane."

CLARENS.—Armorial bearings derived from the source mentioned by our Correspondent have no value whatever For instance, an applicant of the name of Howard of low birth, can appeal in no possible way with any branch of the illustrious house of Norfolk, is assigned by this self-constituted authority, the old heraldic coat of the first Peer of the Empire. A Mr. Brown gets the ensigns of the Viscounts Montagu. A Mr. Seymour, however humble in parentage, acquires the splendid bearings of the Dukes of Somerset, and so on. The whole proceeding is a nullity. Arms, to be correctly used, must be authorised by the Heralds' College in England, the Ulster's Office, in Ireland, or the Lyon Office, in Scotland.

J. D., Wolverhampton.—Arms of Francis Earl of Guilford (who (as holy orders): Az. a lion passant or, between three fleurs-de-lis arg. Crest: A dragon's head erased sa., scaled, ducally gorged and chained or. Motto: "Animo et fide" (*Animo*, "By courage and faith.")

SPES.—It is impossible to define the arms of the gentleman in question unless the family to which he belongs is indicated.

J. B., Sussex.—We do not undertake to identify or discover arms. The task would be very troublesome, and the result uninteresting to the querist.

MISLAID.—You are clearly entitled to quarter the arms of your mother That lady, having no brother, was a co heiress in heraldry.

ESCUTCHEON.—Refer to Noble's "History of the Heralds' College."

AN OLD SUBSCRIBER.—When the force is embodied the rank may be assumed; but it seems scarcely accordant with good taste to add the military designation on your private card.

J. J.—Frederick Richard, Earl of Bective, son and heir-apparent of the Marquis of Donegal, died (unmarried). at Naples, 11th Feb., 1854.

ESCUTCHEON.—Arms of Lockwood: Arg. a fesse between three martlets sa.

A MANCHESTER MERCHANT.—The three fleurs-de-lis or, and field az (the arms of the Bourbon, the prior Kings of France), would never do now the displayed eagle (the Imperial ensign of Napoleon I.) appears to be again the universal emblem throughout France.

THE WAR WITH RUSSIA.—SEBASTOPOL.

In preparation, for

THE ILLUSTRATED LONDON NEWS,

BY PERMISSION OF THE ADMIRALTY,

A LARGE VIEW OF SEBASTOPOL,

AND THE ADJACENT COAST;

With a DIAGRAM, and accurate Sketch of all the FORTIFICATIONS in and near the Harbour; drawn by Lieutenant MONTAGU O'REILLY, when H.M.S. *Retribution* boldly entered that port in January last.

MARRIAGE OF THE EMPEROR OF AUSTRIA.—Next week we shall illustrate this magnificent event, with a View of the Bridal Procession, and a Portrait of the Imperial Bride.

*** The publication of the CENSUS SUPPLEMENTARY PAGES is unavoidably deferred till next week.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MAY 13, 1854.

THE War Budget of Mr. Gladstone will excite considerable opposition; but we doubt whether the opposition will avail to defeat it, or whether its rejection would not be considered a calamity, even by many persons who may feel themselves bound by their own past professions to speak against it. The Ministry having wisely determined to try whether the nation cannot pay for the war as it goes on, without resorting to the expensive system of borrowing, it only remained to decide how the necessary funds could be best raised. To restore the Excise-duties that have been abolished—to return to the ancient Protective system—to levy imposts upon articles of manufacture—to undo, in fact, the great work commenced by the late Sir Robert Peel, and carried on with such remarkable success by his disciple and successor—would have been a course of proceeding which the country would not have tolerated. Whatever the members of the late Ministry might have attempted in this way, if they had had the opportunity, it was not to be expected that the framer of the memorable Budget of 1853 would allow even the urgent necessities of the war to force him to propose, in whole or in part, the reversal of a policy which had been productive of such benefit. The first and most obvious resource, therefore, was to increase the Property and Income-tax. In his brilliant speech of Tuesday night, Mr. Gladstone detailed the auxiliary measures that were necessary to provide for the estimated expenses of the struggle. The Property and Income-tax, which was doubled for the first half of the present year, is to be doubled for the whole period of the war. The country may not relish the proposal, but will not seriously object to it. Great Britain is far more wealthy than it was during the last war; and if it was able to pay a ten per cent Property-tax at that time, it will now levy a five per cent Property-tax to be an intolerable burden. John Bull will probably grumble—for it is his habit and his privilege to do so—but he will pay—and, in his secret conscience, will admit that the Minister had no alternative; and that it is far better to pay six per cent to nip an evil in the bud, than have to pay ten or twenty per cent at a future but no very distant time, for not having the spirit and the wisdom to resist it at the commencement. But as it is not right that the comparatively small number of persons who are liable to the Property and Income-tax should bear the whole burden of the war, and as the proposed increase would only bring in £3,250,000; and, as upwards of £10,000,000 are required, the Government has found it necessary to have recourse to indirect taxation. In fixing upon the Spirit and Malt-duties for increase, we think Mr. Gladstone exercised a sound judgment; and one that, notwithstanding a loud outcry from the agriculturists, will be approved of by the country. He proposes to augment the duty on Irish spirits by 8d. a gallon, and on Scotch spirits by 1s. a gallon; and expects to raise by this means about £450,000. The Malt-tax is to be raised from 2s. 9d. to 4s. per bushel; which, taking the consumption at 40,000,000 of bushels, will produce the sum of £2,450,000. By postponing the reduction of the Sugar-duties, a further sum of £700,000 will become available; and thus the Government will be in possession of £6,850,000, in addition to the amount of increased Income and Property-tax, already voted for the half-year. These items amount, altogether, to upwards of £10,000,000, and will raise the revenue of the year to £66,746,000—the anticipated expenditure being £63 039,000. There will thus be an available margin of at least £3,500,000.

The only part of this scheme which will excite any real dissatisfaction will be that relating to the Malt-tax. A large and influential party have so long been taught to consider the Malt-tax as one operating injuriously against the farmers and proprietors of land, and the agriculturists have so long been led to anticipate and demand its abolition as a matter, not of favour, but of jus tice, that we can scarcely expect they will submit without some angry remonstrance. But their remonstrances will be unavailing. The tax is not a tax upon farmers and agriculturists; for, though paid by them in the first instance, it falls upon the consumers of beer—upon hard-working artisans and labourers—upon servants—and all housekeepers who are able to indulge in the cheap luxury of malt liquor. The men of the towns, who will be the real sufferers by the increased duty, will not, we may be sure, raise any very formidable objections to it; for no tax that the wisdom and ingenuity of all the financiers in the world could devise, in the present circumstances of the country, would be found less objectionable in theory or less oppressive in practice. The farmers themselves, whose prosperity has been greatly increased by the financial policy of the last few years, are less inclined to quarrel with Free-trade than they used to be in those happily by-gone days when they had faith in Mr. Disraeli, and in some unknown thing "that was looming in the future." The more they reflect upon the real incidence of the Malt-tax, the more they will be convinced that it operates no injustice against them as a class; but that its burden, like that of all taxes laid upon articles of consumption, falls ultimately upon the purchaser and consumer, not upon the seller and grower. But whether they approve of the tax or not, there is no chance of a substitute being provided. They will have to submit to the evil; and join—as we have no doubt they will—in the universal wish that speedy victory may crown our efforts in the just and necessary war in which we are engaged. Taxation would then fall to its ancient level; and Great Britain will have offered to the world and to posterity the noble example of bravely defending the right, and of cheerfully paying the cost of it.

IN a letter to the Duke of Wellington, written and published exactly twenty-five years ago, by that clear-headed Englishman, the late William Cobbett, it was stated, "that what was called the liberation of Greece" would be of little substantial benefit to the Greeks themselves. Events have proved the sagacity of the prediction. Mr. Cobbett was also of opinion "that the Greeks were a very bad people," and "that the Russians were at the bottom of their rebellion against the Sultan." "I did not wait," he added, in his honest and homely English, "till Russia had hatched a quarrel and declared war against Turkey; I did not wait for the invasion of Wallachia and Dalmatia; I did not wait for the '*victory of Navarino*,' and the strange coalition there exhibited against a Power which an idiot would almost have perceived it was necessary for us to support. This victory, this disgraceful victory, this untoward victory, lauded to the skies one day, bragged of one day, and lamented the next; this victory I did not wait for, in order to express the above-stated opinions." "Even on the score of humanity," said he in an article of the *Register*, published a year previously, "it became every man to be cautious how he gave encouragement to projects for 'the deliverance of Greece.' Even on this score alone, there was ground for great hesitation; but when to this consideration was added the certainty—not the *possibility*, but the *certainty*—that the liberation of the Greeks, that the separation of them from their masters the Turks, would let the Russians into the Mediterranean, and would lead to a dismemberment of the Ottoman Empire—when this certainty was so clear to all men of sense, where was the Englishman who was not the most perverse or stupid of wretches, that could give encouragement to the rebellion of the Greeks?" Unhappily for the peace of the world in the year 1854, the efforts of the Russians to weaken the Turkish Empire, by establishing an independent Greek kingdom, were blindly aided by Great Britain and France, in the years preceding the crowning blunder of Navarino. As far as the Greeks are concerned, the people of this country are not likely, a second time, to throw away their sympathy. The people of to-day are as wise as Cobbett was more than a quarter of a century ago, and will cordially support any measures that may be necessary to suppress the rebellion fomented in Albania by Russian agents and Russian gold, and to punish the King of Greece for his complicity in the plot. The recent insurrection, which had not even the excuse of a decent grievance—for it broke out at a time when the Sultan had granted a greater degree of civil and religious liberty to his Greek subjects than they had ever had the spirit or the sense to demand—will not, it appears, be at the Allies much trouble to put down. Its leaders are despirited, and can scarcely show a front against the Turkish commanders, much less against the naval and military forces of Great Britain and France. We may reasonably expect to hear of their final discomfiture before many weeks—certainly as the best news, [illegible] that Albania is revolted; and the Mainote Greeks in preventing rebellion, not only in Albania, but in Montenegro. The King of Greece has not had the honesty to declare war against the Sultan; but if his complicity, and that of his Government, in stirring up an armed rebellion in the dominions of his neighbour, can be satisfactorily proved, it is likely that his want of manliness in the mode of proceeding will not prevent the Allies from holding him responsible. It is a misfortune for Europe that his kingdom was ever allowed to be established. It is now the duty of Europe to make the misfortune as little grievous as possible, by insisting upon the good behaviour of those who govern it. A romantic and foolish sympathy with the modern Greeks has long since passed away; and if they desire to retain the independence which they possess, it will behove them very carefully to respect the independence of their neighbours. To those who desire further information on the Greek question, we recommend the well-timed reprint of Cobbett's "REASONS FOR WAR AGAINST RUSSIA IN DEFENCE OF TURKEY"—a little pamphlet from which we have above quoted. It not only shows the acuteness of one of the ablest public writers that England ever produced; but breathes a spirit of patriotism worthy of all commendation and imitation in the present day. "The question put to me," said Cobbett, "is this—Would you, if you were Prime Minister, go to war?—Yes, at once—and my fleets should negotiate the Russians out of all the Turkish territories. The Autocrat should hear England speak from the mouth of the cannon, and from no other mouth." The advice was given in 1834, but it is available for 1854—and none the worse for having been once given in vain.

THE COURT.

The Court has been unusually gay during the past week. On Monday her Majesty gave a concert at Buckingham Palace, at which the artistes of the Royal Italian Opera assisted. The Royal Family, the Foreign Ministers, and a large circle of the nobility were present

On Tuesday the Queen and Prince Albert honoured the Society of Painters in Water-Colours with a visit, at their Gallery, in Pall-mall East. The Duke and Duchess de Nemours visited the Queen in the course of the afternoon. In the evening her Majesty and the Prince honoured the Royal Italian Opera with their presence.

On Wednesday, at half-past two o'clock, the Prince Consort went to St. Paul's Cathedral, to attend the Bicentenary Festival of the Sons of the Clergy. His Royal Highness was afterwards present at the annual dinner of the Governors of the corporation, given in Merchant Taylors' Hall Threadneedle-street. The Queen took a drive in the afternoon, and in the evening honoured the French Plays with her presence.

THE QUEEN'S DRAWINGROOM

The Queen held a Drawingroom (the third this season) on Thursday, in St. James's Palace. Her Majesty and his Royal Highness Prince Albert, escorted by a detachment of Life Guards, arrived from Buckingham Palace soon after two o'clock.

The Queen and Prince Albert entered the Throne-room attended by the Mistress of the Robes, the Duchess of Sutherland, the Ladies of the Bedchamber, the Viscountess Jocelyn (in waiting), the Duchess of Wellington, the Viscountess Canning, the Countess of Desart, and the Marchioness of Ely, &c. &c.

The Queen wore a train of green and white brocaded silk, trimmed with white tulle and blonde, and bunches of violets and pink and white May blossoms; the petticoat of white satin, with white tulle and blonde, and bouchés of violets and pink and white May blossoms, to correspond with the train. Her Majesty's head dress was a wreath of violets and pink and white May blossoms, and diamonds.

The diplomatic circle having been first introduced, several presentations took place.

The general circle were next introduced. The presentations were not very numerous, neither were there any calling for especial remark.

The Queen and the Prince returned to Buckingham Palace after the Drawingroom.

On Friday (yesterday) the Queen and the Prince, with the Duchess of Kent and the Duchess of Cambridge and the Princes Mary, honoured the Ambassador of France and the Countess Walewski with their presence at a *bal costumé*, given at Albert-gate House, the residence of the French Embassy.

This day (Saturday) her Majesty will be present at the launch of the *Royal Albert* line-of-battle ship at Woolwich.

Her Majesty the Queen will give a State Ball on Wednesday next, at Buckingham Palace.

The Viscountess Jocelyn has succeeded the Countess of Charlemont as the Lady in Waiting to the Queen. Lord Rivers and Sir Frederic Stovin have relieved Lord de Tabley and Lieut.-Col. the Hon. A. N. Hood as the Lord and Groom in Waiting.

Their Royal Highnesses the Duke and Duchess d'Aumale and the Duke de Nemours visited the Duchess of Kent, on Saturday, at her residence, Clarence-house, St. James's.

The Marchioness of Waterford has arrived at Viscount Canning's, in Grosvenor-square, from Curraghmore-house. The noble Marquis is expected in town shortly.

Mrs. Gladstone had a brilliant assembly on Wednesday evening, at the official residence of the Chancellor of the Exchequer, in Downing-street.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rural Deans:* The Rev. R. A. Gordon to Buntingford; Rev. A. Upcher to Brooke Norfolk. *Rectories:* The Rev. R. Cage to Rathconnell, Westmeath; Rev. G. de Crespigny to Little Bealings, Suffolk; Rev. J. M. Hobson to Templemoyle; Rev. J. P. Lightfoot to Kidlington, Oxfordshire; Rev. W. P. Musgrave to Elton, Yorkshire; Rev. S. Robins to St. James's, Dover; Rev. A. D. Shafto to Benenden, Kent; Rev. Bernard to Salford, Bath; Rev. D. Williams to Llysewen, near Hay, Brecknock; Rev. W. W. Woolcombe to Wotton, near Northampton. *Vicarages:* The Rev. J. Davidson to Ninebanks, Yorkshire; Rev. H. Leech to Eccles; Rev. W. Lanek to East Haddon, near Northampton; Rev. C. A. Mooney to Honiton, near Dover. *Incumbencies:* The Rev. C. Allen to St. Paul's Church, Bolton; Rev. J. R. Chatterton to Halstead, near Godalming, Surrey; Rev. J. Lees to St. Mark's, Islington; Rev. G. A. Perryn to Sutton Gulden, Cheshire; Rev. T. P. Wilson to Barnsley, Lancashire.

The Rev. William Goode, M.A., Rector of Allhallows the Great, Thames-street, has been appointed to the Warburtonian Lectureship at Lincoln's-inn.

TESTIMONIALS.—The following clergymen have recently received tokens of affection and esteem:—The Rev. W. A. Ormsby, by the parishioners of St. James' with-Pockthorpe, on the resigning incumbency of that parish; the Rev J. Jackson, by the parishioners of Wrentham, on his resignation; the Rev. L. F. Clarkson, from the parishioners of Stamford Rivers, on his leaving the curacy of that parish; the Rev. J. F. Murphy, by the teachers, scholars, and friends of the London road branch of the St. George's Church Sunday-school, Sutton, Macclesfield; the Rev. J. F. Serjeant, Curate of the parish church, Sheffield, by the teachers of the boys' Sunday-school; the Rev. W. J. Hutchings, from the congregation of the District Rectory of Christ Church, Mary-le-bone.

METEOR.—A Correspondent writes from Pakefield that, on Tuesday evening, he and his son observed a brilliant meteor at about half-past seven o'clock in the evening, while walking on the edge of the cliff, about two miles to the south of Lowestoft. When first seen, the light was passing rapidly at a great height in the atmosphere, from an easterly direction. At first it was thought to be a rocket, but the light was too brilliant, of a bluish white cast it rapidly passed away to the southward, and, leaving a trail of light which remained for some seconds after its explosion, which took place almost immediately after it was first observed, was accompanied by a loud but whizzing sound. As the sun was barely set the atmosphere was remarkably clear, and the moon bright.

ADVANCE IN THE PRICE OF IRISH WHISKY.—The distillers of Cork have fixed the price of whisky at 8s. 2d. per gallon—an advance of 4½pence per gallon.

PRICE OF BEER.—The large brewers met at Brewers' Hall on Thursday, and resolved to raise the price of beer 3s. per barrel.

METROPOLITAN NEWS.

,, 11	29.956	59·3	42·7	49·2	— 2·7	86	S.W.	0.00

Note.—The sign — denotes below the average.

The reading of the barometer decreased from 29.73 inches at the beginning of the week, to 29.89 inches by the 6th; increased to 29.62 inches by the 7th; decreased to 29.52 inches by the 8th; increased to 30.06 inches by the 10th; and decreased to 29.96 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.677 inches.

The mean daily temperatures have now been below their average value on every day from the 22nd April (with the exception of May 4th, when it was 1° above), the mean defect for the period being 3·2°.

The mean temperature of the week was 48·6°, being 3·4° below the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 27·7°, being the difference between the highest and the lowest readings of the thermometer on the 8th.

The mean daily range of temperature during the week was 20·9°. The greatest was 17·7°, on the 8th; and the least 15·2°, on the 8th.

Rain fell during the week to the depth of one inch and three-tenths.

Hail fell during the afternoon of the 9th.

Thunder was recurred on the 9th, and thunder was heard frequently during the afternoon.

The weather on the 5th, 6th, and 10th was fine, and the sky free from cloud; during the rest of the week the sky was overcast, and the weather dull. The wind blew very strongly on the 7th and 8th.

JAMES GLAISHER.

Lewisham, May 12th, 1854.

HEALTH OF LONDON.—The number of births registered in the metropolitan districts within the week ending May 6, was 1835; exceeding the average of the same week in nine years by 340. The number of boys was 958; and of girls, 877. The births within the week of the previous week was 1263; exceeding the corrected average by 217. This increase is owing, chiefly, to a great decrease on the mean temperature (as shown in our Meteorological Table) on the third and fourth days of April; and the temperature still continues below the average of former seasons.

MERCHANT SEAMEN'S ORPHAN ASYLUM.—The annual dinner of this society took place on Wednesday evening, at the London Tavern; Lord John Russell in the chair. There were about 150 gentlemen present, many of whom are largely interested in shipping. His Lordship made an eloquent appeal in behalf of the charity, reminding the company that, while in time of peace the merchant seamen were the men by whose exertions all the produce of the tropics was brought to this country to increase the comforts of all classes, in times of war, like the present, they formed a nursery for the British navy, and by their indomitable courage contributed to maintain the glory of the country. The amount of subscriptions announced was £1015 16s. 7d.

RAGGED SCHOOL UNION.—On Monday night the tenth annual meeting of the friends and supporters of this society was held in the large room of Exeter-hall; the Earl of Shaftesbury in the chair. From the report it appeared that there are now in connection with the Union 120 ragged schools, being an increase of thirteen on the year, attended by 12,150 children on Sundays, by 800 on week days, and by 630 in the evenings, all of whom are instructed by 780 paid teachers, aided by a large number of voluntary assistants. There are employed as shoeblacks, under the auspices of the union, thirty seven boys, who last year cleaned 225,306 pairs of boots, and earned the sum of £819, being an increase of £139 on last year. Of the sum so earned, £491 was paid to themselves for food, £205 placed to their credit in the savings' banks, and £103 devoted to the expenses of the society. The purposes in which the destitute obtain food, lodging, and in the majority of instances clothing, now number 15, in which are protected from the streets as many as 350 young persons of both sexes

"SUNNY HOURS."—PAINTED BY G. DODGSON.—FROM THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

in the midst, to the music of a guitar, tambourine, &c., contributed by the company. "Gip-ties" (147) surpasses either of the preceding, in intelligence of individual expression and carefulness of treatment; yet the materials are simple enough—two gipsy girls, one holding up a tambourine, the other leaning against a bank, and looking up laughing. The charm consists in the life thrown into the action and features. We have engraved the latter.

NEW SOCIETY OF PAINTERS IN WATER COLOURS.

(SECOND NOTICE.)

E. Corbould stands prominently forward in support of the claims of historical art on the present occasion, displaying great industry and unquestionable ability; although the result is not always commensurate with the aims of his ambition, or the requirements of the subjects selected. The "Destruction of the Idols at Basle" was a striking and memorable event, which might enlist the highest resources of the pencil for its development. Mr. Corbould, in his large picture on this subject, has done all that intense and luminous colouring can do to present the physical terrors of the scene: the blazing pile within the sacred portals of the church; the prostrate effigies and altars, the scattered relics of an idolatrous worship; and aloft, contrasting with the lurid focus, the calm blue sky reproaching the frenzy and the excesses of men. But here our praise and the artist's achievement end; the moral turmoil of this "hour of madness," as D'Aubigné describes it, is not attempted; the infuriate mob, the terrified priests, are absent; and the few figures who compose the artist's group, look on with notable coolness upon the conflagration, as if it were that of a gala night at Vauxhall. It is not enough to emulate the colours used in high art—we should strive also to catch some of its inspirations. Mr. Corbould has another picture *quasi* historic, in which he is more successful; namely, "King John Refusing Allegiance to the Pope," a scene from Shakespeare's fine tragedy, as performed by Mr. Charles Kean, and the Company under his direction, before her Majesty, at Windsor Castle. As a portrait picture, or scenic representation, the effect of this work is perfect; but for that very reason as a historical representation, apart from the dramatic prototype, it is a failure; proving how difficult it is for art to imitate art with success. The extravagance of attitude—both that of action and of repose—which, in the bustle of the scene, passes by comparatively unremarked, is signally conspicuous when seized and perpetuated upon canvas, or paper. In the present instance the attitude of *John*, who throws himself forward in his seat so as to risk falling on his face, and

"SPANISH GIPSIES."—PAINTED BY F. W. TOPHAM.—FROM THE EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

"PICCIOLA; OR, THE PRISON FLOWER."—PAINTED BY E. H. WEHNERT.—FROM THE EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER-COLOURS.

the tiger fiendishness of his eye, are altogether inappropriate to the kingly dignity becoming the occasion. King John did not lose himself in passion when he rejected the Papal pretensions. His feeling was that of indignation mixed with contempt; his tone that of scornful defiance; witness his very words:—

Thou canst not, Cardinal, devise a name,
So slight, unworthy, and ridiculous,
To charge me to an answer, as the Pope, &c.

W. H. Kearney comes next, with an ingenious and carefully-painted work, on a very difficult subject, entitled "The Fatal Picture." Van Hasselt relates of Rubens that, on visiting a monastery once in search of hospitality, he was so struck by the sight of a picture which he found there, that he thought it was by his own hand. He inquired eagerly who was the artist. He was informed that the picture was painted by a monk, whose name and fame must for ever remain unknown to the world. Upon his exclamation of horror that such genius should be buried in the darkness of the cloister, and entreating that its possessor might come forth to dazzle and receive the homage of men; and avowing himself to be no other than Rubens,—"at this celebrated name," says the author, "the monk turned pale, and vanquished by the struggle within him, but, faithful to Christian humility, staggered and fell down in a swoon on the pavement of the Chapel, and a short time after he had ceased to breathe." Mr. Kearney, we repeat, has done a great deal with this difficult subject: the dignified bearing of Rubens, lavishing generous praise; and the tremulous, spasmodic, self-restraint of the poor pallid monk, in whom all the sparks of noble ambition are not yet extinct, are admirably achieved.

Augustus Mayer, who paints in the "little" style, and with the minuteness and surface *lure* of tea-board decoration, was hardly equal to such a subject as "Nehemiah Rebuilding the Walls of Jerusalem." The figures are, at best, careful Academic studies, of suspended action; and the colouring is gaudy, ill-assorted, and crudely laid on. His "Marriage Party Returning from Church," and "Blind Man's Buff, at Neighbour Flamborough's," are comparatively harmless productions.

C. H. Weigall has a picture of wonderful bustle—the "Battle of Drumclog—The Enthusiasm of Manse Hendrig at the Defeat of Claverhouse" (*vide* "Old Mortality"). The composition is crowded with figures, into all of whom energetic action has been infused; and, barring a little hardness of outline, and a shade of extravagance here and there, the result is highly satisfactory and creditable.

Absolon has a good eye for colour, and a graceful pencil, which he displays to advantage in a Group of Rustics Dancing, after Thomson's lines, "Thus they rejoice," &c. He has also some fanciful figure studies amongst which a rather clever pair of "Pyramus" and "Thisbe," in which the two lovers are represented, severally, on either side of the wall. Under the title "The Field of the Cloth of Gold—Guines," he presents us to a rich, broad cornfield, at harvest-time: a very happy idea, capitally carried out.

H. Warren has bestowed uncommon pains, and the best resources of his art, upon a picture of considerable size, entitled "The Warrant Exhibited to the Lady Abbess of a Benedictine Nunnery for the Suppression of her Convent: temp. Henry VIII." The *ensemble* of the ancient interior, with its appropriate furniture and accessorial details, is admirably real; and the grouping and action are well studied; one of the best figures being that of the old monk who sits at the table writing. By the same artist we have also a very charming subject, "Mein Vöglein" (Anglice, "My pretty little bird!"), representing a German peasant girl, standing in the garden, near her cottage, leaning her back against a wall, with a pet bird upon her finger. The feeling of innocent calm which pervades the scene is very gracefully rendered; and the work is infused with a warm, exuberant character. We have great pleasure in engraving this elegant production. Amongst the smaller pieces by Mr. Warren, we noticed, favourably, one of "An Italian Peasant."

E. N. Wehnert, whose "Prisoner of [illegible]," produced some years ago, attracted so much attention, and is still so honourably remembered, has, in the present Exhibition, another picture breathing a somewhat similar spirit, entitled "Picciola; or, the Prison-flower," the story of which is thus given:—

Picciola was now in full blossom and, thanks to Ludovic, who assisted the prisoner to construct a seat in the court-yard, the invalid could enjoy the society of his favourite for hours at a time. * * *
During these hours of study and delight, Charney, unknown to himself, had two spectators of his actions; these were Ghirhardi and his daughter, who watched him with intense and kindly interest.—*X. B Saintine.*

The picture is very carefully and cleverly painted, being finished in parts, by the way, in opaque colours; but the composition is rather clumsily managed, the artist having placed Ghirhardi and his daughter in the front, in the interior of a

MODEL OF PART OF A MONUMENT TO THE MEMORY OF THE HON. JAMES STUART.—BY J. H. FOLEY, A.R.A. FROM THE EXHIBITION OF THE ROYAL ACADEMY.—SEE NEXT PAGE.

room, and the prisoner in the background, in the yard below, and yet, apparently, so near, that he could hardly have failed seeing those by whom he was daily ob-erved. There is, moreover, a little sublimated sentiment thrown into the expression which we do not quite relish.

G. N. Laporte is not happy in his figure subjects. In "The Meet" we have a group of redcoats, after the accustomed model, but awfully out of joint as to drawing—a group in which, to reverse the passage quoted from Nimrod, "the peer and the peasant all seem equally un-hung."

G. S Shepherd has a clever sketch of "Seymour-street: Clearing up after a Shower," which we recommend to the notice of the Commissioners of Sewers, as showing the provision for surface drainage in the locality in question to be sadly inefficient.

W. Lee's domestic sketches are always pleasing for the homely sentiment which inspires them, and their natural treatment. "The Soldier's Wife" especially will command sympathy at the present moment: and close beside them, little further on, are three pieces of great merit, entitled "Sunday Morning," "The Siesta," and "A Peep into the Nursery."

Miss F. Farmer indulges us with an amusing conceit, "The Sleeping General"—a little boy fallen asleep over his toy soldiers

"The Interior of Roslyn Chapel" by J. Chase, is a careful architectural study of the "proud Chapelle," the burial-place of twenty of "Roslin's barons bold," with a dim religious light pervading it

Amongst the landscape pieces, Wreight's view of "The Canal in St. James's Park in 1670" with Charles II. feeding the water-fowl, is interesting historically, and well painted.

E. G. Warren's "View from the Wynd Cliff, Monmouthshire" is a striking landscape, consisting of a luxuriantly verdant hollow in the foreground, and a wide expanse of water in the distance; the handling clever, and the colouring pure in tone

W. Jernett has several works of remarkable merit in this class. His "View of Jedburgh Abbey, Roxburghshire," exhibits a true feeling for nature in one of her most picturesque presentments: the tone subdued but truthful, ingeniously broken by a streak of light shooting athwart the foreground from the left, and glancing off the backs of a herd of cattle. "In Rain Albey" we have the same fresh, healthy charming as in the last. In "The Wreck," Mr. Bennett shows the practicability of successfully representing the foaming waves of the sea by means of colour alone, and without resorting to the trick, which has become too prevalent with otherwise conscientious artists, of cutting away the pace for the high lights.

A. Perley has several effective bits of lake scenery, and trees; but his colouring, as evidenced in "In the Head of Woodcrome Park," and "Ullswater, from Gowbarrow Park," tends a little to the merely gaudy. The "Coast Scene with Figures—Sunset" is free from this fault, and has a good broad effect.

S. Cooke has some good sea pieces, amongst which we particularly notice "The Stag Rocks, Lizard, Cornwall," and "Coming in of the Tide on the Coast, near the Lizard."

Charles Vacher's "Marmoiée, Lycia," is a telling and agreeable view

T. L. Rowbotham's "Rehan Lake" is delicately coloured, but somewhat tame in general aspect

Ashcroft's "On the Skirts of an Ancient Forest," shows a fine feeling for tree, executed with a free and decisive touch

The Letters "Scene on the Medway—Calm," is a commendable performance, as also would be the "Dutch Vessels running into Floating Harbours," but for the lavish surface scraping for the lights

Mrs. Margetts is as successful as usual in the delicate representation of figures, fruit, and dead game, of which she exhibits several beautiful specimens.

Hurst on Weir has some very life like "Darkings," after originals, the property of Prince Albert and one "Rouen Ducks," and two very spirited sketches entitled "Never say die," and "The Fall" A score by

J. Pepple, whose large luster and pleasing have on former occasions been so great the chief attractions of the season, contains himself this year with a modest effort, entitled "A Corps de Garde," which is hardly out of the street.

THE ROYAL ACADEMY EXHIBITION.

(THIRD NOTICE.)

The exhibition of modern pictures at the Royal Academy usually supplies, to suggestive of many needed emotions. Here, in many a female portrait, we are reminded of the by now no more; or of an absent lover, no longer among the living. Here, in a picture by Leslie, we look forward, awakening reflections as to the aspect of the country engineer at full length, who has made the plans for the railway Manchester or railway. Here, in the picture of the Queen's landing on certain occasions, we are reminded of the days when we use no longer to behold, or off which some friend was wrecked; and here (to be brief with a painful subject) is a hangman's face, running past which we are no longer able to enjoy.

It is owing to these and many such-like associations of our contemporaries have noticed the present Exhibition. The morning and evening papers have looked upon it as the institution of the day—to be casually examined—of which it was sufficient to say something general, and not frequently, as we have observed, very far from the truth. Whatever we may conscientiously say of it, we observe, enlarge upon Mr. Maclise's fine picture, and give it a space rather due to it.

This unfortunate circumstance is partly a great exhibition. A young but clever, contemporary views every picture in a political light. Thus we are told that Mr. Ward's "Argyll" is painted from a Whig pamphlet, and not from the subject of history; and that the picture of "Retiring to Throne" is hardly a subject for the Palace at Westminster. The title pointed out "Good Jobs" is, we are assured, executed on Whig principles of composition; thus, on the canvas, he is seen only to let them have it in life—and fifteen years younger. Mr. Hanna's cleverly executed "Countess of Salisbury and the Knight" is not to be sent to the House of Hanover, as other contemporary (I am sorry that ought to be very sound in its artistic criticisms) has no anti-orthodox to select; but has sought to supply, and has succeeded in supplying what he thinks is small writing about every picture he condescends to notice.

If we call to mind the over-heard opinions expressed in the Exhibition itself, they will be found of a very mixed character. Each one either receives for his "three" a wish, or a word of feeble praise—a word of encouragement, or a sneer. Even the critic on Mr. Hunt's solid allegory of our Saviour is viewed with a devotional feeling by some, by others with a gaze of mystified wonderment, and by many as a piece of mediæval barbarity. Nor does his smaller picture of much better, although it is not quite so much meaning, has not often proved abortive, for "The Awakening Conscience" of this clever painter is now familiar by known as "The Loose Lodging." Maclise either praised aloud for the fertility of his invention and the delicacy of his pencil, or sneered at for his want of perspective in his really successful attempt to engraft the laboured minuteness of the pre-Raphaelites on the broader principle of his own school. Some affect to study like Mr. Ruskin over a little bit of landscape—a reedy pool, or a wood cock on its way to the sky—and have not the sense of appreciation they have at least his power of endurance. Ladies run to the miniatures, boys and girls to Mr. Frith's "Life at the Seaside" while too many people from the country delight their attention almost entirely to the portraits of people of rank and fashion

This week, as a specimen of Scripture, we engrave (No. 1397) Mr. Foley's bas-relief design for a Monument to the Hon. James Stuart. The artist has, in the Catalogue, told his own story:—"Mr Stuart is represented reading a law case, submitted by a Kandian headman who, in company with his wife and child, at ends to receive an opinion upon it. So great a favourite was Mr. Stuart among the natives, and so highly did they appreciate the benefits conferred by them, that his services were ever in request. Unceasing occupation and deep study brought on a disease of the heart, of which he died at the early age of thirty years, having obtained the high office of Deputy Queen's Advocate." Mr. Foley has handed in the clever bas-relief for the admirable monument by Flaxman in University College, Oxford, to the memory of Sir William Jones. The men and the circumstances were not dissimilar; and though Mr. Foley has had Flaxman in his eye, he has reserved himself at his free hand seldom to borrow from him. There is a thoughtful repose about the principal figure that is both appropriate and pleasing.

A CRYSTAL PALACE AT CHELTENHAM.—The inhabitants of Cheltenham, determined not to be outdone in any way by the promoters of the Crystal Palace at Sydenham, have resolved to erect a similar building in their town. It is said that the site will be on Cleeve Hill.

THE growth of land under wheat in the United States, as well as land laid by, the past, is estimated to be at least one million acres.

MUSIC.

TUESDAY was a great night at the ROYAL ITALIAN OPERA. The illustrious veteran Lablache, whose absence ever since the breaking up of the old house in the Haymarket has been sorely felt by the lovers of the musical stage, appeared for the first time on any other Garden boards. Mario, too, made his first appearance this season. The opera, moreover, was the ever-delightful "Barbière di Siviglia," which, notwithstanding innumerable repetitions, still retains all its freshness. This combination of attractions drew an immense audience. The Queen and Prince Albert, with their suite, were present, and the boxes presented a most brilliant and fashionable aspect. The "Barbière" was produced with a strength of cast which we believe to be altogether unprecedented in this or any other theatre. Mdlle. Bosio was the *Rosina;* and a more charming representative of the character has never been seen. Her picture of the young girl brought up in seclusion, innocent and timid, but high spirited, and rendered quick-witted by the force of circumstances, is full of truth and nature; and she executes the music of the part with unrivalled brilliancy. Her "Una voce poca fa," and her aria introduced in the scene of the singing lesson, were marvellous displays of the florid or ornate style carried to perfection. Mario, as *Count Almaviva*, is easy, gentlemanlike, and animated. His voice is as rich, mellow, and deliciously sweet as ever. Lablache's *Bartolo* is a performance altogether unique. Heseems to have been the fit to discover the capabilities of the part, for he was the first great actor who appeared in it, and, when he did, he made it quite a new aspect, rendering it one of the greatest features of the opera. He combines the watchful astuteness of the jealous old guardian with a disposition natura ly good-humoured and genial, in a way which no performer but himself could possibly accomplish. Ronconi's *Figaro* is well known to every frequenter of the opera: it is one of his best and most successful parts. Tagliafico made an immense hit in the character of *Basilio*. It was a masterly picture of hypocrisy and cunning; and he gave the famous air, "La Calunnia," in a manner which drew peals of applause from every part of the house.

AT the ROYAL OPERA, DRURY-LANE, the continued success of the "Freischütz" has prevented the production of anything new. The first performance of "Fidelio," however, with Madame Caradori, is announced for this (Saturday) evening.

THE two PHILHARMONIC SOCIETIES have had concerts this week—the Old on Monday, the New on Wednesday. Both concerts were good and successful; but, neither of them having produced any novelty, either in respect to music or performers, they afford no room for critical remarks at any length. However, that the New Philharmonic Society deserve great praise for their very careful and effective performance of Beethoven's Choral Symphony, the last, the greatest, and the most arduous of all its orchestral works. They are also entitled to appreciation for having given a selection from Mr. Henry Leslie's opera "In manuel," thus encouraging the rising genius of a young native musician of high promise.

THE COLOGNE CHORAL UNION, whose concerts last season attracted so much attention in our musical circles, have revisited us this season, and resumed their very remarkable performances. We may remind our readers that the Cologne Union is an association of amateurs belonging to the most respectable classes of that ancient city. They are animated by their national love for vocal harmony, and a desire to spread its cultivation among the people at large, as a means of moral and social improvement. With this view they are in the habit of giving public performances, not only at home, but in many of the principal towns of Germany and Belgium; and as we have seen, they have now extended their operations to England. Pecuniary emolument to themselves forms no part of their plan; the proceeds of their concerts (which are very large) are entirely devoted to the increase of the funds for building convents, to benefit that institution, to the support of the poor, and other praiseworthy objects. Their first concert was given on Tuesday morning, at the Hanover-square Rooms. It was quite unlike to those of last year; consisting of a number of the most beautiful choral pieces by Mendelssohn, Weber, Rucken, Kalliwa, and other modern composers, and several old national songs, harmonised for many voices. The choir consists of eighty male voices, conducted by Herr Franz Weber, an able and distinguished musician. They sing without the support of any instrumental accompaniment; nor, indeed, do they stand in need of it—for their voices, by training and practice, are able to sustain the pitch and their truth of intonation as completely as a band of instruments could do. In part of tone, delicacy, and variety of effect, we believe our best choral bodies to be inferior; certainly in admirable to hear an expression of Wordsworth's they are eight, singing as one. In blend, gradation of sound, in the grand swell of their voices, or in sinking into murmurs so fine as to be merely audible, they are to be moved by one impulse, guided by one soul. All our amateurs might to hear them; and all our chorus-singers should listen to them, for improvement as well as pleasure.

THE THEATRES.

ST. JAMES'S.

On Friday week "La Grande Duchesse," by M. Scribe, was performed; and as is the case of that lively piece, it was done by art, in the style of high comedy. Such a result is that the heroine of a piece may be the vehicle to fascinate, by her personal attractions, the heart of a youth titled to despise her by the caprice of her disposition; and to direct and fix the wandering affections on her grandmother! Such is the intricate and fantastic web of the production *Adèle*, the grandmother, however, in this revival of the piece, made the principal figure, being personated by Mdlle. Luther; while *Madame de Gerolstein*, the Grand Duchess, was entrusted to Mdlle. de St. Georges. Another principal part, *General Bertoux* (whose name is certainly not a favourite) who had sold himself to the designs of the lady on the throne, but her lover, by pretending a pretended marriage with *Adèle*. The bold and rubbishy Welsh character, part, and situation are developed under the direction of an important study.

On Monday Mdlle Luther performed *Adèle*, in "La Pensionnaire Mariée;" and on Wednesday reappeared in *Zoe*, in "Le Mariage au Miroir," when M. Brindeau made his first appearance in *Sullivan*, in the same piece. The part is a most amusing one, and was done by M. Mellerville, the author, of English manners in exceedingly curious, and in further exaggerated by the performer, who embraces each other on meeting, as foreigners do, and Englishmen do not. It seems also to be the duty of waiters for gentlemen to read the most interesting letters, notes from and society, and unaccountated with any purpose. A, in the piece on the slender basis of some amiable *Sullivan comedien de Drury-lane*) is invited to the house of the rich merchant, *Jenkins* (many enough played by M. Tourillon), for the purpose of disgusting his daughter, *Lelia* (Mdlle. Delahaye), with his conduct in private life, the lady having become enamoured of him in his public capacity. *Sullivan*, accordingly gets awfully drunk, tosses his guests, and is ultimately ordered from the house by the off ruled young lady herself. On his apology and repentance, however, she is, in the third act, reconciled to him, and their union is accomplished with the consent of the merchant father M. Brindeau looks and acts the character so thoroughly well, and displays it, may be pronounced to have made a successful *début*. Her Majesty, Prince Albert, and the Duchess of Kent were present. The house was rather thin.

LYCEUM.

This theatre was found by the public, on Saturday evening, to be closed, and has not as been re-opened.

PHILHARMONIC ROOMS.—The new public hall in Newman-street, Oxford-street, was occupied on Monday evening with the first of Mr. Lee's series of polyphonic entertainments. "The London Season" was, accordingly delivered with its various characters, which were admirably impersonated by the polyphonist, and the whole excited continual surprise, laughter, and applause. The ventriloquial sketches were first-rate. Mr. Lee was in excellent voice and nature.

WILLIS'S ROOMS.—On Monday week Signor Naples invited the public to a *soirée musicale*, which was most numerously attended. The Signor himself sings with perfect ease and unstrained force. Miss Rainford and Madame Newton Frobisher were deservedly admired in the concert was remarkable, indeed, for the general excellence of the vocalists, there being no instance of crude execution. Signor Giulio Regondi exhibited rare power in the management of the concertina, and the instruments, music was performed throughout with meritorious attention to accuracy and effect.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

THERE was a greater gathering of people in Christie and Manson's large room, on Saturday last, than in our long experience of auction rooms we can remember to have seen there before. Most assuredly much finer collections than Saturday's collection have passed under the hammer of Mr. Christie: witness Sir Simon Clarke's sale, Mr. Penrice's sale, Mr. Harman's sale, Mr. Wells's sale, Lord Ashburnham's sale. What, then, was the attraction at Mr. Wadmore's? Why, the *three* Turners to which we have already introduced our readers. They were fine works, and they sold at fine prices. Turner for some time past has been at the money-market head of English art—no pictures of our school have sold under the hammer of the successor for such high prices as have sold for. Mr. Angerstein gave the now insignificant sum of £1381 for *six* Hogarths (the "Marriage à la Mode") and Mr. Vernon gave the princely sum of 1450 guineas for the "Age of Innocence"—one of Sir Joshua's exquisite little girls so called. But these are low prices (the Hogarth especially) when we contrast them with the Turners of Saturday last.

When Mr. Christie began his pleasing task of selling the last three lots of Mr. Wadmore's sale, the room was unpleasantly crowded, and yet all was still. He did not make an oration from his rostrum, but introduced the first lot to the spectators, with a few modest words about the works he had the honour to sell. Mr. Wadmore's sons, he observed, had put no extravagant price upon them; they had no extraordinary expectations about them: all that they looked for was, that they should go "for their sober value." The first lot was the "Cologne," a picture of the year 1826, and described by Turner himself, in the Royal Academy Catalogue, as "Cologne, the arrival of a Packet boat—Evening." It was put up—at "your own price, gentlemen," and a Manchester or London dealer entered it well at a thousand guineas. So choice a picture soon made rapid jumps of twenty and fifty-guinea strides, till it was knocked down amid murmurs of delight at 2000 guineas. "Cologne" was followed by "Dieppe," a picture of the year 1825, and described by the artist himself as "Harbour of Depp" (*changement de domicile*). Like the companion picture, this, too, commenced at a thousand guineas; and, after similar strides, was finally knocked down to the same person for 1850 guineas. Then came the last lot of all—a small unexhibited picture—a picture, we should say, of the year 1809, and known to collectors as "The Guardship of the Nore." It was not entered so well, but was bravely fought for, and finally knocked down for 1650 guineas.

Our readers will, no doubt, ask by whom they were bought, and what did Turner get for them? We can answer the in quiries in part. The "Cologne" and the "Dieppe" were bought for Mr. Naylor, of Liverpool, to whom, on the 18th of November last, we introduced our readers in our column of Table Talk; and the "Guard-ship" was bought, we are told, for an ironmaster in Birmingham, who has determined to possess a collection, and has, for a beginner—this is his first purchase—began uncommonly well. Turner is said to have had £25 for the "Guard-ship," and £600 a piece for the "Cologne" and "Dieppe." Mr. Wadmore, in the year 1828, gave £1500 for the three pictures, and in 1854 the same three pictures sold for £5649. Mr. Sheepshanks's collection would sell for five times the sum he gave for it, and the Vernon collection at such prices is fairly worth double Mr. Vernon's own valuation of it—and we know that collectors are only too apt to think highly enough of their own collections.

But the Turner prices were not the only instances of the increasing market value in which good works of our English school of art are held. That charmingly-coloured sketch by Wilkie, of "The Trumpeter of the Guards," to which we called attention last week, was sold by Wilkie to Mr. Wadmore for *forty* guineas: on Saturday last it sold for two hundred and four guineas, or five times the sum the artist received for it.

But to come to living artists. At the same sale, two little pictures, for each of which Mr. Webster received thirty guineas sold for three hundred and thirty guineas, and three hundred and forty guineas. An "Interior of the Cathedral of Bayonne," for which Mr. Roberts received the same insignificant sum (thirty guineas), was thought to go cheap (as it did) at one hundred and thirty-five guineas; and, if we are not mistaken, a third little Webster, at the same sale, "The Governess," was actually sold at Lord Charles Townshend's sale, some sixteen years ago, for only *forty pounds*—on Saturday it sold for two hundred and fifty guineas!

This mention of the late Lord Charles Townshend reminds us (not necessarily, however) that his Lordship's pictures—or rather the preparation of the collection which his executors have thought fit to sell—have formed a very agreeable exhibition at Christie's during the present week. The attractions were—a beautiful Female Head by Sir Joshua, "Mrs. Bradyll," in a black and white dress, her hand raised to her cheek, in an attitude of contemplation (known to collectors by Mr. Cousins's admirable engraving from it); Mr Danby's masterpiece, "Mariotting on the Lake of Zurich," "Pilgrims Embarking for the Church of Enneclly," and a few choice bits by Frith, Egg, and Stone. On the day on which our Paper appears, Mr. Christie will dispose of the collection. We missed Wilkie's "Letter Writer." Where is that picture. The locality of every good picture should be well known.

We have found people greatly amused with the bill introduced by Sir William Molesworth and the Attorney-General, for the purpose of placing "public statues within the metropolitan police district under the control of the Commissioners of her Majesty's Works and Public Buildings." This amusement arises from the schedule, with the statues enumerated therein, and the statues left out, as it were, by particular desire. The Commissioners, of course, exclude all the City statues; but they take in King Charles I. at Charing-cross; King Charles II., at Chelsea Hospital; King James II., behind Whitehall; Queen Anne, in, Queen-square; King George II., in Golden-square, and Green-wich Hospital; King George III., in Somerset House, and Pall-mall East; King George IV., in Trafalgar-square; the Duke of Kent, at the top of Portland-place; the Achilles, in Hyde Park; the Wyatt Wellington, at Hyde-park-corner; the Wellington, in the Tower; the Nelson, on the Column; and the Canning, in New Palace-yard. But think of the exclusions! They will have nothing to do with William III., in St. James's-square; with King George I., on the top of Bloomsbury steeple; with the butcher Duke of Cumberla d, in Cur dish-market with Mr Fox's Duke of Bedford, in Russell-square; with Mr. Fox himself, in Bloomsbury-square; with Mr. Pitt, in Hanover-square; with Lord George Bentinck, in Cavendish-square, or with old Major Cartwright, in Burton-crescent. Surely George I wants more looking after, than Lord Nelson; there are outer steps on the Bloomsbury steeple, by which King George may be approached and disfigured. Will Parliament suffer the hero of the Revolution, and the first of the House of Hanover, to be pelted or spirited away, like has been spirited away the George II. of Leicester-square? Will Lord John Russell allow Mr. Fox to be neglected? and will Mr Disraeli suffer Mr. Pitt (though in bronze) to be insulted? It appears to us that they cannot—and that the Commissioners should take all out-door statues, in public places, under their protection. They do not tell us what is meant by a public statue, otherwise than by their interpretation in the schedule, and yet they insert a clause that "no public statue shall, after the passing of this act, be erected in any public place, without the written assent of the said Commissioners." A public statue should be held to mean any out-door statue erected in a public place—and the Commissioners should be held responsible for the statues erected. By the present Bill, the public places of London, included in the metropolitan police district, would not appear to occupy so much ground as the public-houses of the district. Any committee, or, perhaps, any person, may disfigure St. James's-square, or Cavendish-square, for the Chief Commissioner of Works and the Attorney General are good enough to inform us that these are not *public places*. They may, however, be made public eye-sores.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE IRISH EXECUTIVE.

The Marquis of WESTMEATH, in moving for papers connected with a commutation of the sentence of death upon a man convicted of murder in the county of Westmeath, contended that there had been in this case an injudicious exercise of the prerogative of mercy by the Lord-Lieutenant, amounting to an obstruction in the course of justice for the sake of popularity.

After a short discussion, the motion, with some modifications was agreed to.

The Nuisances Removal and Diseases Prevention (Further Amendment) Act passed through committee

The Church Building Acts Continuance Bill was read the second time.

HOUSE OF COMMONS.—MONDAY.

BUSINESS OF THE HOUSE.

Lord J. RUSSELL moved a resolution, in reference to the standing orders of the House, to the effect that Government business should have precedence over other orders of the day upon all Thursdays during the remainder of the session.

Some opposition was made, but ultimately the resolution was adopted.

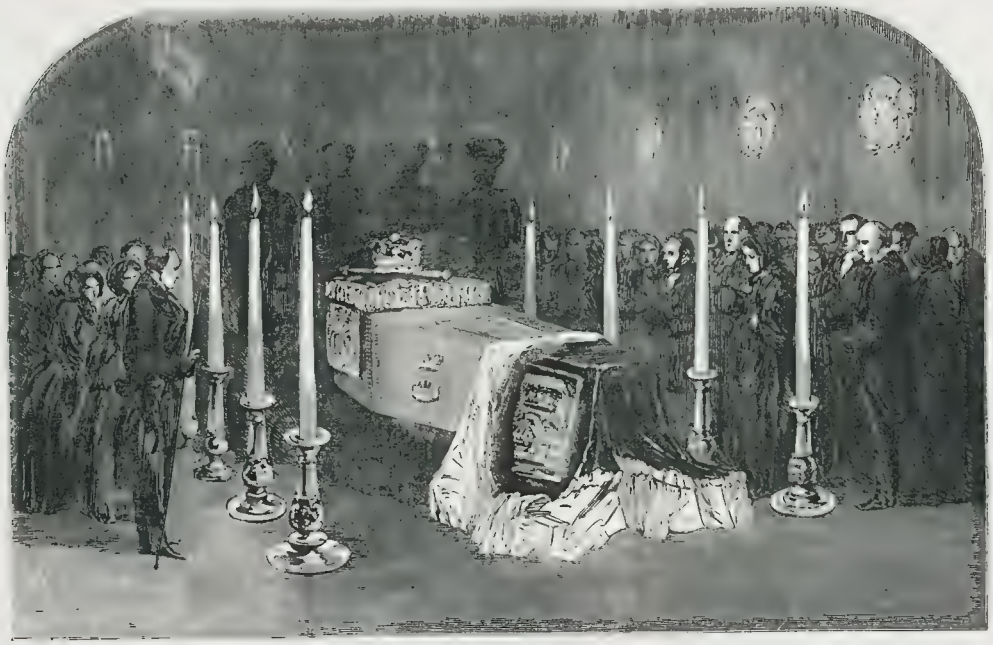
Lord J. Russell gave up the two proximate Thursdays, and consenting that the resolution should not take effect until the 25th inst.

THE WAR BUDGET.

The House having resolved itself into Committee of Ways and Means,

The CHANCELLOR of the EXCHEQUER rose to make his financial statement. He adverted to the necessity which had existed for demanding a doubled Income-tax, at a time when war was not declared. It was then impossible for the Government to form a trustworthy estimate of the expenses of war, but its complicated machinery of the Income-tax made it necessary to apply to Parliament early, in order that the getting in the required revenue might not be delayed. He had at that time asked what was then known to be required, but had also stated that his demand was not adequate to the purposes of war. It now became his duty to ask for the means of carrying on the war; but, before doing so, he replied at some length to the accusations brought against him of having mismanaged the Unfunded Debt, and of having made a bad bargain in the paying off the holders of South Sea Stock. He then proceeded to announce the views of Government as to providing for the expenses of the war, recapitulating the results of his former statement when the doubled Income-tax was granted, and when an estimated revenue of £56,000,000 against an expenditure of £56,180,000, gave a surplus of £820,000. The new Navy, Army, and Ordnance Estimates, with an additional £2,000,000 for the Militia would require £60,000,000. But it was necessary also to provide for charges as yet unknown, and he should have to ask for £6,850,000 in addition to what had been already granted. This would have to be raised by taxation. It was proposed to repeat the operation which had already been performed on the Income-tax. The former operations had given from this source £9,682,000; and the addition would give £3,250,000; and, in all £12,932,000. This augmentation, which was from seven pence to fourteen pence in the pound, would be asked for the period of the war; and should the war terminate—which he prayed God might grant—during the existence of the tax under the Act of 1853, the augmentation would cease. In this way, about two-thirds of the expenses would be provided for. As regarded the remainder, Government was not inclined to push the doctrine of the Income tax so far as some were disposed to do; they did not think that the subjects of that tax ought to bear the whole excess of a national war. Nor was there any other direct tax which Government could propose; and, least of all, could they apply to the Assessed taxes, or draw into a trap those who had been invited to regulate their establishments under the new system. As regarded Indirect taxes, they had resolved to alter the system of postage, which had been so prosperous and beneficial, except for the purpose of augmenting its benefits. In connection with this part of the subject, the Chancellor introduced a tribute to Mr. Rowland Hill, and a congratulation to the country on his protection. Nor did Government intend to re-impose the taxes of last year, believing that notwithstanding the last extremity would induce Parliament to restore the fetters of Excise when they had once been removed. Nor could they touch the Tea duties, or those on tobacco. Passing from the negative to the positive conclusions of Government, he said that it would be necessary to go to the consumer, but this would be done in the least oppressive or injurious mode. It was proposed to repeat the operation of last year on Scotch and Irish spirits, and to add 6d. in Scotland and 1s. in England and in Ireland by 8d.; and this, he estimated, would be a gain to the Exchequer of £450 000. It was proposed to classify the Sugar-duties, and to meet the grievances of the sugar refiner by a scale of charges on all sugar foreign and colonial, according to the relative value of the different sorts; and by this means £700,000 would be raised. It was proposed to augment the duty on malt (Sensation on the Opposition side). He observed that as might fairly come upon the wealthy for the first charges of the war, but that a natural right to do so was denied by all classes. The Malt tax pressed on all, was easily and completely collected, and the addition required no increased staff to get it in, and, therefore, the object seemed to fulfil the conditions which should be sought after. The Malt duty was now in round figures 2s. 9d. per bushel, and he proposed to raise it to 4s., which would have it lower than it was prior to 1840, and less than half what it was from 1804 to 1816, during the great war struggle. Taking the consumption at 40 000 000 bushels, this would give £2,450,000. The united amounts thus to be obtained by increased Income-tax, Spirit-duty, Sugar-duty, and Malt-duty, would be £6,850 000, which was the required sum. All these taxes were to be asked for war purposes, except the Spirit-duty increase, which was to be permanent. But it was necessary to have a resource for extraordinary contingencies, and for a possible rapid increase in the rate of war expenditure. He wished, therefore, to take powers for creating means to be used in case of need. For of the £6 850 000 of taxes in which had been asked, he could not expect to receive before the 5th of April 1855, more than £2 340 000, which would leave him at that date in deficiency of £4 510 000. This would have to be provided for, and the mode of doing so appeared to be by temporary securities. Mr Gladstone here explained and vindicated what he had recently done in regard to the issue of Exchequer Bonds; mentioning that a trifle below the £2,000,000 contemplated for the first series had been taken only, and stating that the failure of the operation, so far, had arisen not from a cause in which certainly no shame was involved, for it was the departure from the old method of gigantic financial operation at the beginning of a war, whereby contractors were used to make colossal fortunes. He thought that it was for the House, and not for the Chancellor of the Exchequer, to dictate the policy which should be adopted, and he had deemed it right, in the first place, to seek the sanction of Parliament for the measures to be adopted. He then said that he proposed to provide "some funds" as follows. He would take authority to confirm the issue of the Exchequer Bonds of the class A, and power to issue a new class of Bonds, to take payment in two instalments of Exchequer Bills, and to many more as ought not to be expected to receive before the 5th of April 1855, more than £2 340 000, which would leave him at that date in deficiency of £4 510 000. This would have to be provided for then

FUNERAL OF THE LATE MARQUIS OF ANGLESEY, AT LICHFIELD.



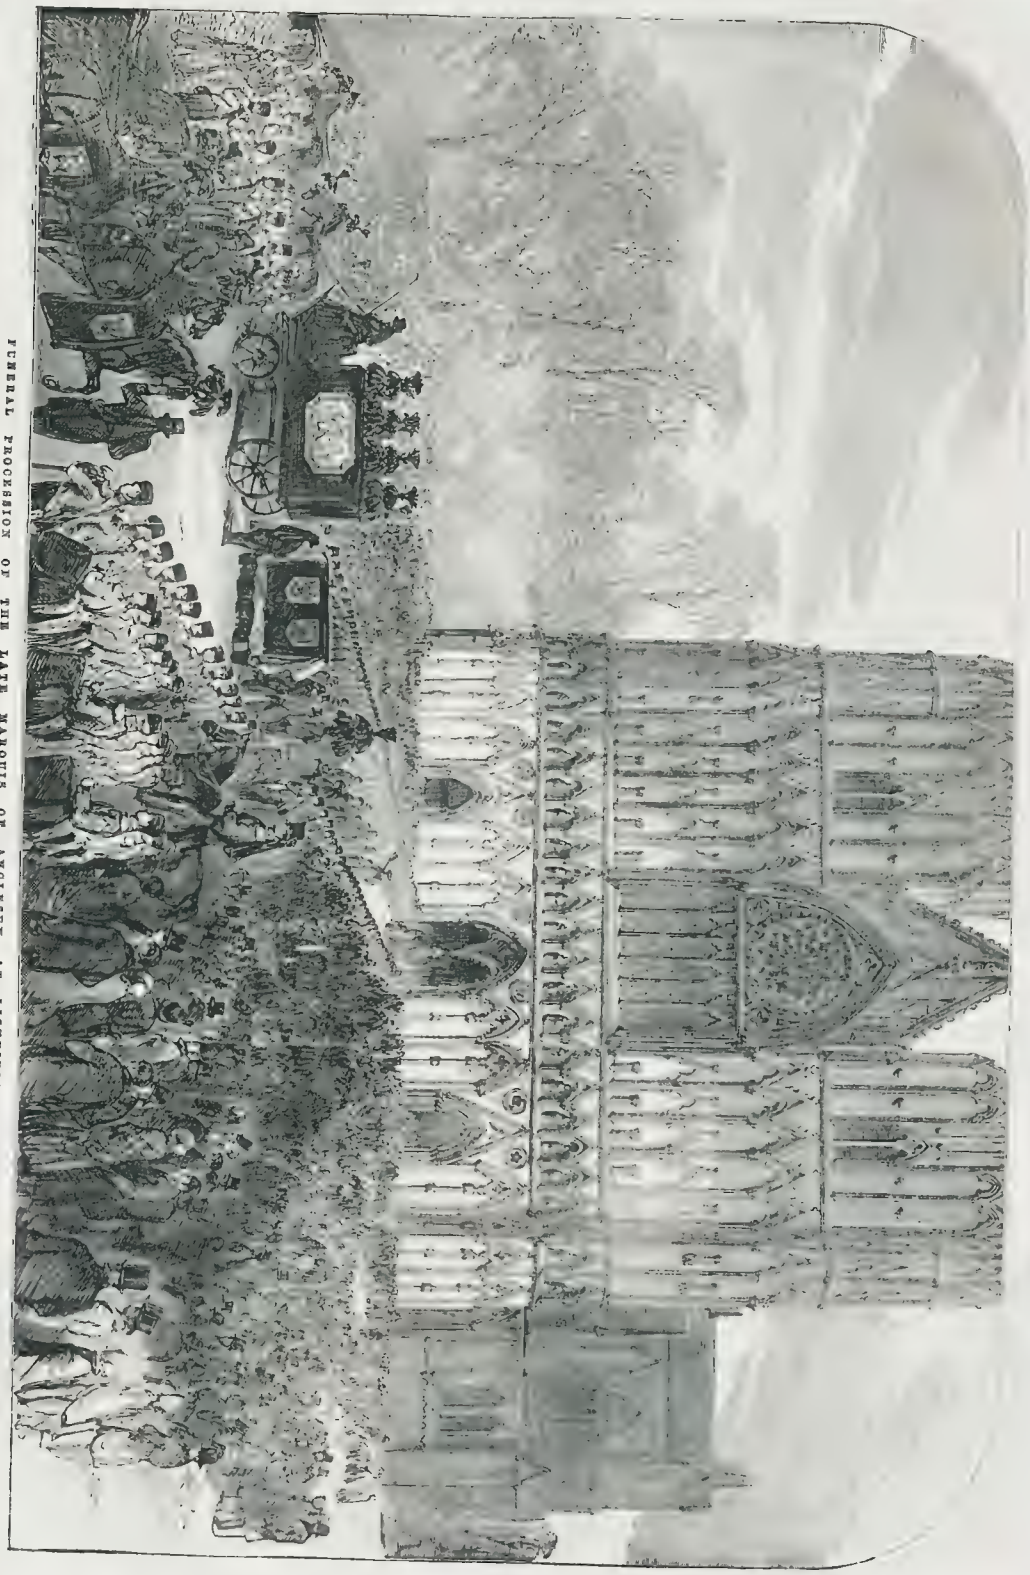
THE REMAINS OF THE LATE MARQUIS OF ANGLESEY LYING IN STATE.

The mortal remains of this gallant nobleman were committed to their last resting place on Saturday last, in the family vault at Lichfield. On Thursday, the remains of the late Marquis lay in state in the mortuary chamber at Uxbridge House; and on Friday morning, at half-past ten o'clock, the body was removed from Uxbridge House, accompanied by an escort of the Royal Horse Guards (Blue)—of which regiment the noble Marquis was Colonel to the Great Northern Railway Station, King's-cross, and after, by special train, to Lichfield. In the procession was—the band of the Royal Horse Guards, with drums muffled, playing the "Dead March in Saul." The late Marquis's coronet and Field-Marshal's bâton on a crimson silk velvet cushion, the horse covered with black cloth trappings, and a plume of ostrich feathers emblazoned with heraldry. The hearse was drawn by six horses with black ostrich feathers and escutcheons; an escort of the Horse Guards (Blue); four mourning coaches and four—first coach, containing Lord Uxbridge (the present Marquis), Lord Paget, Lord Alfred Paget, and Lord George Paget; second coach—the Duke of Richmond, Lord Crofton, and Lord Enfield; third coach Lord Sandwich, Admiral Cadogan, and Lord Templemore; fourth coach Lord Maidstone the Hon. Henry Paget, and the Family Physician; the late Marquis's carriage and horses; the Queen's carriage; Prince Albert's carriage; the Duchess of Gloucester's carriage; the Duchess of Kent's carriage. The French Ambassador's carriage followed next; and after that, sixty belonging to the nobility and gentry; the melancholy cavalcade proceeding *en route* to the terminus.

The remains were then conveyed from London by a special train, accompanied by the members of the family of the distinguished deceased. The train reached Lichfield station at half-past four in the afternoon; and the hearse containing the body moved slowly to the city, preceded by nine carriages, in which were the mourners.

The streets and windows of the houses in the line of the procession were thronged with spectators, many of whom, nearly forty years ago, had witnessed the entrance of the late Marquis into Lichfield, when, gradually recovering from the wound he had received on the field of Waterloo, he was met by the corporation of that city, and received from them a magnificent sword, as a token of the grateful esteem in which they held the hero. The body was conveyed to the George Hotel, where a guard of honour was drawn up, consisting of two companies of the 1st Regiment of Staffordshire Militia, and containing two hundred men, under the command of Major Inge, and Captain the Hon. Charles Wrottesley and Captain Fletcher. When the hearse arrived, the colours were lowered, and the men reversed their arms. The body was then conveyed to the Assembly Room of the Hotel. The room was hung with black cloth, and lighted with wax tapers in silver sconces. Four tall and large wax candles, in massive silver candlesticks, were placed on each side of the coffin. The remains had been placed in a shell, which was deposited in a leaden coffin, and again enclosed in an outer case, covered with rich crimson Genoa velvet, studded with gold nails, with massive handles attached. Over each handle was a Marquis's

INTERMENT OF THE REMAINS OF THE LATE MARQUIS OF ANGLESEY IN THE VAULT, LICHFIELD CATHEDRAL.



FUNERAL PROCESSION OF THE LATE MARQUIS OF ANGLESEY AT LICHFIELD CATHEDRAL.

Coronet. On the head panel appeared the badge of the Order of the Garter, and on the bottom panel the badge of the Order of the Bath. The coffin plate bore the following inscription, comprehending all the titles and offices of the deceased:—

The Most Honourable
HENRY WILLIAM PAGET,
Earl Marquess of Anglesey,
Viscount Uxbridge
Baron Paget of Beaudesert,
a Baronet,
Colonel of the Royal Horse Guards,
Lord-Lieutenant and Custos Rotulorum of the County of Anglesey and Stafford,
Constable of Carnarvon Castle
and Ranger of Snowdon Forest,
Vice-Admiral of the United Kingdom of North Wales and Carnarvonshire,
Captain of Penrhyn Castle,
Privy Councillor,
K.G., G.C.H., K.St.P., G.C.B.,
Knight of Maria Theresa of Austria,
Knight of the Imperial Order of St. George of Russia,
Knight of William of Holland,
Born 17th May, 1768,
Died 29th April 1854

Several thousand persons were admitted the same evening, to view the body lying in state.

At an early hour on Saturday morning the great bell of the Cathedral was tolled. At the o'clock the different companies of infantry assembled in various parts of the city. The Anglesey troop of Yeomanry Cavalry arrived from Burton. The ships in the city, with very few exceptions, were closed.

At half-past ten o'clock the militia, about 1200 men, lined both sides of the street from the George Hotel to the Great Western Entrance of the Cathedral. Meanwhile, the streets and the western portion of the Castle Close became crowded. At twelve o'clock, the procession having been partially formed at the George Hotel, the coffin was placed in the hearse: the guard of honour presented arms; one of the flags of the regiment was lowered, and the soldiers reversed arms: the band of the regiment played the "Dead March in Saul" and the procession moved forward. The procession was formed in the following order:

The Anglesey Troop of Yeomanry Cavalry on foot.
The Band of the Royal Horse Guards, covered with crape.
The Band of the Anglesey militia.
The Band of the First Regiment of the Royal Carnarvonshire Militia
The Corone and Pall of the deceased Marquess on a velvet cushion.
The Coffin.
The Supporters.
With Staff Plumes and Escutcheons.
The Chief Mourner.
The Earl of Uxbridge.
The Duke of Richmond, the Hon. Fortescue Curzon, Lord Yarmouth, Lord March.
The Earl of Lichfield, Lord Templetown, Lord Mansfield, the Hon. Henry Paget, the Hon. Alexander Paget.
The Pall—The Hon. Mr. Pyne, the Hon. Mr. Cropper, Lord Hatherton, Mr. Augustus Stanley.
The Rev. Henry Graves, the Rev. Edward Hall, Lord Alcester, Lord Clanricarde, Colonel Wood, Colonel Wyndham, Colonel Keppel, Colonel Wellesley, Colonel Wynn, Colonel Peel, Major Dyott, Major Seymour, Major Gen. Sir Richard Airey, Major Gen. Sir Hew Ross, Mr. Cavendish Bentinck.
Private Mourners.

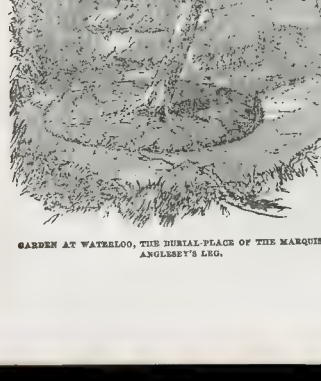
The Earl of Uxbridge was prevented by serious illness from attending, Lord Lichfield was detained by indisposition at Beaudesert, and among the mourners not named was Captain Hampton Lewis, of Archdeacon.

On the arrival of the hearse at the West Entrance of the Cathedral, the coffin was taken out, and borne along the passage, leading to the great central door; the chief mourner bearing the baton, the coronet and baton on a cushion at the head, and partially covered as the foot by a large pall, having been placed on a bier in the area of the nave. The Dean read the Burial Service appointed to be read in the Church. The Anthem by Wesley (1 Peter, i.) was sung by the choir.

The coffin was lifted from the bier; and the procession was re-formed in the following order:—the Anglesey troop of Yeomanry, the Mayor and Corporation of Lichfield in their robes, the mourners, the officers of the Militia, and servants of the deceased. The organ played the "Dead March," and the procession passed through the north door of the Cathedral to the family vault in the north side of the transept, and in the centre formed by the projection of the south transept. Croft's full funeral service was gone through at the grave. The solemn ceremony having terminated, the noble individuals and others forming the procession separated, the Earl of Uxbridge, Lord Paget, and some other members of the family remaining to the last.

The ceremonial was entrusted to Messrs. Gillow, Oxford street, London, for whom Mr. Wilson officiated at Lichfield, and the arrangements were carried out with unusual skill and great attention to detail. It was only a private funeral, an intention relinquished at the express wish of her Majesty and Prince Albert, and of the officers of the Royal Horse Guards, of which the deceased Marquis was Colonel. The interior of the Cathedral was crowded. The troops, under Major Dyott, lined the lane outside.

Among the valorous deeds of the deprived hero, his exploits at Waterloo entitle him to rank next to the great leader of the host. After apparently getting through the arduous struggles of the day, the Earl received a wound in the knee, by almost the last shot that was fired. At first, the wound was not considered material; but, upon surgical examination, it was found necessary to amputate the leg. For this purpose his Lordship was conveyed to Waterloo, and taken to the house of a draper in the village, nearly opposite the head-quarters of the Commander-in-Chief. The operation was performed without delay, and with success. Strangers who visit the place are shown the chair in which his Lordship sat while undergoing the operation; the boot that was taken from the amputated leg; the spot in the garden where the limb was buried, and over which the owner has planted a weeping willow.



GARDEN AT WATERLOO, THE BURIAL-PLACE OF THE MARQUIS OF ANGLESEY'S LEG.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

If the last week's events did not contain the market for National Stocks this week. [illegible] to the [illegible] people in the House of Commons being even [illegible] in favour of temporary accommodation and increased taxation. [illegible] now though that it will not be attempted further [illegible] the stupid periods, when the necessities of the State required [illegible] Millions of Exchequer Bonds yet unsubscribed for. We may observe that [illegible] in the City are somewhat disappointed [illegible] Government have entered the market for loan, which, undoubtedly, would have materially increased the amount of business both on the parts of jobbers and dealers.

Although the supply of money has been somewhat abundant, the market has become tighter, and first class bills cannot be done under 5 per cent per annum. The imports of bullion have been under £170,000; whilst the shipments have exceeded £1 million off. Consequently the stock of bullion has increased to some extent, and the Mint now [illegible] fifty-three days for the delivery of coin. The favourable turn in the exchanges leads to the conclusion that we have passed the worst period of the drain, and that gold will shortly return to us. The low rate of money at Hamburg 2½ per cent—and no rumour that the Bank of England will [illegible] its rate of discount to 4 per cent, have been much influence in the City.

The Consol Market was very steady on Monday. The Three per Cents were done at 87½ ⅝ to 87⅞ ⅞; the Three per Cents Reduced, 88¼ ⅜; the New Three-and-a-Quarter per Cents, 87⅝ ¼; and Long Annuities, 4⅛; India Stock, 258 to 260. India Bonds, 12s. to 10s. discount. Exchequer Bills, 3s. 4d. to 2s. prem. There was an improved feeling in the market on Tuesday, and the prices of the Three per Cents advanced from 87⅛ to 88. The New Three-and-a-Quarter per Cents were 87⅛ ⅜ 87⅝ ½. Long Annuities, 4 1-16. India Stock was 11½. Exchequer Bills remained at 2s. to 2s. 4d. prem. A further rise took place in the quotations on Wednesday, when the Three per Cents rose to 88 ⅛. The New Three-and-a-Quarters per Cents were 87⅝ to 88. Long Annuities, 1860, 4 9-16. India Stock, 258 to 260. India Bonds, 12s. to 10s. discount. Exchequer Bills, 2s. discount to 2s. prem. There was an improved feeling in the market on Thursday, and the prices of the Three per Cents advanced from 87⅞ to 88. The New Three-and-a-Quarter per Cents were 87⅛ to 87⅝ ⅞. Long Annuities, 4 1-16. India Stock was 11½. Exchequer Bills remained at 2s. to 2s. 4d. prem. A further rise took place in the quotations on Wednesday, when the Three per Cents rose to 88 ⅛. The New Three-and-a-Quarter per Cents were 87⅝ to 88. Long Annuities, 1860, 4 9-16. India Stock, 258 to 260. India Bonds, 12s. to 10s. discount. Exchequer Bills, 2s. discount to 2s. prem. There was an improved feeling in the market on Thursday, and the prices of the Three per Cents advanced from 87⅞ to 88. The New Three-and-a-Quarter per Cents were 87⅛ ⅜ 87⅝ ½

For all other places comprised in the Company's West India Scheme of routes, including Carthagena, Chagres, and Grey Town, Malta, Pensacola, and Vera Cruz, apply at the Company's Offices, South of the 2nd and 17th of each month
Further particulars as to Rates of Fares, Freights, &c., may be had on application at the Company's Offices, in London and Southampton where patterns, packages, and publications continue to be received and [illegible]
Return Tickets issued, available for six months, with an abatement of 25 per cent on the ordinary fares.
N.B.—Goods taken on moderate freight to and from Barbadoes, Demerara, Trinidad, Tobago, Jamaica, St. Thomas, Curaçoa, Chagres, and Grey Town (Nicaragua), and thousand dollars from Hamburg.
Particulars as to cargo may be had of Robert Hesketh, Esq., the Company's Superintendent of the cargo department, at Southampton. Freight being prepaid
No. Nassau-street, London R. CHAPPELL, Secretary

THE GREAT NORTHERN RAILWAY COMPANY.—The Directors have, from this date allotted [illegible] of Interest for Deposits on Mortgage [illegible] at the rate of [illegible] per annum. Interest will be allowed on Deposits [illegible] Bankers [illegible] Bankers' Drafts [illegible] Bankers' Drafts [illegible] Bankers' Drafts

DEPARTURE OF LORD RAGLAN IN "THE CARADOC," FROM MARSEILLES.

LORD RAGLAN LEAVING MARSEILLES.

On Saturday, the 22nd ult., just at the very time when the bombardment of Odessa was going on, Lord Raglan and suite left Marseilles in the *Caradoc* steam-ship. He had arrived in that city, *en route* for Constantinople on the Thursday previous, and intended to embark on the same day, but it blew so fierce a hurricane that he was obliged to give up the notion, and take up his quarters in the Hôtel d'Orient. The weather was no less boisterous on the following morning—several transports which had sailed for the East on Thursday having been forced to put back.

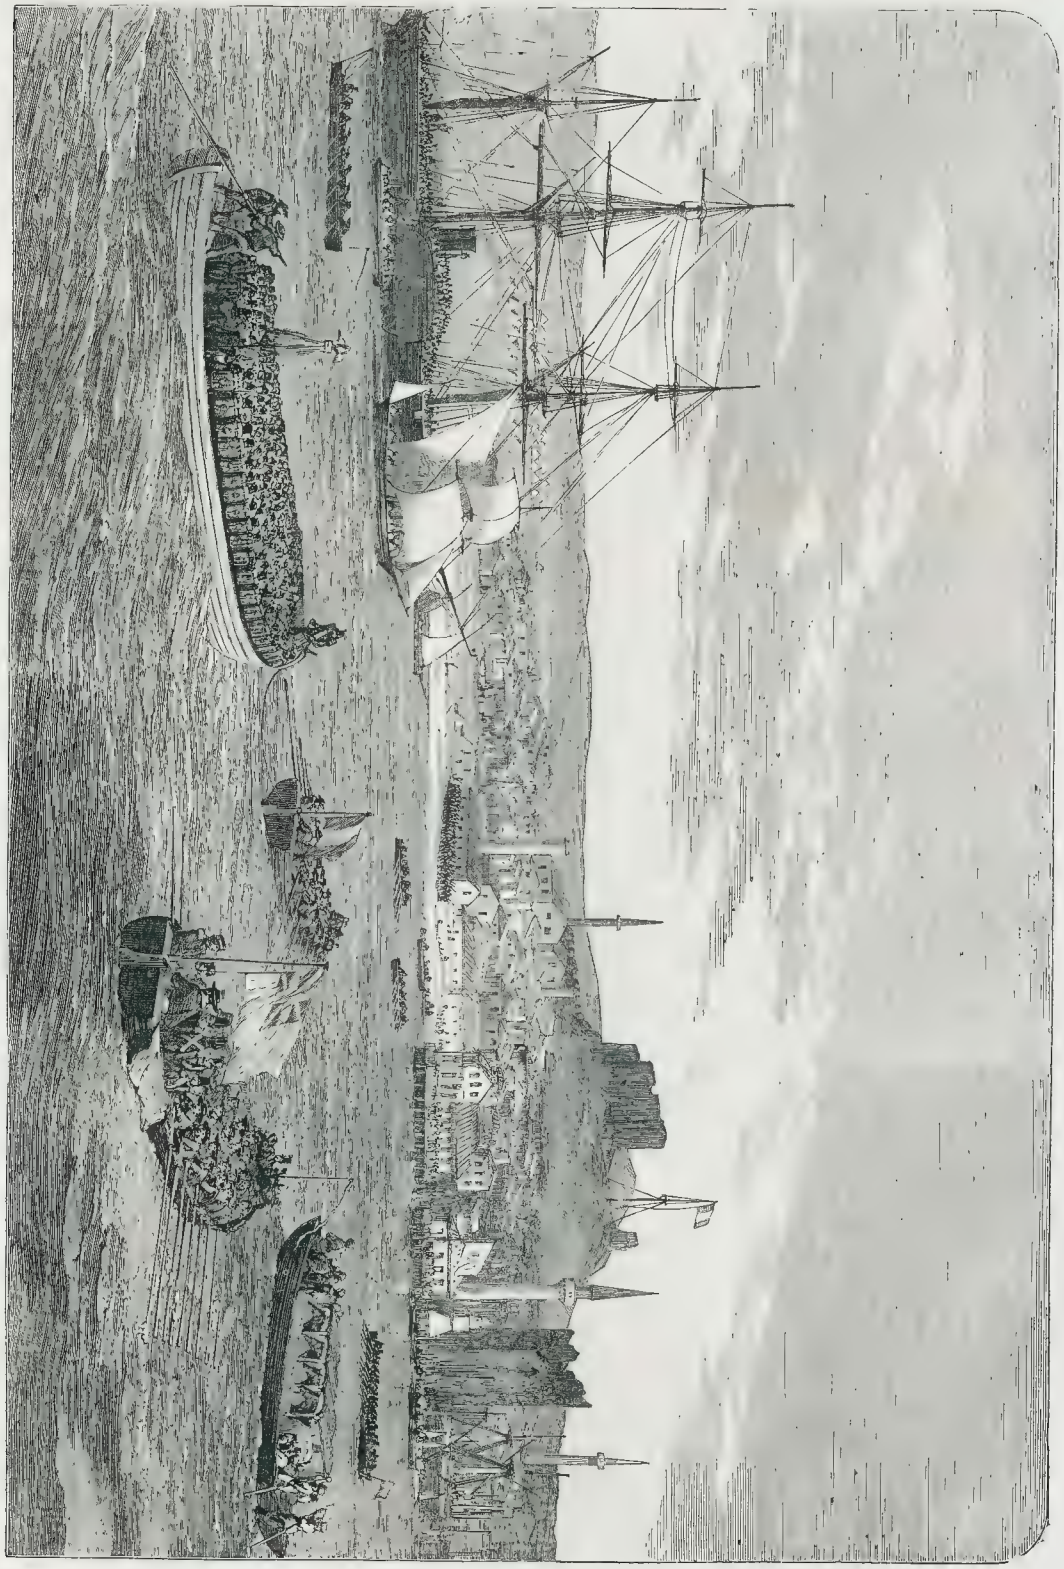
On Saturday, although the gale had not abated, Lord Raglan determined to set sail. Accordingly, the *Caradoc* left Marseilles harbour about one o'clock on that day, in spite of a strong north-easter, which the Captain encountered in dashing style. The passengers by the *Caradoc* were Lord Raglan, Lord de Ros, Colonel Steele, Colonel Somerset, Major Wellesley, Captain Blackwood, Captain Bradford, Admiral Boxer, his Secretary and Flag-Lieutenant, Mr. and Mrs. Stewart, and Mr. Wood.

EMBARKATION OF MARSHAL ST. ARNAUD.

The departure of Marshal St. Arnaud from Marseilles, last Saturday week, caused a considerable movement in that city. The Marshal, dressed in the full uniform of his rank, left his hotel at half-past one o'clock, in an open carriage, accompanied by the Prefect and two Aides-de-camp. The carriage was preceded by a detachment of gendarmes, and followed by General Rostolan (Commander of the Military Division), General Feyheux (Commander of the Garrison), and a brilliant staff. The streets were lined with troops, from the hotel to the pier of the new port, at which the steam-corvette *Berthollet* was lying to receive the Marshal. When he went on board, the yards of the corvette were manned, and the crew received him with three cheers. The Marshal, who looked in much better health than he has lately done, took his station on the quarter-deck, having Madame St. Arnaud at his side, and received the final compliments of the Generals and the civic authorities. Orders were then given to remove the stage, which had been erected to facilitate the embarkation of the passengers, and the *Berthollet* moved slowly away. It was past three o'clock before the corvette reached the roads. The Marshal continued to salute his friends as long as he remained in sight; while a military band on the pier played several favourite airs. The *Berthollet* is a paddle-wheel steamer, of by no means a handsome model; but she has the reputation of being a fast and safe boat.

The *Berthollet* arrived at Malta on the afternoon of the 2nd instant. The Marshal and the officers of his staff met with the most cordial reception from the Governor, the military authorities, and the population. On landing, he was requested to review the troops of the garrison. He afterwards visited the different establishments of the city; and in the evening a grand banquet was given by the Governor in honour of his distinguished visitor

EMBARKATION OF MARSHAL ST. ARNAUD, AT MARSEILLES.



LANDING OF THE FRENCH INFANTRY AT CALLIPOLI—(SEE PAGE 452.)

THE ALLIED TROOPS AT GALLIPOLI.

LETTERS from Gallipoli, dated April the 20th, state that the French 62nd will leave for Rodosto as soon as their artillery arrives. At the above date they had only six field pieces there. General Espinasse will lead the advance, and the troops which march from Gallipoli by the shores of the Sea of Marmora will be replaced by the succeeding regiments from France. It is generally supposed that Rodosto will only be a post on the road to Adrianople, and that the French army will push on there ere the middle of May. On the 22nd, Sir De Lacy Evans and staff passed on, after a short delay, on their way up the Dardanelles, in the *City of London*. On the 23rd ult., the *Emperor* went past Gallipoli early in the morning, with Sir R. England and staff on board, on their way to Constantinople. Later in the day the *Trent*, with the 23rd Regiment; the *Teuning*, with Brigadiers Eyre, Sir C. Campbell, and Penusulathier, Captain Cunninghame and staff; and *Mustang*, with 95th Regiment, arrived; and, after a short delay, went on to Constantinople. Brigadier Eyre, Lieutenant Graham, Brigade-Major Hope, and staff, remain at Gallipoli to act under Sir George Brown.

The 50th and 93rd marched out to Bulair on the 21st, and pitched their tents to form a working brigade with the Rifles and Sappers and Miners for the execution of the works. The profile of these lines has not yet been decided on; but the men have commenced throwing up the earth, and Colonel Waddy, of the 50th, was the first to turn up a spadeful of earth at "the fortifications," which the French have taken under their especial protection. Their troops are at work on the right flank; the English have commenced on the left; and each day about 2000 men are hard at work digging up the earth in a line right across the peninsula or isthmus. The 28th and 44th struck tents for exercise on the 20th ult.; and, as the day was hot, the wind high, and the dust excessive, the operation was not very agreeable.

On Saturday, the 22nd ult., a fete took place in the house occupied by Mr. Alexander, the principal medical officer.

THE ILLUSTRATION.

The large Illustration, upon the preceding page, from a Sketch by our Special Correspondent, represents the landing of French infantry at Gallipoli. The large iron boat is filled with some hundred men, and is towed by a boat with twelve or more oars: the scene is very striking: the soldiers are closely packed in the large boat; they carry their knapsacks and blankets; they face the officers, who are at the helm; opposite is the standard-bearer; and at the upper end of the boat is stationed a drummer, who beats a stirring march all the time. On the left is anchored an English steamer, which has just arrived; the paddle-boxes are crowded with soldiers, who lustily cheered their allies. About midway between the steamer and the French landing boat is a graceful Greek craft; beyond the steamer, leftward of the town, is an encampment of troops; and to the right is the town and harbour of Gallipoli. On the hill are the ruins of a fort, amidst which waves the tricoloured flag of France, which has a significant position in contrast with the inferior place of the Turkish colours, on the roof of the Quarantine. The white-faced building, with arched windows, is a café, with a terrace, crowded with officers: it is situated on the shore, projecting into the sea. Opposite is the Quarantine building; and beyond is a stone lighthouse. The harbour is small; but the three-masted barque and the numerous smaller craft nearly hide the large square tower which commands the town at the foot of the hill: this consists of a mass of conical darkish grey roofs, relieved here and there by minarets, and a tall factory chimney shaft.

VICTORIA.

BY MRS. T. K. HERVEY.

HER fleets are on the hostile shore,
Her sword is on the sea;
The standard that her fathers bore
Waves once more for the free.
The stranger's wrong is her's to-day,
Her shield is o'er the slave;
Her trustiest hearts are on their way
To succour and to save.

Dearer to her the flag at rest,
The sword without a stain,
The peaceful fields,—the reddening west
Glancing o'er golden grain.
It may not be; for her alone
Swords leap and true hearts beat,
Who rules, with Freedom on her throne,
And Slavery at her feet.

She must unwind the web of peace,
So beautiful now;
Her womanhood's delights must cease—
All, save her people's love.
One heart is hers through all the land,
One arm, to win or die;
Wherever peals o'er sea and strand
Victoria's gathering-cry.

A nation's call, a country's woe,
A groaning people bleeding,
She heard, and bade her legions go
At Mercy's tender pleading.
A wrong more deep, a cause more just,
Ne'er armed a conquering world;
Ne'er with a higher, holier trust,
Its banners were unfurled.

While fervent prayers for her arise
Whose hosts await his need,
"Strike home," the noble Turkman cries,
"Our champions must not bleed!"*
New courage fills the Osmanli
As Russia's hordes advance,
While rings the shout from sea to sea—
"For England and for France!"

"God speed the right!" is still the cry,
As in the time of old;
And, with His help, a day draws nigh
Whose glories are untold.
So, mercy-led, so, justice-driven,
Her keels shall cleave their way,
Till, by the gracious might of Heaven,
Victoria crowns the day!

* A speech recorded of the Turks: "Now is the time for us to fight, to save the shedding of our friends' blood."

OUR DISTINGUISHED CORPS.—A DIFFICULTY.—It is one of the disadvantages of our co-operation with the French troops in the East, that a sense of delicacy compels the British to veil the regimental devices which they earned in the great war in the Peninsula and the Netherlands, lest they should outrage the feelings of their gallant comrades. The Scots' Greys are greater sufferers by their Waterloo distinctions than any other corps, for its name used them to be kept back altogether. They are literally covered with souvenirs of Waterloo, and must have altered their uniform entirely if they had been sent to the East.

MILITARY PROMOTIONS COMMISSION.—It is rumoured that one of the uncommissioners of the Commission now sitting on the subject of military promotion is, that military officers of all ranks shall retire from active service when they have passed their sixtieth year; and another is, that the grade of major in the army shall be altogether abolished.

DEFENCES OF LIVERPOOL.—At a meeting of the Liverpool Dock Committee last week, the subject of the defences of the port was discussed. Ultimately, a vote was taken; and there being nine on each side, the chairman gave his casting vote in favour of the committee, supporting an application to Government for a block-ship, or something of the kind.

CHESS.

TO CORRESPONDENTS.

ERRATA C.—Of those last received we are sorry to find No. 1 too easy. No. 2 impracticable (if B goes at the 4th move, may play P to Q 4th, and defer the mate), and No. 3 answerable in 4 or 5, was re-read at night.

J. W. S., of H——, Tredegarshot, and very deficient in point.

M. YEN H., of Brussels.—They have all been satisfactorily solved, and shall be duly distributed.

J. N. Bolton.—Mr. Sprockhoy has returned to Liverpool, and we are glad to hear that he has accepted the Presidentship of the Chess-club, but to the agreeable intelligence there is a drawback, for it is feared that business matters will compel him again to take up his abode abroad, for some time to come.

C. G., Flat.—Your reply, though tardy, was welcome. A second letter shall be forwarded in a few days.

A. M.—Your infirmus was correct.

A NOVICE.—Stalemate makes a drawn game.

J. K. R., Stuttgardt.—Yes with pleasure. For our solution, that Problem 532 can be accomplished in three moves.

S. F. H.—Your Red game is unintelligible, half the "adhesive men" having deserted their posts. Why do you not write the initials of the Pieces and Pawns on your diagrams, as we have so often requested correspondents to do?

G. Mc A., Aberdeenshire.—Your Problems are now under consideration. The Solutions of ours are all correct.

EX-PRESIDENT.—We do not know the number of Chess-clubs in the kingdom. There must be considerably more, however, than you mention, for the *Chess-player's Chronicle*, in its monthly list, enumerates between 50 and 60.

P. T. S.—Contributors of Games, Problems, &c., should always send their names and addresses: not for publication, but that they may be communicated with on the subject of their contributions.

CITY.—The annual subscription to the Wellington Chess and Reading Salons, in St. James street, is only one guinea. Apply to Mr. Thyer, 140, Strand.

TYRO has evidently not yet acquired sufficient knowledge of Chess to appreciate the beauty of the Problem he criticises. Were Black to play, as he suggests, the White Bishop, it is obvious, would give mate the very next move.

F. K., of B.—The suggestion shall not be forgotten.

SOLUTIONS OF PROBLEM No. 532, by Algerine, T. S. of Worcester, T. J., Hanworth, "Sub." Derevon, Sigma, Delta, F. for Argus, Oldpus, Le Roc are correct.

SOLUTIONS OF PROBLEM No 533, by F. K. of B., O. P., T. J. of Hanworth, X. Y. Z., A Wrangler, D. R., Miles, Cosr, Publonia, Max, Solomon, Derevon, M.P., Argonaut, D. V., Tom o' Lincoln, Ernest, are correct.

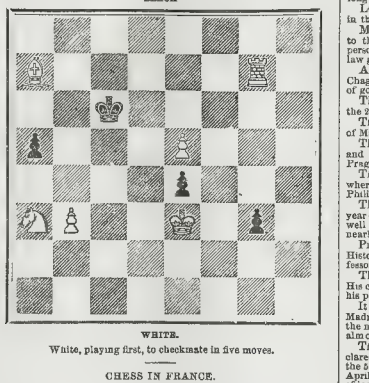
SOLUTIONS OF ENIGMAS by R., T. S., W. H. M., Mrs. Pillsworth, Wayfarer, Omega, J. S., Miles, X. Y. Z., Albert, Max, Philo-Chess, are correct. All others are wrong.

SOLUTION OF PROBLEM No. 532.

WHITE.	BLACK.	WHITE.	BLACK.
1. R to K R 4th	K to K 6th or (a)	2. R mates	
2. R to K R 4th	K or P moves		
(a) 1.		2. Q mates	
2. R to R 2nd	Any move		

PROBLEM No. 534
By W. BIGLAND, Esq.

BLACK



WHITE.

White, playing first, to checkmate in five moves.

CHESS IN FRANCE.

A selection of interesting games, played by some of the most skilful Amateurs in France, has been placed at our service by the Honorary Secretary of the Paris *Circle des Echecs*, M. de Rivière. The following game off recently between M. Le Roche and Journoud:—

(Scotch Gambit).

WHITE (M. Le R.)	BLACK (M. J.)	WHITE (M. Le R.)	BLACK (M. J.)
1. P to K 4th	P to K 4th	18. Q to K 2nd (c)	Q to Q B 3rd
2. K Kt to K B 3rd	Q Kt to Q B 3rd	19. P to K B 3rd	P to Q B 5th
3. P to Q 4th	P takes P	20. K Kt to K B 4th	Q R to K sq
4. K B to Q B 4th	K B to Q B 4th	21. P to K Kt 4th	K Kt to Q 2nd
5. Q B to K Kt 5th	K B to K 3rd	22. K Kt to Q 5th	Q Kt to Q 6th (ch)
(a)		23. K to B sq	P to K B 3rd
6. Q B to K B 4th	P to Q 3rd	24. P to K B 4th	B to Q sq
7. P to Q B 3rd	P takes P	25. P to K B 5th	K Kt to Q B 4th
8. Q Kt takes P	K Kt to K B 3rd		(d)
9. Q to her Kt 3rd	Castles	26. B takes Kt	Q takes B
10. K Kt to Kt 5th	Q to K sq	27. P to Q Kt 3rd	P to Q Kt 4th
11. Q to her sq (b)	P to K R 3rd	28. P takes P	P takes P
12. P to K R 4th	Q B to K Kt 5th	29. Q R to Q Kt sq	P to Q R 3rd
13. K B to K 2nd	B takes B	30. K R to K R 2nd	B to Q R 4th
14. Q takes B	Q Kt to Q 4th	31. P to K Kt 5th	B P takes P
15. Q to her sq	P to Q B 4th	32. P takes P	K R takes P (ch)
16. P to K 3rd	Q Kt to Q B 3rd	33. K to Kt 2nd (e)	R to K B 7th (ch)
17. K Kt to K R 3rd	Q Kt to K 4th	And White resigned.	

(a) This variation effectually prevents the second player from burning the opening into a "Queen Pinn."

(b) Apprehensive, perhaps, of Black's playing his Q Kt to Q R 4th, but we believe White did wrong in moving his Q to her Kt 3rd in the first instance, for it was evident his attack could never be maintained.

(c) It was not "a white stone day" with M. Le Roche, when he played the present game, which is quite unworthy of so strong a master.

(d) In M. Journoud's position, we should certainly have ventured to take the K Pawn with the Rook; the result of which, or we are grossly in error, would have given him two minor pieces for his Castle, *viz.*:—

	25	Q R takes P
	26 Q Kt takes R	Q takes K Kt
	27. Kt to K Kt 2nd	

(This appears his best move. If he play Q to K B 3rd, Black still rejoins with R to K sq).

27	R to K sq	32 K R to K R 2nd B takes B
28 Q to her 2nd	Q to K 8 6th (ch)	31. R takes B Q takes Kt
29. R to K B 2nd	R to Q Kt 3rd	And wins.

(e) An extraordinary error, confirming our remark above, that M. Le Roche was out of use By taking the Rook, he must have won easily.

THE PROPOSED NEW UNIVERSAL CODE OF CHESS LAWS.

At the meeting of the "The Northern and Midland Counties Chess Association," which was held at Manchester in the spring of last year, it will be remembered that Mr. Staunton directed the attention of the assemblage to the gross anomalies and inconsistencies which disfigure our Chess statutes, and pointed out the advantages, and indeed the necessity, of having the laws revised, and then settled upon a firm and uniform basis. After some discussion upon the subject, the members present re solved unanimously "That Mr. Staunton be requested to put himself in communication with Major Jaenisch, of Russia, and Mr Von Heydebrand, of Germany, the most distinguished chess authors of the Continent, to induce them to co-operate with him, in drawing up a code of Chess laws for general adoption, to be reported on at the next meeting of the Association."

It will be gratifying to the great body of Chess amateurs to learn that this resolution of the Association is likely to produce the most satisfactory results. The three gentlemen named at once accepted the duties assigned them, and have for months been occupied in the consideration of the subject. The first fruits of their labours have appeared in the shape of two carefully drawn up pamphlets one in German, by M. Von Heydebrand, entitled "Entwurf neuer Vereinbigen Reglemens für das Schachspiel," the other, in French, by Major Jaenisch, and called "Règles du Jeu des Echecs, adoptées par La Société des Amateurs d'Echecs, de St. Petersbourg, comme Base d'un Code Universel de ce Jeu," &c., &c

These two productions are undergoing translation, and, with a third, containing Mr. Staunton's views, will form one volume, which it is understood will be read before the members of the Association at their next meeting; and, if approved, will then be submitted to the leading Chess-clubs of Europe as the basis for a complete and universal system of rules, applicable to, and which, it is hoped, will be adopted by, the Chess fraternities in all the civilised countries of Europe.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

It is now stated that Saturday, the 10th of June, has been finally decided on as the day on which the Sydenham Palace is to be opened.

Accounts from Trieste say that the Archduke Ferdinand Maximilian will proceed to England, to return the visit of the Duke of Cambridge.

The Whittington stone, which was said to have been demolished, has been deposited in a stonemason's yard, for the purpose of being renovated and repaired; and, in the course of a few days, it will be returned to its original position.

A new law for levying a tax upon dogs has been published at Turin; the proceeds to be applied to the relief of the poor.

Several of the most powerful hydraulic presses of Leeds are at present engaged in compressing hay purchased in the neighbourhood for the use of the cavalry ordered to the seat of war.

A proposition has been brought before the American Legislature to make it a penal offence for a boy to go into a theatre or a circus.

The reduction that has taken place in the Irish military establishment in consequence of the war amounts to about 9,000 men.

The Austrian Government has just opened subscription lists in Frankfort and Amsterdam for a loan of £5,800,000 sterling.

Upwards of ten thousand pounds were paid at the Custom-house, Bristol, on Monday, in anticipation of a rise in the Sugar-duties.

The discovery of gold in the Orange River Sovereignty has been confirmed. In the especial locality of Smithfield several nuggets are alleged to have been obtained, varying from one to four ounces each; but in the majority of cases the gold is found in minute particles.

Twenty-four magnificent palm trees, brought by the *Himalaya* from the East, were on Saturday delivered at the Crystal Palace.

The works of the Mediterranean line of electric telegraph are proceeding so actively, that in the course of the summer despatches may be received direct from Constantinople.

The annual cattle-show for the Royal Agricultural Society of Ireland is to be held this year at Armagh for the province of Ulster, during the week commencing August 7.

Not less than £1000 has been paid, in an instance or two, for the services of Finnish pilots during the whole season, till the navigation closes; and the same sum has been given to a Norwegian linguist, who speaks Russian and Finnish, on board the *Wellington*.

The electric telegraph between Agra and Calcutta, 800 miles in length, is completed.

The Emigration Commissioners have advertised for three more ships to convey emigrants to Australia: two to sail for Sydney and Geelong on the 16th of June, and one on the 25th of June for Moreton Bay.

Letters have been received from Sir John Bowring, dated Aden, in the Red Sea, reporting briefly "all well."

Mr. A. Guppy, a solicitor of Honiton, has been committed to the county gaol at Exeter, for one month, for forging another person's name to a voting paper, in order that he may be elected a Poor-law guardian.

About 2,000,000 of dollars worth of specie have been sunk in the Chagres river, owing to the snagging of the canoes. The boxes and bars of gold and silver are buoyed, however, and all will be recovered.

The town of Nice was lighted with gas for the first time on the 30th ult.

The New York Crystal Palace was to be re-opened on the 4th of May, under the management of a new committee, and Mr. Barnum.

The Duke and Duchess of Bordeaux, under the title of Count and Countess of Chambord, arrived at Dresden on the 27th ult. from Prague.

The English Ambassador left Madrid on the 25th ult. for Seville, where he will pay his respects to Queen Marie Amelie (the widow of Louis Philippe), previous to her departure from Spain.

The French Empress has bestowed a pension of 600 francs a year on Giraud, the poor fellow who was rescued the other day from the well at Ecully, after having been in his horrible and perilous position for nearly three weeks.

Professor E. Forbes is appointed to the Chair of Natural History in the University of Edinburgh, vacant by the decease of Professor Jameson.

The state of the Pope's health is said to be very unsatisfactory. His chest is considered to be affected, and the enormous enlargement of his person reveals a dropsical tendency.

It is expected that the electric telegraph which is to run from Madrid to the French frontier, will be completed as far as Saragossa by the month of June. The wires from Madrid to Irun have been placed in almost all the streets of the capital.

The official returns of the Board of Trade show that the declared value of the woollen manufactures exported in the month ending the 5th of April, 1853, was £931,216, and in the month ending the 5th of April, 1854, £1,023,690, or £102,483 more than in the corresponding month of last year.

A gentleman was fined £20, including costs, at Leeds, the other day, for giving a false character to a former servant.

A project for lighting the city of Mexico with gas is about being commenced, and will be followed by other cities of the Republic.

The Parliamentary Committee on the Wellington Dock Bill have decided that, considering the present state and prospects of the country and trade, it is inexpedient to sanction, at present, any new works of this description.

The Grand Duke of Tuscany has anticipated by one year the Exhibition of Industry which was to have taken place in his States in 1855, in order that it may not clash with that of France.

The Tyne seamen who go to the south of England are now making £12 a month. With such wages, no one can wonder at the difficulty of getting seamen to man her Majesty's fleets.

A rescript from Rome, calling on the priests of Ireland to abstain altogether from interference in political affairs, may shortly be expected, if it has not already arrived, in Dublin.

The total produce of the Victoria gold district for the last two years is given as £25,000,000.

The *Atrato*, the largest paddle wheel steamer in the world, made her first trip from St. Thomas to Southampton, a distance of 3600 miles, in twelve days and twenty hours, averaging nearly 300 miles a day.

At a *soirée* recently given by General Baraguay d'Hilliers, the Hungarian General Klapka was an invited guest; and as soon as he entered the room, all the Austrians present, the *corps diplomatique* included, retired.

The ship-building trade at Dundee is at present interrupted by a disagreement between the journeymen and their masters as to the hours of work and the rate of wages.

The East Kent Railway Company have just entered into a contract with Messrs. Fox and Henderson for the construction of a new bridge over the Medway, in Rochester.

Prince Napoleon arrived at Gallipoli on the night of the 30th ult.

The Earl of Dunraven has recently erected, at his own cost, a chapel, a monastery, and a nunnery for the Christian Brothers of Charity, at Adare, in the county of Limerick.

The factory hands in Stockport have almost all returned to work. At Preston the spinners still hold out, and prevent the power-loom weavers from returning to work.

The Russian Count Lauzanoff, who was arrested in Paris last week, after having been subjected to domiciliary visitation for carrying on a secret correspondence with Russia, has been liberated, on condition of quitting France within ten days.

The Prussian Ingenieur Staff has been making experiments with a new projectile for muskets, described as highly satisfactory.

By the opening of the railway to Ulm, which took place last week, an uninterrupted line now exists between Munich and Paris, Calais, and Havre.

The great demand for sea-weed manure in Ireland this season may be inferred from the fact that the very large sum of £10,000 has been paid for it at the Galway quay alone.

Owing to the dearness of flax, nine spinning-mills in Ulster, comprising 35,000 spindles, have partially or wholly stopped work and others are working short time. At Ballinasloe fair, which was held on Monday last, the demand was much greater than the supply of stock. The fair was acknowledged to be the best that has been witnessed for a quarter of a century.

Advices from the whaling fleet report the destruction of several vessels and the loss of numerous lives. The season this year has altogether proved extremely disastrous both in the loss of ships and crews, and in the failure of the fishing.

Twenty-two young workmen, of Berlin, are about to be sent out to the Lutheran missionaries in Southern Africa, as assistants. They are to teach the principal European trades to the natives, and, at the same time, to instruct them in the elements of Christian doctrine.

The diligences between Lisbon and the Spanish frontier have been obliged to cease running, on account of the bad state of the roads.

Mr. Thomas Johnson, clerk to the magistrates of Lancaster, has intimated his determination to resign his official connexion with the Bench, on the ground that he could no longer conscientiously prepare the publicans' licences.

THE COAST BETWEEN NICE AND ANTIBES, THE SCENE OF THE LOSS OF "THE ERCOLANO."

SHIPWRECK OF THE ERCOLANO.

The loss of the Italian steam-boat *Ercolano*, on the night of the 24th ult. between Nice and Antibes—of which we this week give an Illustration—was, evidently owing to the carelessness of the captain of that vessel, and the melancholy loss of life by which the accident was followed, may with equal justice be attributed to the want of vigilance on board the *Sicilia*, by which the unfortunate vessel was run down. Some interesting details of the melancholy catastrophe are given in the *Hertford Mercury*, as the substance of a conversation which took place between Captain Townshend, M.P., and Sir R Peel, relating to his miraculous escape.

Sir Robert said that, feeling ill from the motion of the vessel, he was sitting in his carriage which had been moved to midships, on account of the heavy rolling of the sea—smoking a cigar, when suddenly, and without the slightest warning, a collision occurred. A large vessel, the *Sicilia*) came upon them at the rate of eleven or twelve knots an hour, running right or nine feet into the *Ercolano*, and literally "doubling her up." The collis.on was so sudden—death so imminent, that there was no time for consideration. Sir Robert had just time to spring out of his carriage before the funnel of the steamer and the apparatus of the galley fell against.it, and threw it overboard. To take off his coat, his trousers, and his boots, was the work of a moment. His servant was standing by him—an old and valued servant, much attached to him and in that awful moment Sir Robert (who must pardon us for referring to a circumstance which he never intended to be made public) found time, and courage, and calmness enough to say a few words to his faithful servitor: "Good bye! God bless you! Nothing can save us! In a few minutes we shall be in the other world; but be comforted. I have made a provision for your daughter" (the old man's only child), he exclaimed. The old servant said he would never leave his master; but Sir Robert, feeling that there was no chance for either of them, except in prompt and individual activity, exclaimed, "You cannot help me. Do the best you can. I shall jump into the sea," and then he took a strong leap to escape the eddy caused by the sinking vessel, which he happily cleared. In the sea, Sir Robert got hold of something which he supposes to be the bowsprit of the *Sicilia*, which was carried away at the moment of the collision. Then he got hold of a chain, and finally of a piece of the wreck, to which he found three other persons, one of whom he thinks was his old servant, were clinging. In this position he remained, the sea rolling heavily, for three quarters of an hour. One by one his companions relaxed their grasp on the floating portion of the wreck, and dropped exhausted into the sea—their grave; and at last he alone remained, holding on till he was picked up by a boat belonging to the vessel which had run them down. Till that moment Sir Robert never lost consciousness or self-command, but, once on board the boat, he sank into a state of insensibility, from which he was restored in the engine-room of the *Sicilia*. Sir Robert says he heard the cries of people in distress from the *Ercolano*, before she sank, and he thinks that lives might have been saved if proper means had been taken.

Our Correspondent's Sketch shows the scene of the catastrophe; the port of Antibes being in the centre, and the Estrelle mountains to the right: they are, as it were, the footstool of the Alps, and are highly picturesque in their forms. Antibes is finely situated on a promontory, jutting out into the sea, and commanding views of the Maritime Alps.

How We Treat our Prisoners of War.—The *Tribune* took 150 prisoners from six of her prizes, all of whom were taken up to Copenhagen on the 20th and 21st of April, and delivered over to the charge of the Russian Minister, with all the clothes and effects they had on board their own ships. The crews were put on board a Russian ship, under a guarantee that they would not serve against the Western Powers during the present war. The Minister was desired to use all possible despatch in receiving the prisoners' luggage, which amounted to sixteen tons. The Russian Minister expressed his unfeigned astonishment at such extreme liberality being displayed towards the prisoners. Sums of money found on the persons of the seamen were immediately returned to them, much apparently to their astonishment; and they did not fail in the highest terms to express their gratitude. In one instance the sum of £200 sterling was found on the person of one of the Russian masters, which was forthwith returned to him, on his declaration that it was positively his personal property, over which the owners of the ship had no control whatever. In many other instances sums of greater or less value, with gold and silver watches, chains, jewellery, &c., were taken away by the respective owners, without question on the part of the captors. There are at present on board the *Tribune* ten Russian Finland seamen, part of the crew of the barque *America*, taken off Scarborough. They are fine, well-made, hardy fellows—all very cheerful and obedient to command. Some of them have expressed a great desire to join the *Tribune*. They unhesitatingly avow their determined hatred against Russia, and would willingly fight in the hope of Finland being restored to them, so that they may once more be—what their fathers were—a free people.

BOMBARDMENT OF ODESSA.

The English official declaration of war reached the fleet, then anchored at Baldjik Bay, near Varna, on the 9th of April, upon which the steamer *Furious* was sent to Odessa to bring away the English Consul. With a flag of truce flying at her mast-head, she hove to, and sent in a boat, also carrying a flag of truce, to demand the Consul. There was some delay in returning an answer, and the Lieutenant in command of the boat thought it right to return to the *Furious*, upon which the Russians opened a fire upon the boat and in the direction of the steamer. Six or seven shots were fired, but fortunately without effect. On the 17th (the French official declaration of war having arrived, without which Admiral Hamelin was naturally unwilling to proceed to extremities), both fleets sailed for Odessa, before which place they anchored on the afternoon of the 20th. An explanation was demanded of General Osten-Sacken, the Military Governor, as to his reasons for outraging a flag of truce, always held sacred to all nations pretending to civilization. This demand was also sent in under a flag of truce, but the boat, when backed by the fleets, was not molested. The General returned an unsatisfactory and untrue answer, declaring that he did not fire upon the boat, but upon the *Furious*, which, not heeding customary [illegible] was steaming up the [illegible] for the purpose of [illegible] areas she was motionless. Upon this the A[illegible] fa: the delivery of all the shipping in the port, and declared that in the event of no answer arriving before sunset on the 21st, they would punish this outrage on the law of nations. The vessel taking these demands having been stopped, Admiral Dundas sent a circular round the fleet stating that what he had done was on account of the Russians having fired on a flag of truce.

Here it is necessary to endeavour to give the reader some idea of Odessa. It has often been compared in general aspect to Brighton; but the line of cliffs on which the town stands has a slight curve inwards, forming a shallow bay, with a radius of some three miles. These cliffs face the north-east, and towards the north they sink into low sandy mounds and flat endless steppes. Stretching out from below them, at the lower or south-easterly end of the town, runs a long fortified mole, at the end of which was a lighthouse. This is called the Quarantine Mole, and it shelters a great crowd of ships of all nations. Their crews are never permitted to go into the town, but are imprisoned within a small walled in and strictly-guarded quarantine district, at the foot of the cliffs, even if they should happen to be detained there for six months at a time. Under pretence of preserving themselves from disease, the Russians have made the quarantine a hateful political tyranny. When the Allied fleets appeared before Odessa, this mercantile prison of all nations was very crowded; and on the morning of the 22nd each vessel had her colours at the mast-head, as if appealing for succour, and protesting against cannon balls intended for the Russians. The attacking force had orders to give this mole as wide a berth as possible, in order to be out of reach of its fire, and so to avoid the necessity of returning the fire and injuring any of the neutrals within. The following was the attacking force: French, *Mogador*, *Vauban*, *Descartes*, *Caton*; English, *Samson*, *Terrible*, *Tiger*, *Retribution*, *Furious*; and a detachment of rocket boats under Commander Dixon. The *Sanspareil* and *Highflyer* acted as reserve.

At five o'clock on the morning of the 22nd of April, the signal was made for the steamers to commence an attack on the Imperial Mole, and the fortifications in its neighbourhood. The orders were to go as far as possible in shore, so as to rake and destroy the Imperial Mole and shipping, but to avoid firing upon any part of the town, or upon the shipping in the Quarantine Mole. The steamers entered in two divisions. The first consisted of the *Samson*, *Furious*, *Vauban*, and *Mogador*. The *Samson* fired the first shot at the Imperial Mole, and the fire was instantly returned. The movement, as witnessed from the large ships, about three-and-a-half miles off, was a most curious sight. When within about 2000 yards each steamer delivered the fire of her enormous guns, then wheeled round in a circle of about half a mile in diameter, each taking up the fire in succession. Thus they kept wheeling and twisting about like so many waltzers, without ever touching or getting into scrapes. The guns in the mole answered steadily, and in the course of an hour the *Vauban* came towards the fleets, on fire from red-hot shot, and riddled in several places. Happily, the fire was got under, and she returned to her post.

At seven a.m. the second division received the signal to stand in. It consisted of the *Terrible*, *Tiger*, *Retribution*, and three French steamers. The *Retribution* led the way, closely followed by the other steamers. The Russians had laid down a "lump," that is, an old vessel was anchored to mark the distance their guns would carry. The Allied division went within this mark, and therefore exposed themselves to loss from the shot of the enemy. At first, however, their shot did not reach our ships, although they suffered severely under our fire. The *Terrible* stood further in than the rest, and commenced firing red-hot shot. After a time a loud explosion was heard. The Imperial magazine had been blown up by a shot from the *Terrible*, and great part of the mole on which it stood was rent in pieces by the violence of the explosion. This relieved the Anglo-French squadron from their most formidable opponent, the battery on the Imperial Mole. The *Terrible* continued to fire red-hot shot. A Russian frigate in the harbour took fire, burnt to the water's edge, and blew up.

Each of the vessels which remained out of action had sent a rocket boat, firing 24-pound rockets, and these caused terrible destruction. The dockyard was the chief object of these missiles, and it was soon in flames. Two new frigates, and from twenty to thirty merchantmen were either sunk or burnt. The seamen of the *Terrible*, which remained on the spot till the following Tuesday, declare that it burnt for two days and two nights, and that this vast collection of naval stores must have been totally destroyed.

The steamers were busily plying the sinking ships with shot and shell, when suddenly from behind some sheds on the low sandy shore near them, a battery of six horse-artillery guns opened out upon the rocket-boats, which were at the moment within musket-shot. Happily nobody was hurt, though a perfect shower of balls fell around them, knocking the oars about, and ploughing up the water all around them. Upon this the rocket-boats and steamers opened upon them, and soon sent them scampering. A few minutes after, the sheds behind which they sheltered themselves burst out into a furious fire. While they were thus engaged, her Majesty's steam-frigate *Arethusa* was ordered to attack the southern side of the Quarantine Mole battery as a diversion, for its guns had frequently been very troublesome. Nothing could be prettier than the way in which she stood in, hove to, and delivered her fire, filled, tacked, and again delivered her broadside. Shortly after the breeze freshened, and she deliberately reefed her topsails, though under fire, and was then recalled by the Admiral.

At half-past five p.m., when the action had lasted twelve hours and a half, the signal of recall was made. The action ceased; the *Terrible* having lost two men killed and five wounded; the *Vauban* two men killed and one wounded; and the *Retribution* one, and the *Sampson* five wounded. These were all the casualties ascertained. As the *Terrible* was the most distinguished in this action, she was received with all honours on passing the fleet. Each ship cheered her as she steamed past on her way to the Bosphorus. She has suffered much in appearance. Her paddle-boxes are a good deal knocked about, and she has twelve shot in her hull. Captain M'Cleverty remained on the paddle-box all the time, and narrowly escaped a shot.

During the fire several English merchantmen slipped out of the Quarantine Mole, and escaped. The poor fellows were very thankful to have escaped. Altogether the punishment was severe, but appropriate Russian property was destroyed, and much of it must have belonged to Government. The town and neutral ships were spared, though completely in our power; and it cannot be contended that a place with so many batteries on the sea-board was defenceless.

The city is said to have suffered comparatively little, though a few of the principal buildings, and among the rest the Woronoff Palace, were a prey to the flames (*See the Engraving upon the following page*) Odessa has, however, completely changed its external appearance. The terrific cannonade and the explosion of the magazine broke all the windows, many chimneys have fallen, and the steeples of many churches have been injured.

The fleets were to leave for Sebastopol immediately.

The *Moniteur* gives the following report of the bombardment, which differs in one or two points from the English one:—

Ville de Paris, Odessa Roads April 25.

On the morning of the 22nd, eight steam frigates—three French and five English—proceeded to the Imperial port of Odessa, and at half-past six four of them had opened their fire on the land batteries. The two mortars, as well as the intermediate batteries, warmly returned it. At ten o'clock four other frigates joined, and then the action became general. It continued until five o'clock in the evening, when Admiral Dundas made a signal to the frigates to join the squadron. The fire had gained the battery of the Imperial mole; the powder magazine had blown up; fifteen vessels, with the exception of two or three, were either sunk or on fire. The naval establishments were also on fire, or very much injured from the shells. The town and the commercial port where a number of vessels of all nations were moored, were respected. Several of these vessels took advantage of the confusion and got out, and among them the only two French vessels that were there.

The following details on the same subject, in a letter from Odessa written the day after the attack, and published by the *Patrie*, show what alarm was caused by the proceedings of the Allied fleets:—

It was on the 17th that the first division of war-steamers, French and English, made their appearance before this place (Odessa). At their arrival the greatest terror seized on the inhabitants. The wealthy families at once engaged all the horses and means of transport to withdraw into the country, and a vast number of persons quitted the town. But the vessels, after having examined the roadstead and harbour, withdrew, and by degrees the general disquietude wore away—the shops and coffee-houses again opened, and everything went on as before. But on the 22nd a great number of war-steamers, counted by many to be 33, appeared in the horizon, and the terror became greater than ever, for everyone felt that the intention was to avenge the insult offered to the English flag of truce—an act, besides, which was universally blamed by the inhabitants. The next day the alarm became greater and greater, and during the action the total destruction of the town was apprehended. This apprehension became still more violent when the powder-magazine blew up, and when the military storehouses were seen to be on fire. Add to this, that every instant wounded soldiers were carried from the batteries into the town, and the governor and the troops manifested the greatest brutality and indifference for the inhabitants. At last the firing ceased, and then the people perceived that the intention had not been to injure them, but to show the Russian authorities that they were not to insult the Western Powers with impunity. The whole affair has thrown the greatest discouragement amongst the troops, and produced a most excellent effect on the minds of the population, who see that Russia is unable to protect them; and that if the town still exists, it is owing to the forbearance of the fleets.

It is amusing to contrast the above graphic account, chiefly taken from information furnished by Englishmen, who saw the whole affair, with the following,

RUSSIAN VERSION OF THE BOMBARDMENT,

which has been issued by General Osten-Sacken.

On the 21st (April) the Anglo-French squadron, consisting of six three-deckers and thirteen two-deckers, with nine steamers, anchored at the distance of three versts (two miles and a quarter) from Odessa, hoisted four p.m. Admirals Dundas and Hamelin sent a flag of truce ashore, demanding the delivery of the Russian, English, and French ships lying in the Quarantine Harbour. This impudent demand received no answer, upon which they had probably calculated, for yesterday, at half-past six a.m., nine of their steamers (one of 54, and the others of 34 guns each—took up a position outside the line of fire of the battery No. 1, on the right side of the harbour, but immediately abreast of Nos. 2, 3, 4, and 5, which they attacked, casting shells now and then into the town, and directing their concentrated fire upon battery No. 6, which stands at the point of the Pratique Harbour. Our batteries were provided with 48 guns. The enemy availed himself of his guns of heavy calibre, and thus kept at such a distance as to prevent Batteries No. 3 and 5 from taking an active part in the combat, although they were fully exposed to the enemy's fire. But Battery No. 6, under the command of Ensign (Fähnurich) Schogaleff, fired spiritedly with its four guns; but as one was dismounted, and the enemy was without the range of the third gun, only two guns on the left flank could operate; and with these two guns Battery No. 6 maintained the combat six hours against the enemy's steamers, and at last, against eight steamers and a screw-ship of 84 guns. The battery would not even then have been silenced, nor would Ensign Schogaleff have retired from it, had not fire broken out in the vessels close by, and in the battery itself. In consequence of the fire of this battery, three of the enemy's vessels were obliged to be taken in tow. After the combat, the Commanding-General availed himself of the right accorded to him to welcome as Knights of the Military Order those who had most distinguished themselves. The brilliant conduct of Ensign Schogaleff was constantly reported to the Field-Marshal. The enemy's ships, from their drawing little water, were enabled to command the Pratique Harbour, to approach the suburb of Pericop, and to throw rockets into it from their boats, and thereby to burn the ships and some houses in and near the same. They attempted a landing also, but the grape-shot of four light field-pieces stationed on the shore, and covered by six infantry companies, put them to flight. These boats were followed by our cannon-shot, and suffered severely. We have on our side a few killed and wounded, and two gun-carriages destroyed. During the combat some of the enemy's liners left the line of battle, and approached the country-house of General Liders; but as they received the fire of our batteries Nos. 1, 2, and 3, they discharged two or three broadsides, and resumed their former position. Our artillery worked admirably. Our batteries, with the exception of No. 6, have suffered little. We have had four killed and sixty-four wounded.

On the 23rd the following orders [illegible] to neutral vessels were issued:—

1. Vessels under [illegible] flag cannot leave [illegible] so long as the enemy's flag remains in sight. 2. Steamers and crews thereof will be provided with quarters ordered for their reception, beyond the reach o. fire, and where they must submit to the quarantine regulations. 3. Ships with

ODESSA.—PALACE OF COUNT WORONZOW, DESTROYED IN THE RECENT BOMBARDMENT.

cargoes on board shall land the same in magazines appended for the purpose 4. Skippers and sailors who do not choose to submit to the foregoing orders, must place themselves at the disposal of the port captain, and in case of opposition will be subject to military law. 5. Excepting the protection offered to captains and crews and cargoes of neutrals, the authorities will not hold themselves responsible for the safety of ships. 6. All neutral vessels may leave the harbour so soon as the enemy has withdrawn."

SIR HAMILTON SEYMOUR, G.C.B.,

LATELY OUR AMBASSADOR TO RUSSIA.

ONE effect of our Parliamentary system—of which the public take but little account, and which would work injustice were it not counterbalanced by advantages—is to concentrate the national attention on the chief Ministers in this or that department of the public service for the time being, and to draw it away from the very important duties performed by other personages occupying not always subordinate, but usually less distinguished positions. Among these personages there is one class who suffers more directly than most of the others—the consequence of this concentration of the national attention on the public and Parliamentary acts of the principal members of the Government. The Ambassadors sent by the Queen of Great Britain to the various foreign Courts, are proverbially well paid and highly considered; and perhaps, as a general rule, they have little to do: but if they be, as they usually are, men of a superior intelligence and activity, they render to their country silent but inestimable services, which form the foundation and furnish the adornment of the more brilliant displays of their official superiors in either House of Parliament. While a Lord Palmerston, a Lord Clarendon, or a Lord Malmesbury, is to all appearance the great Director-General of the Foreign Policy and Correspondence of the Empire, there are patiently at work in the various Courts men whose names are less often in men's mouths, but who patiently prepare the materials out of which their chiefs are to fabricate their speeches or their despatches. A Redcliffe, a Bulwer, a Clayton, a Seymour, if he be a man of superior capacity and powers of observation, becomes a personage of importance inversely to his apparent position: he pulls the strings, and virtually makes puppets of all but the highly-dominating minds. It was rightly, though somewhat too rigidly, observed the other night, by Lord Malmesbury, that the exclusive business of an Ambassador abroad is to furnish his Government at home with the accounts of the secret movements of foreign Courts. The noble Earl gave only a part of the truth; referring rather to a period when his noble ancestor flourished in the Ambassadorial character, and when Court gossip influenced much the destinies of nations, than to the present age, when the relative rights of Sovereigns and their duties as rulers towards each other are better understood, and when an Ambassador must be more a statesman and a political philosopher than a spy and a chronicler. But, in other respects, Lord Malmesbury hit sufficiently near the mark. We have but to record the services of Lord Redcliffe at Constantinople, of Sir Henry Bulwer at Madrid and at Washington, of Sir Thomas Wyse at Athens, and, more recently, of Sir Hamilton Seymour at St. Petersburgh, to establish the vast importance of such persons, and the interest which the public ought to feel in their history and conduct.

It was, and, perhaps, still is, a common prejudice, that our Embassies abroad are useless and extravagantly expensive institutions, kept up for the purpose of making princely provision for ambitious aristocrats. The antecedents of some of our most distinguished diplomatic representatives abroad singularly contradict this notion, which is usually revived once a year, in the discussions on the Estimates. It is certainly untrue of every one of the distinguished Ambassadors whose names we have already mentioned, and it is peculiarly so with respect to Sir Hamilton Seymour. Unlike Sir Thomas Wyse, for instance, who was transplanted from the House of Commons to the Embassy in Greece, Sir Hamilton Seymour has fought his way upward to his present high rank on the diplomatic roll. In this respect he contrasts with the Earl of Westmoreland, and more resembles Sir Henry Bulwer, or Mr. Clayton, both of whom had learned the drudgery (so to speak) of diplomacy, before attaining the right to perform the chief parts. Very few persons will be prepared to hear that the public service of Sir Hamilton Seymour extends over a period of very nearly forty years! Yet such is the fact; for, in the year 1817, he was already an Attaché of the British Embassy at the Hague; and, from that time to the present, he has been incessantly employed in the diplomatic service of the country.

According to Malvolio's classification, Sir Hamilton Seymour is in the category of those who "*such eve greatness.*" The distinguished part he took in the late negotiations with Russia—the dignity, sagacity, and finesse he displayed in his communications with the Emperor—and the moral integrity which enabled him courageously to point out in his despatches the true character of the overtures of which he was made the unwilling medium—all these things have combined to invest him with no ordinary interest in the eyes of his countrymen, who naturally desire to know where so much diplomatic tact and large statesmanship had previously been hidden. We will briefly recount the main incidents of his life.

Sir George Hamilton Seymour was not exactly born "great," but he is of noble birth—uniting in himself the blood of the Seymours and the Hamiltons. He was the eldest son of the late Lord George Seymour, by the ninth daughter of the Hon. and Rev. George Hamilton. We have not at hand the exact date of his birth, but believe it to have been in the year 1797. The interest of his family early procured him employment in the diplomatic service, for which he had been designed; and in March, 1817, he was gazetted as an Attaché to the British Embassy at the Hague. The capacity he here displayed, together with his influence, led to his being brought more immediately under the eye of the Home authorities. In December, 1819, he was appointed assistant *précis* writer at the Foreign-office—a post, we need scarcely say, of a very confidential character, and usually given to young men of more than ordinary promise. In little more than a year after he was promoted to the post of principal *précis* writer; and, in a year after that, he was made Private Secretary in the Foreign-office. This special mark of confidence and favour, which was accorded in January, 1822, was followed, in the October of the same year, by another. Mr. Seymour was appointed Attaché to the special mission sent to Verona at that date. In November of the following year, 1823, he was put one step higher in the scale, by being made Secretary of Legation at Frankfort. From there he was transferred to Stuttgard, in September, 1826, and to Berlin, in January, 1828. In September of the following year he was appointed Secretary of Embassy at Constantinople, where he necessarily derived considerable insight into the nature and objects of those Russian intrigues which, from time immemorial, have disturbed the tranquillity of the Turkish Empire. We need scarcely add that his residence at Constantinople was at a most critical period, which furnished more than ordinary means of judging the relative positions of the European powers as regarded the Turkish question.

SIR HAMILTON SEYMOUR, G.C.B.—DRAWN BY M. BAUGNIET.

The ability exhibited by Mr. Seymour in this last-named capacity attracted the attention of the home authorities, by whom he was elevated at once to the rank of Minister, with Florence as his destination. Lord Palmerston, ever quick and discriminating, was now Secretary of State for Foreign Affairs.

At Florence Mr. Seymour remained a longer time than in any previous diplomatic employment. In April, 1836, he was still further promoted by being named Envoy Extraordinary and Minister Plenipotentiary to the Court of the King of the Belgians. Here he had less scope for the exercise of his abilities than he might have had in a more important field of action; but, during his residence in Brussels, he impressed all around him with a high sense of his unbending integrity and strong ability. The writer of this memoir well remembers him at this period, and the admirable manner in which his diplomatic functions were discharged. At the period of his appointment to the Belgian Embassy, Mr. Seymour was created a Knight Grand Cross of the Order of the Guelphs of Hanover.

About ten years and a half afterwards—in December, 1846—Sir Hamilton Seymour was appointed Ambassador to Lisbon, where, as in his previous employment of the same kind, he discharged his duties to the highest satisfaction of the Home Government. In a Court like that of Portugal, and especially at the period when Sir Hamilton Seymour was there—a period of domestic convulsion, under circumstances which compelled the British Ambassador to recall to the remembrance of the reigning Monarch the services rendered her by his nation and the duties she owed to her subjects—it required no ordinary quantity of combined firmness and tact to maintain the necessary attitude towards the Court without forfeiting the personal respect and influence, without which an Ambassador is comparatively useless. In 1847, he was created a Knight Grand Cross of the Order of the Bath.

We have now followed Sir Hamilton Seymour through the various scenes of his diplomatic education and career. We have seen him initiated into State secrets at home, and visiting successively in one capacity or other almost every important Court of Europe. The best proof of his having given the highest satisfaction in these various employments was his selection, in April, 1851, to fill a post which, in the then condition of Europe, appeared to be one of the most important in the whole range of British diplomacy; because, although the ulterior designs of the Emperor Nicholas on Turkey had not publicly transpired, it was well known that troubles were brewing in that quarter.

Sir Hamilton Seymour proved himself thoroughly well qualified for this most important post. His high cultivation and accomplishments, with the vast store of practical knowledge of contemporary men and things acquired during his long diplomatic service, rendered him personally acceptable to the Emperor, who distinguished him with no ordinary favour. Perhaps the unpretending quietude of his manners, and his not having hitherto played a brilliant part, however important, in European affairs, may have misled the Emperor as to the real characteristics of Sir Hamilton Seymour's mind. At all events, the approaches he made towards him in the memorable tragi-comedy played around the bedside of the "dying man," indicated but a moderate amount of fear of the character of the functionary whom he was then seeking to tempt or to make a tool of. While pursuing a course of the most undeviating courtesy, and quietly "drawing out" the Imperial tempter, so as to fully fathom his secret designs, the astute representative of his country's interests and policy did not permit his Royal mistress or her servants to be "compromised" by any act of his. All who have read the despatches of Sir Hamilton Seymour, constituting the major part of what is called the "Secret Correspondence," have remarked the singular felicity with which he contrived to sustain the honour of his country without giving offence to the morbid pride of his Imperial interlocutor. Any high-minded man could have felt the repulsion experienced by Sir Hamilton Seymour; but it required an extensive experience of Courts and of the "hearts of Kings" to steer with so much tact in such dangerous waters. The country undoubtedly owes much to Sir Hamilton Seymour for the zeal and capacity he displayed throughout this dangerous and difficult negotiation, and for the courage with which he recorded in his despatches the painful impressions that had been produced on his own mind by the language of the Emperor. The latter scarcely responded in a becoming manner to the forbearance shown him by Sir Hamilton, for, when it at last became evident that a rupture was inevitable, his Imperial anger at having been foiled got the better of his instincts as a gentleman and a Sovereign; and he did not treat with becoming consideration the man who ought to have commanded his respect if only for having done his duty. Of course, the distinction between the treatment of the French and that of the British Ambassador, on their severally leaving St. Petersburg, may have been only a political demonstration, to mark the difference of the sentiments entertained by the Emperor towards those several Courts; but there are many modes in which a Sovereign can mark his respect for the individual, while publicly discountenancing the Ambassador. A stronger case could not be afforded, than that of the treatment of Baron Brunnow in this country, and of that functionary's parting visits to the French Ambassador and the leading members of our Government. The detention of Sir Hamilton Seymour's effects, too, though perhaps an accident, was one of those accidents that ought not to have happened.

We have but few words to add. The arrival of Sir Hamilton Seymour in England was almost contemporaneous with the disclosure of the "Secret Correspondence," which first enabled the general public to judge of his claims to their respect. His reception was such as his merits deserved. The reader will not have forgotten his recent speech at the Mansion-house, where he so ably laid down the duties of an Ambassador; and explained in what respect Russia was badly served, in being always deceived as to the true state of things in foreign countries. Russian Ambassadors, he explained, always—or nearly always—wrote what would be pleasing to their Sovereign, who was thus misled as to the actual condition and disposition of foreign Courts and States. He was thus unconsciously proclaiming his own eulogy, by contrast.

Sir Hamilton Seymour married, in 1831, the Hon. Gertrude Brand, third daughter of the 20th Baron Dacre.

The accompanying Portrait is from a Drawing by M. Baugniet.

HELSINGFORS, IN THE GULF OF FINLAND.—FROM AN ORIGINAL SKETCH.

FINLAND:

ITS IMPORTANCE IN CONNECTION WITH THE OPERATIONS OF THE BRITISH FLEET IN THE BALTIC.

(To the Editor of the ILLUSTRATED LONDON NEWS.)

YOUR very interesting article in the ILLUSTRATED LONDON NEWS for March the 18th, with the above title, will not lose, I hope, by the following additions, now that the British fleet is in the Baltic.

Finland, although a country of no great wealth and population, is of immense importance to Russia, in consequence of the vicinity of the capital, St. Petersburg, at the extremity of the Gulf of Finland. Helsingfors, the capital of Finland since 1813, and a seat of a Russian Governer-General, has also a kind of senate of certain numbers of Councillors of State: but all their acts are subject to the acceptance or rejection of the Emperor, when laid before him at St. Petersburg by his Secretary of State for the Government of Finland, there resident. Thus, this country, although nominally possessed of its ancient constitution and laws, is governed by the Secretary of State at St. Petersburg; and the Executive is in the hands of the Governor-General (always an inveterate Russ), who puts in force the frequent ukases issued by the Emperor, independent of all law, and by which the Constitution is not of the slightest value.

A casual observer when in the country would, however, imagine that the people, now a fresh generation, were contented with things as they are; but this is only from a system of intimidation and espionage carried on by the Russian Government in every part of Finland. There is no doubt that, were this incubus removed, the country would recover its national character: it is, however, not sufficiently strong by itself to become independent, but would at a fit opportunity gladly reunite with constitutional Sweden. The country had, before it was kidnapped by Russia, been from the beginning of the sixteenth century a theatre of war; and the 45 years of peace which Finland has lately enjoyed, has been an extraordinary page in its history. By the industry of its people, commerce and shipping have been carried to a great extent and perfection, and manufactures have sprung up to a considerable extent. Last year their ships were distributed about the world, and several East Indiamen and South Sea whalers are still in the southern hemisphere. But very lately more than sixty large ships of theirs have been sold in England for fear of returning to the Baltic, either to be taken or to be laid up useless during a war. The exports of Finland consist of timber tar, corn, and provisions.

But all this has been accomplished by the sole industry of the people. To Russia, Finland is still a foreign country, as its produce pays high duty in Russian ports, and the Finland paper-money is of no value beyond its own boundaries; but, to hold it in still better check, the Emperor has lately laid his hands on the silver deposited in the Bank, and also the Correction Silver Fund: he has merely borrowed the hard specie

JANINA.—FROM AN ORIGINAL SKETCH.—(SEE NEXT PAGE.)

no doubt intent on repayment, if they behave themselves. This summer, if the war is carried on, the Finlanders will first perceive their true position. Deprived of their commerce, finances ruined, no importation of salt, and a large Russian army to support in the country, and a British fleet at its coast, the people will then truly find that their Russian dependence is bad indeed.

It is a question whether the recovery of Finland by Sweden would be a boon or not to the latter. It certainly would be no acquisition of value to her, unless the Russian power in Europe was considerably curtailed. Such is the object of the war: therefore, England and France ought almost to dictate to Sweden to march her army into Finland, and re-conquer the country from the Russians—which would not be a difficult task, aided by the British fleet, and the friendly part of the Finland nation. But Sweden should then give England something for retaining Finland: and it would be best for all parties to cede the island of Gothland to England, which lays midwaters between Sweden and Russia. This island is large, and of a singularly mild climate, and would become of immense importance to England in respect to all Russian trade in the Baltic. To Sweden the island is of no great value; and, by the cession to England, Sweden would acquire an additional bulwark against her eastern neighbour. It would be for Sweden to sacrifice an island for a country, and that to a perpetual ally; as Sweden has never been at war with England, and never likely to be, when we consider the geographical position of the two countries. The enormous resources of one, and the small means of the other, forbids enmity between them.

The fortress of Sveaborg is, undoubtedly, very strong: it is defended by 600 guns, but, in consequence of being built on several rocky islands, it has an immense circumvallation, and requires a large force to defend it; for, these islands, although united by bridges, cannot in time succour each other in repelling an escalade, and many joints of the fortress are vulnerable for such attacks. A steam fleet could pass through the Sound of Gastafsvärd without being in range of more than 100 guns for fifteen or twenty minutes, during which time the half, at least, of those guns would be silenced. The great number of gaarrison could not hold out long, if all supplies were cut off. There are many wood buildings in this fortress which would soon be in a blaze, and even some of the batteries are built of timber.

The Fortress of Bomarsund, on the Island of Aland, is not so dreaded by Sweden as imagined; being distant from Stockholm, in a straight line, eighty miles, and thirty-two miles to the nearest Swedish coast, and, like all boundary fortresses, now of questionable use. Four steam-frigates and some smaller vessels would starve them out, as the Russian fleet could render no assistance, while such a power as the present British fleet would give them sufficient occupation to take care of themselves.

The capital Helsingfors, in consequence of the proximity of the large fortress Sveaborg, has always been a large military station, but has no fortifications of any kind. This is also the only place on the Finland coast which possesses a fine port, large, sheltered, and deep enough for fleets. The town has reaped some benefit under Russian sway, and the inhabitants are better disposed towards Russia than any other place in Finland. In all other towns the Russian military are still considered as invaders, and anything but a friendly feeling exists between the people and them.

Should Russia meet with serious reverses in the Baltic—which can hardly be doubted—there would be in Finland a demonstration which only the present 40,000 Russian bayonets could suppress for a time; but, were Sweden to march with an army of 30,000 men into the country, there is no reasonable doubt that 29,000 brave and patriotic Finlanders would join them—provided the people might join as an independent country under the same crown as Sweden, and neither to be considered or treated as a conquered province. And which even Russia has not dared to put in force, like unhappy Poland.

PATRIOT.

(We are indebted to the Author of "A Sketcher's Tour round the World" for the View of Helsingfors, engraved upon the preceding page.)

THE GREEK INSURRECTION.

THE latest accounts from Greece speak of the insurrection as having failed, but the reports are not very definite. Janina and Prevesa are quiet, though the tranquillity of the former place is chiefly owing to the presence of several Turkish regiments, who have threatened to decimate the inhabitants should they attempt to rise. According to some rumours Grivas is still at the head of a large force in Thessaly, though other accounts mention that, having raised 100,000 drachmas for the support of his troops, and having applied it to his own purposes, he was being abandoned by many of his followers. It is said that the Ionians, who sympathised greatly with the rebel movement—having, it is said, secretly transmitted such aid in money as they could collect—and about 200 of whom managed to get across to Albania and join Grivas and Savelas, are now only too happy at being able to get back to their homes again. Some fifty or sixty who have escaped describe the condition of the rebel forces as most deplorable, wanting almost every necessary, and being, in consequence, compelled to pillage their own friends. According to these men, Grivas lately hung six of his troops, to put a stop to the desertions. In fact, the greater part of Greece is in a state of complete anarchy, law and order being violated with impunity everywhere.

Meanwhile, King Otho does his best to create a diversion in favour of the Russians, by fomenting the insurrection. On this subject the *Moniteur* makes some very significant statements. It says:—

The Cabinet of Athens, whilst promoting the insurrection in Epirus, has endeavoured to lead the population of the kingdom to imagine that the German Powers fully approve of its conduct. Whilst these false assertions were being made under the guarantee of the Greek Cabinet, the Ministers of Austria, Prussia, and Bavaria, as the Government of the Emperor had been formally assured from their Courts, received orders to blame energetically the policy of Greece, and to support in the firmest manner the counsels and representations of the Western Powers.

The Greek Chambers have been dissolved, and King Otho is evidently intent upon doing the best that a despot on a small scale can do to help the chief of all despots—the Czar.

We have engraved upon the preceding page, from an original Sketch, a View of Janina, or Yanina, situated in a valley in the heart of the province of Albania, and forty four miles north of Arta. Its site is about 1000 feet above the level of the sea. The population is estimated at 36,000, of whom 20,000 are Greeks, and from 6000 to 7000 Jews. It was much more populous before 1820, when the city was burnt down by order of Ali Pacha. The present town is built on a peninsula, stretching into a noble lake. Its principal edifice is the fortress, containing the palace of the Pacha. Janina is the residence of the head collector of Customs for Egypt, and of British and other Consuls. It had formerly a large trade with Albania, Roumelia, &c.; and an important annual fair, to which Italian produce, with French and German manufactures, were brought; but its commerce has greatly declined. The plain round Janina yields fruit and grain of most kinds in vast abundance.

The lake is bounded on the north-east by the Mitzikeli mountains (a branch of Pindus), which rise steeply to the height of 2500 feet; on the south-east by a rocky mountain of moderate height, crowned with the ruins of an ancient Epirote city, which, Colonel Leake considers it probable, was the ancient Dodona. On the south-west of the lake is the plain of Joannina, and beyond that a range of low vine-covered hills. Opposite the town of Janina is a small island, on which is a fishing village, on which, in Ali's time, were several convents, frequently used as State prisons. Ali also had a house here.

RUSSIAN CONSULAR OFFICERS.—A notice has been issued by the Foreign Office, that the "Exequatur" heretofore granted by her Majesty to the former Consul-General and Consuls of the Emperor of Russia, in this country, have been withdrawn; and that no person is recognised, or permitted to act within her Majesty's dominions, as Consul-General, Consul, or Vice Consul, or to perform any other duties as, or to act in any respect as, a Consul, Vice-Consul, Consular officer, or agent, on behalf of his Imperial Majesty.

OUR PRIZE PRISONERS.—It has been suggested that the seamen taken prisoners on board Russian prizes, who are all Fins, should be allowed to serve on English transport and emigrant ships. They are excellent sailors, and would be not only useful at a time when seamen are wanted, but would be disposed to entertain such a service.

PROGRESS OF THE WAR.—An interesting arrangement has been made at the United Service Institution, for indicating the movements of the armies in the East. A large map of the seat of war has been mounted on a board, and by means of moveable cards, the positions of the various forces—Turkish, Russian, French, and English—are day by day marked, according to the latest intelligence received. Now that our own troops are in the field this becomes particularly interesting, as each regiment, marked with its number, can be distinguished. The movements of the fleets are in a similar manner indicated on the Admiralty charts of the Baltic and Black Sea.

"TOY WORK" AT THE GIRLS' RAGGED SCHOOL, (CALMEL) GRAYS-YARD, JAMES-STREET, OXFORD-STREET.

RAGGED SCHOOLS.—EXHIBITION OF NEW PATENT TOY-WORK.

AN interesting display of these novel articles, made by children in the London Ragged Schools, will take place at the mansion of the Earl of Shaftesbury, in Grosvenor-square, this day (Saturday).

The Toy work in question is upon a new principle, combining elegance of design with great utility to children, inasmuch as the youngest capacity readily acquires a knowledge of every branch of needlework necessary to furnish one of these little models.

The new manufacture is taught in the Schools at Lisson street, Newroad; Calmel, Gray's-yard, James-street, Oxford-street; Field-lane, City; and "Grotto passage," Puddington. But, with the exception of Gray's-yard, not more than six girls of each school are occupied two hours per day for four days a week.

Our Artist has illustrated the Girls' School, in Gray's-yard, with the little manufacturers at work. The Toy-work originated in the "Tudor Villa" Model, exhibited at the Great Exhibition of 1851, and now in the possession of the Russian Imperial family.

This model was built for a benevolent lady, in order to show to foreigners the style of residence occupied by the middle classes in England: to furnish which, taxed the ingenuity of our fair Correspondent, who accordingly invented several articles of furniture, composed of bonnet or other wire, bent with the fingers to the required shape, and afterwards covered with a solution of whitening, glue and resin, which, when quite dry and hard, is ornamented with composition castings, arranged to imitate the carvings of wood or ornamental cast-iron.

The Tudor Villa and its furniture afforded so much pleasure to the thousands who visited the Exhibition, that our Correspondent thought of making it useful in some way to children; and this feeling was strengthened by the admiration it obtained abroad from artists of distinction. Accordingly, the heads of a new institution forming in aid of poor gentlewomen were consulted, and their fear that it would be too difficult for them to accomplish with facility prevented their entertaining it. The proposition was then submitted to the Earl of Shaftesbury, for the use of Ragged Schools. The Central Committee at once adopted the design, on his Lordship's suggestion.

A patent has been obtained for the toys, and as far as the little learners are concerned, the work is a pleasure. By means of the bedsteads, an easy and pleasant mode is at once secured of getting the learners to acquire all kinds of useful stitches in needle-work; and, by covering sofas and chairs, of upholstery; as well as a general idea of work, which not only brings out ideas, and ingenuity, but tells with great effect on their habits and behaviour. A year since the little girls—who are now a neat, orderly, and well-behaved set of children—came to the school with scarcely any knowledge of work, or how to use their fingers; and, though long at school, some of them could not work an eyelet-hole or run a string in a bag! They are now the best workers; and the difficulty is not how to get them to the work, but how to get them away from it, the attraction of working for a doll is so great.

The work will be exhibited at Lord Shaftesbury's mansion, in Grosvenor-square, on Saturday, to a select few, who may select from the exhibits; and on Monday and two following days they will be sold at the "German Fair," Portland Bazaar.

We understand that a specimen of this new work is being prepared to be submitted to the inspection of her Majesty.

THE SUGGESTED CHANGES IN THE CORPORATION.

A good deal of excitement prevailed in Guildhall on Wednesday in consequence of a report, to which very general credit was given, that changes to the effect stated below are proposed by the Corporation Commissioners for the consideration of Parliament. In addition to the recommendation that the numbers of Aldermen and Common Councilmen should be diminished, and that two stipendiary magistrates be appointed to do the police work of the City, it is, according to the information collected by the meeting, suggested:—

That the Court of Aldermen should be abolished, and that the Aldermen should form a portion of the Court of Common Council, and that a qualification should be required from each person appointed.

That the conservancy of the river Thames should be under the direction of a board consisting of the First Lord of the Admiralty, the Lord Mayor, the principal officers of the Trinity, and of other officers connected with the Government.

That the Lord Mayor, the Sheriffs, and the Chamberlain should be elected by the Common Councilmen.

That the Irish Society should be abolished, and that the management of their estates in Ireland should be placed under the superintendence of a committee, to be appointed by the Lord-Lieutenant of Ireland.

That the Court of Hustings should be abolished.

That the office of Bridgemaster should be abolished.

That the attendance of the Aldermen at the Central Criminal Court should be discontinued.

That the City police should be amalgamated with the Metropolitan police.

That the Sheriffs' Court should be annexed to the Lord Mayor's Court, and that there should exist a right of appeal to the Superior Courts.

That the borough of Southwark should form one separate municipal district, and that other municipal districts be formed in the metropolitan boroughs.

That the City Commissioners of Sewers be continued.

That a Board of Management from the Court of Common Council, for carrying on improvements in the City, and in relation to the bridges of the City and the metropolis, be appointed.

That compensation should be given to those officers whose offices should be abolished.

THE PUBLIC STATUES BILL.—Sir W. Molesworth's bill for placing the public statues in the metropolis under the care and charge of the Commissioners of Public Works has just been printed. The bill gives the Commissioners powers to repair and protect the statues by railings, &c., whenever it may be necessary; and also provides that, after the passing of the Act, no public statue shall be erected on any public place without the written assent of the Commissioners. The public statues referred to are—the statue of James II., in Whitehall-gardens; of George Canning, New Palace-yard; Charles I., at Charing-cross; George III., Pall-mall East; George IV. and the Nelson Column, Trafalgar-square; the statue of the Duke of Wellington, on the Arch at Hyde-park-corner; the Achilles, in Hyde park; the statues of George II., in Golden-square; the Duke of Wellington, on Tower-green; George III., at Somerset-house; Queen Anne, in Queen-square; the Duke of Kent, Park-crescent; George II., at Greenwich Hospital; and Charles II., at Chelsea Hospital.

FRANCE AND ENGLAND.—The members of the Star-club have resolved to invite his Excellency Count Walewski, the French Minister, to an entertainment in the month of June. The meeting is to be made special to enable the members to invite as large a number as possible of the *corps diplomatique*, members of Parliament, and gentlemen connected with the City of London and the large provincial towns, to give effect to an expression of sympathy and satisfaction at the cordial union between France and England so worthily supported and represented by his Excellency.

LICHFIELD ELECTION.—On Tuesday Lord Waterpark was elected, without opposition, as one of the representatives of the borough of Lichfield, in the room of Lord Anson, raised to the peerage on the title of Earl of Lichfield.

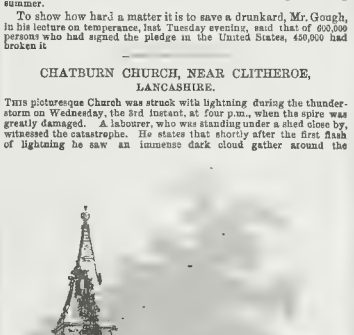
One of the oldest historical monuments in Belgium has just been pulled down, namely, the last remaining tower of the fortified castle which Pepin the Short caused to be built in 743.

Mr. Laird, of Birkenhead, has already for launching a beautifully-modelled vessel called the *Tchadda*, intended for the exploring expedition that is to survey the interior rivers of Western Africa during the ensuing summer.

To show how hard a matter it is to save a drunkard, Mr. Gough, in his lecture on temperance, last Tuesday evening, said that of 600,000 persons who had signed the pledge in the United States, 450,000 had broken it.

CHATBURN CHURCH, NEAR CLITHEROE, LANCASHIRE.

THIS picturesque Church was struck with lightning during the thunderstorm on Wednesday, the 3rd instant, at four p.m., when the spire was greatly damaged. A labourer, who was standing under a shed close by, witnessed the catastrophe. He states that shortly after the first flash of lightning he saw an immense dark cloud gather around the



CHATBURN CHURCH, STRUCK BY LIGHTNING.

Church, when, with a great rush, the fluid darted downwards and entirely scooped out one side of the steeple, carrying away the stones, connecting irons, &c., to a considerable distance, and distributing them, singly, over the adjacent gardens and fields: one stone only made its way in the Church through the roof. His only companion was injured. The catastrophe is not surprising, as no conducting rod was attached to the spire, although the site of the edifice is considerably higher than the adjoining land, and not far from Pendle-hill. The injury done to the steeple is so great that it must be taken down and rebuilt.

The accompanying Sketch of the ruins was taken immediately after the catastrophe.

PAPER-HANGINGS and PANELLED DECORATIONS.—The Cheapest in London is at CRACE'S Wholesale Warehouse, 22, Great Pulteney-street, Oxford-street, where the Palace and the Trade are now supplied from this extensive and most Extensive Assortment in the Kingdom. Thirty per Cent Cheaper than any House.

SARL'S ARGENTINE SILVER PLATE.—17 and 18, Cornhill. This beautiful metal continues to stand the severest test against the assertions for Silver. Its intrinsic value, combined with its brilliant appearance, defies all competition. It is upwards of thirteen years since this manufacture was introduced by SARL and SONS to the public, and in commending the many approved and unsolicited testimonials in favour of it, it needs all former precedents, that give an extraordinary proof of its having answered the intended purpose, which was to produce a plate possessed of the durability and appearance of an silver at once strikes the eye. The magnificent Table Services, Tea and Coffee Sets, many splendid novelties in dinner, tea, and breakfast services, and never possessed so many attractions as at the present time. The Spoon and Fork department is the only one for various patterns that are made in solid silver. A new and enlarged Pamphlet of Sketches and Prices is just published, and may be had free on application. It may be obtained gratis by applying at the manufactory.—Sarl and Sons, 17 and 18 Cornhill (Janion's). The public are cautioned against purchasing any Electro-plate that is not chased at Sarl and Sons. No other parties are authorised to sell it.

FLUID COMPASS WITHOUT AIR BUBBLE.—P. DENT, Chronometer Maker to the Queen and Prince Albert, has received the Society's Gold Medal for the best door to his other shop, (No 31), for the Exclusive sale of the Patent Ship Chronometers, for which the Prize Medal was awarded in 1851, by R. J. Dent, at the Great Exhibition; and his own improved Fluid Compass, which is smaller than any other in use. Prices the same as ordinary Compasses.

SUPERIOR WATCHES and CLOCKS.—A. B. SAVORY and SONS, 9, Cornhill London. Highly finished 7 ATWATCHES, which, having the Horizontal Escapement, the important requisites, accuracy and durability, are combined. A written form of Warranty is given with each.

S. MORDAN and CO.'S MANUFACTURES, 79, City-road, London.

CAUTION.—PATENT RYE-POINTED PENCILS.—S. MORDAN and CO are daily receiving complaints of the various imitations of their truly useful invention, which has now been before the public above thirty years. S. M. and Co. consider it a Purchaser to see that the Patentees' name be stamped legibly on the case. A quantity of counterfeits are constantly offered to the public, as they realise a greater profit to the Salesman, but will be found of no value to use

CEDAR PENCILS made from the Cumberland Lead, purified by Mr. Brockedon's process. S. Mordan and Co. have no hesitation in asserting that such excellent pencils in every respect are only to be obtained from the Black Lead from the Borrodale Mines in consequence of the Cumberland Company having disposed of the whole of their stock of crude black lead to the patentee, S. Mordan and Co are enabled to offer their Cedar Pencils, made from the only pure lead extant, with confidence that their superiority will be readily appreciated by the public. The highest commendations have been pronounced on these Pencils by painters, engravers, architects, engineers, draughtsmen of the greatest eminence in their several professions, to whose testimonials have been published in detail. The following names are annexed —

Charles Barry Esq., R.A. Copley Fielding, Esq., P.W.S
C. L. Eastlake, Esq., P.R.A. Frost, Esq., R.A.
J. K. Brunel, Esq., F.R.S. David Roberts, Esq., R.A.
Charles Stanfield, Esq., R.A. J. T. Willmore, Esq., A.R.A
R. Westmacott, Jun., Esq., R.S. H. C. Wilkin, Esq., Director Government School of Design.
H. Pratt, Esq., Esq., F.R.A.
Philip Hardwick, Esq., R.A.

Each Pencil is stamped "Warranted Pure Cumberland Lead. S. Mordan and Co."

S. MORDAN and CO'S PATENT COMBINATION LITHOGRAPHIC and COPYING-PRESS

By the aid of the most simple mechanical arrangements, the Patentees have succeeded in producing a most efficient and portable Printing and Copying Machine, equally well adapted for the Counting house, Office, or Library. With this Press every person may readily become independent of his Printer

This combined Machine is produced at a less cost than the cheapest Lithographic Press in the market; and in addition to its capability of doing the work of a lithographic Press, it is an excellent and perfect Copying Press, so that it may be said that this latter qualification is obtained by the purchaser gratis

To be obtained from the leading Stationers in the Kingdom.

They beg to call attention to several articles which the Prize Medal was awarded to, for each which they are now selling much under value, viz.,

For example 20,000 French Barèges Lo p Shawls 15s. 9d 15,000 Irish Poplin Shawls, covers in one piece, 13,700 yards Checked and Stripe Glacé Silks, One Guinea for 12 yards. 18,740 dozens Kid Gloves, wide width, 10s. 9d., worth two guineas Several Thousand Robes, 12s. 9d., worth one guinea The Mantle Department is replete with every novelty; amongst which may be seen The celebrated Toga, Form fully described in one. And six of the most superb and costly designs, as chosen by her Most gracious Majesty Carte, 21 guineas; 31 and 42s. Set Paul's Churchyard. Who can, 31 and 36. Paternoster-row

A TWARK WORK HOSE every article marked in plain figures, and Ladies will find that, while every facility will be offered for their ready inspection of a most beautiful and extensive assortment of materials, the impossibility to purchase (no frequent in other establishments) will never be permitted by the new firm of NICOLL, HAYNES, and SIMES, 142 and 144 REGENT-STREET.

WARWICK HOUSE DRESS-MAKING DEPARTMENT.—This is a new feature in the above Establishment, and will offer great facilities and saving of expense to Ladies, who may entrust their commissions in the sphere of an increased taxation by selecting their dresses from an immense assortment in the Warwick-house, and by having them made up in the new Dress Rooms by skilled artistes, whose services are engaged. It is understood that this novel principle will be appreciated by the Patronesses of this Establishment, and will be beneficial to a considerable part of the ordinary expense and trouble may be saved. Ladies residing in the Country or Abroad, and not having fixed town residences, will find boudoirs prepared for their use, and private entrance in Warwick-street. NICOLL, HAYNES, and SIMES, 142 and 144, REGENT-STREET.

THE WARWICK-HOUSE MANTLE.—The configuration of this truly-elegant garment has been Registered (6 and 7 Vic. cap. 65) under various ranges from One Guinea and upwards; but the cost is necessarily governed by the material used. Such can be bought in London only of NICOLL, HAYNES, and SIMES, 142 and 144, REGENT-STREET.

THE WARWICK-HOUSE DRESS.—The design for this Robe has been specially prepared for this Firm by one of the first Artists of the day. It is not only inexpensive; but is lady-like in its colouring, and particularly in the materials adapted for the season now commenced. this is also Registered 6 and 7 Vic., &c., and can be had only in London of NICOLL, HAYNES, and SIMES, 142 and 144, Regent-st reet

WARWICK HOUSE.—FAMILY LINENS DEPARTMENT By the above Advertisements it will be seen that the Sale of all Small wares is discontinued in this Establishment, and in their stead there is now concentrated a few but well-organised Departments. That for Family Linens is progressing, and in order to add to the Misfortunes, Public Companies, and Families, offers the following advantages—Sheets, towels, &c., of sorts may be washed into the den gn of all damask Table Linen thus removing much liability of loss which not to its laundress, or by other accidents Sheets in pairs, and towels, &c., in dozens, neatly hemmed (and marked if necessary), all of the best description, at the most moderate prices NICOLL, HAYNES, and SIMES, 142 and 144, REGENT-STREET.

AT WARWICK HOUSE. BRIDAL VEILS with Flounceings, as I other Accompaniments of a Wedding Trousseau, are always on view LACE and other MANTLES, for Full and Dinners en demi toilette Also, IRISH POINT-LACE, in sleeves, habit-shirts, chemisettes, collures, and all Hunton Lace BLIND LAPPETS, for her Majesty's Drawing rooms, from six shillings and sixpence NICOLL, HAYNES, and SIMES 142 and 144, Regent-street.

THE JUPON CIRCULETTE, To be had only of Messrs. [illegible] and SON, 25, Pall-mall.

FORD and COMPANY, MANUFACTURERS and FUR WAREHOUSEMEN, 34 Oxford-street, Four doors east of Newman-street.

THE HOLY LAND.

Second Edition, corrected and enlarged, crown 8vo, cloth, 6s.,

THE LAND of the MORNING: A Record of Two Visits to Palestine By H. B WHITAKER CHURTON, M.A., Vicar of Icklesham, Sussex, Chaplain of the Lord Bishop of Chichester, and late Preacher of the Chapel Royal.

"Mr Churton's volume may be recommended especially as a book for families who find much to quicken and deepen the interest of our religion."—Christian Observer.

"The volume is pervaded by a spirit of deep piety, and it will be an acceptable and profitable companion to all students of the Sacred Volume. Its data are, throughout, most interesting; and the engravings by which it is illustrated are in all cases extremely well executed and in many instances are eminently beautiful. We should say that, from the elegance of its volume, it would be a very appropriate gift to young persons of piety, who are habitual students of the Bible."—English Review

London: T. HATCHARD, 187, Piccadilly

Just published, Third Edition, 12mo, price 6s.,

LEILA at HOME: a Continuation to "Leila in England." By ANN MARIA STEPHENS.
By the same Author,
LEILA; or, The Island. Fcap., cloth, 6s.
LEILA in ENGLAND. A Continuation of "Leila; or, The Island." Fcap., cloth, 6s.
MARY and FLORENCE; or, Grave and Gay. Fcap., cloth, 5s.
MARY and FLORENCE at SIXTEEN. Fcap., cloth 5s.

"These works are excellent. Miss Tytler's writings are especially valuable for their religious spirit. Mrs. Cowden Clarke has a position below even the Rationalism of the last generation and the Puritanism of the present. The portraits are correct and well drawn, and we are shrewd from Juvenile life she possesses which might be more ambitiously displayed, but cannot be better bestowed."—Quarterly Review.

London: T. HATCHARD, 187, Piccadilly

THE NEW NOVEL.

Now ready, at all the Libraries,

IRON COUSIN (The). By MRS. COWDEN CLARKE. Author of "The Concordance to Shakspeare."
London: GEORGE ROUTLEDGE and Co., Farringdon-street.

THE MOST EXTRAORDINARY SUCCESSFUL WORK SINCE THE "PILGRIM'S PROGRESS."

Price 1s. 6d. fancy cover, by A. Cromwell,

LAPLIGHTER (THE).

NOTICE.—The extraordinary success of this work bids fair to equal even "Uncle Tom's Cabin." Twenty Thousand of our edition have been sold in a fortnight. It is the opinion of one and all who have read it, that the glowing eulogiums passed on the "Lamplighter" by the American press are only what its merits deserve, and there is no doubt its sale will be equal to any book ever issued in England.

As there are other editions, care should be taken in ordering to specify "Routledge's Unabridged Edition."
London: GEORGE ROUTLEDGE and Co., Farringdon-street.

THE NEW MILITARY NOVEL.

Now ready, at all the Libraries,

PHILIP ROLLO. By JAMES GRANT, Author of "The Romance of War," &c.

"Much of the story lies on the shores of the Baltic, which gives it an especial interest in the present crisis, and will, we doubt not, make readers will have reason to thank us for encouraging them to read 'Philip Rollo' for themselves."—Athenæum.

"Mr. Grant has produced an admirable novel—the heaviest of his stacy can wage."

"Philip Rollo' will be most acceptable wherever it circulates."—Bell's Messenger

London: GEORGE ROUTLEDGE and Co., Farringdon-street.

Now ready, price 1s., uniform with "Yankee Humour," "Too Clever by Half," &c.,

LAUGHS I HAVE PUT A PEN TO: Fun by Jottings By N PARKER WILLIS, Author of "Pencillings by the Way," "Summer Cruise in the Mediterranean," &c. "More accurately and pictorially descriptive of scenes and incidents in a light off-hand way than perhaps any other American writer since Washington Irving."—Athenæum.

London: SAMUEL ROWE, 124, Cheapside; and to be had of all Booksellers, and at Railway Stations

No. 10. The New Patent Model with expression à la Main The most perfect Harmonium that can be made, 15 stops, elegant rosewood case, 55 gs.

Full descriptive Lists sent on appl cation. 50, New Bond-street.

London: Printed and Published at the Office 198, Strand, in the Parish of St. Clement Danes, by the Proprietor, JAMES WILLIAM LITTLE, 198, Strand, aforesaid.—SATURDAY, MAY 13, 1854.

THE ILLUSTRATED LONDON NEWS

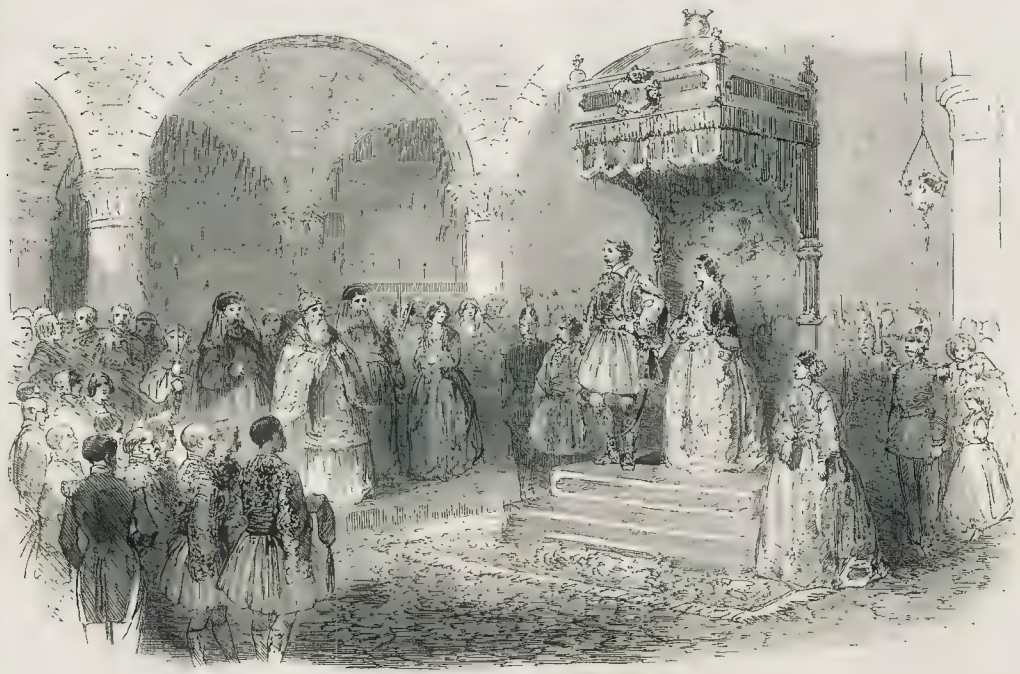
No. 683.—VOL. XXIV.] SATURDAY, MAY 20, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE POLICY OF GERMANY AND SCANDINAVIA.

As every one is desirous that the war with Russia may be brought to a speedy, honourable, and safe conclusion—speedy because of the miseries which war inevitably produces; honourable, because war, with all its horrors, is preferable to a dishonourable peace; and safe, because the world requires a guarantee against any renewed aggression on the part of the fanatic despot who has caused the embroilment—it becomes important to know whether Great Britain and France are to have all the trouble and all the expense, as well as all the glory, of the conflict? They can doubtless manage the weighty business without allies, even were one or more of the neutral Powers to turn against them. But, strong and confident as they may be, there is no denying that there are several States in Europe whose immediate assistance would be of the highest value. It is necessary, in the first place, to restrain, and possibly to punish, the evil-doer; but it is equally necessary, when the struggle shall be brought to a close, that the Great Commonwealth of Civilisation should be preserved from a renewal of the danger. The Scandinavian and Germanic nations are more particularly called upon to take part in the question—not only because of their contiguity to the offender, but because his success would be the destruction of their independence, their freedom, and their prosperity. Great Britain and France would remain the equals, if not the superiors, of Russia, in all that contributo to the stability and the grandeur of states, were the Russian flag to float in triumph over Constantinople; but the Germanic and Scandinavian States would, in that case, only exist upon the sufferance of the Czar. Their commerce would be in his keeping, and their liberty would depend upon his caprice.

The people of Denmark, Sweden, and Norway are fully aware of their interests in this respect, and look upon the Russians with distrust and aversion. A similar feeling exists in Austria, Prussia, and the various minor States of the Germanic Confederation. To call a man a Russian is the worst term of opprobrium that the imagination of a German can invent. It implies, in his estimation, not only slavery, but dirt and brutality. The Scandinavians look upon the English not only as their natural allies, but as their brothers in blood. A leading German journal has recently expressed the pride of all true Germans that the language and literature of Germany and England have so many points of resemblance, and claimed the English as the most noble and vigorous offshoot of the Teutonic races. The Danes and Swedes openly pray for the success of Sir Charles Napier in the Baltic, and shout the chorus of "God save the Queen" with almost as much enthusiasm as the British sailors. The Finlanders detest the yoke of the Czar, and look back with regret to the days when they formed an independent portion of the Swedish kingdom, and deplore their junction with an Empire of which they form the only population that can make any pretensions to civilisation. The Prussians—who claim, with much reason, to be as highly advanced and civilised a nation as the French—are impatient of the insolent patronage of a barbarian Power; and the Austrians know that they never can become the prosperous nation which they ought to be, as long as the protection of Russia lies like an incubus upon their Government—and as long as the mouths of the Danube are in possession of a Power whose policy it is to make Austria a State as landlocked as Switzerland. Unfortunately, however, the decision of the part which is to be taken by these intelligent nations does not rest with the people, or with the Parliaments freely elected by them. The comparatively free States of Scandinavia have too little weight or power, to incur the risk of moving, until they know that the confederacy against the public enemy will become general; so that we have to look to Austria and to Prussia—one a despotism, and the other a *quasi* despotism, with the mere shadow of a free legislature—to give the signal which shall decide the destiny of Europe.

The policy of Austria begins to declare itself. Day by day the Emperor and his advisers are increasing the distance which separates them from the cause of the Czar. The spirit of the Austrian people sensibly operates upon their Government. Austria will not allow the Montenegrins to assist the Russians, and will cooperate in the coercion of the Greeks, if King Otho be mad enough to risk his kingdom in the attempt to create in his dominions, or in Albania, a perilous diversion in favour of the Russians. The "huge ingratitude," of which Prince Schwarzenberg declared his willingness to be guilty, if Russia persisted in her humiliation of the Austrian empire, begins to be considered by the Austrian Court as a piece of "ingratitude" as meritorious and necessary as it will be "huge." The Sovereign of that ancient State succeeded to the throne at a time when it seemed scarcely possible that its disintegration and destruction could be avoided. Before his youthful mind a vision of splendour has always been present,—a vision which he may have it in his power to realise by consolidating his rule, removing the well-founded discontent of his Sclavonian, Hungarian, and Italian subjects, extending the liberties of all classes and races, and freeing himself from the degrading sense of subjection, and of owing his crown, not to the affection of his own people, but to the bayonets of a foreign potentate. Could he accomplish this task, he would be the greatest and most illustrious Sovereign of the House of Hapsburg. Such a task, splendid and difficult as it is, will be possible to him, if he unite his armies with those of Great Britain



OTHO, KING OF GREECE, AND HIS QUEEN, IN THE CATHEDRAL AT ATHENS.—(SEE NEXT PAGE)

and France. The approval of his people will go along with him, and the name of Austria will cease to be synonymous with rottenness and decay. The people of Germany are slower-minded than the English and the French. They take a longer time to reflect and to act, and their Governments are even slower and more phlegmatic. But Austria has evidently begun to move, and every week adds strength to the conviction that the generous Sovereign and his experienced advisers will take that rightful side, which youthful impulse and the calculations of aged wisdom alike recommend.

The King of Prussia is by no means in so hopeful a condition. The Prussian people are ashamed of Russian protection, and long to cast off the yoke; but the King has neither the sense to understand his position, nor the courage to do either right or wrong. His whole course of conduct is suicidal. He dares not express himself openly like a man. Unfit for his high office, even in ordinary and peaceful times, he is doubly and trebly unfit at a time like the present. He is, probably, aware that his duty is to declare against Russia, but his personal feeling in favour of the Czar, and perhaps an ill-grounded hope, feoundated in his ill-regulated mind, that Prussia might chance, by the Czar's aid, to obtain in a general scramble a large accession of territory, lead him to lay false with his own conscience. While Austria seems to be approximating to the Western Alliance, Prussia is daily separating from it. Almost every post brings the news of some fresh act of perfidy committed by the King in favour of the Czar. One day His Majesty recalled M. Von Bunsen from London, because that able diplomatist saw and declared that the true course for Prussia was to join the Anti Russian Alliance. Another day he dismissed his War Minister, General Von Bonin, for asserting in eloquent language that the alliance of Prussia with Russia would be an act of parricide. Untaught by the regret or reprobation which this step created in his dominions, the King quarrelled with his brother and heir-apparent for agreeing in opinion with General Von Bonin—deprived him of his high military command, and banished him from the Court to Baden-Baden. It is not difficult to predict what will be the result of this wilful blindness on the part of the King. Unless he open his eyes he will fall into a ditch, and the ditch will be—Abdication. There is public spirit in Prussia not to be outraged with impunity. The Prussians encourage too ardent a patriotism, and have ideas too enlightened of the rank which Prussia ought to hold in the great European Commonwealth, to permit them to tolerate the degradation of their Fatherland beneath the chariot wheels of the Czar. Either the King of Prussia will have to follow where his people lead, or he will have to resign the crown to the abler, clearer-sighted, and honester brother whom he has disgraced and banished. The large French army that is immediately to assemble at St. Omer, within a few easy marches of the Rhine, will perhaps tend to impart a little energy to the King's purpose. We hope the Prussian people will not consider the French camp as a menace against their independence; but, if they do, it will show them how perilous is the indecision of a Sovereign who leaves no alternative but Russian insolence on the one hand, or French supremacy on the other. We may be sure that nothing of the kind is intended by France; but, ere the Russians take offence, they should remember the mighty interests at stake, and the perilous position of Europe. They have good sense here than sufficient to lead them right, and to discover at the same time that nobody leads them wrong but a weak-minded Sovereign, whose personal predilections appear to be stronger than his sense of public duty.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday

Paris is emptying as fast as it can of the *beau monde:* the season is over, the *soirées* are closing, the châteaux are being aired, and set in order, for the reception of hosts and guests

M. de Lazareff, whose arrest and imprisonment, on a charge of entertaining a secret correspondence with St. Petersburg, created so much sensation, has not only been set at liberty, after a short interrogation, but has received an authorisation to remain in France—a privilege, however which he declines accepting, and has taken, or is about to take, his departure from Paris.

The report, which had gained great credit, that the whole of the Champs Elysées, with the exception of the Grand Avenue, was to be built upon, has been contradicted by the *Moniteur*. The only alterations to take place in this quarter are certain enlargements, which are found to be absolutely indispensable in the new Palais d'Industrie, and the widening of some wide streets, in the place of the mean and narrow ones which now exist, between the Grand Avenue and the quays. The new Boulevard Malesherbes is to be terminated by a magnificent monument, somewhat in the style of that at the station of the Strasburg Railway; it is to form, moreover, the entrance to the Park of Monceaux, which, instead of being divided, and sold in lots, as was intended, is to be preserved, and, as a report, which appears to have some grounds of truth, states, is about to be sold by the Ville de Paris to a company for the space of ninety-nine years, for the purpose of establishing nothing less than sea-baths. Be the rumour true or false, it is positive that the plans for the formation of such an establishment are its own out; that in them it is proposed to establish a basin of enormous extent, which is to be kept constantly supplied by three machines, on the principle of those at Marly, which are to be placed on the cliffs at Passy, and to discharge the water through pipes along the whole line of the Champs Elysées to Paris. The expense of the whole is estimated at 966,865 francs.

As soon as the Camp at St. Omer is formed, it is the intention of the Emperor to proceed thither, and pass a week on the spot. The report that he is to be destined a very high command there, immediately under his own orders, for the General Baraguay d'Hilliers, on his return from Constantinople, is confirmed by the *Moniteur*.

A few days since took place the sale of the effects of the late Abbé Desmalis. It was generally supposed and reported that these were of great rarity and value; but the result has proved how greatly these reports were exaggerated. With the exception of two or three pictures, a few bronzes, and other works of art, and a small but well-selected library, chiefly containing books of the sixteenth and seventeenth centuries—the value of which is not a little enhanced by their almost all possessing extended marginal notes in the writing of their late possessor—the property of M. Lamennais included little beyond what might be found in the dwelling of any individual of refined though simple taste and moderate fortune.

M. Alexandre Dumas is commencing a new novel, in twelve volumes—it is not stated in how many days it is to be completed—for the United States.

The Orangerie of the Louvre has been arranged for the barracks of the Cent Gardes. This corps is to be formed and drilled at Versailles, before entering on its functions. It is rumoured that the institution of the Pages is to be renewed, but we know not if the report have much foundation.

The attempts of the clergy to induce the shopkeepers to close their houses on Sunday, in compliance with the circular of the Archbishop of Paris, are extremely ill-received in all quarters, and there seems to be but little likelihood of much effect being produced for the present, at all events: possibly, if the clergy persevere in exhorting and preaching on the subject, as they generally do when a point is to be carried, some good may eventually be brought about.

Another innovation meets with but little more favour in some of the provinces; the new sous and two-sous pieces are, in certain parts, refused by the peasants, on the plea that they are lighter than the old ones, and that consequently they have not their money's worth—while, on the other hand, the village shopkeepers and small *marchands* object to receive the old sous, fancying their value depreciated by the introduction of the new.

The season of the Italian Opera came to a close last week. As a whole, it has been tolerably successful under the management of Signor Ragani. The "Beatrice di Tenda," sung by Frezzolini, wound up the season with loud and continuous applause; and M. Ragani is already taking his measures to re-open the theatre in four months for a "spell," as the Yankees say, of eighteen, in consequence of the Industrial Exhibition.

ANGLO-FRENCH OCCUPATION OF GREECE.

It is positively stated that an Anglo French army will occupy Greece in the beginning of June. The army of occupation, it is said, will consist of somewhere about 15,000 men, of which 10,000 will be contributed by the French. The regiments forming the English portion of the force have received their orders for immediate embarkation. They are the 20th Regiment, at Plymouth; the 34th, and first battalion of the Rifle Brigade, at Portsmouth; the 21st and 42rd, in Dublin; and the 97th, at Windsor.

The rebellion in Greece is said to have been effectually put down for the present by Fuad Effendi. Communication with Prevesa is now fully restored, and it was expected that the road to Janina would be entirely free in a short time.

The English and French Ambassadors left Athens, for Negropont, on the 3rd inst.

Letters from Smyrna state that, in consequence of the increase of piracy in the Archipelago, it is considered unsafe for vessels to leave that port without convoy.

Letters from Athens of the 7th inst. confirm the announcement in previous despatches of the closing of the Legislative Corps by King Otho.

The Illustration upon the preceding page portrays Otho and his Queen, as they appeared in the Cathedral, at Athens, on the 25th of March, surrounded by their Court and attendants. The raised throne and canopy, with their showy embroidery, are at variance with the sacred character of a church; and the helmeted guards, to our thinking, are ill-placed in a temple of peaceful religion. Opposite is the venerable Patriarch of the Church, ascending the steps leading to the choir; in the rear are young priests bearing candles in a manner peculiar to the Greek Church. The costumes are varied, picturesque, and striking. The Cathedral, in which this display of ecclesiastical and regal state takes place, is a handsome Byzantine structure, with a modern steeple.

INVESTMENT OF SEBASTOPOL.

The Admirals and the fleet left Odessa on the 26th of April, and proceeded to Sebastopol, off which place it was to be the general rendezvous of the fleet. A telegraphic message from Odessa states that the Anglo-French fleet, consisting of thirty ships of war, was within sight of Sebastopol, in a south-easterly direction, on the 28th of April. Other accounts say that a powerful division of both fleets, including the steamers under the command of Rear-Admiral Sir E. Lyons, was to be detached for the purpose of clearing the coasts of the Crimea, Georgia, and Circassia of "everything Russian" in the shape of ships or forts—a small squadron being stationed off the Sulina mouth of the Danube, and a couple of steamers left at Odessa to watch that port.

The understanding in Constantinople was that Sebastopol would not be seriously attacked until Sir Edward Lyons had returned with the steamers, after destroying the forts of Anapa, Soudjoukale, and Redoutkale. The steam frigate *Terrible* left Constantinople on the 2nd inst., to join the squadron on the coast of Circassia. Lieutenant Stanton, of the Royal Engineers, accompanied the *Terrible*, which is to land and proceed into the interior of Circassia, to meet Schamyl. A body of 200 horsemen, sent by the Circassian hero, will meet them on the coast. A letter in the *Patrie* says that—

Since the destruction by the Russians of the different forts on the coast, the Circassians have commenced to re-construct them. The works are pushed with great vigour, and executed under the direction of European engineers and officers. Fort Lazarew, which was less damaged than the others, is entirely restored, and defended by pieces of artillery which the Ottoman Government sent, and which are well served. Fort Wiliamino and Fort Navaleraki are also armed, and redoubts in earth have been raised on the shore to prevent the enemy from disembarking. A party of Circassians took possession, on the confines of the Crimea, of two Russian gun-boats which were at anchor. They were immediate y carried to the Bay of Pschad, and on the following day they took possession of a considerable number of vessels, and caused alarm all along the coast. The independent tribes showed success in organising a little flotilla they will go great mischief to the Russians.

The Turkish fleet, consisting of nine ships of the line, with twenty-four vessels of different sizes, including seven steamers, and mounting altogether 1040 guns, entered the Black Sea, on the 4th instant, with munitions of war for the Circassians. A letter from Constantinople says the Turkish fleet will land 15,000 troops in the Crimea, to act against Sebastopol, so that it may be assailed at once by sea and land.

SIR CHARLES NAPIER IN THE BALTIC.

There is no further news of any importance from the Baltic Fleet; but something important is expected daily, now that steamers have commenced running between Stockholm and St. Petersburg. An American and two Russian ships are said to have arrived at Gottland on the 5th, so that the navigation is now completely open. Letters from St. Petersburg of the 9th instant state that the British fleet had been seen within twenty-five to thirty miles off Cronstadt, and had captured a number of Russian gun-boats.

(From our own Correspondent.)

The Admiral went up to Stockholm on the 24th April, and had audience from the King (Oscar) at half-past eleven the following morning. The King's reception of the Admiral at this early hour was considered a mark of great favour, and was granted, it was said, in consequence of the Admiral's wish to be with his fleet again as soon as possible. After the audience the Queen invited him to breakfast in her apartments. The Admiral remained nearly two hours at the Palace. The people collected in crowds outside to see him come out, and cheered most enthusiastically. The Royal steam-yacht, which was waiting with her crew up, took him down to Vaxholm (about six miles below Stockholm), where a larger steamer was waiting to take him to the fleet. When it was known that he was likely to visit Stockholm, a number of people practised "Rule Britannia," to sing before the house where he might be stopping; but his short stay prevented the intended compliment. No thing can exceed his popularity here; everybody is anxious to get a sight of him; and there is a portrait of him, copied from that in the ILLUSTRATED LONDON NEWS, in all the shop windows.

The students from Upsala have been down to visit the Admiral; they sent a letter down announcing their intention of waiting upon him, and came down in a steamer, which was crowded with them. After going on board the *Duke of Wellington*, they steamed round to look at the fleet, and then returned highly gratified.

ARRIVAL OF THE "AUSTERLITZ" AT THE FLEET.

May 1.—About one p.m. to-day a large vessel was seen entering the channel, and was soon made out to be the *Austerlitz*. She came up under steam alone, and saluted the Admiral with seventeen guns, which was returned with the same number. Her head is a figure of Napoleon, about two-thirds length, very well carved and gilt; her guns appear closer together than ours, and she carries them all along on the upper deck, and has thus three complete decks. Her sterns is very peculiar, and has a large figure of an angel on each side, with a spread eagle in the centre, all painted white; and her two white streaks are carried right round the stern. As she steamed close past the *Duke of Wellington*, the two figures seemed to meet; the great massive head of the Duke, with its stern expression, all white, leaning forwards towards the other, which came on with head erect, and the right arm across the chest.

May 3.—A schooner yacht has just joined the fleet—the *Esmeralda*, one of the western yachts. She came dashing up with a fresh breeze in fine style this morning, and continued cruising about among the ships during the rest of the day. We hear they are going to sea with us. Everybody was delighted to see the "plucky little craft." The *Prince Regent* arrived in the afternoon.

May 4.—The *Cumberland* came in this morning. The following is a list of the vessels here to-day, but any hour may change this, from vessels being sent away:—

SCREW STEAMERS.	SAILING SHIPS.	PADDLE STEAMERS.
Duke of Wellington	Cressy	Neptune	Basilisk
St. Jean d'Acre	Ceasar	Monarch	Gorgon
Princess Royal	Edinburgh	Boscawen	Dragon
James Watt	Hogue	Prince Regent	Magicienne
Royal George	Blenheim	Cumberland	Lightning
Austerlitz		Esmeralda (yacht)	

Fogs, with rain, are frequent now. The pilots say the ice is breaking up. A very short time will show whether or not the Russians intend coming out.

The yacht brought an account of a Swedish squadron—two line-of-battle ships and some frigates—cruising outside.

WRETCHED CONDITION OF THE RUSSIAN ARMY.

The Austrian papers begin to let out a little of the truth about the condition of the Russians on the Danube. A Vienna medical paper, after stating that the immense train of waggons and carts which follow into Russian troops into the Dobrudja had returned for fresh supplies of provisions, says they bring back hundreds of wounded, and thousands of ruined arms and spoiled equipments. More than 400 wounded are expected from Karasu. In Braila, Galatz, and Reni new wards have been hastily built up for 2000 additional patients. These, however, are not enough. The flying hospitals bring such numbers, and in such quick succession from the Dobrudja, that divisions of the sick have to be sent twice a day to Hirsova, Matchin; and thence again across to the left bank. It is difficult to describe in all their stern reality the hardships and privations now endured by the Russians in the Dobrudja. The Russians have there more than 2000 wounded, and above 3000 dead and missing. The loss in horses, baggage, and munition is equally great. This estimate falls short of the truth. Not far from Kustendjee, upon a marshy bit of ground that is not 1000 fathoms in length, there lie now 243 Russians and 71 horses; and yet this was one of the least important spots where an obstinate fight came off, and where the Russians were defeated. The Turks, far better acquainted with the country, and the means of turning it to good account, are accustomed to open fire upon their enemy at the beginning of each engagement with their heavy guns, of which they have plenty, and their effect is great indeed. Their artillery is better served than the Russian, as all eye-witnesses acknowledge. The mortality among the Russian wounded was in April last 21 per cent. A great cause of sickness among the troops is the mouldy biscuit and the want of wholesome water to drink. The affair at Tchernavoda, the bloodiest of them all—it is thus confirmed by the medical writer—has changed the face of all around. Citizen and peasant exist no longer, for every man is a soldier from dire necessity and for self-preservation. The Russian officers in Wallachia are sending back all they possess, and which they wish to keep, to Russia—that is to say, their wives, jewels, ornaments, and horse furniture. They no longer talk big of spending the summer on the shores of the Bosphorus. Behind Fokshan a new hospital is building, and this shows alone what the Russian Commander-in-Chief thinks of the present war. The *Augsburg Gazette*, which is generally well informed about Russian movements, estimates that the epidemic has already put 18,000 Russians *hors de combat* since their occupation of the Dobrudja.

The great depôt of artillery and munitions of war at Fokshani is said to have been burned as an act of vengeance by the inhabitants. Should this prove to be correct the loss to the Russians will be very serious.

Despatches received on Tuesday by the French Ministry of Foreign Affairs report a signal advantage gained by the Turks on the Danube. Fifty Russian guns are stated to have been spiked or taken; and it is further said, that, owing to floods on the banks of the Danube and a rising of the Wallachians against the invaders, the Russian army in the Dobrudja is in a most perilous position.

ARRIVAL OF PRINCE NAPOLEON AT CONSTANTINOPLE.

On the 1st inst., at one p.m., the steam corvette *Roland* was descried off the Seraglio Point, conveying Prince Napoleon, with his numerous staff and suite. A Royal salute from the land batteries, as well as from all the English, French, and American ships of war, announced the event. M. Baraguay d'Hilliers, with all the *personnel* of his Embassy, got on board the *Ajaccio*, which followed in the track of the *Roland* to the Prince's Palace on the Bosphorus. On arriving there, the Ambassador, after having introduced his officials, got into his boat, and proceeded in all haste to the Imperial Palace of Tcheragan to announce the arrival of his Imperial Highness. It so happened that the Sultan had been out to ride, and Chamil Bey, the Teschifetgi, was accordingly despatched to acquaint His Majesty with the circumstance. The Sultan arrived in all haste, commanded instantly to see the Ambassador, and conversed for a few moments with his Excellency in the palace garden. A messenger was immediately despatched to say that his Highness was ready to receive the Prince, who, on arriving shortly after, was most graciously welcomed by the young Sovereign at the bottom of the staircase. The incident, trifling as it may appear, produced a great sensation, and is perhaps unparalleled in the annals of the Ottoman Court. The Sultan then conducted his Imperial guest to the Presence Chamber, and, having seated him by his side, conversed familiarly, through the medium of Redschid Pacha, on the great events of the day, and expressed, in the warmest terms, his gratitude to the French Emperor for the real and effectual assistance afforded ever since the commencement of this struggle. Two days after—another unheard-of circumstance—the Sultan returned the visit of his Imperial Highness, and anxiously inquired whether all had been provided for the comfort of his Royal guest, assuring him that the strictest orders had been given to that effect.

On the 2nd inst the French Ambassador introduced to his Imperial Highness, the French colony of Constantinople, and the chiefs of the different Missions. The Grand Vizier, the Ministers, and great functionaries, also paid their respects in the afternoon on that day. In the following day a grand banquet was given at the French Embassy, in honour of the Prince, at which the diplomatic corps, General Prim and staff, Lord Raglan, and the principal Turkish functionaries were present.

On Saturday, the 6th inst., Prince Napoleon was invited to dine with his Majesty at the Imperial Palace of Tcheragan.

THE ALLIED TROOPS AT GALLIPOLI.

On the morning of the 29th ult. a tempest fell upon the town of Gallipoli. Torrents of rain, driven by a violent southerly wind, inundated the streets. Several merchantmen in the roads were driven from their anchors, and wrecked on the coast. About four o'clock the steam-corvette, *Roland*, with Prince Napoleon, was signalled; but shortly before, the sky had cleared, and the storm abated. A quintuple salute of twenty-one guns from the ships of the squadron was fired in honour of the Prince, and the *Roland* cast anchor in the midst of the flags of the fleet, the flags of the two nations being profusely displayed. The yards were then manned, and the seven hurrahs required by the regulations were given *con amore*, while the bands on board the different ships played military airs. The generals, with the intendants and all the officers of the staff, were in attendance on the beach to receive the Prince; and the troops having been turned out as a guard of honour, the whole affair took on an appearance of gaiety to which the inhabitants were little accustomed, and which they seemed to enjoy greatly. One of the best houses in Gallipoli having been prepared for the reception of the French Prince, he forthwith transferred his quarters to it, and was occupied the rest of the day in the reception of French and Turkish officials and deputations.

On the following day, April 30, a great review of the French troops took place, for the first time since their arrival at Gallipoli, and it was calculated to excite wonder of the natives, who flocked from distant parts of the country to see the strange troops, and whose numbers are now computed of by both French and English as a positive inconvenience. The review took place half-way between Boulahir and the field of the great river, in the triangle formed by those two points and Gallipoli. The Prince was accompanied to the ground by all the general officers, the officers of the staff, the Turkish functionaries, and by General Brown, and most of the English officers. The Spanish General Prim was also in attendance. The weather was splendid, and the whole affair went off exceedingly well.

In the afternoon Prince Napoleon again embarked on board the *Roland* to proceed to Constantinople. He was accompanied to the landing-place by General Canrobert and his staff, by the Governor and authorities of the town, and by the Generals and superior officers of the English army. The troops were under arms, and received his imperial Highness with loud cries of "Vive l'Empereur!" "Vive le Prince Napoléon!" Salutes were fired by the vessels of war at anchor in the port.

The news of the bombardment of Odessa has produced a profound sensation among the Greeks living at Gallipoli. They knew it before the English did, and they made no attempt to conceal their disappointment. So true is it that in Turkey the religious creed is a much stronger bond of union than temporal interests, for the whole of the Greeks in Gallipoli are petty shopkeepers, to whom the presence of the European troops is a certain fortune. Many of them have already realised immense sums by their trafficking with the troops. According to the latest accounts, rents were so high, that a wretched shop (built of wood) is freely let for 200 francs a month—a sum far beyond what the construction of it could have cost. Provisions were dear; but there was said to be no deficiency in the supply, and the only complaint on that score was that the native population and the Ottoman troops were engaged in a perpetual contest on the subject of prices. There was a demand for everything, and an abundant supply of nothing that has become essential to the comfort of the least luxurious private. Fancy a hard old Yankee ham fetching 20s., Dutch cheese at 8s. each, and beer—not Bass's, but bad foreign beer—at 1s. 6d. a bottle! This dearth of commodities, however, appears to have been in a fair way of removal. Letters of the 1st inst., state that shopkeepers were arriving in crowds from Smolensk, Smyrna, Marseilles, Algiers, Malta, and even from London, so that we shall probably soon hear of the markets, at Gallipoli, being as completely glutted with the comforts and luxuries of life, as those of London and Paris generally are.

THE RUSSIANS IN THE PACIFIC.

The two Russian frigates *Diana* and *Aurora*, which have lately been cruising in the Pacific, stand a rather good chance of being captured by some French or English vessel, unless the captains should adopt the safe Russian method of stalking into a neutral port. Our latest news from Callao are to the 12th of April, at which time the British frigate *President*, 50, and the French 50 gun frigate *La Forte*, both remained at that port waiting the news of the declaration of war with Russia, when they would, no doubt, concert measures for capturing the *Diana*. Whichever of the frigates pursues the *Diana*, and brings her to action, the other will wait off Valparaiso the arrival of the other Russian frigate, the *Aurora*, from Rio, and do her best to ensure her before she can reach a neutral port.

The *Diana*, after lying at Valparaiso for some weeks, the *President* being there at the same time, sailed for the Sandwich Islands on March 23. A Valparaiso paper says:

During the time the Russian frigate was in port, her officers and men were often on shore. The officers are remarkably intelligent, well-bred, and good-looking men, and have by their urbanity, affability, and gentlemanly deportment secured the esteem and good wishes of many persons here, both native and foreign. When questioned as to the prospect of war between Russia and France and Great Britain, they were naturally reserved. But when asked, in reference to the probability of a hostile encounter between the *Diana* and *President*, what were their opinions of the issue, the Russian commander was only heard to say, "We shall never strike our flag."

We learn by the Overland Telegraph, that the Russian squadron that has been so long in the China Seas, left Manilla, March 18, for Batavia. We trust that they will not hear of the declaration of war before our Anglo-French squadrons take the intelligence, and the enemy too, at the same time.

EGYPT.

(From our own Correspondent.)

CAIRO, April 28th, 1854.

THE order of the Egyptian Government, that the Greeks should leave this country within twenty-four hours after the expiration of the last day of the month of April, will, doubtless, be carried out, as regards Greeks not under the protection of Great Britain or other friendly Powers. Those who are obliged to leave, complain loudly of the difficulty of collecting debts, and, consequently, of settling with their creditors. The Pacha's police, however, are lending them such aid as they can legitimately expect; nor can they, as far as is at present known, complain of any harshness whatever in the conduct of the Government or people of this country.

Various rumours are rife here of encounters between the Allies and the Russians, by sea and land, which meet but little credit with the well-informed. In the intervals of our now frequent arrivals from Europe. The only newspaper published here is the *Boulac Independent*, a fortnightly Government paper, in Arabic and Turkish.

The people seem to appreciate the active intervention of the English and French, though but little is said of the war, at least in public. There is a deficiency of labourers, owing to the large forces sent to Constantinople. The number of men employed on the railway between this and Alexandria varies extremely; indeed, it would much advance the interests of this country were more attention paid to public works of a reproductive character, and less to the construction of palaces.

The garrison of Cairo consists of about 18,000 men, 1000 of whom are cavalry, consisting of two regiments, each 500 strong—one Caramineers, in white uniform; the other, Lancers, in crimson. Attached to the cavalry are 400 dromedaries, for the conveyance of men, guns, or ammunition. Besides these regular forces, there are 5000 armed police, many of whom are well mounted, the others act on foot.

A new levy of recruits for the army is ordered, the number required being 30,000. Much difficulty will doubtless be experienced in raising so large a force in Egypt at present.

His Highness Abbas Pacha contemplates building a palace in the vicinity of Mount Horeb; and has at present above 3000 men constructing a road from Tor, a port on the Gulf of Suez, towards that sacred mountain.

In addition to the cavalry above mentioned, the Pacha has a considerable force of Horse Artillery and Irregular Cavalry, besides Mamelukes, or gentlemen troopers.

UNITED STATES.

The steam-ship *Asia*, which left New York on the 3rd inst., arrived at Liverpool on Sunday. She brings no intelligence regarding the screw steam-ship *City of Glasgow*.

In the House of Representatives, Mr. Wheeler had asked consent to offer a resolution directing the Secretary of the Navy to send out steam-vessels in search of the missing steamer, which was objected to.

In the Senate, on May 1, Mr. Mallell moved a resolution permitting the President, during the recess of Congress, to suspend the neutrality laws in the case of Cuba; which was referred, but was not expected to be sanctioned, although the organ of the Government in Washington upholds Mr. Slidell's resolution.

The American papers report serious loss of life and property by floods, caused by deluges of rain all over the States of New York and New England.

Forty soldiers of the United States army are reported to have been killed or wounded in a battle with the Indians in New Mexico.

In Mexico, Santa Anna is reported to have gained a decisive victory over Alvarez.

AUSTRALIA.

The celebrated clipper ship *Marco Polo* arrived at Liverpool on Saturday last, after a very quick run of eighty-three days, having left Melbourne on the 19th February. The present voyage may be classed as one of the best ever made by this vessel, when it is considered that she had scarcely half her complement of crew owing to desertions. She passed everything before her, amongst other ships the celebrated *Boomerang*, which sailed four days prior to the *Marco Polo*, for Callao. The *Marco Polo* was at the River Plate thirty-five days after leaving Port Phillip Head. The screw-steamer *Australian* sailed from Port Phillip Head on the 10th of February, for London, with several passengers, and 78,907 ounces of gold. She was to call at the Cape of Good Hope, for which she had £1000 in specie.

The news by the *Marco Polo*, though late, does not possess much interest to an English reader. Adelaide papers state the Government measure of having two Chambers, one composed of nominees of the Crown, was very popular, and a memorial against its adoption largely signed. A letter from Forest Creek, Mount Alexander, dated Feb. 10, says:—"Hundreds of persons are daily passing through here on their way to the Tarrengower diggings, and the number of teams loaded with stores of all kinds for the same place is almost incredible. The reports of these diggings are very favourable, but the great scarcity of water is a serious impediment to the operations of the diggers. There is another new rush about four miles from Castlemaine, and the same distance from Campbell's station, in a parallel line with the river Loddon, and leading into the Tarrengower diggings at Bryant's Creek. There are some thousands at work there doing well, and with every prospect of the gold field being extensive."

THE OVERLAND MAIL.

The papers received in anticipation of the Overland Mail, *viâ* Marseilles, bring rather unsatisfactory accounts from Burmah. A detachment of sepoys, escorting provisions to Prome, had been attacked by dacoits, when two sepoys were killed and fourteen wounded. The party, numbering seventy men of the 10th Bengal Native Infantry, under the command of Captain Phillot, when five miles from Taphoon, was fired into from the dense jungle through which the road lay, and in which the dacoits were concealed. On the first fire the cart drivers unyoked their bullocks and ran away, so that Capt. Phillot could neither advance nor return without leaving the wounded and the detachment behind. However, he charged his assailants and drove them through the jungle at the bayonet's point. After two hours' hard fighting, the detachment was reinforced by a party of the 4th Rifles, under the command of Lieutenant Dunbar, who were accompanied by two elephants, upon which the wounded were placed, and all returned to Taphoon. The loss sustained, upon this occasion, by the Burmese, has not been accurately ascertained.

From Persia we have no intelligence upon which we can place much confidence. It is, however, stated that 800 Persians had besieged the fort of Abbas, in which were the Arab Chief, Mahomet Saleem, and about 1000 men. A three-masted vessel, with 500 troops on board, was also firing on the Persians, who are said to have lost 110 men. It is added that the Persians will be obliged to retire, as the Arabs are well supplied with ammunition.

The *Delhi Gazette* has more Russian news from Cabul. A report was prevalent that Newab Jubber Khan had breathed his last, and no end of Russian and Persian agents were said to be actively employed in Khorassan and Turkistan. "Two or three parties," says the *Gazette*, "were already at Herat, with intent to induce Mahomed Taeed Khan, son of the Vizeer of Herat, to cede that place to them whilst the war rages between Russia and Turkey, offering in return Neeshapore, a Persian province of Khorassan, of equal value to Herat, which they would then strengthen and garrison properly."

The great Ganges Canal, which has cost the East India Company more than a million and a half of money, was to be opened by the Lieutenant-Governor of the North-West Provinces, Mr. Colvin, during the month of April.

The Committee to promote the interests of the Great French Exhibition for 1855 has been organised by Lord Dalhousie. It is presided over by the Chief Justice, Sir Laurence Peel. The object is to send to Paris specimens of Indian as London, like those in the department "India" in the Hyde-park demonstration. The Court of Directors has sanctioned an outlay of £50,000 for the purpose.

THE BOMBARDMENT OF ODESSA.

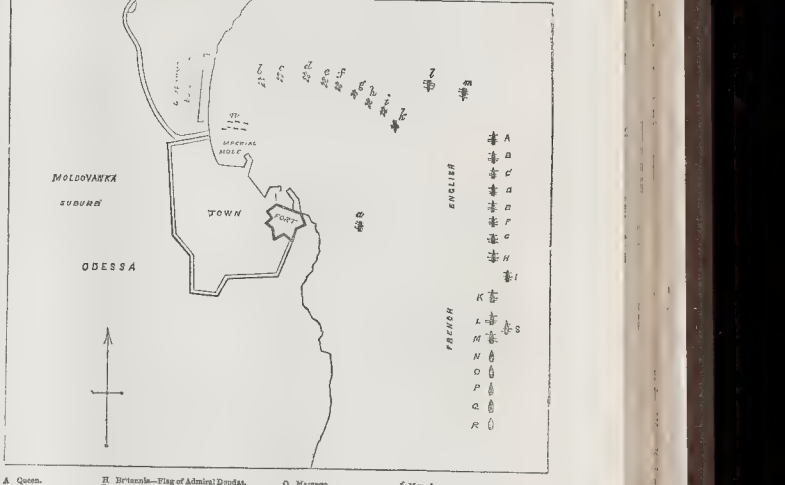
We have been favoured by a Correspondent with the accompanying Plan, showing the destruction of Russian shipping within the Imperial Mole, by steamers and rocket boats of the combined fleets, on Saturday, the 22nd April, 1854; H.M.S. *Arethusa* engaging the small batteries on the cliff and guns at the inner end of the Quarantine Mole.

The action commenced about 6 a.m., by the Imperial Mole opening fire on the *Samson*; soon after one p.m., the magazine on the Mole-head blew up, and the enemy's guns were silenced; rocket boats closed in, and set fire to shipping within the Imperial Mole.

(From a Private Letter.)

April 26th,
Three Miles off Odessa.

We arrived off Odessa on Thursday the 20th, after a passage of four days from Kavarna. The fleet anchored three miles outside, while we and the *Tiger* went in to reconnoitre, keeping of course out of gunshot, and we boarded several merchant vessels. The town is regularly built; the houses are large and handsome, and, as far as we could see, mostly built of stone. We examined the Imperial Mole well, as the Government transports lay there with a great number of small vessels, and some good-sized brigs and barques. In the evening we anchored with the fleet, which was next day joined by the *Retribution* and *Furious*. The captains were on board the flag-ship all that day; and in the evening, when the captain came on board, we heard that the *Tiger*, *Vauban*, *Descartes*, under command of the *Samson*, were going in to attack the Imperial Mole, and destroy the shipping. Accordingly, next morning, at five o'clock, we were under way, and proceeded in, followed by the *Vauban*, *Tiger*, and last by the *Descartes*. The *Sanspareil*, *Highflyer*, *Retribution*, *Terrible*, *Furious*, and *Magicienne* also got under way, in case of our requiring assistance, but kept outside. At five minutes after six we went to quarters, and loaded with shot; and thirty-six minutes after six fired the first shot at a large barque that was in the Mole. Ere the smoke from our gun had cleared away, it was returned, and the shot came whizzing into us, passing through the stern of one of our quarter boats. The wounded man knocked down his first after-gun's crew, and one of the marines was wounded in the wrist: it was, indeed, a narrow escape for the others. After this they came in pretty fast, we returning them in fine style. They had a "limp" moored off the Fort, to which all their guns were laid; and as we went round it is so covered by our little squadron, they gave us plenty of shot. One entered the aftermost port, hit the mizen mast, knocked away a bit of the wheel, and our after compass, hit a man in the thigh, and dropped down by his side. * * * The shot that struck the ship did no harm, though there were four men steering at the time. After



PLAN OF THE BOMBARDMENT OF ODESSA.

back to our former position, and anchored head and stern. Half the ship's company then got some dinner, and we being very tired, were getting a snack in the berth, when we heard great cheering on deck, and running up, beheld the fort blown up, and a number of ships on fire and sinking. A shell or rocket had fired the magazine—up it went, and they could not fire a shot after. The boats then came to the remaining ships; but, as they neared the shore, a battery of field-pieces opened on them, fortunately killing no one. We pitched some Government sheds, which at night made a fine blaze. But I am detaining the bag.

MARRIAGE OF THE EMPEROR OF AUSTRIA.

ALL accounts agree in representing the ceremony of the recent Marriage of the Emperor of Austria with the Duchess Elizabeth as one of the most magnificent displays ever witnessed in Vienna. First in order was the superb pageant of

THE IMPERIAL BRIDE ENTERING VIENNA.

(See Illustration, page 486.)

The entrance of the Duchess Elizabeth into the city, which took place on the 23rd ult., gave the show loving inhabitants of that city an excellent opportunity of displaying their loyalty. All her route, and especially that which lay without the line, was enlivened by crowds of the Austrians in their holiday costumes, by triumphal arches, flags and banners, in the various national colours of Austria and Bavaria, by happy mottoes on the various houses, and emblematical representations of the Imperial happiness, with music at every turn. Many of the devices were most happily conceived—as that of a window fitted up like a chapel, and containing busts of the Imperial pair, surrounded by vases of roses in full bloom, and the expression of a hope that "they might long flourish and bloom as those roses were then doing." The Theresianum was beautifully adorned with plants, garlands, and flowers from the hothouses of Schonbrun. The Empress elect here made the last additions to her toilette, assumed the wreath and diadem, and conducted by the High Chamberlains, entered with her brother the splendid coronation carriage. She wore an exquisitely fine lace dress, over a silk slip of *couleur de rose*. On her head she wore a diadem of brilliants, and a garland of fresh pink and white roses; the belt, or girdle, was splendidly set off with precious stones—rubies, emeralds, &c., and she wore magnificent bracelets. From the Theresianum, down the Favoriten and Wadner streets, and over the glacis to the Karnthner Thor, where she entered the city, it was one triumphal procession. Proceeding slowly over the glacis, amid the vivats of the multitude, a pause of some minutes occurred at the new and elegant Elizabethan Brucke, over the Wien, now for the first time opened to the public, and called after the Imperial bride. This bridge was most tastefully ornamented with flowers and evergreens; whilst on five elegant tribunes, erected at each end and side of it, the families of the Municipal Body of Vienna presided over their burgomaster, Chevalier de Seiller, welcomed their future Empress, who received at this point the welcomes and felicitations of the city. The three bands on the glacis, meanwhile, were playing the National Hymn of Austria. Advancing over this beautiful structure to the city gate, which was ornamented with evergreens so as to resemble a natural arbour, and having an allegorical figure of "Welcome" on the ramparts above it, the cortège entered the city. Here the streets were kept by lines of soldiers, as they had hitherto been by the tradesmen of the several guilds, and by the firemen of Vienna itself. The whole street was in its gayest attire; every house was ornamented with flags, tapestries, rich carpets hanging from the windows, and Imperial coats of arms and ciphers; every window was alive with spectators—the most distinguished houses being the Prussian Embassy, the hotels, and the banking house of Persenitti. Through the Karnthner Strasse the cortège proceeded by the Stockimisen Platz to the Graben, where the most splendid scene of all presented itself. Every house here was richly ornamented—those of Prince Bibesco, the Sparkasse, and Count Thun especially so. Immense tribunes occupied the open spaces, whilst one sea of heads and happy faces alone was distinguishable. By the Kholmarkt, which was in the same style, and in which the Bourgoyy Palace, the Hofsaer, and Mayerhofe houses were most conspicuous, the procession reached the Imperial Burg or Palace, and, passing through the inner court, reached the heights of Bellaria, where the Emperor, advancing at the head of his Court, assisted his bride to alight from her chariot, and after embracing her with genuine affection, conducted her into the Palace of his ancestors.

THE MARRIAGE CEREMONY.

(See Illustration, page 487.)

The decorations of the Church of the Augustins were appropriately grand and superb for this solemn occasion. The upper part of the high altar and the side walls were hung with richly gold-embroidered red velvet draperies. The brilliantly-illuminated high altar was adorned with the rarest flowers, ranged on both sides. On the Gospel side was erected a beautifully ornamented platform, with richly-gilt steps, on the upper part of which stood a throne for the Emperor and his august bride, the Imperial Crown being affixed over the same. The transept part of the nave was hung with ample red curtains suspended from the fall height of the roof of the church; the remainder of the church walls were hung with costly carpets, on which religious subjects were ingeniously embroidered. Before the altar there was a prayer desk, covered with gold-embroidered white velvet, for their Majesties, over which a canopy made of the like gorgeous material was suspended. Behind the same were ranged seats with red velvet coverings, for the members of the Imperial and Ducal families. To the left thereof was the oratorical part for the high dignitaries of the Church; on the opposite side was the tribune for the diplomatic corps, behind which on the side of the choir, in a circular and amphitheatrical form, were ranged the seats for the ladies of the Court and the high nobility, the body of generals, and a limited number of the civil and military authorities that were invited. The brilliancy of the illumination surpassed all description. Upwards of 100 large and small lustres were suspended from the vaulting of the church, and about 10,000 wax candles shed a refulgent blaze of light over this imposing spectacle. The corridor leading from the Imperial burg to the church was also hung with rich tapestries, and brilliantly illuminated. The entrances of the church were kept by the Imperial Royal body-guards (*archires*) and pages.

At precisely seven o'clock p.m., a loud and solemn pealing of all the church bells of the city announced that the Imperial bridal procession

GRAND PROCESSION OF THE EMPRESS OF AUSTRIA (ELECT) INTO VIENNA.—(SEE PRECEDING PAGE.)

MARRIAGE OF THE EMPEROR OF AUSTRIA WITH THE PRINCESS ELIZABETH IN THE CHURCH OF THE AUGUSTINS, AT VIENNA

had left the burg, and were approaching the church. The lower officers of the Court, and of the household, led the august procession, according to the usual State etiquette; then came the Pages of Honour, the Privy Councillors, the great nobles holding offices of state in the Imperial household, and then their Imperial Highnesses the Archdukes together. Then followed his Majesty the Emperor, in a white Field-Marshal's uniform, and wearing the large riband of the order of St. Hubert, accompanied by his Lord High Chamberlain, the Count Lanskorouski, his first Aide-de-camp, General Count Grünne, and a detachment of his Guard of Halberdiers, or Life Guards. Then followed her Royal and Imperial Highness the Archduchess Sophia (mother of the Emperor), with the Imperial bride elect, and at her left hand her Highness the Duchess Louise, mother of the bride. Her Royal Highness the Imperial bride wore a beautiful white silk dress, embroidered with gold and silver, with a magnificent train. The girdle and other portions of this bridal robe, as well as the train, were richly adorned with exquisite white gems; whilst on her head her Highness wore the diadem of brilliants which her Imperial Highness the Archduchess Sophie wore on her own wedding day, with a charming lace veil waving gracefully over her snow-white shoulders; and in her bosom appeared a nosegay of fresh roses. Their Imperial Highnesses the Archdukes followed the bride: and then the ladies of the Court closed the bridal train. A burst of trumpets and kettle-drums announced that the bridal pair were entering the church, where the Prince Archbishop Othmar, Chevalier de Rassicher, and the clergy had already assembled to receive them; and then followed the Court to the high altar, where his Majesty the Emperor and his august bride knelt down at a prie-dieu and offered up a prayer; the other members of the Imperial Family taking up their position, meanwhile, under a second lofty canopy.

The Archbishop then proceeded to commence the holy office for matrimony. All the archbishops, bishops, and prelates, in their gorgeous canonical robes, now ranged themselves on either side of the high altar. At the moment at which the usual questions were answered and the exchange of rings took place, the cannons on the ramparts thundered for the first time, and the battalion of grenadiers which was posted on the Augustine bastion, fired their first salvo. The ceremony also performed the National Anthem in the church. After the archiepiscopal blessing had been given, the newly-married pair moved to a throne erected for them on the Epistle side of the altar, and, there kneeling, offered up prayers, whilst the orchestra sung Te Deum; the artillery, at its commencement, thundering for the second time. After completing their prayers, their Majesties and the august Court, the Imperial household, and the invited guests, withdrew in the order in which they had entered the church; and a third discharge of artillery announced the happy moment. It was now half-past seven, and a shout of "Vivat!" from the assembled company echoed to each round of the artillery. The order of the procession on leaving the church was the same as that on entering it, save that his Majesty the Emperor was now at the side of the young Empress Elizabeth.

After the nuptials, the *corps d'diplomatique* were presented to their Majesties—Lord Westmoreland being the first. The Empress Elizabeth then received the ladies of the same distinguished corps; after which the generals and the corps of officers were admitted to wait on their Majesties. At the close of this reception their Majesties proceeded to the magnificent Ceremonien Saal, or Hall of Ceremonies, which was splendidly lighted up on this occasion, and where the whole of the exalted and august personages of the Imperial family had assembled meanwhile under the noble canopy. The ladies were then admitted to kiss her Majesty's hand. The Emperor conversed for some time with the foreign diplomatists; and finally left the hall in company with his youthful bride, to be present at the dinner which the Archduchess Sophie gave in her own apartments; and at which the whole of the members of both families were present.

The pair of accompanying illustrations are from Sketches by J. Laufberger, of Vienna.

A Portrait and Memoir of the Empress will be found at page 464.

CALENDAR FOR THE WEEK.

SUNDAY, May 21.—5th Sunday after Easter. Rogation Sunday.
MONDAY, 22.—Order of Baronets instituted, 1611.
TUESDAY, 23.—Francis attempted to shoot the Queen, 1842.
WEDNESDAY, 24.—Queen Victoria born, 1819. Calvin died, 1564.
THURSDAY, 25.—Ascension Day. Holy Thursday.
FRIDAY, 26.—St. Augustine.
SATURDAY, 27.—King of Hanover born, 1819. Dante born, 1265.

TO CORRESPONDENTS.

SENEX.—The heraldic insignia for the Marquis of Anglesey's funeral were executed by Cowland and Son, Long-acre.

E. U. G.—See "Short Short-Hand."

H. M. Sc——field.—We have not room for the inscription.

J. H., No. 6.—The Most Hon. the Marquis of Breadalbane, Park-lane, London, is the name and address of the Lord Chamberlain.

INQUISITOR.—The daughter of a Knight takes precedence of the wife of a Baronet's younger son.

ISOLANE.—Arms of Prince Albert: Quarterly 1st and 4th the Royal arms of the United Empire, difference by a label of three points, on the centre point a cross gu.; 2nd and 3rd Barry of ten, or and az., a bend urdle vert for Saxony. His Royal Highness's shield, with his supporters and numerous crests, very finely engraved, forms the frontispiece of Burke's "Heraldic Illustrations."

ANTI RADICAL.—A new edition of "The Landed Gentry" is announced as being in preparation.

D. W.—Lord Raglan was, previously to his elevation to the Peerage, known by his courtesy title of Lord Fitzroy Somerset. The Earl of Aberdeen was called Lord Haddo before his accession to his grandfather's Earldom.

L.—A full account of the Ladies of Llangollen (Lady Eleanor Butler and Miss Sarah Ponsonby) may be found in the Anecdotes of the Aristocracy." The Rev. Francis Mahoney, one of the most gifted writers and accomplished scholars of the day, is the author of the "Prout Papers."

M. F.—There is no recognised Earl of Stirling. The family name of those who held the title was Alexander.

ROYAL PEDIGREE.—The Duke of Modena is clearly the heir of line of our Royal House of Stuart. Charlotte, Duchess of Orleans, niece of Prince Rupert, and grandaughter of Elizabeth, Queen of Bohemia, daughter of King James I., was direct ancestress of the late Louis Philippe King of the French. The Duke of Modena is descended from Henrietta, youngest daughter of Charles I.

J. B. C.—Application must be made to the Will Office, York.

A CORRESPONDENT from Carmarthen.—The wife of a Viscount's son has precedence, in all places, of the wife of a Colonel in the army.

LONDA.—If the lady used the spoons with the crest on them, she would, we apprehend be liable to the tax on armorial bearings.

A CONSTANT READER.—The Grand Duke Constantine (the Czar's brother) is dead.

O. H. Z.—The younger sons of all Peers take precedence of Baronets. Privy Councillors have precedence of the younger sons of Viscounts and Barons, and consequently of all Baronets.

VULPES.—The only authorised sources of heraldic information are the College of Arms, in England; Lister's office, in Ireland, and the Lyon Office, in Scotland. Books are published, but they are valueless. The only means by which a "Nobleman" can become entitled to a coat armour is by grant; in England, at a cost of £76 5s.; in Ireland, of £31 10s.

BESSIE.—Sir Archibald Alison was not a Knight at the time he obtained his Baronetcy.

STELLA.—The unmarried daughters of all Barons take precedence of the daughters of Commoners married to Commoners.

A SUBSCRIBER FROM THE COMMENCEMENT.—The cockade may be borne.

A SUBSCRIBER.—The arms are correct, but [illegible] is "Dormant, Extinct and Dormant Peerage."

A SON OF TOIL will find the information he seeks in maps, which may now be had for twopence each.

J. A., Kidderminster.—In 1853 the circulation of the *Times* was 13,900,670. The recent Parliamentary returns, containing the circulation of all newspapers in 1851, 1852, 1853, may be purchased for a few pence. The present Lord Chancellor Cranworth, formerly Baron Rolfe, was raised to the peerage, on being Vice-Chancellor, in 1850.

A. X. Z., Clifton.—A small work on the management of a Conservatory may be had of Orr and Co., Amen-corner.

I. W. J., Winchester.—We think not by Shakespeare.

CECIL H., Hitchin.—We are not aware of the publication of any cheap and authentic Life of Cromwell.

FAINT HEART should [illegible] to contributors, Christ's Hospital, for a list of [illegible] &c.

W. H., Lurl [illegible]

DECLINED with Thanks, Mr. C., Rochester; and Libertas.

THE WAR WITH RUSSIA.—SEBASTOPOL.

In preparation, for

THE ILLUSTRATED LONDON NEWS,

BY PERMISSION OF THE ADMIRALTY,

A LARGE VIEW OF SEBASTOPOL AND THE ADJACENT COAST;

With a DIAGRAM, and most accurate Sketch of all the FORTIFICATIONS in and near that harbour, as drawn by Lieut. MONTAGU O'REILLY, when H.M.S. *Retribution* boldly entered that port in January last.

*** The CENSUS SUPPLEMENTARY PAGES will be given in a week or two.

NEXT WEEK, A LARGE VIEW OF

THE BOMBARDMENT OF ODESSA.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MAY 20, 1854.

THE Opposition to the increase of the Malt-duty has been less violent than might have been anticipated. As the Government commanded the decisive majority of 303 against 195 on Mr. Cayley's amendment, there is no necessity for any reproduction of the arguments of those who, in spite of proof, reason, and common sense, still persist that the Malt-tax is an injustice upon the agriculturists. The House of Commons has virtually granted the addition which the Ministry thought it incumbent upon itself to ask. The Budget is, therefore, safe from all future attack, and will pass through its various stages with as much speed as the forms of the House will allow. The Malt-tax, like every other tax, is an evil; and the day, we hope, will soon arrive, when it may become possible to reduce, if not to abolish, it. In the meantime the bulk of the people, not subject to the Income and Property-tax, will remember, if they are compelled to pay a small extra sum for their malt liquor in support of a just, necessary, and popular war, that the classes in more comfortable circumstances will not only be liable to the same inconveniences and hardship, but will have to pay a doubled Income and Property-tax. Under such circumstances, they will acknowledge, however costly the war may prove, that the Government has dealt fairly by them. The triumphant result of the division of Monday night will have the best effect throughout Europe. It would, indeed, have been a calamity which the Russians would have turned to good account in beating up for allies, if the representatives of the British people had rejected any vital part of the Budget, and thereby broken up the Ministry. From such a calamity—which, it must be admitted, was never imminent—the country has been spared. On a question like that of malt, appealing to ancient prejudices and to class ignorance, it was impossible to expect unanimity; but the majority was large enough to be entirely satisfactory, and to prove to all the world that Great Britain enters upon the war with a good spirit as well as a full purse.

It is possible that the Emperor of Russia may represent to his confiding people that the British Government has been defeated in its attempt to levy taxes for the prosecution of hostilities against him. We should not be in the least surprised to learn of a notification to that effect in the *Journal de St. Petersburg*. His obedient General, the Baron Von Osten-Sacken, has claimed the victory over the Allies at Odessa; the claim has been graciously allowed, and the victorious and mendacious commander has received, as a reward for the fabulous achievement, the praise of his equally mendacious master, and the Cross of the Order of St. Andrew. "Te Deums," in celebration of the event, have been solemnly chanted in Moscow and St. Petersburg, in impious mockery of the God of Truth. The blinded Russians are thus taught to believe, as in the days of old, that Europe cannot withstand the Czar, and that the first encounter has been fatal to his opponents. Let us hope that the Czar will speedily have as much reason to order "Te Deums" for similar victories of his arms at Sebastopol, Revel, Helsingfors, and Cronstadt.

ALTHOUGH no measure is to be founded upon it during the present Session of Parliament, the Report of the Royal Commissioners appointed to inquire into the condition of the Corporation of the City of London demands from us something more than a mere passing remark. We have, from time to time, without fear, favour, or animosity, taken up the various points of the evidence presented to the Commission; and it is with peculiar satisfaction that we now find that the deliberations of the honourable gentlemen who formed the Commission have resulted in the enunciation of principles identical with those we have felt it to be our duty to maintain.

Some persons who profess to be learned in the law have pronounced, in a manner the most dogmatic, that all Royal Commissions are illegal. Were we for a moment to admit the accuracy of this judgment, we would still be bound to acknowledge that to those tribunals we are indebted for several of our wisest modern reformations. A Royal Commission tore aside the flimsy veil from the supposed sacredness of Smithfield, exposed its abominations, and bade it begone; a Royal Commission dived deeply into the secret recesses of our University system, proved the inadequacy of these foundations, as now conducted, to meet the necessities of the present day—and this Session of Parliament will see them vastly improved; and now a Royal Commission has pronounced its judgment on the doings and misdoings of the ancient Corporation of London. It fortunately happens that a very short Act of the Legislature will render unmistakeably legal what otherwise might appear doubtful.

What the Commissioners propose to be established is best indicated by what they recommend to be abolished. The list is neither short nor unimportant, and embraces the abolition of tolls, brokers' fees, metage dues, porters' privileges, and freedom fines; which, in reality, means the annihilation of oppressive and irritating imposts amounting to some £25,000 or £30,000 per annum. It is recommended that the twenty-six Aldermen should be reduced to twelve or sixteen, presiding over a like number of Wards, with five Common-councilmen to assist them; so that the 206 members now forming the Common-council will be reduced to one-third the present number, which will ensure character and respectability to the body. The hardest blow seems to have fallen on the heads of the unfortunate Aldermen. They are not only to be shorn of their magisterial functions, but, as a legislative and deliberative assembly, are to lose their identity, and be absorbed in the Common-council. The Aldermanic display at the Central Criminal Court is to be dispensed with. They are also to be relieved of their cares and anxieties as police magistrates; and, instead of being elected for life, they must return to their constituents once in six years. They are no longer to look upon the chief magisterial chair as their natural inheritance. that high dignity may be filled, not only by any member of the Common-council, but by any citizen qualified to be elected a Common-councilman.

The river Thames may, after all, be purified! The members of the Navigation Committee are to be released from the care of the troublesome stream. Abhorring water, it was hardly to be expected that they could sincerely care for the purity or decency of the Thames. The control of the river is to be confided to a body whose interests and duties are intimately connected with it. In commending the managements of the City police, it is nevertheless judiciously recommended that the City and Metropolitan police forces should be placed under one authority. The head-quarters of the Chief Commissioner ought, in our opinion, to be within the City, where so much valuable property is accumulated and stored; and subordinate branches, with telegraphic communications to each, should be established at or near Charing-cross, Kennington, Mile-end, and Islington. The general conduct of the Commissioners of Sewers is glanced at; and, although no specific recommendation is made, it is evident that a General Commissioner of Sewers would be considered as best for the public, by ensuring concord of design and harmony in working.

Considering the temptation to write strongly, it is not the least charm of the admirable Report of the Commissioners, that, while liberal in its suggested changes, it is ever moderate and very respectful in its language. The arguments of the Commissioners are clear and convincing, while their conclusions are not to be disputed.

The proposed incorporation of surrounding boroughs, which implies the absorption of hosts of petty Boards, is excellent; while the formation of a Central Council, or Board of Works for General Metropolitan Improvements, with a taxing power conferred, is not only wise but indispensable. Such a Board, discreetly conducted, ought to consolidate and combine with itself the various Sanitary Boards and Boards of Health; so that, instead of a number perpetually shirking responsibility, but greedy of credit, we should have one body responsible for its work. The adoption of the elective principle in the formation of this Board is much to be approved. The cause of failure in many similar Boards may be traced to the nomination of individuals being made through interest, and not from merit.

The Commissioners have disposed of the Irish Society in a summary manner. Suggestions had often been made that that incorporation should be closely investigated. The simple hint gave great offence, and new-born deputies rushed to the rescue, and described that Society as the quintessence of purity; but a deputation of tenants from Coleraine and Londonderry set the matter straight. It was proved from indisputable documentary evidence, that the society had never fulfilled the conditions of its charter, and that 75 per cent of the revenue had been expended in administration, and chiefly on the members themselves. Nor need we be surprised at this. Most of the gentlemen, being respectable London tradesmen, are not immately connected with agricultural pursuits. Hearing that the farmers of the Lothians were justly celebrated all over the world, it was held prudent that before visiting the north of Ireland, they might as well visit the neighbourhood of Edinburgh and Stirling; and, being there, why should they not proceed to Glasgow, by way of Loch Katrine and Loch Lomond? The Falls of the Clyde, or even the Kyles of Bute, Mull, Staffa, and Iona, might help to qualify them for the better performance of their official duties. Besides, the sail from Glasgow to Belfast was not very wearisome nor peculiarly unpleasant. Having breakfasted at Londonderry, lunched at the Giant's Causeway, and dined at Coleraine, they had passed through their estates, the condition of which they criticised, and recorded as satisfactory. Over their wine and walnuts, the suggestion to visit the south of Ireland, and contrast its wretchedness, idleness, and pauperism with the health, cleanliness, and independence of the north, was received with acclamation, and pronounced highly beneficial; and if Killarney, Glengarriff, Cork, and the mountains of North or South Wales came in their way on their return homewards, it was the fault of those places, and not of the visiting deputation from the Irish Society. That this learned body should have been condemned for the exercise of so much prudence, forethought, and thirst for information, is somewhat vexatious to those who enjoyed such pleasant excursions. But the decision of the Commissioners will be hailed with satisfaction by the poor tenants who have suffered so long. Not the least of their annoyances being that septennially they were mulcted of £3, without knowing what became of the money, as they could not find it in the general statement of accounts. This has been traced to the pockets of the secretary, and, although it made an increase to his salary of upwards of £100 per annum, it seems to have been considered unworthy of record when that gentleman was called upon to give an account of his annual income received from every source. Being a septennial bonus, we presume that any secretary of an *Irish* society might justly conclude that it had nothing to do with annual income.

The exposition has been complete. The Report has been made, and it now remains to continue a work so fearlessly begun, and, so far, so admirably conducted.

With new and greatly enlarged constituencies—circumscribed corporate bodies, with well-defined duties, it will become the privilege, and we hope the pleasure, of the ablest and best-informed persons of each locality to undertake the responsibility of serving their fellow-citizens in whatever capacity they may be though capable of serving them best.

LATEST INTELLIGENCE.

ALLEGED BOMBARDMENT OF REVEL.

A report that Revel had been bombarded by the English fleet was current on the Paris Bourse on Thursday; but the evening papers of that day contained nothing to confirm the statement. The report appeared in some of the London papers yesterday, but no credit was attached to it.

THE RUSSIAN FLEET.

STETTIN, May 15.—The Russian fleet has left Helsingfors, in order to join the division of the grand fleet now lying at Cronstadt.

ARRIVAL OF THE DUKE OF CAMBRIDGE AT CONSTANTINOPLE.

A telegraphic despatch announced the arrival of the Duke of Cambridge at Constantinople on the 10th. The ratifications of the triple treaty had been exchanged on the day previous. The French troops at Gallipoli were about to march to Adrianople.

THE WAR ON THE DANUBE.

All the accounts from the seat of war show that the Russians have the worst of it in skirmishing with the Turks. On the 3rd instant six squadrons of Turkish Cossacks and five of Turkish Hussars had an engagement with the Russian Cossacks near Radovan. The affair lasted three hours, and ended with the total defeat of the latter. After the second charge the Russians were in complete disorder, and, quitting their horses, took refuge in a large thicket. Sixty horses fell into the hands of the Turks. A Russian Major, who is lying ill at Kalafat, says the Russians had 130 killed and 12 wounded. The latter, with two guns, were brought to Kalafat. The Turks had 10 killed and 2 wounded. On the 5th instant the Russians were beyond the Sabyl, about two miles and a half from Krajova, and news of fresh rencounters was daily expected.

THE RUSSO-GREEK GOVERNMENT.

Accounts were received in Paris on Thursday, which state that the Russian Government has insured to the Greek Government a subvention of a million of drachmas per month. The Greek Government is said to have granted letters of marque to the pirates who at the present moment infest the Levant!

AUSTRIA AND PRUSSIA.

A rise took place in the French Funds on Wednesday, caused by the increased belief that the Austrian Cabinet has positively declared itself in favour of the Western Powers. This belief has been much strengthened by statements in several German journals, and particularly by the notice which is given in them of the clauses of the convention between Austria and Prussia. According to these statements, it has been agreed that the Two Powers should call formally upon Russia to evacuate the Principalities of the Danube, and that in the event of a refusal each Power is to have full liberty of action. If Austria resolves on offensive operations against Russia, Prussia is not bound to take part in them; but if Russia, in revenge, should attack any portion of the Austrian territories, or excite defection or rebellion in the Austrian provinces against the Government, then Prussia is bound to lend her aid in defence of the integrity of the Austrian territory. The treaty, therefore, although purely a defensive one, would become both offensive and defensive. Russia should make any attack upon Austria. This is important, for it relieves Austria from the fear which she would either have to encounter single-handed with the Western Powers. If Russia should attack her directly by invasion, or indirectly by exciting disaffection and rebellion in some of her provinces, she is sure of the effectual assistance of Prussia.

REPORTED LOSS OF THE "TIGER."—It is stated that she ran ashore a few miles from Odessa. Batteries were brought down, and nothing was to be done but surrender—the crew, 200 men, being made prisoners after a gallant resistance. Two steamers arrived to the assistance of the *Tiger*, but too late. They were, according to the last accounts, firing on the batteries. The *Tiger*, 16, steam frigate, was built at Chatham in 1840, and is 1220 tons and 400-horse power. It is added that Captain Giffard was wounded in the defence of his ship. If these statements should prove to be groundless—and the news comes only by the Russian telegraph—the story will be additional proof of Russian veracity.

THE COURT.

On Monday his Royal Highness Prince Albert, accompanied by Viscount Hardinge, Sir John Burgoyne, and Colonel Torrens, and attended by Colonel the Hon. Charles Grey and Captain Du Pat, left the Wenvoe Castle Station, at a quarter-past eight o'clock, for the Ash Station, on the Alton Branch of the South-Western Railway. From thence, his Royal Highness proceeded to Aldershot-common —Cæsar's Camp, &c.—to inspect the ground selected as the site for a camp, and, after riding over the ground, took the railway again at the Farnborough Station, at half-past twelve o'clock. In the evening the Queen had a dinner party. The company included his Royal Highness the Duchess of Kent, the Duke of Buccleuch, the Portuguese Minister and the Countess de Lavradio, the Earl of Aberdeen, the Marchioness of Ely, and the Earl of Dalkeith.

On Tuesday her Majesty the Queen and his Royal Highness the Prince, attended by Viscountess Jocelyn, Col. Bouverie, and Captain Du Plat, drove to Hampton Court. Her Majesty and his Royal Highness inspected the paddocks at Bushy. The Queen and Prince returned by Twickenham, and paid a visit to their Royal Highnesses the Duke and Duchess of Aumale and her Imperial Highness the Princess of Salerno. On the same day Mr. George G. Adams had the honour of submitting his designs for the opening medal of the Crystal Palace to her Majesty and Prince Albert; and the Prince favoured him with a sitting.

On Wednesday the Queen gave a State Ball at Buckingham Palace.

On Thursday the Queen paid a visit to the Duchess of Gloucester, at Gloucester House. In the evening her Majesty and the Prince Consort honoured the Royal Italian Opera with their presence.

THE STATE BALL.

The Queen gave a State Ball on Wednesday evening, in Buckingham Palace. The entire suite of state saloons were opened for the first time, and were brilliantly lit. The Ball-room and the Throne-room were prepared for dancing; the Picture-gallery was set apart for the assembling of the general company; the Queen receiving the members of the Royal Family in the White Drawing-room.

The invitations to the reception comprised the members of the Royal Family, the whole of the diplomatic corps (with their wives and daughters), foreigners of distinction now in this country, and a numerous circle of the ladies and gentlemen attending the Queen's Court, in all numbering about 1700. Her Royal Highness the Duchess of Kent arrived at half-past nine o'clock, attended by Lady Anna Maria Dawson and Lord James Murray. Their Royal Highnesses the Duchess of Cambridge and the Princess Mary were attended by Lady Caroline Cust and Major Horne Purves. Her Majesty the Queen and his Royal Highness the Prince Albert were conducted by the Lord Chamberlain (the Marquis of Exeter), the Vice Chamberlain (Lord Ernest Bruce), from the White Drawing room through the saloon into the Ball-room, accompanied by their Royal Highnesses the Duchess of Kent, the Duchess of Cambridge, and the Princess Mary, and followed by their numerous guests.

The Queen wore a dress of white crêpe lisse, spangled with gold bouillons, with a white tulle, and trimmed with wreaths of green bay-leaves and red berries, ivy leaves and ribbon grass. The dress was ornamented with diamonds. Her Majesty wore a head-dress to correspond with the flowers, ornamented with diamonds. The Duchess of Kent wore a dress of white silk, brocaded with silver of British manufacture, trimmed with white lace, and having the stomacher ornamented with diamonds. Her Royal Highness's head-dress was formed of white velvet, ostrich feathers, and diamonds. The Duchess of Cambridge wore a dress of green gros de tours, trimmed with white Honiton lace; the stomacher of diamonds and emeralds; the necklace of diamonds and emeralds. Her Royal Highness wore a diamond tiara. The Princess Mary wore a dress of apple-green crape, over a rich gilacé silk petticoat of the same colour; the bottom of the dress was trimmed with crape and garlands of white roses. The Princess had an over-skirt of crape, looped up with garlands of white roses; the stomacher was ornamented with diamonds; the necklace was pearls and diamonds. Her Royal Highness wore on her head a wreath of white roses and green leaves, with diamond stars in front, and diamond and carbuncle stars at the back.

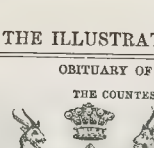
Immediately after the entrance of her Majesty and the august party into the Ball-room, a quadrille was formed, at a quarter before ten o'clock, and the Queen opened the ball with Count Colloredo, the Austrian Minister—the vis-à-vis being his Royal Highness Prince Albert and her Royal Highness the Princess Mary of Cambridge.

The quadrille bands of Mr. Wippert and Messrs. Coote and Tinney were stationed in the rooms appropriated for dancing.

The festivities were prolonged until two o'clock.

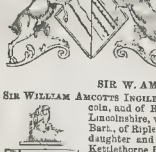
OBITUARY OF EMINENT PERSONS.

THE COUNTESS OF PORTSMOUTH.



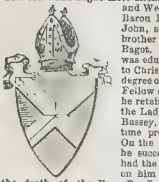
CATHARINE, Countess Dowager of Portsmouth, whose death occurred on the 12th inst., was the second daughter of Hugh, third Baron and first Viscount Fortescue, by his wife, Hester, daughter of the Right Hon. George Grenville, the celebrated statesman. She was married on the 24th June, 1820, to the Hon. Newton Fellowes, who succeeded his brother, as fourth Earl of Portsmouth, on the 14th July, 1853, and died on the 9th Jan., 1854.

SIR W. AMCOTTS INGILBY.



SIR WILLIAM AMCOTTS INGILBY, of Kettlethorpe Hall, county of Lincoln, and of Ripley Castle, county of York, M.P. for Lincolnshire, was the only son of Sir John Ingilby, Bart., of Ripley, by his wife, Elizabeth Emerson, only daughter and heiress of Wharton Emerson, Esq., of Kettlethorpe Park, county of Lincoln, and of Retford, Notts, which Wharton Emerson assumed the surname and arms of Amcotts, and was created a Baronet in 1796, with remainder to the eldest son of his daughter, Lady Ingilby. Consequently, at his demise, the title devolved upon Sir William Amcotts Ingilby, the subject of this notice, who was born on the 20th June, 1783, and who (besides inheriting the Amcotts Baronetcy) succeeded to the parental Baronetcy of Ripley as second Baronet, on the death of his father, the 8th May, 1815—having assumed, in 1812, by Royal permission, the name of Amcotts before that of Ingilby. Sir William married, first, in April, 1822, Louisa, daughter of John Atkinson, Esq., of Maple Hayes, in the county of Stafford, which lady died on the 22nd July, 1836; secondly, he married, on the 27th July, 1843, Mary Ann, only child of John Clementson, Esq., and grand daughter of the late Sir Thomas Turton, Bart. Sir William had no issue by either marriage. He died on the 14th inst., at the house of John Clementson, Esq., 23, Abingdon-street, Westminster.

THE BISHOP OF BATH AND WELLS.



THE Hon. and Right Rev. Richard Bagot, D.D., Lord Bishop of Bath and Wells, was the third son of William, first Baron Bagot, by his wife Louisa, daughter of John, second Viscount Bellingbroke, and was brother of William, second and present Baron Bagot. He was born the 22nd Nov., 1782. He was educated at Rugby, whence he proceeded to Christ Church, Oxford, in 1800. He took his degree of B.A. in 1803; and, in 1804, was elected Fellow of All Souls College, which fellowship he retained until Dec. 1806, when he married the Lady Harriet, youngest daughter of George Bussey, fourth Earl of Jersey, having a short time previously obtained his degree of M.A. On the death of the Rev. Dr. Legge, in 1829, he succeeded to the Bishopric of Oxford, and had the degree of Doctor of Divinity conferred on him by the University, by diploma. On the death of the Rev. Dr. Law, Bishop of Bath and Wells, in 1845, Dr. Bagot was translated to that see. The prelate died at Brighton, on the 15th instant. He leaves issue six sons and three daughters. The eldest daughter is married to the Hon. and Rev. Lord Charles Thynne; the second, to the Hon. and Rev. G. O. Bridgman; and the third, to William Henry, Viscount Downe.

SIR CHARLES WOLSELY, BART.

SIR CHARLES WOLSELY, eighth Baronet of Wolsely, in the county of Stafford, was the eldest son of Sir Charles Wolsely, the seventh Baronet, the well-known politician and supporter of Catholic claims, by his second wife, Anne, youngest daughter of Anthony Wright, Esq., of Wensdale, Essex. Sir Charles, the eighth Baronet, was born in 1813; he married, in 1836, Mary Anne, eldest daughter of the late Nicholas Stonor, Esq., of Acton House, Middlesex, by whom he leaves four sons; the eldest of them, Charles William, born in 1846, is now the ninth Baronet. Sir Charles, the eighth Baronet, who succeeded to the family honours the 3rd October, 1846, died on the 1st inst.

The house and Baronetcy of Wolsely rank among the oldest in the realm.

LIEUT.-GENERAL STAVELY.

LIEUT.-GENERAL WILLIAM STAVELY, C.B., Commander-in-Chief of the Madras Army, passed the greater part of the military service he commenced, under the Duke of Wellington, at Oporto, in May, 1809, that career in which he rose to the rank of Lieut.-General. Stavely shared in the glories of Talavera, Fombal, Redinha, Foz d'Aronce, Sierra de Moira, Fuentes d'Onor, Ciudad Rodrigo, Badajos, Victoria, the passage of the Bidassoa, Nivelle, and Toulouse. He acted also in the campaign of 1816, and was at the battle of Waterloo, and at the capture of Paris, where he was severely wounded. He received the war medal with eight clasps, and a reward of £100 per annum for distinguished service through the Peninsula and the campaign of 1815. Lieut.-General Stavely died in India, suddenly, on the 4th March, while in his carriage, on a journey, shortly after he had left a place called Tippicadoo.

COLONEL SIR JAMES TENNANT, K.C.B.

THE death of this gallant soldier occurred at Mean Meer, British India, on the 6th of March, at the age of sixty-four. At the period of his decease he was Brigadier Commanding at Lahore.

Few officers in the Bengal army have been more actively engaged than Sir James Tennant. In Boondelkund in Oudh, at Kalidgar, at Bhurtpore, under Sir David Ochterlony and Lord Hastings; at Maharajpoor, at Chillianwallah, and finally at Goojerat, in the staff department of Brigadier-General of Artillery, the distinguished veteran earned the highest military reputation. He was also eminent as a mathematician. His loss is deeply deplored.

THE HON. LADY GLYNNE.

MARY, LADY GLYNNE was the second daughter of Richard Aldworth, second Lord Braybrooke, by his wife Catherine, fourth and youngest daughter of the Right Hon. George Grenville; consequently, Lady Glynne was the first cousin of the present Portsmouth, whose decease is above noticed: both ladies were nieces of the first Marquis of Buckingham. Lady Glynne was married on the 11th April, 1806, to Sir Stephen Richard Glynne, eighth Baronet of Hawarden Castle, Flintshire, who died on the 5th March, 1815, and by whom she had issue two sons (the elder, Stephen, is the present and ninth Baronet) and two daughters viz., Catherine, married the 25th July, 1839, to the Right Hon. W. E. Gladstone, M.P. and Chancellor of the Exchequer; and Mary, married the 28th July, 1838, to Lord Lyttleton.

Lady Glynne's death has just occurred at Hagley Hall, in her sixty-eighth year.

THE MISSING "CITY OF GLASGOW."—LIVERPOOL, Thursday Evening.—A report is in circulation to the effect that the *City of Glasgow* has foundered at sea, but that the crew and passengers were saved, and had been conveyed to the coast of Africa. The rumour is found upon the letter which it is said has been received by a gentleman in Londonderry, from a Mr. Smith, one of the passengers.—The steamer *Arabian*, which sailed yesterday, was reported off Point Lynas this afternoon, putting back with machinery damaged; and, having been on shore, she will have to dock immediately.

MEDICAL BENEVOLENT COLLEGE.—The first annual meeting was held on Thursday, at the Hanover-square Rooms, Earl Manvers in the chair. The income from the Medical College was £18 000. A plot of land (of 12 acres) has been granted by the Bishop of Ely, on which it is intended to build the College, at Epsom, at a cost of £30,000, to contain accommodation for 200 residents, a chapel, offices, &c.

SECRET SOCIETY IN GREECE.—A letter from Athens, in the *Presse* of Vienna, says:—"A secret society, similar to the old Vehmgerichte of Germany, exists here. The members of it are obliged to swear on their admission that they will kill any enemy of the country, whoever he may be, except the King and Queen. Whoever is not for the insurgents is considered a traitor. The King cannot act otherwise than he does, for he would expose his life. That is why a Prussian corvette is anchored off the Piræus, in the expectation of certain eventualities."

NAVAL AND MILITARY INTELLIGENCE.

WE are assured that the long-looked for brevet will immediately take place. It will include all the Colonels of 1846, but even in that case it will not give many to choose from for a command.

MAJOR-GENERAL the Honourable Sir George Cathcart is expected home from the Cape of Good Hope, and it is currently stated the gallant officer will be employed in the East.

BRIGADIER-GENERAL THE EARL of CARDIGAN reached Paris last week, en route to assume the command of the Light Cavalry now assembling at the seat of war. The regiments destined for Turkey are being embarked with greater expedition than has heretofore been manifested; but, in all probability, the staff officers attached to the Earl of Lucan's division will reach their destination prior to the arrival of the mounted force. Lord Cardigan expects to join the army at Scutari by the 22nd or 23rd of the present month. His Lordship has appointed Capt. Viscount Dupplin, 1st Life Guards (eldest son of the Earl of Kinnoul), and Lieutenant R. Fitzharding Berkeley Maxse, of the 21st Royal North British Fusiliers, his Aides-de-Camp. Major Mayow, unattached, has been selected as Brigade Major.

THE first promotion for the Russian war has been conferred upon Commander John Bourmaster Dickson (1847), Commander in Admiral Dundas's flag-ship *Britannia*. He has been promoted to the rank of Captain for his gallant services in command of the rocket-boats at the late Bombardment of Odessa.

FOOD FOR THE BRITISH TROOPS IN TURKEY.—The authorities at the Horse Guards have had under their consideration a newly-invented meat cake, which seems to be admirably adapted for soldiers engaged in a campaign like that in which we are about to embark in Turkey. Each cake allows three good meals, weighs ¾ ounces, divided in three rations of 2½ ounces each, which can be eaten dry, or when broken up and mixed with warm or cold water affords a nutritious soup. These meat cakes are easily stowed away in a soldier might, in his coat, carry a dozen in his haversack, to be used as reserved rations whenever the supply of other provisions failed, thereby being independent of the commissariat for twelve days. Mr. O'Brien, in the second edition of "A Residence in Wallachia," referring to this invention, says, "I have more than once tasted the soup made from these cakes, and found it excellent." Mr. Colquhoun has approved of them so highly that he sent some to Constantinople, with a recommendation that they should be used in the Turkish army.

THE ARMY IN IRELAND.—The reduction that has taken place in the Irish military establishment, in consequence of the war, amounts to about 9000 men. The present force consists of five regiments of cavalry, and six regiments of infantry; there are, besides, twenty-seven regimental depôts: making altogether, exclusive of artillery, a force of 14,700 men.

ORDERS have been issued for 1000 of the Minié rifle muskets peculiarly manufactured in the year 1851, to be sent out to Turkey with the least possible delay, to replace those now in use by a portion of the troops stationed in the East.

THE Admiralty, anxious to provide additional medical assistance of some sort for the navy, have consented to accept the services of young men waiting two years of completing their apprenticeship, as clerkships, at a salary of £100 per annum.

THE GUN-BOATS FOR THE FLEET.—The new gun-boats building by the Admiralty are to carry guns of the heaviest calibre used in the navy, and are to be propelled with screw machinery, so placed as to be altogether out of reach of shot, the machinery being under the waterline; they will also have the advantage of being the swiftest steamers in the fleet, as well as most formidable gun boats. Half a dozen of these are equal to a hundred of the Russian gun-boats, and will be much better adapted for war purposes than paddle-wheel gun-boats. To meet the requirements of the war, a class of gun-boats of smaller tonnage, and of less horse-power machinery, is also being constructed.

EXPLOSION OF A BALTIC GUN-BOAT.—The Government gunboat, the *Jasper*, blew up on Monday morning, twelve miles off Beachy Head, but happily no life was lost. The *Jasper*, with thirty three hands on board, left Portsmouth Harbour on Saturday morning for the Baltic, under the command of Lieutenant Crowley, having about two tons of powder on board, and other ammunition. They had proceeded as far as Beachy Head, when about half-past six o'clock they discovered a leak between the boiler and the powder magazine. Every effort was made to extinguish the flames, but without avail, for at last they deemed it expedient to quit the ship in their three boats. They lay by the vessel at a safe distance, and about half past nine o'clock the vessel blew up. The crew were picked up by the *Vanguard*, of Liverpool, which took them to within three miles of Brighton, where they were safely landed in their boats at seven o'clock in the evening, having lost nearly everything on board.

THE MIDDLESEX MILITIA.—The 1st Royal Middlesex Regiment of Militia, which is now in course of training at Hampstead, had the honour of a visit yesterday (Friday) week from his Royal Highness the Prince Consort and the Prince of Wales, attended by the Hon. Colonel Feilding. His Royal Highness the Prince Consort inspected the regiment and expressed himself astonished and delighted at their proficiency.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. R. W. Buck to Eaton Bishop, Sussex; Rev. F. Fitzpatrick to Framstown; Rev. A. Gedge to Ledborough, Lincolnshire; Rev. C. Hare to St. Maughans; Rev. Dr. F. C. Hawtrey, Provost of Eton College, to Farnham Royal; Rev. H. G. Reynolds to Grimley; Ven. J. Sandford to Alvechurch, near Bromsgrove; Rev. Dr. S. L. Townsend to Louth. *Vicarages:* The Rev. J. Graves to Kelmscar, diocese of Ossory and Ferns; Rev. F. Storr to Bercsley. *Incumbencies:* The Rev. W. R. L. Bennett to Holy Trinity Church, Dover; Rev. R. Boys to Looe, near Maidstone; Rev. E. T. Cardale to Flax Bourton, Somerset; Rev. F. T. Gregory to St. Mary's Friar, Wrotham; Rev. H. Morse to Henfenewe, near Lampeter; Rev. J. Peel to Hornsby and South, Yorkshire.

TESTIMONIALS.—The Rev. M. Duggan, from the congregation of Harworth, near Bawtry; the Rev. W. H. Buck, Curate of S. George-the-Martyr, Southwark; a rich suit of robes, a pocket silver communion service, and a purse of money.

The new church at Eton is to be consecrated on the 1st of June, The Archbishop of Canterbury, and the Bishops of Oxford, Winchester, Bangor, and New Zealand are expected to be present.

MR. DRUMMOND AND THE MEMORY OF SIR JOHN MOORE

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—In your last Number, some assertions of Mr. Henry Drummond relative to Sir John Moore have been commented on; and if those assertions have been correctly reported, the hon. member has, with the best intentions, fallen into a grievous error.

I have seen most of Sir John Moore's letters written during his last campaign; I have studied his journal; my brother was his aide-de-camp and I am well acquainted with Colonel Seaton, who was his military secretary; and I knew intimately the late General Anderson, his bosom friend. From none of those sources could I collect that Sir John Moore ever read, much less took to heart, the newspaper criticisms of the day, during his operations. Moreover, if my memory serves me well, no attacks were made upon him, until after his glorious death. Certainly he was not of a temperament to be disturbed by such things; and as to their causing him to neglect the safety of his troops, the gist of all the flimsy censures which have been published on his conduct, is that he took too much care of their safety, and should have risked more!

I remain, Sir, your obedient servant,
WM. NAPIER, Lieut.-General.

ROMAN CATHOLIC MEETING.—There was an immense attendance at the Round Room of the Rotunda at the meeting held at Dublin on Monday. The Lord Mayor of Dublin presided. Resolutions founded on the Papal Encyclic Declaration," were adopted. A stormy scene occurred in consequence of an offensive allusion by the Rev. Mr. Marshall to the present position of affairs. Albert at the Festival of [illegible] was met by the Clergy. Mr. Maguire was called to order by the chairman, and, after fifteen minutes' uproar, was allowed to proceed. A letter (indescribable confusion. Another disturbance was created by Mr. John Reynolds, late M.P. for Dublin, who was hooted by the Catholics as the editor of the *Tablet*. The proceedings terminated in the usual confusion.

GRAND LEVEE AT BUCKINGHAM PALACE.—On Tuesday last, the noble and [illegible] held a levee at St. James's Palace, on behalf of Her Majesty, in the absence of the Queen. Upwards of [illegible] Regiment of Militia, of which Earl Cadogan is Colonel, in the Chair.

A CHAIR MADE OF THE "HEIR OF MELVILLE."—Lieut.-General Sir Arthur Benson has had a chair made of the wood of the Melville Hotel, and added to the wax-work collection in Baker-street.

LAUNCH OF "THE ROYAL ALBERT."—HER MAJESTY RECEIVING THE WIFE FROM THE MASTER SHIPWRIGHT.—(SEE PAGE 470.)

LAUNCH OF 'THE ROYAL ALBERT,' SKETCHED FROM THE RIVER.—(SEE PAGE 476.)

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

THE MILITIA.—ADDRESS.

The Duke of NEWCASTLE moved an Address to the Crown, in reply to the Message respecting the Militia, praying her Majesty to call out the whole or such part of the militia as her Majesty might think fit.

After some observations from Lords GREY and DERBY—who, admitting the propriety of the step about to be taken with regard to the militia, insisted on the necessity which existed for carrying it out with the least possible appearance of a breach of faith towards those who had enlisted in the militia.—The Address was agreed to.

HOUSE OF COMMONS.—MONDAY.

LONDON CORPORATION.

Lord J. RUSSELL, in reply to Mr. I. DUNCOMBE, said, it was not the intention of the Government to introduce a measure during the present session founded upon the report of the Commission appointed to inquire into the Corporation of the City of London.

THE MALT DUTY.

On the order for the second reading of the Excise-duties (Malt and Spirits) Bill,

Mr. CAYLEY moved to defer the second reading for six months. In taking this course he professed to be actuated solely by a sense of public duty, believing that the increase of the Malt-tax was not only unjust, but inconsistent with the principles of commercial policy which had been adopted by the present Government. With regard to the war for the prosecution of which these taxes were required, he acknowledged, and endeavoured to show, that it had been brought about by negotiations at once infirm of purpose, vacillating, and obsequious, and by the want of a firm and stable mind in her Majesty's Councils. Having, however, been plunged into war, the country, he observed, was willing to vote the supplies for carrying it on, but not in an unequal and unjust manner. What reason was there why malt should be taxed in preference to cotton yarn? The effect of a Malt-tax was to enhance the cost of the article four-fold; its repeal would reduce the price of beer to 1d. per pot, while it would give an impulse to the cultivation of barley that must diminish in the same proportion the growth of wheat and oats, and consequently raise their prices—a compensation for the repeal of the Corn-laws. Having recapitulated his objections to the tax upon the ground of the burden it cast upon the landlord, the farmer, and the consumer, Mr. Cayley expatiated upon its mischievous effects in a more limited point of view.

The amendment was seconded by Mr. STANHOPE, who objected to the additional Malt-tax because it was excessive in amount, and was levied unfairly upon one class, and because there was no real necessity for raising this particular tax in the exigency of the war, it being required only to remedy the financial errors of the last session.

Lord MONCK briefly replied to some of the arguments of Mr. Cayley.

Colonel GILPIN said, the feeling of the agriculturists with whom he had communicated was unanimously against this tax, to which he objected also, because he believed it would not produce what was expected, nor compensate for the burden it would cast upon the public.

Mr. WARDEN opposed the amendment, defending the financial measures of the Government and the expediency of the tax.

The Marquis of GRANBY and Mr. POLLARD-URQUHART supported the amendment.

Mr. CROSSLEY opposed it, as did also Mr. BALL.

Mr. Bentinck, Mr. Barrow, and Mr. Newdegate supported the amendment.

Mr. J. WILSON observed that, as the House had approved the policy of the war, what it had to consider was, the means by which it should be carried on. Experiments made by increasing the Customs-duties had always failed, whereas an increase of the Malt-tax had never hitherto failed. The argument that the additional duty fell upon the producer, not the consumer, was refuted by the fact that there had been no reduction in the price of barley, and that the brewers had announced their intention to raise the price of beer a little beyond the amount of the duty.

Mr. SPOONER supported the amendment, insisting upon the injustice and inequality of the tax

Sir C. BURRELL entirely coincided with Mr Spooner.

Mr. SANDARS was disposed to find Government the ways and means by which the war might be brought to an early termination, and was of opinion that £2,500,000 could not be raised with so little disturbance of the industry of the country as by an increase of the Malt tax.

Mr. FLOYER strongly condemned a tax which fell upon a necessary beverage of the agricultural poor.

Sir E. B. LYTTON, after a general criticism of the Budget, said it was true that the Malt-tax fell upon the consumer; but did it for that reason less indirectly affect the home producer? He cited the authority of Mr. M'Culloch, who said that this tax "indirectly, if not directly, is especially injurious to the agriculturist."

Mr. DRUMMOND asked if it was possible to propose a single tax which the stupidest man in the House could not find an objection to? Were they go up to raise money for the war or not? If they were, the only question was from whose pocket it was to come. As for getting rid of the Malt-tax, the country would be lucky if that and the Income-tax were not doubled.

Sir J. PAKINGTON felt the painful position in which his party were placed in being compelled to object to any proposal for meeting the expenses of a war in the justice of which they had concurred; but the blame rested with the Government.

Lord J. RUSSELL said, the question before the House was, whether, when a formidable military Power threatened to swallow up one of our allies, is 3d. a bushel upon malt was too great a sacrifice Unless taxes were imposed upon articles of general consumption, a revenue could not be obtained; and if they were laid upon articles of necessity, they would occasion great hardship among the community at large. The object, therefore, was to levy the taxes upon articles of general consumption which were not articles of necessity; and there were none to which the description so strictly applied as those of spirits and malt. "Don't tell me," said the noble Lord, "that the tax is so objectionable that you are ready to vote any other, and that the landed interest will resist this small addition to the Malt-duty; tell me not that this is really the obstacle which prevents you from supporting the Government, but that, although you are in favour of the war, you are not ready to vote the necessary supplies."

Mr. DISRAELI supported the policy of the war; but a statesman ought to think of something more than the amount of the burden; the principle of the tax must enter into the contemplation of the House of Commons, and, if neglected by the House, would not escape the reflection of the people. He opposed this additional tax on malt, because it was unjust to those who were to pay it, and because it was unnecessary to have recourse to it

Upon a division, Mr. Cayley's amendment was negatived by 303 against 195.

The bill was then read a second time

Lord PALMERSTON brought down a Message from her Majesty relative to calling out and embodying the militia.

HOUSE OF LORDS.—TUESDAY.

The Nuisances Removal Bill passed through Committee, and the Benefices Augmentation Bill was read a third time.

TAXES ON LAW PROCEEDINGS.

Lord BROUGHAM brought under notice the subject of taxes on law proceedings. He complained of the heavy fees imposed upon suitors in the county courts. From returns, it was shown that in the superior tribunals the fees imposed upon actions for debt amounted to only £30 000 a year, while the aggregate paid in the county courts was £261,000—show ng an average of 30 per cent on the amount recovered. His Lordship moved Resolutions embodying his views.

The LORD CHANCELLOR concurred generally in the views expressed by Lord Brougham, but thought it would be inexpedient to adopt the suggestions at present. The whole question would be considered when the report of the County Courts Commission was received.

The resolutions were negatived.

HOUSE OF COMMONS.—TUESDAY.

THE PERIODICAL PRESS.

Mr M. GIBSON called the attention of the House to the present unsatisfactory state of the law affecting the press He remarked that the position of the law was now this, that observations on facts might be permitted, but facts themselves might not be stated. It needed the refined intellect attributed to the Chancellor of the Exchequer to introduce such a law. If he (Mr. Gibson) chose to publish Admiral Dundas's regrets that he had been compelled to bombard Odessa, he laid himself open to a penalty, but if he published a violent attack upon the Admiral for neglecting his duty, he might do so with impunity. He urged that public policy demanded that, if observation and discussion were permitted, facts, which corrected erroneous theory, ought also to be allowed. This was a practical grievance, for numerous parties were interested in the question, and prosecutions were going on for alleged infractions of the law. He called upon the Government to remember that they could not subsist entirely on war, and begged that at the next general election they would enable their supporters to say that they had tried to do something to ameliorate the law on this subject. Dwelling upon the importance of a good and cheap press as a means of education, he moved a resolution to the effect that the laws in reference to the periodical press and newspaper stamps were ill-defined and unequally enforced, and that the subject demanded the early consideration of Parliament.

Mr A. KINNAIRD seconded the motion.

The ATTORNEY-GENERAL admitted that the law was in a most complicated and anomalous state, and required improvement. Observing that some inconvenience might follow the passing of the resolution before the House, he moved the previous question.

Mr. EWART argued that, as the *odium theologicum* prevented a system of national education from being adopted, the people ought not to be denied the right to educate themselves by means of the press.

Mr. HUME was afraid that the professions of the Government as to the education of the people were all sham, for they doggedly adhered to the old system of preventing the diffusion of knowledge amongst the people by means of cheap unstamped newspapers. The taxes on knowledge tended to keep the working classes of this country in vice and ignorance.

The SOLICITOR-GENERAL could not agree to the language of that resolution being adopted by the House, because it would imply very great reproach on the Government, namely, that the law had been unequally enforced. The law had not been unequally enforced from any design, caprice, or inconstancy of purpose. No doubt, the point respecting the security to be given by the publishers of newspapers was one deserving of attention. There was in the existing law relics of the six Acts of 1819, which he thought might be well got rid of (Hear, hear); and a bill might very properly be introduced for the purpose of making the law more simple and uniform on the subject.

Sir J. SHELLEY believed that a free circulation of newspapers would do more to promote education, than any system which had been devised (Hear, hear).

Mr. CROSSLEY could not agree that, because we were at war, they ought not to consider their system of taxation. They ought rather to see whether it could not be improved. He would suggest that the taxes on newspapers should be taken off, and a heavy stamp imposed on bankers' cheques

Mr. BRIGHT refused to be satisfied with smooth words from the law officers of the Crown. Their promises, he remarked, never touched upon the great evil of the case. The Government did not maintain the newspaper stamp and other restrictions on the press merely for the sake of revenue. The tenacity with which these burdens were defended arose from a wish to impede the circulation of one single class of intelligence, that, namely, relating to political subjects. At present newspapers were only accessible to the working man at the public-house.

Lord PALMERSTON suggested that the resolution should be modified, and might then be allowed to pass. The noble Lord at the same time expressed his full concurrence in the opinion that the means of affording information to all classes of the people should be rendered as wide as poss.ble.

Mr. M. GIBSON, in reply, declined to change the tenor of his motion.

Lord PALMERSTON having obtained from the right hon. member an admission that his resolution involved no censure upon any Ministerial department or office, consented to waive all opposition. The amendment of the "previous question" was then withdrawn, and the resolution passed without a division

Mr. BLAND obtained leave to introduce two bills—one, "for a better and more general mode of taking the average price of corn and other agricultural produce in Ireland;" and another, "to provide for the annual valuation of rent-charge, in lieu of tithes, in Ireland, with reference to the averages of the last seven preceding seven years."

Mr. MALINS obtained leave to bring in a bill to enable married women to dispose of reversionary and other interest in personal estate.

The Queen's Message on the subject of the Militia was considered; and an Address, in answer, ordered to be presented.

HOUSE OF COMMONS.—WEDNESDAY.

The Registration of Bills of Sale Bill passed through committee.

The second reading of the Burgh Boundaries (Scotland) Bill was negatived without a division.

The Episcopal and Capitular Estates Bill was read a second time *pro forma*, and ordered to be committed on the 21st of January, it being understood Government will bring forward a measure on the subject as soon as they can mature one.

The Drainage of Lands Bill was read a second time, and ordered for committal on Wednesday next.

The Manning the Navy Bill and Navy Pay Bill were severally reported as before in committee, and the reports agreed to.

HOUSE OF LORDS.—THURSDAY.

THE FAMILIES OF OUR SOLDIERS IN THE EAST.

The Duke of NEWCASTLE, in reply to Lord St. Leonards, stated that it was not the intention of the Government to interfere with voluntary or private societies in the dispensation of the large funds collected under the Army of National Humiliation for the wives and children of our soldiers in the East. The Government, however, thought it advisable that a Royal Commission should issue, whose duty should be to distribute the relief of the widows and orphans of such of our soldiers as were killed in action.

IRISH LAND BILLS.

The Duke of ARGYLL moved that their Lordships should go into committee upon the Law of Landlord and Tenant (Ireland) Bill, and upon the Powers of Leasing (Ireland) Bill. Those two measures had been referred to a select committee, and had now come down to the House, having undergone certain alterations.

After considerable discussion, the bills passed through committee.

HOUSE OF COMMONS.—THURSDAY.

In reply to Mr. Collier, Lord J. RUSSELL stated that the Government hoped to be able to proceed with the Testamentary Jurisdiction Bill this session.

The noble Lord also said, in reply to Mr. Bright, that the correspondence relative to the state of Greece was in the hands of the printers, and would be shortly laid before the House.

In answer to a question from Sir J. Pakington, the noble Lord stated that the Government meant to proceed to-morrow (Friday) with the Excise-duties Bill in Committee, and then with the resolutions relating to the Sugar-duties, the Income-tax, and Stamp duties; but, inasmuch as the Chancellor of the Exchequer would not be able to attend the House until Monday, they did not intend to bring forward the resolutions on the subject of the Exchequer Bonds until the latter day.

THE RUSSIAN FLEET IN THE CHINESE SEAS.

Sir J. GRAHAM, in reply to Mr. A. Pellatt, stated that the Russian fleet, which was a small one, in the Chinese Seas, had, according to the most recent accounts, sought shelter in Manilla, and afterwards in Batavia. Orders had been sent out to our naval force there to watch that fleet, and he had no doubt but a satisfactory account would be given of it by the British and French squadrons.

REAL ESTATE CHARGES BILL.

Mr. L. KING moved the second reading of the Real Estate Charges Bill

Mr. MULLINGS moved that it be read a second time that day six months. He thought that the bill, if passed, would form a fertile source of litigation

The SOLICITOR-GENERAL gave the measure a qualified support.

Mr. HALINS thought it would be a waste of time to proceed to consider in committee a measure open to so many objections.

After some further discussion, the second reading of the bill was carried by 166 votes to 124.

CONVENTUAL AND MONASTIC INSTITUTIONS.

The adjourned debate on the nomination of the committee upon Conventual and Monastic Institutions was then resumed.

Mr. NEWDEGATE referred to the repeated attempts made to prevent the success of the motion of Mr Chambers by an abuse of the forms of the House, which left the majority completely at the mercy of the minority. He could see no advantage to be gained by a perseverance in that unseemly struggle. Under those circumstances, he recommended Mr. Chambers to withdraw his proposition, and to take some other course of carrying out the views of the great majority of that House, as well as of the country at large.

Mr. BRIGHT denounced the proposition as most unjustifiable, and unbecoming the character of that House; and condemned the bigoted and acrimonious language of many of those members that had voted this inquiry.

Mr. I. CHAMBERS consented to withdraw his motion, considering physically impossible, at this period of the session, to carry it against vexatious objections of a few members that formed part of that minority who objected to any inquiry. He did not, however, mean to abandon the question, but he would renew it in another form.

Lord J. RUSSELL rejoiced at the motion being withdrawn; although he did not exactly approve of the principle of a majority of that House yielding to a minority.

Sir J. PAKINGTON though that the minority overruling the majority in the present case was a most dangerous precedent, and might be followed, on future occasions, under circumstances which the noble Lord did not seem to apprehend.

After a few words from Mr. COGAN, and some other members,

The SPEAKER put the question, when, in consequence of a call for division, the votes were taken, the result of which proceeding was as follows—For the discharging of the Order, 100; against it, 1: majority, 99.

The Gaming Houses Bill passed through committee.

The Merchant Shipping Bill was read a second time.

The Manning the Navy Bill and the Navy Pay Bill were read a third time and passed.

HOUSE OF LORDS.—FRIDAY.

REPORTED LOSS OF THE "TIGER" STEAM-FRIGATE.

In reply to the Earl of Malmesbury, the Duke of NEWCASTLE said that though he was not able positively to contradict the rumour of the loss of the *Tiger*, at Odessa, he had some reasons for thinking that the rumour was untrue. The only information received by the Government on the subject, was that conveyed in a telegraphic message received yesterday by a mercantile house in the City, containing the same rumour as had appeared in the public newspapers. The steamer that described as having been lost was represented to be a screw-steamer, whereas the *Tiger* was a paddle-wheel steamer. In reference to a statement said to have appeared in the *Moniteur*, with respect to a proposal made by Admiral Dundas to Baron Osten Sacken, at Odessa, for the exchange of prisoners, the facts were shortly these:—About forty fifty prisoners were taken from Russian coasting vessels by our ships in the Black Sea. Admiral Dundas, believing that some English sailors in the same class, while in the harbour of Odessa, were detained as prisoners by the Russian authorities, wrote to Baron Osten-Sacken, proposing the exchange of prisoners. Baron Osten-Sacken wrote a courteous letter on the same day in reply, informing Admiral Dundas that he had referred the questions in reference to an exchange, but that he would immediately write to Prince Paskiewitsch upon the subject. He (the noble Duke) had received no information as to any answer having been received from the Prince, but he had no reason for supposing that Admiral Dundas had released his prisoners. The Government had recently sent to Admiral Dundas instructions as to the treatment and disposal of the prisoners taken during the war.

The Railway and Canal Traffic Regulation Bill was read a second time.

The Boundary Survey (Ireland) Bill passed through Committee.

HOUSE OF COMMONS.—FRIDAY.

Lord J. RUSSELL, in answer to a question from Mr. Hutchins, stated that from recent intelligence received from Madrid, her Majesty's Ministers had every reason to hope that there would be an amicable settlement of the difference created between the Governments of Spain and the United States by the affair of the *Black Warrior*.

Sir J. GRAHAM, in reply to Mr. Alexander, said that the Board of Admiralty thought it advisable for the present not to take as apprentices to the Royal Navy boys from the workhouses, either in England or in Ireland.

The right hon. Baronet, in reply to Mr. Hume, made a similar statement in reference to the reported loss of the *Tiger* steam-frigate, that made by the Duke of Newcastle in the House of Lords.

THE EXCISE-DUTIES BILL.

The House then went into Committee upon the Excise-duties Bill.

Mr. E. YORKE stated that he would not press the motion of which he had given notice, that the proposed increase to the Malt-tax should continue for one year.

The second clause having been put, some discussion arose as to the period at which the Malt tax should cease. It was ultimately arranged that it should cease with the 5th of July following the ratification of a definitive treaty of peace.

Sir J. TROLLOPE took occasion to observe that, in his opinion, the best policy to have pursued would have been to restore the Beer-tax on the abolition of that tax had not exercised a favourable effect upon the public morals, and it had contributed to produce the evils of the present licensing system.

The Bill passed through Committee.

SUGAR DUTIES.

The House then went into Committee of Ways and Means.

Mr. WILSON moved the proposed new scale of Sugar-duties.

Mr. MOFFATT complained that the Government proposal would introduce a sliding-scale into the Sugar-duties, and would therefore be productive of considerable confusion and inconvenience.

Sir JOHN PAKINGTON expressed his gratification at certain concessions made by the Government to the sugar trade.

Mr. CAIRNS and Mr. D. SEYMOUR severally objected to the proposal of extending the duty of 12s. 6d. (with 15 per cent) to the 16th of August, instead of allowing the duty of 12s. to date from the 5th of July. Also would necessarily be incurred by those traders who had acted on the statement of the Chancellor of the Exchequer.

Mr. GOULBURN said that, if traders speculated upon statements made by the Chancellor of the Exchequer, they should be prepared to abide by the consequences

Mr. WILSON denied that the Government had changed their intention upon the subject. The Chancellor of the Exchequer would have brought his resolution under the notice of the House on the evening he had made his financial statement, if he had not been advised to postpone the details of his scheme.

Mr. RICARDO maintained that, under that proposal, the pledge given by the Chancellor of the Exchequer would not be kept.

Mr. A. HASTIE thought that the House ought not to undertake to protect a few over adventurous speculators at the expense of the public

The resolution was ultimately agreed to, upon the understanding that the subject should be open to further consideration; and the remaining resolutions with reference to the Sugar duties were also adopted.

INCOME-TAX.

Upon a solution for doubling the Income-tax having been moved,

Mr. WILLIAMS moved that "before the country shall be subjected to additional taxation, real property shall be made to pay the same Property-tax as is now payable on personal property; and that corporate, collegiate, and ecclesiastical property shall pay a duty equivalent amount to the Probate and Legacy-duties levied on other kinds proper y."

Mr. WILSON said that the hon. gentleman was in error in respect the Probate-duty. The Probate-duty was, in fact, a stamp duty, and a balance were struck between the amount of stamps issued for the purpose of transferring real property and personal property, it would be found to be largely against real property. In regard to the latter part the hon. member's motion, he was not inclined to dispute the justice of the case to some extent. A bill was in preparation for the extension of the succession-duty to corporate property; but, in consequence of the difficulties that surrounded the subject, and of the circumstances in which the country was placed, he could not pledge himself that it would be brought forward in the present session.

After some further discussion Mr. WILLIAMS withdrew his amendment.

A resolution was next adopted, granting the sum of £8,000,000 out of the Consolidated Fund towards making good the supply granted to her Majesty.

Resolutions were then proposed for altering the existing stamp duties and imposing certain stamp duties upon foreign bills of exchange.

Mr. PHINN brought under the notice of the Committee the advantage of rendering all cheques on banks liable for the future to the penny stamp.

Mr. GLYN thought that the adoption of such a tax would lead to the imposition of a heavy charge upon trade

Mr. BRIGHT believed that the proposed tax might be advantageously substituted for the existing newspaper stamp.

Mr. PHINN having declined to press any resolution upon the subject, the Stamp-duties resolutions were agreed to

Mr. J. G. PHILLIMORE proposed the second reading of the Chiltern Hundreds Bill

Mr. H. FITZROY opposed the Bill.

After some discussion the House divided, when the second reading of the Bill was rejected by a majority of 113 to 39.

SONNET:

Suggested by Mr. Ward's picture, in the Royal Academy Exhibition; representing the Earl of Argyll asleep in prison the night before his execution. Engraved in the ILLUSTRATED LONDON NEWS, No. 631.

ARGYLL! though pent in by a dungeon's wall,
Condemn'd to lie in felon fetters bound,
Yet dost thou calmly breathe in peace as sound
As formerly within thy lordly hall:
Plain proof that, ever amidst disastrous fall,
There is a power and majesty profound
In conscious virtue, which no despot crowned
By eyes and bolts and bars can e'er enthral.
Sent from the Council by the King's decree
A minion, worthy of such mandate foul,
Who came to jeer and taunt with bitter glee
Thy piteous doom and noisome prison hole,
Awed into reverence stood abashed to see
The peaceful grandeur of a righteous soul.

Note.—The sign + denotes above the average and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The reading of the barometer has varied but little during the week, the highest reading being 30.21 inches on the morning of the 12th, and the lowest 30.06 inches on the morning of the 18th. The mean for the week, at the height of eighty-two feet above the level of the sea, was 30.173 inches.

The mean temperature of the week was 52·9°, being 0·6° above the average of the corresponding week during 38 years.

The range of temperature during the week was 33·2°, being the difference between the highest and lowest readings of the thermometer on the 17th

The mean daily range of temperature during the week was 22·8°: the greatest was 25·2°, on the 17th; and the least 10·4°, on the 13th.

Rain fell slightly on the 18th.

The Weather on the 12th was fine, but the sky was obscured by thick haze during the morning; the sky was tolerably free from cloud from the 13th to the 17th (particularly on the 14th and the 17th, when it was cloudless), and the weather fine throughout; on the 18th the weather was dull, and the sky overcast. The wind has been in gentle motion only during the week.

Lewisham, May 19, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—During the week, ending last Saturday, the births of 1872 children were registered in the metropolitan districts: of these 976 were boys, exceeding the average of the nine corresponding weeks of the nine preceding years by 117; and 876 were girls, exceeding the average of the same weeks by 37. The number of deaths during the same weeks decreased to 1083: the numbers in the three preceding weeks being 1193, 1211, and 1263 respectively. The average of the ten corresponding weeks of the ten preceding years, corrected for increase of population, is 1041. The mortality is, therefore, still in excess of the estimated amount.

NEWSVENDERS' BENEVOLENT AND PROVIDENT INSTITUTION.—The fifteenth annual general meeting of the institution will be held at Anderton's Hotel, Fleet-street, on Monday evening next, to receive the committee's report, decide on an application for a pension, elect officers for the ensuing year, and to confirm the election of Mr. Charles Dickens as president (who has consented to accept the office), in the room of the late Mr. James Harmer

DINNER AT THE MANSION-HOUSE.—On Tuesday night, according to ancient custom, the Lord Mayor entertained her Majesty's Judges at the Mansion-house. A magnificent entertainment was provided for the occasion by Messrs. Staples, of the Albion Tavern, and the company invited comprised a large number of Aldermen and Sheriffs. The loving cup was sent round with the customary formality, and after the loyal toasts had been disposed of, the Lord Mayor proposed "the Church, by him was acknowledged by the Archbishop of Canterbury. His Lord ship then gave "the health of the Judges." Lord Campbell responded in graceful terms, and, alluding to the recent report of the Royal Commissioners, enjoyed the services which, at different periods in our history been rendered to the cause of constitutional liberty by the Corporation of the City of London. England, he said, would not be England without the Lord Mayor. He loved the Lord Mayor's Day and the Lord Mayor's Show; and he expressed a hope that, in discharging the duties of the Board, the Judges might not, according to the recommendation of the Commissioners, be disseverated from the chief magistrate and aldermen of the City. The large number of guests who appeared in official costume, and many ladies present, imparted a very gay appearance to the banquet, which passed off with unusual éclat. Among the company were—the Duchess of Somerset, the Archbishop of Canterbury, Lady Frances Pratt, the Marquis Camden, Lady Ann Beckett, the Earl of Munster, Lady F. Bentinck, the Earl of Malmesbury, the Earl and Countess of Bradford, Lord Campbell and Lady Strathleden, nearly all the Judges, and many Members of Parliament.

HORTICULTURAL SOCIETY.—The first show of the season was held at Chiswick, on Saturday last; but, owing to the launch of the *Royal Albert* taking place on the same day, the number of visitors at the Gardens was unusually small, and the array of fruits and flowers was not by any means equal to the average. There were, however, some very fine specimens of azaleas, rhododendrons, and roses. Some of the latter were in fine perfection—full of leaf and rich in colour. In the fruit collection there were some specimens of British Queen strawberries, of tempting richness and monstrous size; there were also some good contributions of pines, green figs, and grapes.

THE RAGGED SCHOOL FANCY FAIR, announced in our Journal of last week, was held at the Portland Bazaar on Monday, Tuesday, and Wednesday; the proprietors having generously placed at the disposal of the committee both ends of their spacious building. The new year's art toys, and also the entire profits arising from the sale of their own stock during that period. The visitors number in several thousand. The whole of the art toys, and other stock of the Bazaar, were sold, and it is proposed to keep a portion of the Bazaar exclusively for the sale of articles made by the children of the Ragged Schools.

THE CRYSTAL PALACE AT CHELTENHAM, 400 ft. long, and 90 ft. wide at the transepts, which has been erected in the grounds of the Royal Old Wells, will be opened on June 1: a portion has been fitted up as a "Fine Arts Court." On the 20th and 21st of June will be held a floral and horticultural show, for which 20,000 ft. of tentage has been provided; and seven luncheons are in course of erection in the building and gardens.

SIR J. BROOKE.—Mr. C. R. Prinsep, the East India Company's Advocate General at Calcutta, and the Hon. H. B. Devereux, of the Bengal Civil Service, have been appointed the commissioners for inquiring into the position which Sir J. Brooke holds in Sarawak is advantageous to the commercial interests of Great Britain.

THE PRESTON STRIKE.—All the factory operatives at Preston, except the spinners, having resumed work, a meeting of trades delegates was held at Manchester on Sunday, to recommend to them a proper course they should pursue under the circumstances in which they were at present placed. There were delegates from all the principal towns in Lancashire (including Liverpool), and from London, Sheffield, the Potteries, and Bristol. Mr. Neal, shipwright, of Liverpool, was in the chair. In the course of a lengthy consultation it was urged that the present was an unfavourable time for commencing the contest, and that as the prolonging of the strike by the spinners would keep many of the weavers and other workpeople out of employment without pecuniary support, it was unreasonable to struggle longer at the present time for the ten per cent. A resolution to that effect was carried, and the delegates from the Preston spinners present then retired to a separate room to give the final determination of the question. They almost immediately adopted the recommendation of the general trades meeting, and passed a resolution to that effect. On Monday morning the hands sought work at the establishments where they were engaged when the lock-out occurred, but many of them have been unable to procure employment, in consequence of their places being pre occupied. The aggregate expenditure of all the operatives' committees during the thirty-seven weeks of the contest amounts to £2 00 000, and the sacrifice of wages will probably be three or four times that sum. In addition to this, there is the manufacturers' loss of profits—no inconsiderable item.

CHESS.

TO CORRESPONDENTS.

NED LOUIS.—New York, Sydney-street.
L. A. W.—Quite wrong. Take more pains.

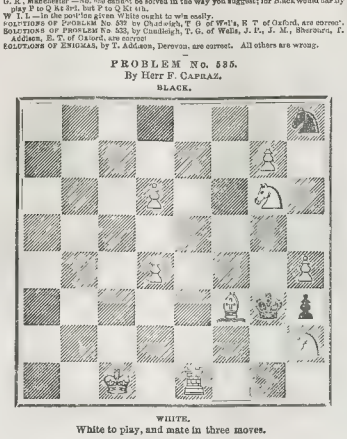
PROBLEM No. 535.

By Herr F. CAPRAZ.

BLACK.



WHITE.

White to play, and mate in three moves.

MUSIC.

THERE has been nothing new during the past week, at the ROYAL ITALIAN OPERA. Pischek, who has recently arrived in London, has been added to the company; and his first appearance was announced for Thursday, in the character of *Riccardo*, in the opera of "I Puritani." But his name was taken out of the bills, without any cause assigned, and his place was supplied by Ronconi, who formerly sustained the part Lablache performed his favourite character of *Giorgio*; and Bosio, who has succeeded Grisi in the part of *Elvira*, has made it one of her most beautiful and successful creations.

AT THE DRURY-LANE OPERA, on Saturday last, there was a very fine performance of "Fidelio," the finest, indeed, that has taken place since Beethoven's only opera was first produced in this country, at Her Majesty's (then the King's) Theatre, two-and-twenty years ago. Now, as then, it was given in its original German form, without any of the changes which have been found necessary to adapt it to the exigences of the Italian stage. There was no interpolation of sing-song recitative by other composers. The German dialogue, which is terse and forcible, was simply spoken, and thus the rapidity and spirit of the action were preserved. The music, which is thoroughly German, was sung by the German performers with kindred plainness and purity. Madlle. Caradori, as *Leonora*, strongly reminded us of Madame Schroeder Devrient, whom she resembled in her dress and whole appearance, in the beautiful simplicity of her action and elocution, and in her deep earnestness. Belchart was very successful in the part of *Florestan*: he acted with great feeling and sang beautifully. Formès was the best *Rocco* we have ever seen: he gave quite a new effect to the character of the kind-hearted gaoler. Madlle. Sedlatzek was a nice and sprightly *Marcellina*; and the subordinate parts were respectably filled. In short, this opera in which the highest dramatic interest is blended with the most beautiful music in the world—was performed in a manner which made it one of the greatest treats the musical stage can furnish.

Two Oratorios, by native composers, have been performed this week: "Daniel," by Mr. George Lake; and "Immanuel," by Mr. Henry Leslie. Neither of them was entirely new to the public. "Daniel" was performed at Exeter Hall two years ago; and, though it presented no striking or original feature, yet it was justly regarded as a creditable work; evincing sound studies and musicianlike attainments. Its repetition at St. Martin's-hall, on Monday evening, strengthened this favourable impression, and several portions were received with much approbation by a numerous audience. "Immanuel" is a work of a much higher order, entitling its author to a place among the most distinguished composers of the day. Its first performance took place so recently, and was so fully noticed by us, that it is sufficient now to say, that its repetition on Wednesday (which on this occasion was under the direction of Mr. Hullah) was completely successful. The hall was crowded, and the applause was warm and unanimous.

THE annual performance of the "Messiah," for the benefit of the Royal Society of Musicians, took place at Exeter-hall, on Wednesday The performance was in every respect similar to those of the Sacred Harmonic Society. There were the same principal singers, the same immense orchestra and chorus, and the same conductor, Mr. Costa. The hall was full to overflowing, and the performance must have been highly beneficial to the old and most valuable charity, of which the author of the "Messiah" was one of the founders.

THE principal Concerts of the week have been the Misses Cole and Mr. Gibert's performance of classical chamber music at Willis's Rooms, on Monday evening; Mr. Neate's second concert of classical vocal and pianoforte music, at Gore-house, on Thursday morning; and, on the same morning, the second concert of the Quartet Association. The Cologne Choral Union, too, have continued their performances at the Hanover-square Rooms, without giving them any feature of variety. They have, however, announced for Tuesday next a concert to consist partly of sacred music—the class of music most favourable to the production of fine choral harmony.

THE Chelsea Sacred Harmonic Society gave a performance of a portion of the "Messiah," a movement of a symphony by Mozart and a miscellaneous selection from Handel, Pergolesi, &c., on the 16th inst., at the Parochial School Rooms, Chelsea, which was well attended.

THE THEATRES.

SURREY.—While the Islington theatre is delivered over for a time to the performance of the minor drama, Mr. Phelps is starring on the stage, in company with Mr. Cresswick; and on Monday appeared in the character in which he won his earliest laurels, that of *Othello*. The selection was well made. The part of Iago calls out the best qualities of Mr Phelps's style—its tame, but impressive declamation, and its subtle passion. The *Iago* of Mr. Creswick is a remarkably careful, and for him ineffective performance; and the temptation scene, in the third act, was impressively successful. On Tuesday, the tragedy of "Julius Cæsar" was performed; and Mr Phelps' personation of *Brutus*, always excellent, presented all its points in the most amiable point of view. Mr. Marston was the *Mare Antony*, the best representative of the character we now possess. Now that Shakspeare is re-introduced to these boards, with a thing suitable to the occasion, we trust to such an improvement in the taste of the audience as will render the experiment not for him ineffective performance; and the temptation scene, in the third act, was impressively successful. On Tuesday, the tragedy of "Julius Cæsar" was performed; and Mr Phelps' personation of *Brutus*, always excellent, presented all its points in the most amiable point of view. Mr. Marston was the *Mare Antony*, the best representative of the character we now possess. Now that Shakspeare is re-introduced to these boards, with a thing suitable to the occasion, we trust to such an improvement in the taste of the audience as will render the experiment not for him ineffective performance; and the temptation scene, in the third act, was impressively successful. On Tuesday, the tragedy of "Julius Cæsar" was performed; and Mr Phelps' personation of *Brutus*, always excellent, presented all its points in the most amiable point of view. Mr. Marston was the *Mare Antony*, the best representative of the character we now possess. Now that Shakspeare is re-introduced to these boards, with a thing suitable to the occasion, we trust to such an improvement in the taste of the audience as will render the experiment of patronising the highest drama profitable in future.

SADLER'S WELLS.—Mr. Wright has been "starring" this week, in three characters—that of *Billy Lackaday*, in "Sweethearts and Wives;" that of *Simmons*, in "The Spitalfields Weaver;" and that of *Downey*, in "The Unfinished Gentleman." He has succeeded in attracting fuller houses than usual. Mr. Payne, the manager *pro tem.*, has certainly catered well for the Islington public, by providing a succession of meritorious performers. This week Miss Harriet Gordon has been added to the company, and was well received.

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

THE obituary of this week records the death of George Clint, whose inimitable pencil has done so much to preserve to posterity the comic excellences of Munden, Liston, and old Charles Mathews. Zoffany did not do more for Garrick and Parsons than Clint has done for the great actors who had the good fortune to sit to him. To many of the young frequenters of our popular exhibitions, the name of Clint, we suspect, is almost wholly unknown; but to any one conversant with art in this country, Clint's claims to excellence as a painter in the line he delighted to excel in, are at once admitted. He is on his throne at the Garrick Club—in the collection of dramatic pictures formed by the late Charles Mathews, and now, by Mr. Durrant's liberality, the property of the Club

In that small-sized picture from "Love, Law, and Physic," how admirably he has caught the artistic peculiarities of Mathews, Liston, Blanchard, and Emery. In that scene from "Look and Say," which hangs by its side, how happily he has transferred to canvas the inimitable Munden, and the not less inimitable Mrs. Orger. In that small full-length of Monsieur Mallet, who that remembers the man, does not see at once before him the most versatile of actors, the elder Mathews. In that kit-kat head of Liston, how excellently well he has shown his skill in catching the ever-changing features of Liston. Or, when stepping from the Garrick to Rutland-gate, who that has seen Liston as *Paul Pry*, but again beholds him—oh! how good he was, in that well-sustained conception. Clint was an able artist, and his pictures will rise in value, though he found no Vernon to encourage him.

The pictures of Zoffany and Clint are in art, and to good old actors, what Cibber's Apology, and some of Lamb's Essays are in literature to the same almost now extinct class of people.

Mr. Clint was the only artist who ever voluntarily withdrew from the ranks of the Royal Academy. He pursued a manly course. He was elected an Associate in 1821, and, after fourteen years of waiting for election into the highest ranks of the Academy, he, in 1835, resigned his diploma. He would no longer, he said, suffer himself to remain in a position that enabled his brethren to degenerate his talents. He had seen twenty vacancies occur, and seen them filled up, in some few instances, by his seniors, but, in most instances, by his juniors, in point of election, and, we will add, talent. Between 1821 and 1835, the Academy had been enabled to elect into its ranks two-and-twenty Associates—viz., Clint, Wyattville, Jones, Pickersgill, Wilkins, Etty, Danby, Allan, Briggs, E. Landseer, Deering, Chalon, Eastlake, Newton, Cockerell, Witherington, Wyon, Stanfield, Geddes, Gibson, Uwins, and Lee. Of these twenty-two, all have been, or are, with three exceptions, Royal Academicians. The exceptions are—Mr. Geddes, who died an Associate; Mr. Danby, who is still an Associate; and Mr. Cant, who withdrew in 1835. It was Mr. Clint's belief that the prospects of an artist are seriously injured by any body of men who can, at every fresh vacancy, pass a slur upon his talents by electing his junior to that position which it is evident to the public he is anxious to obtain. Nay, Mr. Clint would urge, and did urge vehemently at the time, that an artist should not even be elected an Associate, unless it was clear to those who elected him that he had even *then* painted pictures of merit enough to enable him to the full honours of the Academy. Our wonder is, not that Mr. Clint withdrew, but that he was so long in withdrawing. Now it is no matter in what way his prospects were injured; it is enough that he has painted pictures that will live from their own high merits, and the able actors they perpetuate, while oil and canvas will hold together. Mr. Clint was eighty-fifth year, and was finishing his old calling within a few weeks of his death. We saw, a few days ago, a clever "Falstaff" picture from his pencil, of this year's creation.

The heavy prices at which pictures sold at Mr. Wadmore's sale had no effect on Lord Charles Townshend's sale. Two thousand guineas for a single Turner did not dip deep into the pockets of a merchant prince. Messrs. Christie obtained the same war prices for Lord Charles's executors that he obtained for Mr. Wadmore's sons. The fine Danby, 'Morning on the Lake of Zurich," sold for 660 guineas (Mr. Danby had 840 for it); a good Hilton, "Venus Seeking for Cupid at the Bath of Diana," brought 315 guineas; the excellent "Britomart Rescuing Amoret from the Enchantress," sold for 420 guineas; a fine Frost, "Wood Nymphs Bathing," was knocked down at 431 guineas; Leslie's "Sterne and the Grisette" sold for 810 guineas; Frith's "Prayer" (a mother and child) brought 410 guineas; Frank Stone's "Bashful Lover and Maiden Coy" sold for 300 guineas; Egg's "First Interview of Peter the Great with the Empress Catherine" went for 255 guineas; Sir Joshua's charming portrait of Mrs. Bradyll was considered a bargain at 215 guineas; and Romney's "Head of Lady Hamilton as Cassandra" was spoken of as cheap at 120 guineas. Two anecdotes are current about this sale. The Romney was sold by Christie, some seven years ago, at Newington Butts sale, for ninety guineas; and was then deemed dear. Now, when it has sold for as much again, it is considered cheap. Such is one story. The other we allude to refers to the purchaser of the Danby. He who gave 660 guineas for this fine picture was the princely ironmaster of Birmingham who gave, a fortnight ago, for his first picture, Turner's "Guardship at the Nore," 1550 guineas. The Danby is his second acquisition. He has either good taste himself, or has no bad adviser at his back.

It has been all art-gossip this week, even in literary circles We were taken, on Thursday, to see the sixty colour drawings by John Martin, which Christie is to dispose of on Monday next. The day was against their being seen to advantage; but yet how they enlivened the room. Martin had a fine eye for nature. He could copy her when he chose, with the skill of a seedsman or a Linnæus. He was not constantly dreaming life away in celestial cities, Paphian bowers, the halls of Satan, or the haunts of Manfred. He loved to escape into green lanes, nodding corn-fields, trotting streams, sedate rivers, or quiet pools of clear water, on which the water lily lives. He would spend whole days in transcribing nature in this way. Then his fondness for our English skies was something in him that was both earnest and delightful. Other people bore one with their talk about nature, because one sees the cant of adulation in such worship when expressed, as it is too commonly expressed, by those who talk in the same breath about nature and the pre-Raphaelites. But in Martin it was natural: you saw that he was sincere in his worship of green fields and English scenery.

We were much struck with these drawings. Some we observe date back as far as 1833, when his style was rather pretty than bold. He soon grew out of this, and, we think, was never better than when he painted "My Native Vale," his "Views of the Wye and Cliff," and two or three of his Corn fields. "My Native Vale" shows what the valley of the Tyne had done for his young imagination. Here he caught that love of hill and dale, and rock and stream, and mountainous distance, which he used to such advantage in his own creations. He had, in his own vale alone, sufficient suggestive material for his finest works. He had gone into the spirit of nature so thoroughly, that he worked on the principles (if we may be pardoned the expression) on which Nature worked. An auction room, when it is filled with the best works of an artist, who was in the flesh and in health not nine months ago, is suggestive of many sad thoughts. But what beautiful embodiments of nature, and what fine creations can one pencil be teach to all time. These Martins should be seen.

INLAND BOOK POST.—Whenever the number of postage stamps on a book packet is insufficient, or when there is any other infringement of the regulations respecting book packets, the packet becomes liable to the letter rate of postage.

THE EMPRESS OF AUSTRIA.

THE beautiful and accomplished young Princess who has just been elevated to the Imperial throne of Austria, personifies the future of hope and rejuvenescence which now dawns on that empire, after all the terrible reverses of the last revolutionary epoch. The life of a young girl of seventeen, even though so exalted in station, necessarily affords but few materials for a biographical notice; but the associations she brings with her help to fill the void, constituting, as they do, a presage of future stability to the empire over which she is called on conjointly to preside. The part played by Bavaria in the politics of Europe has been overlooked, because its results have not yet been commensurate with the foundations that have been laid. Of all the royalties that grew up under the shadow of Napoleon, that of Bavaria is the only one existing, because the only one founded on hereditary right, and there certainly appears to be a degree of life in the Bavarian nation, and in the policy of the reigning family, strongly suggestive of affinity with the genius of the man to whom they owed their regal title. We may be assured that, however much of love may have entered into the alliance which has just been completed at Vienna, it has not been merely what is ordinarily termed a love-match, but that reasons of State policy have also entered into the plan. Happy the Monarchs who thus can make their interests coincide with their affections. The position of Austria is materially strengthened and improved by this close alliance with the reigning family of Bavaria. That kingdom, although only a second-rate one in the Royal hierarchy of Europe, is favorably placed for the attainment of power, or at least for the maintenance of an inconvenient neutrality. With its people hardy and well compacted, with comparatively free legislative institutions, a good understanding between the King and the people, and a command of the Danube and the Rhine, it is impossible to say to what degree of eminence it might not be raised by the agency of some Sovereign gifted with a genius either for war or diplomacy. In fact, at a time when friendly relations between Bavaria and Austria were suspended, the statesmen of the former country began to dream of making it a kind of Southern Prussia. Austrian statesmen have ever been desirous of keeping up friendly relations with this Power; and, for five or six centuries past, the alliances between the two Royal families have been frequent. The last of these marriages, that which has placed the subject of this notice on the throne of Austria, is not by any means the least important, considering the attitude assumed by the Great Northern Power of Germany; so that thus a love-match between two persons so young as the Emperor and his Empress may not be without its consequences of a certain degree of political importance.

In the Romance of History the sorrows of Queens play a conspicuous part, and it might be easily shown, that those sorrows have for the most part arisen from the custom, often unavoidable, but almost always productive of evil, of selecting the consorts of Kings from among Princesses of foreign race and manners. The history of England and France is full of such examples. The German Sovereigns have not been necessarily subjected to the same necessity, because, from the number of kingdoms and principalities into which Germany is divided, there has always been a wide field of choice. The domestic education, too, of German princes fits them to sustain their social obligations. We could cite a hundred instances of marriages of the class we have referred to, where the conjugal happiness of the contracted parties, arising from similarity of language, habits, ideas, and tastes, could not be surpassed by the most fortunate examples in private life. The young Empress of Austria enters on her married life under these favourable auspices. She is not regarded as a stranger either by the family or the subjects of her husband. The two Royal races have been so often allied before, that they are almost associated by the ties of consanguinity. The first of those unions dates at about the end of the thirteenth century, when the then Elector of Bavaria, Louis II., married Matilda, the daughter of Rodolph of Hapsburg. Since that time there have been no fewer than twenty-four marriages between various members of the two Houses of Hapsburg and Wittelsbach.

HER IMPERIAL MAJESTY THE EMPRESS OF AUSTRIA.

Elizabeth-Amélie-Eugénie, now the Empress of Austria, is the first cousin, on the mother's side, of the present King of Bavaria. On the father's side, she is but remotely allied to the Royal family, being the daughter of a younger scion, the Duke Maximilian Joseph. This Prince inherited the romanteesque character which had appeared in the persons of some of his ancestors. He was famous and beloved in Germany, not merely as a Prince, but also as a man. As a traveller, he resembled the Prince Adalbert of Prussia in our own day; and he was the author of many German songs, which even at the present time are familiar to the people. There has been at all times a kind of idiosyncratic antagonism between th reigns of Bavaria and their subjects. The association with Lola Montes. Notwithstand his epicurean follies, this Monarch is (for he h vives) sufficiently a poet to have almost wor that still more eccentric personage. In the dis able éclat caused by these vagaries the Europe lic lost sight for the moment of the services the had rendered to his country in promoting its advancement, and to the arts by his munificent age. Millions of money—much derived from private resources, more created by the spirit o prise—were applied, under his guidance, to vancement of public works throughout the co while his tasteful labours in the beautifying capital of his kingdom, and in rendering it focus of art-worship, will render his name lo long after his senile follies shall have been b oblivion.

The young Empress of Austria, then, is the ter of one, and the niece of the other, of these of the House of Wittelsbach, who have thus ill the dull opacity of the Bavarian character, an rendered their names familiar as household throughout Germany. Report says that she h self inherited much of the poetic organisation o two Princes, and that in her the arts will ha more patron. The education given to the Pri of the German families is of the highest orde it is said that the young Empress has greatly p by her instruction, especially in painting and m

The Empress is the second daughter of the Maximilian Joseph, who married a daughter of milian Joseph, the first King of Bavaria, and of Louis the Monarch, who abdicated the th 1848, leaving it to his son Maximilian Jose Second, the present King. She was born on th of Dec., 1837, and is, therefore, in her seven year. When political events had led to the abd of the late Emperor of Austria in favour of the Archduke Francis Joseph, the family and coun of the Duke sought for him a suitable alliance. dition pointed to the House of Wittelsbach, and had done the rest. A Princess of that family— beautiful, accomplished, amiable—had alread tracted the young regards of the Emperor. were betrothed on the 18th of August, 1853 after a courtship, in the course of which the oc tional ceremonies of Royalty were evaded more once by the Imperial lover, in order to see un verse with his *fiancée* (rumour even spoke of hi ing incurred the danger of assas-ination by con tors on one of these occa ons), they were at l married on the 24th April last. Seldom has a marriage been concluded under more favourabl pices.

THE ROYAL ACADEMY EXHIBITION.

Of examples of Academical skill we have already several specime wood, almost asking for publicity; but we are obliged to limit our trations of this week (much to our own annoyance) to one so example; and this we have chosen from the peaceful class of pict which the Academy, rich in such works, affords no better example Mr. Faed's picture, No 448, "Morning—Reapers going out;" a pi not only recalling a delightful scene in a delightful period of the and of English life, but one that is suggestive of many poets, who described the same scene with a thorough appreciation of the poet the occasion. Nor has Mr. Faed been unalive to the peculiar fitne the subject. He has caught—perhaps too delicately—the poetry period of the year, and has represented very touchingly the diff

"MORNING.—REAPERS GOING OUT."—PAINTED BY T. FAED.—FROM THE EXHIBITION OF THE ROYAL ACADEMY.

NEW MUSEUM OF THE ROYAL COLLEGE OF SURGEONS, LINCOLN'S-INN FIELDS.—(SEE NEXT PAGE)

ations that the same scene awakens in old and young. How ly the boy is rushing to the field: the sisters have stolen no- , and are thinking that they are no longer to meet in the field e they loved, and the old man and his wife (both very feelingly ted) have that quiet and settled composure which age and a try life are so likely to engender.

EXTRAORDINARY SCENE AT SADLER'S WELLS THEATRE.

ew days since, this popular place of amusement was appropriated to urpose of a somewhat novel character—for a meeting of "Total Abstainers." There was, doubtless, some attraction for our thoroughgoing friends in the name of "Wells," and in the convenient contiguity to the New River—such as, in bygone times, used to draw audiences with its "real water." However, the Abstainers met, in full force—Mr. George Cruikshank in the chair; and, by the very efficient aid of his humorous pencil, we are enabled to present our readers with the "extraordinary" scene which the theatre presented on this occasion.

After the Chairman had addressed the meeting, with much piquant and incontrovertible truth, an oration was delivered by the great Temperance advocate, J. B. Gough. At the close occurred the incident which Mr. Cruikshank has described with his graphic pencil. It is well known that our Artist is a total abstainer, and naturally he was unwilling to lose so good an opportunity as then offered itself for swelling the stream to which he belonged. Accordingly, he appealed to the audience to come forward and take the pledge. Nor was the appeal made in vain. A rush from box and pit and gallery was the result. A plank bridge was laid across from the pit to the stage, along which poured the living tide. A young lady was the first to lead the way: her devotion was rewarded with cheers, such as seldom resound in any theatre. Upwards of three hundred followed her example. The number would have been greater had not the evening been far advanced, and the weary scene-shifters anxious to get home to bed.

We must add here a few words about Mr. Gough. This popular orator has been in England now nearly ten months, every night of which almost has been spent in lecturing to crowded audiences. In

"TOTAL ABSTAINERS'" MEETING IN SADLER'S WELLS THEATRE.—DRAWN BY GEORGE CRUIKSHANK.

London, every time he appears upon the platform, Exeter-hall and other places are crammed to overflowing, by people who have to pay 5d. or 1s. for admission. His chairmen have been chosen from men the most honoured in the land. The Earl of Shaftesbury and Lord Robert Grosvenor have each presided, and thus lent him the sanction of their influence and the weight of their illustrious names. Those who have heard Mr. Gough once have not been satisfied till they have heard him again. To the populace in his oratory there is an ineffable charm; and yet in his appearance there is nothing remarkable, and he gives no sign of learning or intellectual power. Apparently, he is about thirty-seven; a spare, sallow, man. You would pass him in the crowd without looking at him; yet he has theatrical gesture up and respond, and the drunkard breaks his fetters and emerges into a new and nobler life, whilst thousands take the only sure way of never becoming drunkards, and thousands follow Mr. Gough's advice for example's sake.

NEW MUSEUM OF THE ROYAL COLLEGE OF SURGEONS.

THE new H.ll or Museum, at the Royal College of Surgeons, in Lincoln's-inn-fields, is the second which has been added to the Hunterian Museum, since it has been under the conservatorship of Professor Owen; the rapid increase in the number of rare and valuable specimens rendering necessitated, not only the enlargement and rebuilding the original Museum, in 1836, but the successive addition of two other halls.

The third has been recently completed, and which is the subject of the preceding Illustration, is 100 feet in length, 40 feet in breadth, and about 60 feet in height. The ground floor is appropriated to the skeletons of animals, and to general osteology; the galleries, two in number, contain the specimens of diseases and diseased parts, forming the Pathological collection.

The specimens, several thousands in number, which have been arranged in a marvellously brief period of time, are already rendered instructive by having the scientific and common names attached to most of them on the ground-floor, whilst those in the galleries are described in printed catalogues, placed there for the use of visitors.

Amongst the skeletons on the platforms may be noticed that of old Chunee, the elephant, which was shot at Exeter 'Change, before the abolition of the menagerie in that thoroughfare: it was the largest elephant ever seen in Europe. It was brought to England in 1810, of the age of twenty years, and was then so docile as to be exhibited on the stage, in one of the pantomimes, at Queen-garden Theatre. In 1814 it was purchased by Mr. Cross, the proprietor of the menagerie at Exeter 'Change, and was there exhibited until the year 1826, when a return of an annual paroxysm aggravated, as was subsequently found, by inflammation of the large pulp of one of the tusks—produced such ungovernable violence as to endanger the breaking down of the den, and to compel the keeper to put the enormous beast to death. This was at first attempted by enticing him to eat an orange—a fruit of which he was excessively fond—into which a small portion of strong mineral poison had been introduced. The elephant detected the *ruse* as soon as he had taken the orange in his trunk; and, throwing it down, he stamped upon it with his fore-foot, and would no longer allow Mr. Cross, the only one who had previously any degree of control in him, to come within reach. After many ineffectual shots with a rifle, a corporal's guard of the Guards was sent for, and the animal dropped after receiving upwards of a hundred musket-balls. The height of the skeleton to the summit of the dorsal spines or withers, is nine feet; the length, from the anterior broken extremities of the tusks to the root of the tail, is fourteen feet.

Two rare kinds of whale—the small white beluga whale and the bottlenose whale, very conveniently exhibit the ... the bony framework of those animals, which, under the guise of fish, breathe the air and have warm blood like land quadrupeds. The skeleton of the rhinoceros shows the full magnitude of that massive animal, and is the largest that has yet been set up in Europe: it is of the one horned Indian kind. Near it is contrasted the light and more delicate skeleton of the horse, said to be of the famous racer Eclipse, and which is part of the original Hunterian Collection. Amongst the rarer animals may be noticed the Sumatran tapir, the walrus, and the narwhale: the latter is the marine animal whose tooth or tusk figured as the horn of the unicorn. The skulls and other parts and separate bones of the skeletons are arranged round the floor in the wall-cases, and the choicer and smaller pathological specimens in the centre cabinets.

We believe that the Collection of the college of Surgeons, as now arranged in the three Museums, affords the most comprehensive view of the animal organisation, in health and disease, which is to be found in Europe. Particular museums may exceed it in some departments, as that at Paris or Leyden, in the number of skeletons of different races; but no capital of Europe is so complete and systematic a series of organic structures to be found, and especially so completely catalogued and well arranged.

As the history of this remarkable Museum may not be known to many of our readers, we may briefly state that the nucleus of the Collection was formed by the celebrated surgeon, John Hunter, in the last century. It was purchased, after his death, by Parliament, for £15,000, and handed over in 1800 to the then Company of Surgeons, under the condition that the Company (soon after raised to the dignity of a College), should keep the Collection in good preservation, and open it for four hours in the forenoon of two days every week for the inspection of the members of the College, and persons introduced by them: and Parliament wisely added to the condition that the Collection should be illustrated annually by a course of twenty-four lectures, to be delivered by a Museum Professor. Besides the gift of the Collection, Parliament voted a further sum of £10,000 in aid of the erection of the Museum, which was completed and opened to visitors in 1813. The late Mr. Cl.f. was appointed the first Conservator, and at the Collection was under his excellent care until his retirement, soon after the appointment of Professor Owen to the joint offices of Conservatorship and Professorship. A second grant of £12,000 was voted to the College by Parliament, and the Museum was rebuilt and enlarged, and a ... room added to it in 1836. The third Museum, completed at the commencement of the present year, was built by the College, with the aid of a third Parliamentary grant of £15,000, voted in 1852. The time of access to the Museum has been enlarged to four days in the week—Monday to Thursday, from twelve to four p.m.

There is, perhaps, no metropolis in which the intelligent inhabitants have more extensive, varied, and easy means of acquiring a knowledge of Nature and Art, in the best way—that is, by the eye—than in London at this time, considering the present state and arrangement of the British Museum, the Museum of the College of Surgeons, the Museum of Practical Geology, in Jermyn-street, and the new Museums of Art and Design, at Marlborough House. Next month will be added the stupendous displays at the Crystal Palace at Sydenham.

NATIONAL SPORTS.

NEWMARKET SECOND SPRING MEETING.—TUESDAY.

A most meagre list, as the return will testify. A very thin attendance. The weather fine, but cold.

Fifty Pounds.—Capt walked over

Sweepstakes of 10 sovs. each.—Thessaly, 1. Oxus, 2. Fifty Pounds.—Cock Pheasant, 1. Domedia, 2

THURSDAY.

Sweepstakes of 10 sovs. each.—Freckle, 1. Handsome Buck, 2. Handicap Sweepstakes of 10 sovs. each.—Diomedia, 1. Kenuyside Hero, 2.

Suffolk Stakes.—Sharavogue, 1. Domino, 2.

Handicap Plate of 50 sovs. Sabra, 1. Antevorta, 2.

Sweepstakes of 20 sovs. each.—Scout, 1. Nottingbourne, 2.

Jockey Club Plate.—Poodle, 1. Rackapelt, 2.

THURSDAY.

Sweepstakes of 10 sovs.—Pebb.e, 1. Chorus, 2.

Two-year-old Sweepstakes.—Para, 1. Contention, 2.

Sweepstakes of 10 sovs.—Handsome Buck, 1. Freckle, 2.

Handicap Plate.—Sesostris filly, 1.

SHREWSBURY RACES.—THURSDAY.

Members' Plate—Lady Flora, 1. Sampson, 2.

FRIDAY.

Meiklam Handicap.—Usurer, 1. Myrtle by Sweetmeat, 2.

Attingham Stakes.—Red Coat, 1. Pope Joan, 2.

Shropshire Stakes.—Hercules, 1. Hobbyhorse, 2.

Hawkstone Cup.—St. Spiro, 1. Lurley, 2

Corporation Plate.—Field Marshal, 1. Robin Hood, 2.

Handicap Plate.—Little Davie, 1. Florist, 2.

Acton Burnell Stakes.—Florist, 1. Master Adam, 2.

NEXT WEEK'S RACING is of little amount. On Tuesday and Wednesday the meeting at Bath takes place; on the latter day and Thursday the Liverpool Hunt will be held.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Compared with some previous weeks, the supply of Stock in the market, since we last wrote, has been rather limited. This circumstance, combined with the heavy purchases effected by the *Bulls*, for time, has had a favourable influence upon prices. The advance during the week has been about ¼ per cent, and which appears to be likely to counteract the efforts of the *Bear* party to reduce the quotations, should the next accounts of the Bank of England prove favourable.

Although the supply of money is still tolerably abundant, the rates of discount have advanced in London-street. The ... however, was to be expected, owing to the determination of the Bank directors to make money dearer. The private bankers are now charging from 3½ to 3¾ per cent upon first-class acceptances; whilst the discount houses are at one ... ¼, for money, with one month's notice. These are the highest rates ... for some time past; but it is hinted that they will not long be maintained.

Consols were very steady on Monday. The Three per Cents Reduced marked 87⅝, the Three per Cent Consols, 87⅝; the New Three and-half per Cents, 98¼; and the New Two-and-a-Half per Cents, 72. In the Stock of the Bank of England, 218; India Bonds under ... Exchequer Bills, 1 to 3 prem. Bank Stock was in good demand at 213. Long Annuities were 13 1-16. Reduced Three per Cents, 87⅝ ⅞. Three per Cents Reduced, 87⅝ ⅞. New Three per Cents, 87⅝ ⅞. New Two and-a-Half per Cents, 72¼ ⅜. New Three and-a-Half per Cents, 98¼ ⅜. India Stock, 257. India Bonds, £1000, 68. to 70s. dis.; Exchequer Bills, par to 3s. prem.; Exchequer Bonds Scrip, ½ prem. There was considerable firmness in the market on Thursday, and the quotations improved ¼ per cent. The Three per Cents, for Money, were done at 88⅛, 87⅞ and 88 to 87¾. Consols for Account closed at the latter figure. The new Three and-a-Quarter per Cents were done at 98⅜. The Three per Cents Reduced, 87⅞ ⅞. Exchequer Bills, 1s. to 2s. prem.

During the four weeks ending on the 15th ult., the note circulation of the United Kingdom amounted to £20,439,567; being an increase, compared with the previous month, of £781,503; and an increase, compared with the corresponding period in 1853, of £794 113. The stock of bullion in the Bank of England is now upwards of £5,000,000 less than it was last year at this time

For Foreign Bonds there has been a steady market. Prices, generally, have kept up pretty well. The following are the last quotations:—Belgian 5 per Cents, 103; Brazilian New Four-and-a-Half per Cents, 80; Chilian New Six per Cents, 100; Danish Five per Cents, 100; Mexican Three per Cents, 24; Peruvian Four-and-a-Half per Cents, 64; Russian Five per Cents, 96. Ditto, Four-and-a-Half per Cents, 89; Ditto, Four per Cents, 82; Spanish Three per Cents, 28; Ditto, New Deferred, 18; French Four-and-a-Half per Cents, 88; ex 25f.; Dutch Four-and-a-Half per Cents, 95¾; Ditto, Four per Cents, 88⅝; Granada, 17; Greek Bonds, 15½; and Swedish Five per Cents, 85.

The last week of the Bank of France present remarkable results. The increase in the stock of bullion has amounted to £1 640,000. Out of the £800,000 lent by the institution from August 1853 to February last, £600,000 has been regained. The falling off in the discounts has exceeded £1,800,000

Joint-Stock Bank shares have been tolerably firm. Austra'asia have marked 7¾; London Joint-Stock, 4¾; London and Westminster, 3¾; Union of Australia, 69; Union of London, 23¾; Mercantile Securities have changed hands to a fair extent. Australian Land, 1¼; Australian Agricultural, 1¾; Crystal Palace, 6¾; Electric Telegraph, 1¾; Peninsular Land and Mineral, 4¾; Peninsular and Oriental Steam, New, 3¾; South Australian Land, 3¾; Van Diemen's Land, 1¾; Australasian Reversionary Investment, Inl. Waterworks Shares have marked—Berlin, 1¾; East London, 129¾; Ditto, New, 10 prem.; Grand Junction, 72; Ditto, New, 17; Kent, 80; Lambeth, 57; Southwark and Vauxhall, 89¾; West Middlesex, 91; Ditto, New, 104, Hungerford Bridge Shares were 12 prem. Railway, 6; Ditto, Old Annuities of £3 3s.; Vauxhall, 1¼. Insurance Companies have been in demand. Alliance, 69; Atlas, 125; Globe, 125; Guardian, 5; London, 29; Pelican, 6¾; Phœnix, ex div. and bonus, 8. Rock, 1¾ ex div.; Royal Exchange, 235; Sun Fire, 260; Ditto, Life, 65.

Railway shares have ruled steady, and the quotations have had an upward tendency. The following are the closing prices on Tuesday:—

ORDINARY SHARES.—Bristol and Exeter, 85¾; Eastern Counties, 12¾; Great Northern, 86¾; Ditto, A Stock, 73; Ditto, B Stock, 120; Great Southern and Western (Ireland), 88¾; Great Western, 71¾; Lancashire and Carlisle, New Yards, 94¼; Lancashire and Yorkshire, 104; Leeds Northern, 12; London and Blackwall, 8¾; London, Tilbury, and Southend, 6¾; London and Brighton, 99¾; London and North-Western, 99¾; London and South-Western, 86¾; Midland, 69¾; North British 81; North Devon, 8, Guaranteed, 7; South-Eastern, 60; South Wales, 84; Vale of Neath, 17¾; York, Newcastle, and Berwick, 58; Ditto, Extension, 11¾; Ditto G. N. E. Purchase, 7¾; York and North-Midland 14.

LOAN AND DEBENTURE RENTALS.—Buckinghamshire, 93½; Northern and Eastern, 5; Wear Valley, 4¼; Wilts and Somerset, 9¾

DIFFERENCE SHARES.—Great Northern Five per Cent, 113½; Ditto, Redeemable at Par, per Cent prem., 106½; Great Western, Irredeemable Four per Cent, 90; Midland Consolidated, 123; Ditto, Four-and-a-Half per Cent, 1¾ dis

FOREIGN.—Antwerp and Rotterdam, 8¾; Grand Trunk of Canada, A Issue, 2¾; Ditto, Certificates of Debentures, 2¾; Great Central of France, 9¾; Great Western of Canada Shares, 19¾; Luxemburg, Limited Shares, 4¾; Ditto, Preferred, 5¾; Northern of France, 34¾; Paris and Lyons, 26¾; Paris and Strasbourg, 3¾; Sambre and Meuse, 9; Zealand, 1¾

Mining Shares have been steady. On Thursday Agua Fria were 1¼; Ayr Bonza, 8; Imperial Brazilian, 4¾; Colonial Gold, 1; Mexican and South American, 6¾; Quar z Rock, 4.

The imports of bullion this week have been nearly £600,000. The exports have been under £100,000.

Friday Afternoon.

The Consol market is very firm, and the quotations are on the advance. The Three per Cents, both for Money and the Account, have been done at 88⅛; the Three per Cents Reduced, 88⅛; and the New Three and-a-Quarter per Cents, 88¾. Foreign Bonds and Railway Shares are steady.

THE MARKETS.

CORN EXCHANGE (Friday).—We were very scantily supplied with English wheat to-day ... inactive, and by land carriage. For all kinds the demand ruled sluggish, and in some instances, fine qualities are ... and an advance in the price is obtained on Monday of la. per quarter. Foreign wheat the supply of which was pretty large, met a dull sale, and for bad an upward tendency ... the import exceeds 37,000 qrs tes. Barley ... ... dearer. Barley was ... in rather supply and moderate request, on former terms. There was only a moderate sale for malt, at full prices. The oat trade was dull, owing to the large arrivals ... The quotations, however, were well supported. Beans, peas, and flour were unaltered in value.

ARRIVALS.—Wheat, 440; barley, 1; oats, 4840; oats, 1240; flour, 410. Irish: oats, 1,100; wheat, 37,790; barley ... oats, 56,440; flour, 1,750 sacks, 2,163 barrels. Foreign: wheat, 1,000 quarters; barley ... oats, 1,000; flour, 1,350 sacks. Scotch and

33, Norfolk street, Strand. May 17th, 1854.

THE CONSERVATIVE LAND SOCIETY. A Register of the RIGHTS of CHOICE for SALE is kept at the Offices, 33, Norfolk-street, Strand, for public inspection.
Fresh-fld Estate, near Hastings, Sussex, with immediate possession.—
By PULLER and MORSEY, at the AUCTION MART, LONDON, on WEDNESDAY, MAY 24, at 12, in one lot,
A FREEHOLD ESTATE, HASTINGS, for occupation or investment, comprising BIRCH FARM, a most exact shooting-box, with 245 acres of dry, pasture and arable land, in high cultivation. A lightly situate in the parish of Ridlington, and within half a mile of the sea-coast, and three miles from the town of Hastings. The buildings have all been erected within a few years, in a most substantial manner, and are now in complete order. There are two fine timber on the estate, consisting of oak, chestnut, and larch; and the supply of water is abundant and of excellent quality. The new high road between Battle and Hastings passes the entrance-gate, and there are numerous sites in convenient parts adapted for the erection of villas, which are much in request. The estate is freehold, and the land-tax and tithe do not exceed £14 per annum. To be viewed till the sale, by application on the premises; and particulars may be had fourteen days previous to the sale; also at the Albion Hotel and Library, Hastings; at the Bedford, the New Steyning Hotel and Library, Brighton; the Sussex Hotel and Library, Tunbridge Wells; of Messrs. Toller and Co., Solicitors, Bedford row, London; and of Messrs Fuller and Horsey, 13, Billiter-street, London.

THE PRYOR'S BANK, at FULHAM.—A Delightful ELIZABETHAN RESIDENCE, on the Banks of the Thames, adjoining the Bishop of London's Palace, and close to Mr. only ss 10d per annum; also, a Genteel RESIDENCE adjoining, built entirely of red and moulded bricks, with stone dressings, and fronting the Thames; the valuable LEASE, and the costly Fittings and Effects, including Plate, Linen, China, Glass, Fine Old Portraits, and valuable contents, will be SOLD by AUCTION, upon the Premises, next Week, commencing THURSDAY NEXT, the 25th inst (unless an acceptable offer is made previously by private treaty) of the valuable Lease, with the Fittings and Furniture, may be taken in One Lot, by Messrs. Smith and Phillips, The Elizabethan Residence contains eleven sleeping-rooms, two spacious drawing rooms, and gallery, bouldoir, noble dining room, and library, splendid dry dessert and well fitted with Gothic oak carvings of the period of Henry VIII and Elizabeth; ball, kitchen, and offices, coach-house and three-stall stable, and out-buildings. The suites of rooms are adapted as well for the comforts of quiet life as for large receptions: and its proximity to London renders this a most desirable opportunity to a fine gentleman or gentlemen for occupation or investment. Printed particulars of Charles Gwillim Jones, Esq., Solicitor, 11, Gray's-inn-square; and of Mr Pearson, Auctioneer, 13, George-street, Hanover square; also, on the premises.—N.B Omnibuses pass Church-lane, Fulham (which is the nearest way to the House), every ten minutes; and the Property will be on private view on Monday, May 22nd, and following day. The Lease will be sold on the 25th inst., being the first day's sale.

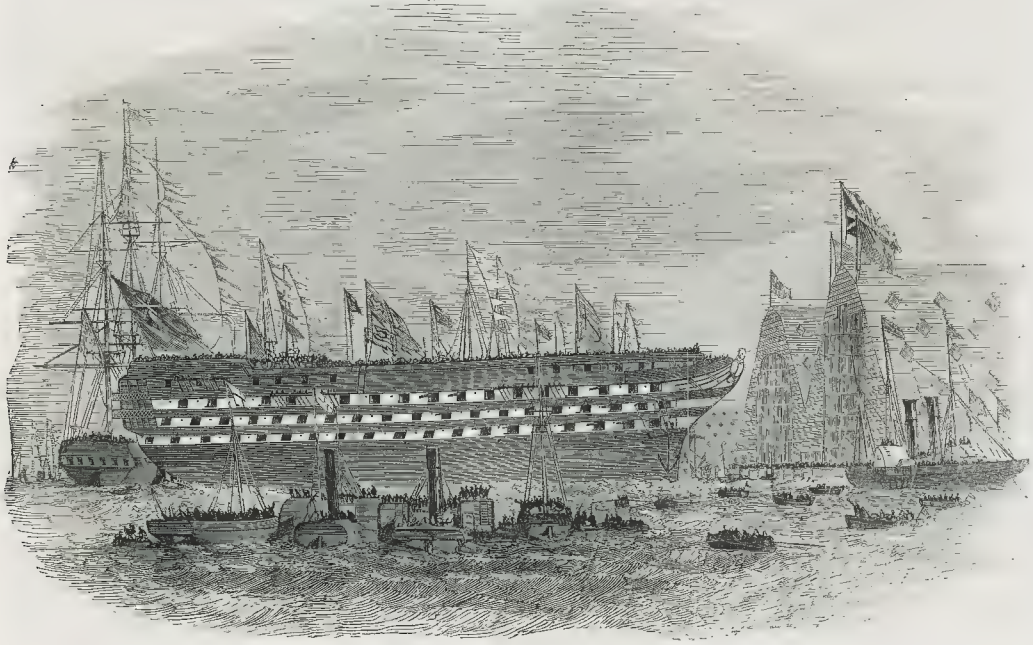
FESTIVAL OF THE SONS OF THE CLERGY, IN ST. PAUL'S CATHEDRAL.—(SEE PAGE 466.)

LAUNCH OF THE "ROYAL ALBERT," AT WOOLWICH DOCKYARD.

HER MAJESTY NAMING "THE ROYAL ALBERT."

THE *Royal Albert* was safely launched from Woolwich Dockyard, on Saturday, in the presence of the Queen, the Prince Consort, the Royal family, the Court, the foreign Ministers, the members of the Legislature, the naval and military authorities, and an assemblage, ashore and afloat, of at least 100,000 spectators. The morning gave promise of a brilliant, unclouded day—such a day as of itself, at this season, makes the river irresistibly attractive to Londoners. Towards noon it became rather overcast, and there were indications of a thunder shower; but it happily passed off. Before ten o'clock, the hour appointed for the opening of the gates, the dockyard was besieged by thousands of ticket-holders, and others not so fortunately situated, and long lines of carriages extended almost the whole distance from New cross up to the dockyard gates. At length, however, the gates were passed, and holders of "A, B, C," and numerous other alphabetical tickets, wended their way amid long avenues of store yards, and huge piles of timbers, to their appointed places. Around the slip in which lay the gigantic hull, were erected, in the form of a spacious amphitheatre, a series of booths, capable of accommodating at least ten thousand persons. Each of the booths was distinguished by a letter legibly painted in white upon a ground of the same colour as the ticket, an arrangement by which an immense amount of confusion was saved to the visitors. Here were seated, in spaces set apart for each, and proceeding from left to right, in the order stated, the Foreign Ambassadors, the members of the two Houses of Parliament, the Cabinet Ministers, the general visitors, the army and navy, the Admiralty, and the officers of the dockyard, of Whitehall, and Somerset-house, with their friends. By the excellent arrangements of the authorities, and by the unwearied exertions of Mr. Mallalieu, the Police Superintendent of the district, spectators who had reserved seats were enabled to reach them without any inconvenience or confusion; and the claims of the multitude were not disregarded, as after eleven o'clock the dockyard gates were thrown open to them, and leave afforded to the first comers to occupy the best places they could select.

As the hour approached for the Queen's arrival, every point whence a view of the launch could be obtained was crowded. The house-tops overlooking that part of the river were manned, and even on the Essex shore a multitude of spectators had assembled. Punctual, as usual, to a minute, the Royal carriages, with their cavalry escort, reached the dockyard at one o'clock precisely. A guard of honour, composed of the Royal Marines, was drawn up and presented arms. The gentlemen cadets from the Royal Military Academy were also present, and, with Captain Eardley Wilmot at their head, saluted as the Queen passed. The factory store-room, at the south end of which her Majesty alighted, was lined on either side by 800 boys from the Greenwich Naval Schools, who raised their shrill cheers as she passed through them. From land and water the strains of the National Anthem now resounded. Her Majesty was received on alighting by Commodore Shepherd, Superintendent of the Yard; the Surveyor General of the Navy, Sir Baldwin Walker; Sir James Graham, Mr. Bernal Osborne, Admiral Berkeley, and the other Lords of the Admiralty. The Prince Consort, the Prince of Wales, the Princess Royal, Prince Alfred, and her Royal Highness the Duchess of Kent accompanied her Majesty, who was also attended by several ladies of her Court, and of the great officers of the household. The illustrious party were immediately conducted to a covered dais, tastefully decorated with flowers, and overlooking the river on the west or left side of the slip. Here a short pause ensued while the animated water pageant was sur-



THE ROYAL ALBERT."—BROADSIDE VIEW.

veyed, and the thousands of spectators afloat, cheering vociferously all the time, opened up a passage, enabling the huge war steamer, when launched, to swing stern foremost up the river with the flowing tide. In a species of semi-state the Royal party then proceeded by a reserved passage along the west side of the ship to a raised platform, covered with scarlet cloth, at the ship's bow. The Commodore Superintendent led the way; then came the Marquis of Abercorn and the Marquis of Breadalbane in their official capacities. Her Majesty, leaning on the arm of the Prince Consort, advanced next; behind them came the other members of the Royal family; the ladies of the Court, the Lords of the Admiralty, and other distinguished persons in attendance. The great assemblage of spectators on their right, representing the rank, the intelligence, and, it may be fairly added, the beauty of the country, rose to receive and cheer them; while on their left towered the mighty fabric of the war-steamer. Arrived at the platform, Sir James Graham presented Commodore Shepherd, the Superintendent of the Dockyard, to her Majesty; who, after examining an elegant oak hammer and chisel made from a piece of the timber of Nelson's ship *Victory*, and used for the purpose of dividing the cord of the dog shores, came forward to the bows of the ship, where the Master Shipwright, Mr. Rice, having been introduced to her Majesty, presented her with a bottle of wine, covered with lace and decorated at either end with the rose, shamrock, and thistle. It was suspended horizontally, so that, if filled or allowed to swing by its own gravity, it would be dashed against the bow. This was, however, not properly pointed out to her Majesty, who, standing at some distance off, threw the bottle twice without hitting the stem; but a brief explanation from the Master Shipwright enabled her to perform the rites of naval baptism on the *Royal Albert*. She appeared much amused at this incident herself, and laughed heartily when it was over. The Royal party having returned to their original station overlooking the river with the same observances as accompanied their advance from it, the preparations for the launch immediately commenced.

Now came the anxious time for Mr. M'Pherson Rice, the able Master Shipwright of the yard. It was on the 16th of August, 1845, one of the anniversaries of Prince Albert's birthday, that the keel of the mighty war steamer was laid. Designed, and in some measure constructed, by his predecessor, Mr. Lang, the task of completing her devolved upon him only in April, 1853. What if all was not right, if the launch could not be effected, or any accident took place? Time was when such operations were attended with much difficulty and danger; when in France, for example, it was the custom to employ convicts in the work, and to give them their liberty if they escaped with life; but in the present case, the science of naval architecture has made immense progress of late. The only anxiety now felt on occasions of this kind is that naturally arising, however confident one may be of the result, from the size of the vessel to be run off the slip. A ship like the *Royal Albert*, nearly 4000 tons burden, 272 feet in length, sixty-one feet broad, and sixty-six deep, is no ordinary mass to move, however favourable the circumstances. But in less than ten minutes after royalty had retired from the platform to her seat, the launch was effected in slow and beautiful style, Mr. Rice most wisely adopting the plan of launching the gigantic vessel by the blocks, instead of by the dog-shores; for, when a vessel begins to draw and press upon the dog-shores, it is not possible to retain her as in the case of the *Rosamond*, a few years since, which launched herself an hour before the appointed time; and the pressure in some times so enormous on the detaining shores that they cannot be struck away, but have to be chopped—an expedient attended with great danger. The bands on the river and in the dockyard struck up "Rule Britannia" and "God Save the Queen" promiscuously, in the excitement of the moment. There was waving of hats and handkerchiefs, too, in abundance; and many a fervent wish arose that so proud a ship might be fortunate and victorious. The mingled majesty and ease with which she moved into the water were indescribably imposing. She took possession of the river, cleared away a path for herself on its breast with a native inborn authority, and became at once a Triton among the minnows of small craft around her. Of all the great sights with which the progress of mechanical invention has rendered the present age familiar, there is none, perhaps, superior to that which is presented by the launch of a first-rate man-of-war; and of the thousands who witnessed that spectacle on Saturday, there were few whose hearts did not involuntarily echo the benediction of the Queen, who, in christening her, said, with emphasis, "Success to the Royal Albert." (*See the large Illustrations at pages* 460, 461.)

Immediately after the launch the Queen and Royal Family entered their carriages, and quitted the dockyard amid the same demonstrations of loyalty as greeted them on their arrival. The immense crowd of spectators also gradually dispersed.

With the number of fine ships that are annually turned off the stocks on the Thames, there was nothing in the mere operation of the launch on Saturday that need have excited any extraordinary degree of interest; but when one takes into consideration the dimensions of the *Royal Albert*, and other details connected with her construction, a material difference arises. She is no long backed, narrow, thin-sided swimmer of the seas, built for speed in mercantile adventure, but a veritable floating fortress, in which the honour and might of Old England may be confidently embarked. Her proportions, her armament, and her propelling power place her on an equality with the great *Duke of Wellington*. Twenty years ago the *Caledonia* was considered a model: she carried 120 guns; her length was 205 feet; her burden about 2750 tons; while the weight of her broadside of metal was about 1750 lb. The *Royal Albert* is the latest effort of naval science; and it is only by comparing her side by side with a line-of-battle ship of a former period, that we can fully estimate her gigantic size or tremendous power. If the thing were practicable, there would be no difficulty as regards space in placing the *Caledonia* in her hold. The extreme length of the *Royal Albert* is 272 feet (about eight feet shorter than the *Duke of Wellington*), and her extreme breadth 61 feet; her burden is 3760 tons, and the weight of her broadside of metal more than four times that of the *Victory*, and more than double that of the *Caledonia*, or close upon 4000 lbs. The mere weight of timber and iron in her hull alone is 5200 tons; and, when thoroughly fitted and equipped, the weight is no less than 5600 tons.

Her armament will be arranged as follows: On the lower deck there will be ten 8-inch guns for firing shells or hollow shot, and twenty-six long 32-pounder guns. On the middle deck will be six 8-inch guns, and thirty 32 pounders. On the main deck, thirty-eight 32-pounders, and on the upper deck twenty 32 pounders. On the forecastle there will be a 68-pounder gun, mounted on a pivot, and this last will be one of the most formidable of all. The gun will weigh five tons, and will throw a solid iron shot of 83 lb. weight a distance of three miles. If any one has stood upon the platform of a battery when heavy guns have been fired, he must have witnessed how, after a few discharges, the massive granite and the solidly knitted oak and iron framework has been shaken and dislocated by the force of the concussion, and can fancy what must be the strength of the timbers of a man-of-war when a whole tier or broadside of these guns is discharged at once.

On Monday the *Royal Albert* arrived at Sheerness from Woolwich at 11.45 a.m., in tow of the steam vessels *African* and *Adder*, with the steam-vessel *Monkey* in attendance. On the magnificent ship rounding the Garrison Point, the flood-tide was making very strong, and gave her through the water so much way that both steam-vessels were obliged to reverse their engines for some time to check her speed; and, by the judicious management of the officers in charge, she was safely anchored off the dockyard, preparatory to her being taken into the basin and dock.

THE GOLDSMITHS' AND JEWELLERS' ANNUITY INSTITUTION ASYLUM.

On Monday, the first Anniversary Festival of the foundation of this Institution was celebrated by a dinner at the London Tavern, John Brown Esq. in the chair, and was attended by about 200 gentlemen chiefly in the trades for whose benefit the Asylum has been founded. Also a considerable sum was subscribed by the company, and the proceedings were altogether highly satisfactory. As the Asylum has been established upon a plan differing in an important respect from a general "charity," it may be interesting to detail its rise and progress.

The Annuity Institution originated from the benevolent exertions of several of the most active members of the Goldsmiths' and Jewellers' trades, in the year 1827, when a society was organised to grant assistance to the most meritorious members by way of a small annuity; and, to make the undertaking as nearly self-supporting as possible, the yearly payment that should qualify for a vote was fixed as low as 6s. This not only enlisted the support of the very numerous body, any of whom might themselves fall into need of its assistance, but also awakened the sympathies and contributions of some of the more wealthy members of the trades.

With such encouragement, in 1837, at a general meeting of the subscribers, it was resolved to add, under proper regulations, an Asylum Fund, by which Almshouses should be provided for the needy. A committee was therefore formed, and, having soon proceeded in their good work as to purchase a piece of land, and to realise about £1000 towards an Asylum fund, they made an urgent appeal to the great body of the trade; and the requisite funding raised, the foundation-stone of the Asylum was laid on May 1st, 1851, upon the west side of Manor-road, South Hackney.

GOLDSMITHS' AND JEWELLERS' ASYLUM, MANOR-ROAD, SOUTH HACKNEY.

The Asylum, of which we engrave the façade, has been ably designed by Mr. W. P. Griffith, F.S.A., in the Tudor style; and constructed of malm bricks, with Caen stone dressings; the central octagonal pinnacle is of Anstone stone. The roofs are high spanned, and covered with Bangor slates. The chimney shafts are lofty, and diagonally clustered upon a square base, forming a prominent feature. The central tablet, having a label with oblated bosses, contains a quotation from Psalm 71, v. 9, "Cast me not off in the time of old age; forsake me not when my strength faileth." Then follow the names of the trustees and officers. The buildings accommodate sixteen pensioners, the arrangements being on the principle of the Poor Brothers in the Charterhouse. In the rear, and attached to the lower story, are wash houses, possessing a constant supply of water. It is interesting to add that the Asylum has been chiefly raised by the working community of the trades, and, with few exceptions, supported by them. Since 1827, seventy-four annuitants have benefited by pensions of £15 to males and £10 to females, annually; altogether £5500 has been expended in annuities only, and at the present time nineteen persons are annually relieved, at a cost of £245.

In addition to this, it is stated upwards of £400. The contract for the building was £1067, and there was recently wanting about £400 to complete it. The subscriptions at the festival on Monday will largely aid this object; and the committee earnestly hope that, the greater part of the good work being done, the benevolent public will enable them to obtain the rest.

NEW CHURCH OF ST. CHRYSOSTOM, EVERTON.

On Tuesday week this handsome edifice, recently erected in the parish of Walton-on-the-Hill, Liverpool, was consecrated by the Lord Bishop of Chester. The foundation-stone was laid in May, 1852; and the Church was opened on August 31, 1853. It is situate in Audley-street, Everton, a little to the east of Everton-road, upon a piece of ground generously presented by two gentlemen, and bounded on the north by Breck-road. It is in the midst of a thickly-peopled and rapidly-increasing neighbourhood, and has been erected to supply the urgent demand for increased church accommodation in that district of Everton, as well as the neighbouring township, bordering upon West Derby. Some years ago the then Bishop of the diocese licensed the Sunday-school, in Mill road, Everton, for the performance of Divine Service, which had regularly taken place since that period, under the auspices of the late Rev. R. P. Buddicum, M.A., and the present highly-esteemed Incumbent and Curate of St. George's, Everton, the Rev. W. W. Evelbank and the Rev. J. Macnaught; but the accommodation in the school having been found altogether inadequate to the increasing population of the district, an effort was made to erect a new church for the accommodation of the inhabitants; and, by the unwearied exertions of several gentlemen, who have taken a lively interest in the undertaking—more particularly the Rev. J. Macnaught, Thomas Darnley Anderton, Esq., and Netlam Tory, Esq.—it was brought to a successful issue.

NEW CHURCH OF ST. CHRYSOSTOM, EVERTON.

The style of architecture is the Decorated, from the designs of Mr. Raffles Brown, architect, of Liverpool. The interior consists of a centre, and two side aisles—the latter terminating with north and south transepts. On each side of the centre aisle is a series of arches, rising from light columns of polished granite. There are no galleries in the Church, except those in the transepts. The organ is placed on the ground floor, and enclosed within a small archway, on the north side of the approaches to the communion table; stalls for the choristers being placed on each side, in front of the altar. There is accommodation for 1400 worshippers, all in pews, with sittings of equal comfort. The sittings are arranged in five classes, the last two of which comprehend 408 entirely free for ever; and also 200 sittings, which are let at an annual rent of five shillings each.

There is a fund for the endowment and repair of the Church, provided also by voluntary subscription. Application will immediately be made to the Church Building Commissioners to assign an ecclesiastical district to the Church. The Rev. John Macnaught has been licensed to the perpetual curacy.

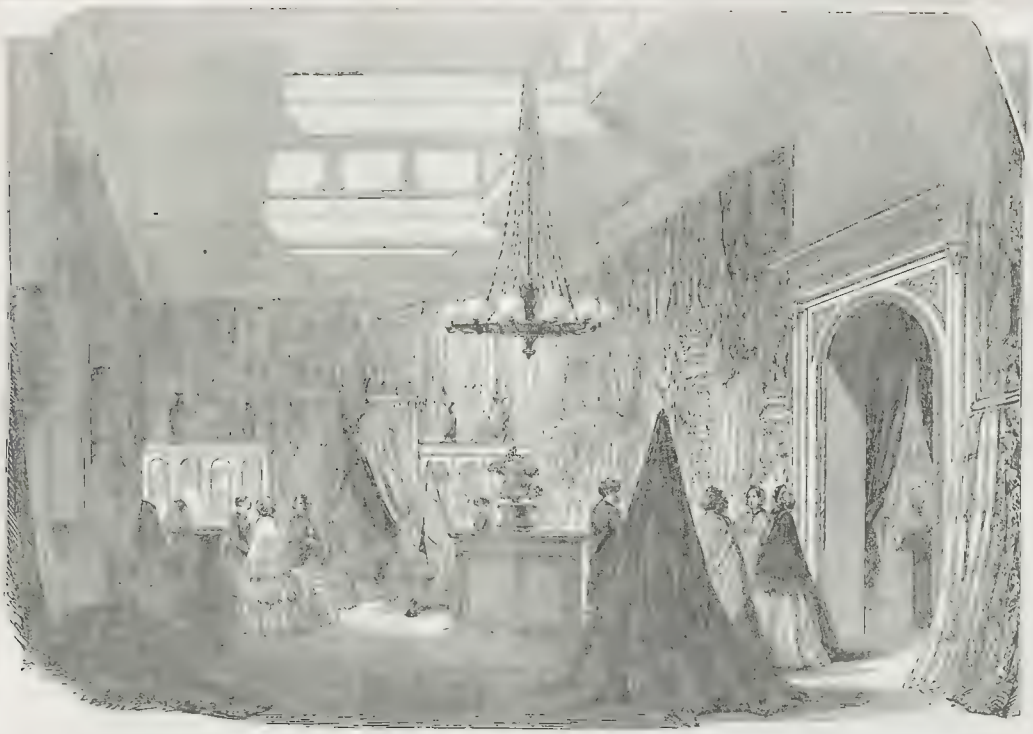
SCHOMBERG-HOUSE, PALL-MALL.

We have occasionally illustrated some of the great emporiums of useful, elegant, and fashionable textile fabrics, which, in the extent and importance of their operations, and the completeness and liberality of their arrangements, are amongst the true wonders of London. In Number 675, for example, we depicted one of the vast warehouses in the neighbourhood of St. Paul's, whence are distributed throughout England, and throughout the world, those articles of drapery in which English housewives take so much delight. We described the palatial warerooms for receiving goods, the giant cranes for lifting them, the counting houses for taking orders, the offices for sale and distribution, the regiments of travellers, the brigades of assistants, and the army of porters who assist in this distribution.

Schomberg-house, the subject of the accompanying Illustrations, presents a different aspect. Here all is elegance and refined taste. The silk mercer here is a fine artist. India, China, France, and England pour forth their various stores for his approval. This renowned *Maison de Mode*, has for a century, or more, held, in relation to the British Court and aristocracy, almost the same position as that occupied for some fifty years by Longchamps in the regards of the fair leaders of Parisian fashions. Where George III. was wont to come shopping with his daughters, royalty, in our own day, may be seen his descendants, attending to the taste of the fashionable textures, and to their fabrics of which these flowing costumes were composed, could probably tell that many homes were made happy, that many a smiling face was to contribute to the encouragement and permanent advantage of British industry.

On a former occasion, and before the completion of that work of restoration, alteration, and internal and external improvement which has made this establishment one of the most remarkable examples of the enterprise of metropolitan traders, we alluded to the historical associations connected with the place itself: to the names of eminence and celebrity, whose residence has identified it with memories of the most interesting nature. The building in its present state, comprises a series of arrangements so complete in design, so judicious in disposition and classification, that the acme of the conditions—(viz., those of perplexing research and unsatisfactory inquiry)—which in the old times, formed so great a drawback from the pleasure of "shopping," are absolutely done away with. At a single *coup-d'œil*, the fair visitor may make herself aware of what are to be the fashions of the ensuing year; and the utmost requirements of curiosity may be gratified by a half-hour agreeably spent in the noble suite of apartments of which our Engravings give only a partial view.

There are persons who, looking at the gorgeous dresses of a Drawingroom, or perusing the description of such sumptuous and brilliant fancy costumes as those displayed, for example, at the French Ambassador's Ball, will invidiously complain of the luxury of the rich, and point to "rags and starvation" as a painful contrast to robes of tulle, and golden tissues, and soft cashmeres. But the proprietors of the Pall-Mall repository, where have proceeded so many of the fine fabrics of which these flowing costumes were composed, could probably tell that many homes were made happy, that many a smiling face was

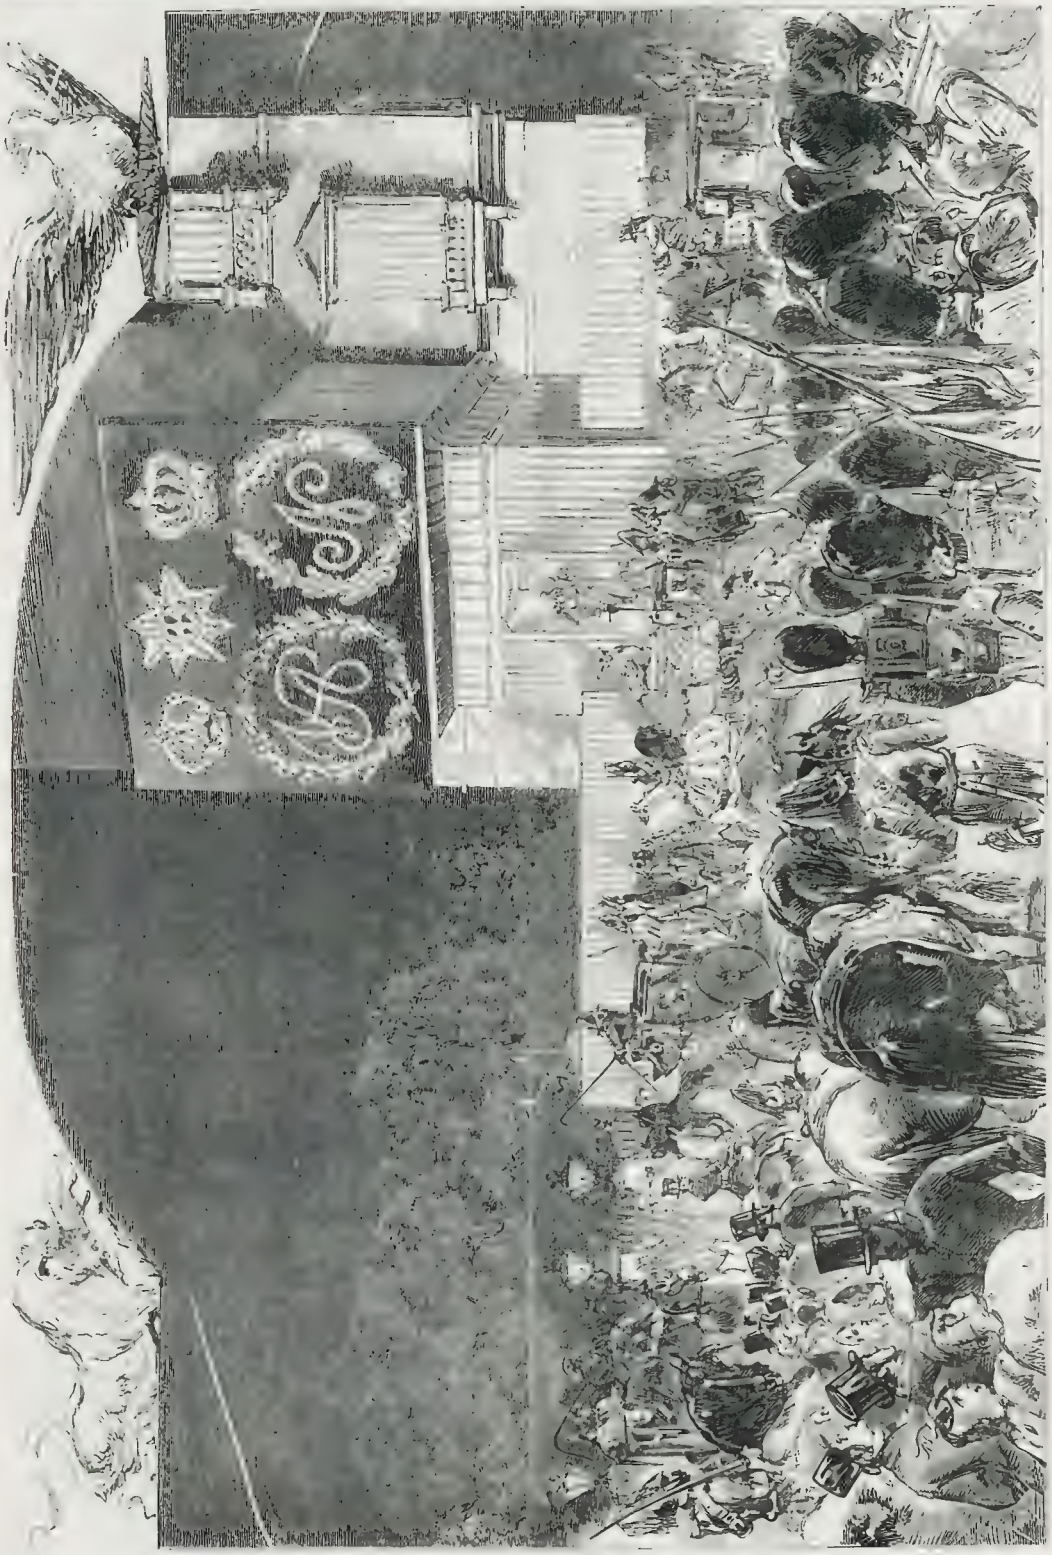


SCHOMBERG HOUSE, PALL-MALL.—THE SHAWL DEPARTMENT.

bron[illegible] the cheerful board, that many hearts were lightened, and Indu[illegible] rewarded by the employment afforded, through themselves, to the industrious, by that Drawingroom and that Ball. All is not frivolous that is fashionable, nor extravagant that is sumptuous.

Thoughts like these are naturally suggested by the spectacle witnessed in the interior of Schomberg-house, thronged as it is by visitants of the highest rank and most refined taste. Nor is the sense of sight less gratified than the imagination. Colours the brightest—hues the most fleeting, seized and fixed as if a rainbow could be photographed—shades the most delicate—fabrics really strong, yet in appearance of the airiest—flowers of undying bloom—laces of a fineness that would seem hardly able to bear the sighing of a summer wind—and last, not least, that exquisite creation of Irish industry, the guipure, which bids fair to excel those marvels in lace work that have hitherto rendered the wardrobe chests of old Spanish families the envy of many a modern courtier;—all these afford proofs, gratifying alike to patriotism and good taste, of the semi-miraculous progress which has been of late years achieved in the most elegant and intricate departments of manufacturing ingenuity. To realise the full extent of this progress and these improvements, it is necessary to view them where alone they are to be found in the fullness of perfection and variety, viz., at some depository of "fashion," conducted on the largest and grandest scale, and the resources of which enable its managers to command, at the earliest moment, the best specimens of the products of the industrial capacity of all countries.

SCHOMBERG-HOUSE, PALL-MALL.—THE MILLINERY DEPARTMENT.



THE BAL COSTUME AT THE FRENCH EMBASSY, ALBERT-GATE HOUSE—ARRIVAL OF HER MAJESTY.

THE QUEEN'S VISIT TO THE FRENCH EMBASSY.

HIS EXCELLENCY COUNT WALEWSKI, THE FRENCH AMBASSADOR.—FROM THE PICTURE BY MOTTEZ.

THE COUNTESS WALEWSKA.—FROM THE PICTURE BY MOTTEZ.

No gathering of the world of fashion for a long time past has created so great a sensation as that produced by the *Bal Costumé* given by the French Ambassador, at Albert-gate House, on the night of Friday, the 12th instant. The circumstance of a British Sovereign paying a visit of friendship to the Minister of another Power was of so unusual a character as to excite a more than ordinary degree of public interest. As was appositely observed by a daily contemporary, "there was a deep and solemn significancy in this memorable demonstration. It indicated the force and constancy of the mutual resolution of the two great nations of civilisation to stand by each other in the holy and righteous undertaking upon which they have entered—to fight, with all the energy which the consciousness of right can convey, the battle of truth, justice

BAL COSTUMÉ AT THE FRENCH EMBASSY.—RECEPTION OF HER MAJESTY.

and honour: and to check, once and for all future time, the further progress of that baleful "heresy" or policy which, for a century and a half, has menaced the peace of the world. The event formed, in short, the public consummation of that auspicious union between Great Britain and France, in the perpetuation of which the welfare of all humanity is concerned; and it is, therefore, with an emotion which no mere meeting of "rank and fashion" could excite, that her Majesty's visit to the Count Walewski will be regarded by the French people as well as by the English."

The public did not fail to give due weight to considerations of this character. Interest and expectancy were excited to their utmost tension; and from an early hour on the evening of Friday the approaches to the French Embassy were thronged by multitudes of persons belonging in great part to a social station much higher than that usually pre dominant in a street crowd. By the time the lamps were lighted, the Right-street of Knightsbridge, as well as that portion of the Park in the immediate vicinity of the mansion, presented a singularly gay and animated appearance.

Immediately above the portico of the Embassy a pavilion had been erected, the entire wall of which was converted into a gigantic illumination. On one side were the Royal initials, "V. A," and on the other the Imperial monogram, "N," each in a laurelled circle of twelve feet in diameter. Above and between both were two crowns, surmounted by a star in the centre of nine feet in diameter. The preparations in the interior were so well managed as to be brought to a close early in the afternoon. At eight o'clock the whole was illuminated; and now was first seen in all its brilliancy the full effect of the splendid *tout ensemble* which had been so sedulously elaborated in honour of the Royal visit. However opinions may vary as to the architectural taste exhibited in the construction of "the tall house at the corner," the mansion, it must be confessed, is about as ill adapted as possible to the convenient reception and accommodation of a large number of guests. As compared with the elevation, its ground area is most scanty; and a disproportionate extent is taken up by the staircase. The best possible use, however, was made of such opportunities, whether for comfort or display, as existed. The staircase itself was beautifully lighted and decorated, and the arrangements of the supper-room, ball-room, and retiring-rooms, were elaborately complete—in the former, a sculptured group, representing an allegory of France and England in characteristic attitudes, from the design of Mr. Evan Thomas, and invoking, and reiterating the solemn aspiration of Lord John Russell, "God defend the right," had a pleasing effect. The library, a small and compact apartment, was tastefully laid out for the special use of her Majesty and the Royal family.

A perfect refinement of skilful ingenuity had been successfully exercised in imparting to the ball-room that air of spacious magnificence which its narrow proportions seemed to forbid. Never was illusion more complete and gratifying. Drapery, paintings, mirrors, and every accessory of ornamentation were so happily disposed that the visitor might almost imagine himself in one of the noble saloons which form the boast of the most princely palaces in the capitals of Europe. Full length portraits of their Imperial Majesties the Emperor and Empress of France, by Winterhalter, which had been forwarded from Paris on the day preceding, specially to grace the occasion, were conspicuous amongst the ornaments of this room.

With judicious regard to the space at command, the number of invitations had been limited to 600, and very little pressure or inconvenient crowding was experienced. At nine o'clock the carriages began to set down; and by ten o'clock (the hour of the Queen's arrival) the rooms were in readiness to receive her Majesty, who was greeted with a victorious cheering by the multitude without. The Queen, who looked in excellent health and spirits, was received, on alighting from her carriage, by the Ambassador and the Countess Walewski, accompanied by the Secretaries to the Embassy, M. Ch. Baudin and M. Jules de Saux, and entered the mansion resting on the arm of his Excellency, the Prince Consort leading the Countess Walewski. The Duchess of Sutherland and the Viscountess Jocelyn were in attendance. Her Majesty was attired in a costume of great elegance, the prevailing colour of which was pink. Upon her head she wore a diamond tiara, and the same precious stones were scattered profusely over the dress. The Prince Consort wore his full military uniform as Field Marshal. After a short pause the Royal party ascended to the ball-room, the orchestra, under the direction of M. Emile Laurent, playing the National Anthem. The Queen, with her illustrious relatives, the Duchess of Kent, the Duchess of Cambridge, and the Princess Mary, then took seats on the dais, the guests defiled before her Majesty. And now approached the grand event of the fête—the entrance of the four fancy quadrilles. The first was the Spanish Quadrille, led by the Countess of Wilton, and composed of the following ladies and gentlemen:—

PINK.

Lady Georgiana Lygon.	Capt. Streatfield.
Lady Selina Meade.	Hon. Arthur Egerton.
Lady Katherine Grey Egerton.	Viscount Elmley
Lady Alice Egerton.	Hon. Francis Stonor.
Lady Blanche Egerton.	Mr. Julian Fane.
Hon. Blanche de Ros.	Mr. Francis Thynne.

BLUE.

Lady Mary Cecil	Mr. Gilbert Heathcote
Lady Arabella Sackville West.	Mr. H. D. Magens
Lady Margaret Butler.	Viscount Grey de Wilton.
Hon. Miss Montagu.	Mr. Graham Vivian.
Hon. Susan Pitt.	Mr. Thomas Leslie.
Hon. Fanny Pitt.	Mr. Keith Fraser.

The costume of this quadrille was peculiarly rich and elegant; that of the Countess of Wilton was a dress of grey satin, with a manteau of blue satin, profusely decorated with gold and precious stones. The costume of the younger ladies was composed of rich taffeta skirt, corsage *dessous en batiste fluter*, with caraco of black velvet; sleeves with epaulettes and revers of black velvet. The head-dress was formed of a Spanish lace mantilla, over a high comb. The gentlemen's costume consisted of a black velvet jacket, tastefully embroidered and decorated; waistcoat of rich gros de Naples, six gentlemen wearing blue, and six cerise. The trunks were of black velvet, corded with silver.

The next quadrille was that of Frances Countess of Waldegrave. The period selected for illustration was the reign of Henri IV., and the following ladies and gentlemen represented the characters of the Court:—

Marguerite de Navarre, Reine de France	Henri de Navarre, Roi de France
Frances Countess of Waldegrave	—Baron Marochetti.
Duchesse de Guise—Hon. Mrs. Russell.	Duc de Guise—The Hon. E. W. Russell.
Maids of Honour—Lady Louisa Bingham, Hon. Mary Bulteel, Miss Georgiana Bulteel, Miss Augusta Seymour, Miss Elphinstone, Miss Stuart Mackenzie.	Gentlemen of the Court—Hon. T. Stonor, Mr. Colchester Fortescue, Mr. Hayward, Account, Mr. Bidwell, Mr. Bellew, Mr. Glyn

The Countess herself was a faithful personification of Marguerite de Navarre described by Brantome. Her ladyship wore a robe of Royal crimson velvet, magnificently embroidered with fleurs de lis and gold borders. The ornaments were composed of pearls and diamonds. The Hon. Mrs. Russell's representation of the Duchesse de Guise, and that of the Duc de Guise by her husband, were much admired; and the commanding person of the Baron Marochetti appeared to great advantage in the character of Henri Quatre, the costume being taken from an old painting of that monarch, by Rubens.

Lady Stanley of Alderley's quadrille "Les Bergères de Watteau," came next, and was formed of the following ladies and gentlemen:—

Countess Helena Kielmansegge.	Hon. Charles Hay.
Lady Emma Stanley.	Lord Cavendish.
Lady Elizabeth Hay.	Count Chotek.
Lady Gertrude Ogilvy.	Mr. Blackburne.
Lady Elizabeth Craven	Count Castlerosse.
Hon. Maude Stanley (of Alderley).	Mr. Stapleton.
Miss Geraldine Maitland.	Mr. Jervoise Smith.
Miss Theresa Lister.	Lord Henry Thynne.

This quadrille was a charming spectacle. The ladies looked like shepherdesses just stepped out of Watteau's pictures. Four of the gentlemen wore the uniform of Louis XV.'s Guards, with blue facings; the other four wore the same uniform, with red facings.

Viscountess Barrington's "Quadrille Louis XV. Mousquetaires de la Reine," which concluded the fancy sets, was composed of the following ladies and gentlemen:—

Hon. Mary Barrington.	Hon. Charles Hanbury.
Hon. Caroline Barrington.	Mr. Wickham.
Miss Heathcote.	Mr. Lyon.
Miss Liddell	Mr. Barnard.
Miss Elizabeth Liddell.	Mr. Hedworth Williamson.
Mrs. Henry Liddell.	Mr. Grosvenor.

The ladies in this quadrille wore the Court costume of the period illustrated. The hair was powdered and brushed back. The gentlemen wore the gorgeous uniform of the Mousquetaires of the *ancien regime*.

The "set" quadrilles having been brought to a conclusion, her Majesty was graciously pleased to honour the Count Walewski by dancing with him in a quadrille which was immediately formed, his Royal Highness Prince Albert taking the Countess Walewski as a partner. Several other dances having intervened, her Majesty honoured the Duke of Hamilton with her hand in a quadrille—the Prince Consort dancing with the Duchess of Hamilton (late Princess Mary of Baden). After a short interval, during which the Queen was pleased to accept of refreshment from the hand of the Ambassador, her Majesty again danced in a quadrille, this time honouring the Earl Granville with her hand, the Prince Consort dancing with the Princess Mary. Her Majesty, at the conclusion of this dance, received presentation of the more distinguished guests on the introduction of the Ambassador, and subsequently made the circuit of the *salons*, resting on the arm of the Count Walewski.

At midnight, the Queen and the Royal party descended to the supper-room, where a banquet was spread, combining every delicacy that the art of the *cuisinier* can suggest.

After supper, the Queen returned to the ball-room, and joined in another quadrille with the Marquis of Abercorn. It was half-past one when her Majesty took her departure, amid demonstrations of affectionate enthusiasm similar to those which had hailed her arrival. The assembly did not break up until half-past three in the morning.

Our account of a festivity marked in so many respects by circumstances of a peculiar and gratifying character, would not be complete without an allusion to the very full attendance of the Ministers of foreign Powers and their Attachés accredited to the Court of St. James. The Cabinet Ministers were also present. The great majority of the company were, of course, in fancy costume. Amongst the impersonations of individual characters none was more conspicuous for grace and correctness than that of the unfortunate Marie Antoinette, by the Duchess of Wellington, whose style of beauty is eminently adapted to the part assumed by her Grace. The Countess of Walewski, as the celebrated Duchess de Nevers, wore a sumptuous costume of the 17th century, and was accompanied by her youthful son in the character of page. The epoch of Louis XV. was abundantly illustrated in all its gorgeous and ingenious variety of tastes. The Countess of Kinnoul, Viscountess Mandeville, the Duchess of Montrose, Mrs. Disraeli, Lady Graham (wife of the First Lord of the Admiralty), and a number of ladies, did full justice to the traditions of this period, which likewise had several male representatives. Miss Graham wore a peculiarly elegant and suggestive costume as Anne Vere, Countess of Oxford. The allegory of "Night," "Twilight," and "Day," by Lady Zetland, Miss Barclay, and Miss Vyner, formed an elegant tableau. The Countess Delawarr displayed fine taste in the selection of an old English costume, copied chiefly from a family portrait: to use a homely but expressive phrase, it became her "excellently well." The appearance of Lady Pakington as a Lady Pakington of the "olden time," was from a family portrait, equally characteristic.

Amongst the ladies whose costume was "observed of all observers," we may, without instituting invidious comparisons, allude to the sister beauties, the Marchioness of Waterford and the Viscountess Canning, whose dresses were nearly similar. The Duchess of Somerset adopted the happy idea of founding her costume on the circumstances of the present time, and making it emblematic of the cordial union existing between Great Britain and France. The idea was carried out with much judgment and effect. Viscountess Palmerston's costume, as the representative of the neglected wife of the miserable Charles IX. of France, displayed a remarkable precision and completeness of acquaintance with the "fashions" of three centuries since. Lady Molesworth chose the character of another Queen of France, equally slighted by her wretched husband, Louis XI. of inglorious memory. Her Ladyship's dress was historic and authentic, and distinguished by chaste grandeur. Next week we shall illustrate a few of the historical costumes.

It would be both convenient and interesting to take special notice of the costumes worn by the gentlemen, further than that they were generally of a costly and gorgeous, and, in many instances, of a very tasteful description. We may, however, observe that the Lord Chief Justice of England, in his official black velvet dress, was one of the decided "features" of the ball-room. The Corporation was represented by its Lord Mayor, in the character of that "merchant of renown," Sir Thomas Gresham, and his Lordship played his part with a quaint gravity that was effective.

The mansion was fitted up for the occasion by Mr. Thomas Cubitt, to whose representative, Mr. Waller, our special acknowledgment is due, for the facilities afforded to our Artists.

THE COUNT AND COUNTESS WALEWSKI.

COUNT ALEXANDER COLONNA WALEWSKI, the eminent diplomatist who represents the French Government at the Court of St. James, served in the French army in Africa, as a Captain in the 4th Hussars. Whilst so engaged, he was entrusted with important missions to the camp of Abd-el-Kader, and acquitted himself with a degree of ability, which led to his entry upon the career in which he has achieved fame. In the year 1840 he managed a special negotiation, on the part of France, at Athens and Constantinople; and was afterwards sent to Rio Pista, as mediator between the Republic of Buenos Ayres and that of Montevideo. In this capacity he acted in concert with Lord Howden, the mediator on behalf of Great Britain. His Excellency then served as Envoy Extraordinary and Minister Plenipotentiary at the Court of Florence; and afterwards at that of Naples. His latest diplomatic appointment, previous to his accession to the Embassy to Great Britain, was that of Ambassador at the Court of Madrid. In the important posts filled by him, his Excellency has obtained a reputation not only for skill and sagacity, but for candour and good faith, which has conciliated in an unusual degree the respect and confidence of the several Governments to which he has been accredited.

The Countess Walewski is daughter of M. Ricci, and springs from one of the most ancient Florentine families, numbering amongst her ancestors the celebrated names of Machiavel and Dante. Her Excellency's mother is the daughter of Prince Stanislaus Poniatowski, nephew of the last King of Poland; the Prince settled and married in Italy after the last partition of Poland.

The Portraits are taken from the pictures painted by the celebrated Parisian artist, Mittex.

QUEEN VICTORIA AND THE FRENCH PEOPLE.—At the opening of the section of the Mediterranean Railway between Valence and Montelimar, a dinner was given by the directors of the company, at which popular demonstration took place, which shows how popular the war against Russia and the alliance with England have become in France. Before the first toast was given, Count Chotek, in the chair, rose and said spontaneously, and cried out, "Vive l'Empereur!" "Vive la Reine Victoria!" "A bas les Russes!" amidst extraordinary excitement and cheering. The cry was caught up by the crowd outside, and repeated with increased enthusiasm.

FRENCH GALLANTRY.—When the French fleet was lying off Deal, thirty women of Boulogne, most of whom had husbands or relatives on board, resolved to pay their ships a visit. Seven went in the *Duchesse* steamer, but the greater part embarked for Deal direct in a couple of fishing-boats. They were received with extraordinary honours by the fleet. Admiral Parseval Deschenes paid particular attention to one lady, whose husband he had known at Brest, and the officers of the Admiral's ship asked her to dine with them. She felt overwhelmed by this condescension, and begged not to be separated from her travelling companions. This modesty was appreciated. A separate table, with thirty covers, was laid in the officers' cabin, and there the whole party were splendidly regaled, to their own and the spectators' great delight and astonishment.

COMMUNICATION BETWEEN GUARDS AND DRIVERS.—Captain Wynne, R.E., has reported to the Lords' Committee of PRIVY COUNCIL for Trade, upon Professor Gordon's invention of means of communication between guards and drivers on railways. He says:—As far as experience went in the two trials which I made, I confess that Professor Gordon has satisfactorily established that his apparatus supplies an effective communication between driver and guard, that it combines cheapness with simplicity of construction, and apparently a non-liability to derangement; but, at the same time, I should wish to guard myself from expressing a positive opinion until the apparatus has been for some time tested by the rough handling of working constantly in a train."

CHURCH-RATES.—On Saturday a bill in the House of Commons was brought to repeal the compulsory payment of church-rates, to consolidate and amend the laws respecting the assessing and collecting of church rates in England and Wales, to remove a Dissenter from the assessment, a declaration to be signed, which declaration is set forth. Church-rates are to be assessed and recovered like poor-rates.

LOWERING IN THE PRICE OF BEER.—At a recent meeting of several of the principal brewers in the metropolis, it was agreed that, in consequence of the increased duty, the price of beer should be lowered as follows, from and after the 1st of May:—Per barrel, brown or pale ale, double stout, from 36s. to 32s.; X ale, XX, from 30s. to 28s., XXX, from 42s. to 34s., XXXX from 50s. to 60s.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Mr. Charles Dickens has accepted the office of President of the Reading Athenæum, vacant by the death of Judge Talfourd.

M. Jaques Arago is about to leave France for the Brazils, at the request of the Emperor Don Pedro II.

Mr. Stephenson, the engineer of the Grand Trunk Railway of Canada, proposes to construct a similar bridge over the St. Lawrence, at Montreal, the estimated cost of which is £1,400,000.

The University of Edinburgh has conferred the honorary degree of LL.D. on Mr. George Finlay, author of the well known work on Greek and Byzantine history; and on William Freund, author of the celebrated Latin Dictionary.

No. 684.—VOL. XXIV.] SATURDAY, MAY 27, 1854. [WITH A SUPPLEMENT, SIXPENCE.

OUR NATURAL ALLIES IN THE BALTIC.

We endeavored to draw attention in our last to the strong sympathy expressed by the Scandinavian nations for the cause in which Great Britain and France are engaged. We return to the subject, with the view of showing how greatly it is the interest and duty of the Allies, and more especially of England, to encourage this friendly sentiment and to turn it to account. Austria and Prussia may desire nothing so much as peace—peace *à tout prix*—peace unaccompanied by the punishment of the man whose insane ambition has so wantonly disturbed it. But Great Britain and France can have no desire to respect what is called the "integrity of the Russian Empire." Their love of peace has a stronger foundation; for if peace can be better secured by the partial disintegration or dismemberment of that Empire, than by respect for its actual limits, it will be alike their interest and their duty to endeavour to push the war to that extremity. A Power whose systematic policy, ever since the days of Peter the Great, has been to assault the integrity of its neighbours, must give "material guarantees" to keep the peace. It is not sufficient to prevent the aggressor from enriching himself merely in one direction. His virtual monopoly of the Black Sea is but one of many dangers to be guarded against. The Czar has proved that no considerations of justice can restrain him, and that no reliance can be placed upon his word or upon his prudence. To restrain him from aggrandising his empire at the expense of Turkey is not enough. Defeated in that object, he or his successors, if left unpunished, will all the more vigorously endeavour to extend the Russian supremacy in another direction. If he cannot have the Black Sea, he will make every effort to command or to monopolise the Baltic. In addition to the actual possession of Finland, wrested by conquest from Sweden, and which forms one of the most valuable jewels in the Imperial Crown, the Czar has a reversionary interest in the Duchy of Holstein. On the death of the present King of Denmark, that province becomes his inheritance. Such a circumstance is a European misfortune; but if the people of Holstein themselves have no desire to be yoked to the Barbarian, it will not be wise on the part of Great Britain and France to suffer them to be dissevered from the Danish Crown. It is morally certain that the object of Russia—especially if she be signally defeated in the South—will be to strengthen herself in the North. Sweden and Denmark are free states—inhabited by brave and intelligent races, closely allied, not only by language but by sympathy and by religious opinion, with the people of Great Britain. They are our natural allies, and no social or political circumstances exist to show that they are in a state of decline. The Turks may or may not be able to maintain themselves in Europe. It is a question of extremely doubtful solution with many persons who give no support whatever to the nefarious ambition of the Czar, whether the Turks, notwithstanding all the wise and extensive reforms of the late and the present Sultan, possess that elasticity of mind and enterprise of character which will enable them to play their proper part in the great scheme of civilised Europe, and whether their religion be not, in reality, an insurmountable bar to their national advancement, and to their existence as a bulwark against Russian encroachment. But if there be any truth in these arguments—which, however, we do not assert—no similar objections can be taken against the Swedes and the Danes. Sweden has been robbed by Russia, and her people earnestly desire to repossess their ancient province. The people of that province themselves detest the yoke of their barbarian task-masters, and hail with delight the prospect of being reunited to that free Protestant and maritime State, with whose ancient glories their own are so intimately associated. Should not Great Britain and France assist the Swedes and the Fins to come together again? Has not the time arrived, when advantage should be taken of the popular sympathy expressed towards the great cause of European freedom by the Scandinavian nations? And should not our Government enter into negotiations with the Courts both of Sweden and Denmark to guarantee them support and assistance, and to secure them on our side?

Russia is busily engaged in the attempt to make these States break through their declared neutrality. It is our duty to follow the example. Our supremacy in the struggle will secure the independence of Denmark and Sweden: the supremacy of Russia will be fatal to them both. Sweden will not only remain without Finland—her rightful possession; but Denmark, in spite of the sympathies of the Holsteiners, and in spite of the interests of every other province of that brave, but too small kingdom—will be dissevered from association with civilised Europe, and united with a Government which maintains its connection with foreigners by the sword, and with its own subjects by the knout. Were the alternative fairly placed before Sweden and Denmark by the Government of this country, and were our alliance offered them upon the terms which they have a right to expect, and which it is our palpable interest to offer, there can be no doubt of the enthusiastic alacrity with which they would give their decision.

Although the anticipations of victory excited by the appearance of the gallant Napier in their seas, have not yet been justified by any considerable achievement, the Fins and the Swedes know that our conquests are certain, and look with almost as much interest as the people of England do to every move in the game. When Revel and Helsingfors are taken, as they will assuredly be whenever Sir Charles Napier thinks it expedient to attack them, the entrance to St. Petersburg will be as effectually blocked as if our fleets were at Cronstadt. The Swedes are preparing their minds for the day when St. Petersburg itself shall be in our possession. They do not understand the delays of our diplomacy, and have begun to express their astonishment that no definite overtures have yet been made to them by the Allies. The Danes are equally on the alert. It is publicly stated in Copenhagen that by a new treaty between Great Britain and France, signed on the 15th ult., those Powers have bound themselves to procure a categorical answer from the two Scandinavian States, whether they will join the Anglo-French or the Russian Alliance. Time will show whether this statement be true; but there seems no inherent reason to doubt its correctness. Both Den-

THE SULINEH MOUTH OF THE DANUBE—(SEE NEXT PAGE.)

mark and Sweden could give effectual aid; and we see with pleasure that the amount and quality of that aid are freely set forth by one of the ablest of the Swedish journals. It is stated in the *Aftonblad* that Sweden alone—not including the Norwegian contingent, the militia, and reserves—is able to provide an army of 94,980 men; composed of 85,000 infantry, 5564 cavalry, and 4416 artillery. Of this force, 60,000 men would be available for a war against Russia, and an attack upon St. Petersburg by land. How valuable an auxiliary such a force would prove to our own military and naval forces in the Baltic, need not be insisted upon. In addition to this force, Sweden, if not Denmark, could provide large numbers of flat-bottomed vessels, such as Admiral Napier requires, and expressly built for the navigation of the shallow waters of the Upper Baltic and the Gulfs of Finland and Bothnia. We believe that our Government has but to offer to aid the Swedes in the endeavour to repossess themselves of Finland, to be secure of their hearty and zealous co-operation Sweden has often played a great part in the history of Europe. It is for the interest of all Europe, that that State should be restored to her ancient place in the great Commonwealth of Civilisation. Such a result of the war would not only be the greatest punishment of Russia, but would be one of the most effectual "material guarantees" against Russian aggrandisement. By such a stroke Russia would lose nearly her whole maritime population—for the native Russian is no better a sailor than the Swiss or Tyrolese; and by such a re-arrangement of the map of Europe, there would be little reason to fear the encroachments of the Czar or his successors for half a century to come. Denmark is almost equally interested with Sweden; and although the King, the Court, and the Cabinet are pro-Russian—but more perhaps from fear than from sympathy—it remains to be seen whether King, Court, or Cabinet could resist the impulse of the population, or the example of Sweden, if Great Britain and France relieved them of their fears of Russia, by boldly demanding of them to take the side of civilisation—and of their own interest.

THE SULINEH MOUTH OF THE DANUBE.

After a course of nearly 1800 miles, the river Danube, before it flows into the Black Sea, divides into several branches, of which the three principal ones are—the Sulineh, the Kilia, and the St. George's Channel The Sulineh mouth, through which nearly the whole of the navigation of the Danube passes, has been claimed by Russia ever since the treaty of Adrianople, and every means has been taken by that Power to close up the free passage of the river with a view to promote the prosperity of Odessa. So long as the mouths of the river formed part of the Turkish territory, a depth of sixteen or eighteen feet was maintained on the bar, so that large vessels had no difficulty in passing it. Since it fell into the hands of Russia, the culpable neglect of the authorities has caused such an increase of the bar that the depth of water has fallen to eight or ten feet, while, at the same time, the channel has been so much contracted by the formation of sand banks, and from the remains of shipwrecked vessels being allowed to remain there, that it is difficult for any vessel to pass, except in calm weather, and with a skilful pilot. Our Government has frequently remonstrated with the Russian authorities on the necessity of dredging the channel, and they have always promised they would take effectual measures to remedy the evil; but, like all the other promises of Russia, nothing has ever come of it. A long correspondence on the subject, which ultimately assumed a very angry character, took place between Lord Palmerston and Count Nesselrode, two or three years ago, and would probably have ended in a serious quarrel with Russia had the Eastern question not occurred. Last summer Lord Palmerston, having been asked whether any instructions had been sent out by Government to inquire into the case of British vessels then detained in the Danube, owing to the imperfect navigation of the Sulineh channel, gave a long explanation of the way in which Russia had trifled with this country. After many remonstrances from our Government, the Russian Government would send a steam-dredge to carry away all the obstructions on the bar. "The steam-dredge came," said Lord Palmerston, "and the steam-dredge worked, but in two hours it was always put out of gear from some accident or other (Laughter), and they were obliged to go back to Odessa for repairs" It is easy to understand the meaning of all this. Though very guarded in his language, Lord Palmerston did not scruple to state that "there was rivalship on the part of Odessa, where there existed a desire to obstruct the navigation of the Danube, and to direct it, if possible, by way of Odessa." Taking this fact into account, and bearing in mind how dishonest and unscrupulous the Russian authorities are in international affairs, no one will expect to see the navigation of the Danube placed on a proper footing while Russia retains any power over it.

With a view to prevent the passage of English or French gun-boats up the Danube during the present hostilities, the Russians lately erected several batteries at the Sulineh mouth of the river, but these suffered so severely from repeated attacks of the Allied fleets, that they have dismantled them, finding the place untenable against an assault by water.

The illustration on the opposite page will give some idea of the dangerous nature of the navigation. The remains of wrecked vessels scattered over the river show what havoc has been made by the selfish policy of Russia.

The King of Prussia's Courtesy to Russians.—His patriotic Majesty the King of Prussia has conferred the following distinctions upon the Russian officers specified below:—The Red Order of the Eagle, first class, to the Lieutenant-Generals Riesenkampff, Tutschkoff, and Tscheer, all three holding high and active commands in Russian Poland; the Red Eagle, second class, to Colonel Ulrich, and the same, third class, to Colonel Maximoff; the same, fourth class, to Captain Stern, to First Lieutenants Masloff and Jegoroff, and to Second Lieutenant Renwald.

Russian Intrigues in Portugal.—A letter from Lisbon says: "The Miguelite journal *A Nacão*, which has just appeared under a new form, rivals the journal *de St. Petersbourg*. Its first article is an enthusiastic paraphrase of the last memorandum of Russia. There is no difficulty in recognising that the articles of the *Nacão* are the work of a pen more skilful than that of the ordinary editors of that journal. The details which it gives of the policy of the Czar, and of the operations of the belligerent armies, sufficiently indicate the source from whence the Miguelite journal derives them."

Despatches from Turkey.—In order to receive accounts from the theatre of operations with greater celerity and regularity, a service of Tatar couriers has been organised between Adrianople and Belgrade. The journey will be performed in four days after which, by the telegraphic line of Semlin, despatches will reach Paris in less than seven hours, by Peterwardein, Lovrin, Szegedin, Czegled, Pesth, Vienna, Lintz, Munich, and Paris. A service of couriers corresponding with that between Belgrade and Adrianople, will be established between the latter city and the head-quarters of the army of the East. It is calculated that, by means of these measures, news of the operations of the French army may be received in six days.

Nelson's Column, Trafalgar-square.—The last instalment of the artistic embellishment of the pedestal of Nelson's Column has been placed on the west side, facing Pall-mall. The subject is by Mr. Watson, representing Nelson receiving the sword of the Commander of the San Josef, in the action of St. Vincent. The massive plate representing the scene is of gun-metal, supplied by Government, and weighs about five tons. Messrs. Robinson and Cottams, of Pimlico, were entrusted to finish this instalment. It was cast in three divisions, and there appears to be scarcely the slightest flaw in any part.

Statue of Charles I.—The statue of King Charles I., at Charing-cross, is to be restored and renovated, preparatory to being placed under the surveillance constituted by the new Act.

La Plata Treaty.—A treaty has been concluded between England and France with respect to the division of prizes taken from Russia. They are to be divided in proportion to the number of men engaged in the different captures. The whole terms of the treaty show that the utmost confidence exists between the two Governments, and that they are both actuated by the same feeling, of not doing more than is absolutely necessary, or anything that can outrage the feelings of humanity of the most scrupulous.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

Paris, Thursday.

The season is finally and effectually terminated by the departure of the Court for St. Cloud, which would have taken place sooner than it has done, but for certain reparations and improvements to which that palace has been submitted. The Emperor and Empress purpose remaining here until the formation of the Camp de la Manche is completed, when they proceed thither; the Empress, during the Emperor's stay, remaining at Boulogne, for the benefit of sea-bathing.

The return of M. Hubner, the Austrian Minister, was last week the theme for a thousand speculations, a thousand commentaries. The popular opinion—ever sanguine—declared that the result of his representations at Vienna—his tendencies being well known to be all in favour of the Western Powers—would be the declaration of Austria's uniting her forces with those of England and France, and that her levy of 85,000 men was the preparatory step towards this coalition. Certain persons, likely to be well informed, incline to the idea that this hope is at least premature; and that, whatever may be the course adopted by Austria later, she is not at present on such terms with Russia as to render an immediate rupture by any means probable. In support of this opinion, they cite the fact of the movement at Montenegro being suddenly interrupted by the arrival of two superior Russian officers, coming from Austria, and proceeding at once to an interview with Prince Danilo; and by the general inactivity of the Russian army in the Dobrudja, as if waiting for some expected arrangement ere taking the decisive step of crossing the Balkan.

It is confidently stated that Lord Cowley is shortly to give a fête in imitation of that of M. de Walewska, at which the Emperor and Empress are to be present.

A trial has been made of the uniform of the new Imperial Guards; it consists of a blue coat with facings, *garance* trousers, and gaiters: the head-dress, a bearskin cap with a band, is found to look heavy, and will, probably, undergo some modifications. The Cuirassiers of the Imperial Guard were to have a cuirass, with a golden sun, white breeches, and boots cut away at the top; but this shape being found to possess certain inconveniences, it will probably be altered; but the rest of the costume is, we believe, to be retained.

The two seats in the Académie Française left vacant by M. Jay and Tissot, have been filled, at the recent election, by M. de Sacy, the popular writer—whose articles in the *Journal des Débats* are marked by a degree of talent giving them an interest beyond that generally accorded to topics of the day—and M. Dupanloup, Bishop of Orleans.

The races at Chantilly have been much affected by the badness of the weather, which has prevented the attendance of the usual concourse of the *beau monde*, which habitually attends them, and rendered the ground heavy for all the horses, but more especially the less strong ones.

Last week took place the sale of a most interesting collection of autographs, belonging to M. de la Roulaie Rochefort. The letters, belonging to no particular period or class, possessed no less variety than value. Among others were those of Charles Quint, François I., Gustavus of Sweden, Marguerite d'Autriche, Richelieu, Robespierre, St. Just, Mdme. Roland, Rousseau, Walter Scott, Wellington, Soult, Talma, &c., &c. Some of these autographs fetched good prices, but as the general rule, they sold indifferently.

It is a positive fact that the agents of the Russian Government have adopted the custom of making out, every time an engagement takes place, three different reports of the event. The first, which is true in all points, is for the eye of the Emperor alone, and is read by none but him; the second is for the Minister and is the one destined to appear in the public press, and to go the rounds of the rest of Europe: the third, filled with the most ridiculous accounts of the bravery and successes of the Russians, and the discomfiture of their opponents, is only meant for internal circulation, to re assure the people of the interior. This report is printed only in Russian; and is put up in the churches, and read aloud by the priests, and the greatest care is taken that no copies of it shall go abroad.

The Théâtre Lyrique has a brilliant success with a new opéra-comique, written by M. Méry, and composed by M. Ernest Roger, entitled "Maître Wolfram." The scene, as the name indicates, lies in Germany. *Maître Wolfram*, a young composer, and organist, loves with a passion he deems hopeless and dissembled, *Hélène*, an orphan, adopted by his host, *Wilhem*, brought up in the house with him, growing under his eye from childhood to an age when the affection of the young man changes its character. *Hélène* loves *Frantz*, a young officer; but *Wilhem*, led into error as to the object of her attachment, and believing it to be *Wolfram*, communicates to him the supposed discovery, which transports him with delight, and fills *Hélène*, who has for him a warm regard, but of another sort, with regret and embarrassment. The mistake is, however, explained; *Hélène* and *Frantz* are united; and the composer returns to his organ, to try to console himself with a mistress who, though she has proved insufficient to occupy all his heart, is, at least, more faithful to him in his affliction than he was to her in his hour and fleeting joy. The poem and the music rival each other in grace, sweetness, and originality of style and treatment; and "Maître Wolfram" may certainly be considered as one of the greatest successes of the day.

UNITED STATES.

The steam-ship *Arabia*, which left New York on the 8th inst., arrived at Liverpool on the 20th. The American papers supply no news of the missing *City of Glasgow* steamer.

The steam-boat *Pennsylvania* had exploded in the Delaware on the 6th inst., killing nine persons and sixteen horses.

The excitement on the Nebraska Bill was again as great as ever. In the House of Representatives, on the 8th, seventeen bills were laid aside in order to give it precedence; and the *New York Express* says, "When the Nebraska Bill came on, the House was a scene of no little tumult. Members were on their feet, and clapping of hands was heard in all parts of the Hall. A motion that it should lie on the table was defeated by a vote of 85 to 105. Some of the members, hitherto opposed to the bill, now voted for taking it up. In New York and all the principal cities of the Union, the interest upon this question was very intense."

The New York Chamber of Commerce had memorialised Congress in relation to the rights of neutrals, and the importance of taking advantage of the existing state of affairs in Europe to negotiate treaties with the different maritime Powers of the world for the protection of the rights of neutral vessels, and to establish the American principle, that free ships make free goods. Mr. Ingersoll had delivered a speech in the Senate on the European war, advocating the immediate declaration, that free ships make free cargoes, and that the United States would not permit the search of American vessels or the overhauling of their papers.

Government had resolved on energetic measures in regard to the *Black Warrior* affair, the despatches from Madrid having given great dissatisfaction. The Captain-General of Cuba was pushing to the utmost all measures for the defence of the island in the event of a war with the United States. The military force was estimated at 12,000 men. The correspondent of the *New York Daily Times* again reports the landing of three corps of slaves at Cuba.

On Wednesday the *Pacific* steam-ship arrived at Liverpool, with four days' later news. When she left, the Nebraska Bill was still under debate. It was said that the President would recommend to Congress the blockade of Cuba, in case Spain refuses to give redress in the *Black Warrior* affair.

The caloric-ship *Ericsson*, which was capsized on her trial trip on the Hudson river, had been raised on the 11th inst. There was no damage done to her hull or engines; and the loss sustained by damage to her furniture and ornamental work is estimated at 30,000 dollars.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

Schumla, May 1, 1854.

The first really important naval operation of the campaign against the Russians, has taken place within the last few days. The British and French fleets having received orders to make for Odessa, left Baltchik on the 17th ult., and reached their destination by the 21st. The *Retribution* and two other steamers—one of which was French—had been for some time cruising in front of Odessa, and had succeeded in capturing fifteen Russian merchant ships, of which the crews were sent as prisoners on board the fleet, whilst the vessels were despatched as prizes to the nearest port—Varna. On the morning of the 22nd, three British steam-frigates and one French took up their station in front of the military harbour. They opened fire at six a.m. on the Russian batteries, which immediately returned the compliment. At ten o'clock four other frigates took up a position to shell the batteries, and a general engagement ensued. The firing continued incessantly until five p.m., when Admiral Dundas and Vice-Admiral Hamelin hoisted the signal to cease. By this time the batteries on the moles of the Imperial harbour were on fire, the powder magazine had exploded, and all the ships inside had been either burnt or sunk by shells. It must be borne in mind that the arsenal and docks of Odessa are on one side of the remicircle formed by the town, and that these were attacked without any damage to the inhabitants. The commercial harbour, containing vessels of every nation, was respected by the Admirals, who forbore from inflicting on the Russians the punishment which they had not hesitated to give the Turks in the disastrous affair of Sinope. In the confusion consequent upon the bombardment, several of the traders in the harbour succeeded in slipping their cables, and making their way out. Amongst these were two French vessels. The prizes taken in front of Odessa were put up to public competition at Varna, and sold to the highest bidder. Two vessels were bought for the account of his Excellency Omer Pacha, who intends to have them manned by English crews. The loss in the fleets during the engagement has not reached me. They were still in the roads of Odessa on the 26th inst.

The accounts hastily sent two days since of the retreat of the Russians from Little Wallachia are confirmed. The enemy began to retire on the 22nd, the very day when our fleets arrived at Odessa, and the Turks advanced into the country from Kalafat on the 23rd. The villages had been in great part cleared of inhabitants; or rather, perhaps, the miserable people had been forced to fly, because the Russians carried with them every thing eatable, and burnt the remainder. Not a parcel of hay or straw, not a measure of corn was left behind. The Turks came up with the rearguard of the retiring Russians, near Baileschdi; but there was no engagement, as was at first reported. A sufficient force was left as outposts at Baileschdi, and the main body returned to Kalafat. For the Russians, the abandonment of Little Wallachia had become a matter of necessity, and they felt that they must concentrate themselves. I believe I am correctly informed when I say that they expect to be attacked in the neighbourhood of Bucharest, where they have commenced a series of regular works for the purpose of withstanding a siege. News from Silistria only three days old is that no further movement had been made by the enemy, and that everything was quiet. The Turks are extremely glad to hear of the arrival of a French division of 12,000 men at Adrianople. According to the latest letters, there were six regiments of British in Constantinople, and that is also pleasing intelligence. It would be much to be desired that the Allies should land a force on the coast of the Black Sea in such numbers as to cut off the supplies, and render untenable the position of Bucharest; but I fear we are not yet in sufficient number for such a plan.

With the exception of a fire which yesterday broke out in the hospital here, I know of nothing new. Three patients died of fright; and the fire was extinguished without any considerable damage.

Of the Russians there is no news. Nothing has stirred on either side. The Turks are not at Adrianople, as at first supposed, but still in Gallipoli, 22,000 strong. There are 5000 English there also, and 12,000 in Constantinople.

BOMBARDMENT OF SILISTRIA.

Notwithstanding the numerous reports of Silistria having fallen into the hands of the Russians, the latest intelligence informs us that it was still held by the Turks, and that so late as the 18th ult. Marshal Paskiewitsch had his head-quarters at Kalarasch, opposite Silistria. On the 14th he had crossed the Danube, with his staff, to reconnoitre. Next day terms of capitulation were offered to the Commander of the fortress, and the bombardment was suspended. On the 17th Mussa Pacha rejected the Russian terms, and the bombardment had been renewed. Since then, it is said that the sudden overflowing of the river, which is likely to last some time, as this is the season when it overflows, has caused the Russians to cease the fire of the batteries established in the island opposite Silistria. The *Wanderer* contains a letter from Schumla of the 8th inst., to the effect that Omer Pacha has sent to Constantinople to say that if the auxiliary troops were not at the Balkan by the end of May, he would be obliged to sacrifice Silistria.

The Turks still continue to show themselves superior to the Russians in the frequent engagements which take place between detachments from the two armies. One of the most important affairs of this kind was the one at Nicopolis, on the 29th ult., an account of which has been published by Omer Pacha. According to the Turkish bulletin, Said Pacha, after having passed the Danube, demolished the works of the *tête du pont* of the Russians, took two pieces of cannon, beat and pursued the enemy as far as Tournow, and occupied Islas. These accounts are confirmed by private letters, but nevertheless a bulletin was published at Bucharest on the 30th ult., in which it was announced that a victory had been gained over the Turks, and a "Te Deum" was even sung on the occasion of it. A letter from Orsova confirms the details of the affair which took place on the 16th, near Giurgevo. Said Pacha crossed the Danube at the head of 4000 men, attacked and destroyed the enemy's batteries, and drove back the Russians as far as Giurgevo. The Turks took two pieces of cannon from the batteries. Said Pacha, after having set fire to a quantity of timber and other materials, collected for the purpose of constructing a bridge, recrossed to the other side of the river.

Another sanguinary engagement took place on the 12th, in which the Turks took several pieces of cannon from the Russians.

Since the evacuation of the Russians from Little Wallachia, the inhabitants have ventured to show the real state of their feelings towards their oppressors. Continual attempts, we are told, are made by the Wallachians to destroy the artillery and ammunition depôts of the Russians at Roksehan. On the 4th a "laid fire was extinguished with great difficulty," and another again on the 6th. At Kalarasch, a magazine, containing 8000 pud of flour, was recently burnt down; and in the Talomnitza district all the hay which the Russians had collected has been burned. Nearly 1000 Wallachians, of the better class, are in prison on charges of sympathising with the Turks; and the Wallachian *Moniteur* publishes the announcement of the sale of property belonging to certain inhabitants of the county, and which has been confiscated in pursuance of sentences pronounced by the Russian military tribunals, for what they call rebellion.

LOSS OF THE "TIGER."—RENEWED BOMBARDMENT OF ODESSA.

The news from the Black Sea is of a very conflicting character. On Friday week a telegraphic despatch brought the news of the *Tiger*, "a screw-steamer of thirty-two guns," having run aground near Odessa, on the 12th inst., and, after some firing, having been obliged to surrender. As the *Tiger* was known to be a paddle-wheel steamer of only sixteen guns, it was thought that the story must be a fabrication; but it has been placed beyond doubt by later intelligence, although we are still left very much in the dark as to what the case really was. The *Wanderer*, on the authority of letters from Lemberg, of the 17th and 18th, says:—

The *Tiger*, with sixteen guns and 250 men on board stranded in the vicinity of Cortazzi (a few miles from Odessa), and was immediately fired upon from the battery erected at this point, and by several gun-boats. On the following day two English men of war arrived on the spot, and at once opened fire upon the said battery. The second letter speaks of seven English steamers having demanded the restitution of the ship and her imprisoned crew, which being refused, they proceeded to bombard

he town of Odessa. When this letter was posted the firing had already arted six hours, and still continued.

Another account, said to be from a reliable source, states that the *Tiger* got on a sand-bank when in pursuit of a Russian schooner, which an into the quarantine port. The Russians fired into her with red hot balls until she was completely helpless. The two steamers who came to her assistance were obliged to keep at a distance, as the Russians had some guns of the very largest calibre, which they fired with extreme precision." The *Tiger* was burned almost down to the water. The *Prince* affirms that the Russians fired on the steamer after she had hoisted a white flag, and made signals of distress. "In spite of a perfect shower of balls the crew went on shore, where they are treated as prisoners of war. Several ships of the line and smaller vessels have been set on fire by the inhabitants of Odessa are in great consternation. A flag of truce has just been sent in.

In an official report of the affair which had reached Vienna, it is said that great apprehension of a descent was from the allied fleets, in consequence of the capture of the *Tiger*, were entertained at Odessa; that the Commandant has caused the coals stored up there to be set on fire, and would do the same with the grain if the bombardment was renewed; and that the detained captains and crews of English merchantmen, together with the prisoners from the *Tiger*, had been sent off to Bessarabia.

The following is the account given by the *Journal d'Odesse*; but, as we know what monstrous falsehoods have been published there about former transactions, we can place little reliance on its statement:—

On the 12th of May the *Tiger*, of 1275 tons burden, and mounting sixteen guns, which stranded at seven versts from Odessa, was forced to surrender before the *Vesuvius* and *Niger* could come to her assistance. Her captain (Giffard) lost one leg, a midshipman both, and five men were wounded. Two hundred and twenty-six prisoners were taken. The Russians had two officers wounded, and two soldiers killed. As the vessel could not be removed, she was set on fire by us, and sank the same day. Some of her guns were taken as trophies to Odessa.

A private letter from Odessa, of the 13th, gives a somewhat different account, as will be seen:—

ODESSA, May 13.

To-day's news are that last night, during a heavy fog, the English steamer *Tiger* ran herself aground at Cortazzi's Hutor, so as to be almost under the dry. As soon as this was made sure as to have gone ashore, the artillery was sent there, and the steamer crippled. She struck, and her crew, I am told, of about 200 men, are just now being brought in as prisoners. The vessel is, I understand, on fire. Three other steamers are in sight, and have made communications, the nature of which we do not know. I have just seen the steamer; she is only fifty paces from the shore. The vessel is a powder hat had both his legs shot off.

The *Tiger* was a steam-frigate of 1220 tons, and 400-horse power. It was launched at Chatham in 1849, and its crew is understood to have mounted to 200 men. The following is the official list of officers on board:—

Captain Henry W. Giffard. Lieutenants Alfred Royer, Alexander Hamilton, and W. P. Stone. Master, Francis Edington. First Lieutenant Marine Artillery, F. L. Arnell. Surgeon, H. J. Domville. Paymaster, George A. Lance. Mate, C. H. Dickinson (acting). Assistant-surgeon, Edmund Lowless. Second Master, John C. Soltcet. Clerks, Charles Gi. Barnes and N. G. Simmonds.

THE FLEETS IN THE BLACK SEA.

The latest news relating to the Allied fleets in the Black Sea comes down no farther than the 8th inst., at which date Admiral Dundas was off Sebastopol, with the following vessels:—*Britannia*, 120; *Queen*, 118; *Rodney*, 120; *Albion*, 90; *Rodney*, 90; *London*, 90; *Agamemnon*, 91; *Sanspareil*, 84; *Bellerophon*, 78; *Sanspareil*, 71, screw; *Arethusa*, 50; with the steamers *Terrible*, 21; *Retribution*, 22; *Highflyer*, 21, screw; *Furious*, 16; *Tiger*, 16; *Niger*, 14, screw; *Samson*, 6; *Firebrand*, 6; *Inflexible*.

Another letter of the same date states that, on the 5th, Rear-Admiral Sir Edmund Lyons started from Sebastopol on his mission to the coasts of Georgia and Circassia, in the screw-ship *Agamemnon*, and French screw *Charlemagne*, 90, *Retribution*, *Highflyer*, *Niger*, *Samson*, *Firebrand*, and with a squadron of French steamers.

The *Tiger* was ordered to cruise between Sebastopol and Odessa. The loss of that vessel, to which we have elsewhere adverted, took place on the 12th.

The French Government has received two important despatches from Vice-Admiral Hamelin, Commander-in-Chief of the squadron of the Mediterranean, relating to the movements of the Combined Squadrons in the Black Sea since the bombardment of Odessa. The following are the principal passages:

Ville de Paris, before Sebastopol, May 1, 1854.

Monsieur le Ministre,—The fourth day after the bombardment of the town of Odessa, the wind having veered to the north, the two squadrons set sail on the morning of the 26th of April, and took the direction towards the western coast of the Crimea, as I had settled with Admiral Dundas. On the 28th, finding ourselves in sight of the port adjoining Eupatoria, I detached the steam-corvette the *Catan*, accompanied by the *Furious*, to explore the bay to the south of that town. The latter, after having shelled and destroyed three Russian vessels, one of which two were coasters. The *Furious* took a fourth. Somewhat earlier the *Descartes*, in cruising ahead of the squadrons, met with an English brig which had been captured on the previous evening by a Russian frigate; the latter, on perceiving the squadrons, had abandoned her prize, and started with her speed to gain the port of Sebastopol. Of these four prizes, two have been sent to the Bosphorus. As regards the two coasters, they were sunk.

We profited by the time while we were lying-to before Sebastopol to proceed to explore the neighbouring bays. This was done by the *Caton* and the *Furious*. Other steam-frigates presented themselves at the very mouth of the port, and have examined with the greatest attention of that the Russian fleet was composed. It appears to consist of twelve ships of the line, three sailing frigates, and a very considerable number of steamers, the most of them of small dimensions. The Russian prisoners interrogated, state that the ships of the line are to the number of 14, which two, in truth, are not in a very good state, and the steamers to the number of 30, of which three are large. What would appear to confirm the report of the Russian prisoners is the fact that two large vessels appeared from the top of our masts to be under repair in the basins of Sebastopol, and might, consequently, be the two ships of war in a missing state, of which the prisoners had spoken.

Ville de Paris, before Sebastopol, May 5.

Monsieur le Ministre,—Since the last letter which I had the honour of sending to your Excellency, dated May 1, the two French and English squadrons have not ceased to cruise at a little distance and within sight of the port of Sebastopol, where the Russian ships persist in remaining immovable at their anchors. The manœuvres which we are calculated, any degree to slacken the operations of war which Admiral Dundas and I have projected on the Russian coasts, an Anglo-French division starts this evening, under the command of Rear-Admiral Lyons, to attack Circassia. Its naval division is composed of the English steam-ship of the line the *Agamemnon*, carrying the flag of Rear-Admiral Lyons; of the French screw-ship of the line the *Charlemagne*, of five English steamers, and of two French steam-frigates, namely, the *Mogador* and the *Vauban*. The last-frigate and three of the English steamers will return to the squadron, when that naval division, having executed all that is projected to be done towards the Bay of Theodosia, will direct its course towards the coast of Circassia, where two ships of the line and three frigates will be transported.

While these operations are being executed the remaining seventeen ships of the two combined squadrons will cruise in sight of Sebastopol, in order to keep the Russian fleet in view.

Towards the 15th of May I have reason to think that we shall be able to begin our naval division thus detached, at the anchorage of Balschik, from which place I reckon upon sending a steamer to Constantinople to receive information with respect to the operations which may have been undertaken or executed.

Since the foregoing despatches were received, Admiral Hamelin is said to have written to the French Government, requesting that a body of troops should be sent to him as soon as possible, for operating by land. On Monday eighty pieces of artillery, of tremendous power, were embarked at Toulon and Marseilles. They are said to be for Sebastopol, against which a combined attack by sea and land will shortly take place.

THE DUKE OF CAMBRIDGE AT CONSTANTINOPLE.

Letters from Constantinople of the 11th inst. state that the Duke of Cambridge was the great star of the day. Ministers, Ambassadors, merchants were all pressing to his levee. Everybody has some anecdote of his favour to relate; and the poor Turks, who, like all Orientals, are very impressionable, suppose that there is something supernatural about him. The day after his arrival several hundred Turks remained stationed in front of his palace all day to get a distant sight of the "Inglis Pasha," as they denominate the Duke.

On the 10th inst., at about three p.m., the Duke was received by the Sultan in grand ceremony. Lord Stratford de Redcliffe and Redschid Pasha, Minister for Foreign Affairs, were present. The conference was short, but cordial; the Sultan had no terms strong enough to express his gratitude for the aid given by the great British nation. The Duke, on his side, said the red-jackets would show what they could do. They had never turned their backs to an enemy; and as for yielding to the Muscovite, that would be incompatible with the national honour as long as there remained one Englishman. Next morning, at about eleven, the British merchants and residents at Constantinople presented an address to his Royal Highness. Both that and the reply were what everybody expected—compliments, and a due return of the same. The Sultan was to give a grand dinner in honour of the Duke on the 13th.

Prince Napoleon was about to proceed to Gallipoli to see that proper arrangements are made to march them forward to Adrianople. As soon as the French receive their artillery they were to go on. The Turks are greatly vexed that everything is managed so slowly. They say "England is a great nation, and her resources are immense; how is it possible to persuade us that they are not prepared for war? The nation that can build and man a fleet of 30 men of war in four months surely cannot allege pecuniary difficulties as an excuse."

THE GREEK INSURRECTION.—GREEK PIRATES.

Intelligence from Athens, dated the 13th inst., speaks of the insurrection having extended in Thessaly, and of the towns of Paramythea and Margharita having fallen into the hands of the insurgents. The Greek Chief, Tzanes Karatassos, had arrived within twelve leagues of the town of Salonica. Another despatch from Athens, of the same date, states that to the ultimatum, presented to the Greek Government on the part of France and England, four days were given for an answer; that if no answer be returned, or if it be unfavourable, Greece will be blockaded and occupied by Anglo-French troops; that the custom-houses are to be seized; and that a Provisional Government will be substituted for the Government of King Otho. The ultimatum requires the immediate recall of all officers that have joined the insurgents, and the dissolution of the volunteer corps. Five vessels of the combined English and French fleets were in the Piræus.

Private letters from the Piræus give some details of the piracy which had been organised through the whole extent of the Hellenic kingdom. The energy displayed by the ships of war of the European nations, attacking and sinking the corsairs wherever they meet them, has produced a salutary effect, and has evidently discouraged these brigands. The pirates had become, in consequence of the indifference of the Hellenic Government, so audacious as to have gone the length of the seizure of the military arsenal of Paros. The failure of the plan was only due to the presence of the ships of war in the Greek waters, and to the determination of the foreign Governments to destroy vessels known to be fitted out for piracy.

THE WAR PANIC AT ST. PETERSBURG.

On the authority of several Frenchmen, who have recently been obliged to leave St. Petersburg, the *Augsburg Gazette* of Saturday last states that a perfect paralysis is seizing trade and commerce in that city, rendered more grievous by the enormous price of provisions. Many bankruptcies are imminent. Paper money had fallen considerably below its nominal value, and gold was eagerly sought. Economy in every branch of the national expenditure was being attempted. Thus, the building of the Church of Isaac was suspended—a most ominous and momentous matter in Russia. The patriotism of the wealthy inhabitants was perpetually roused by the crying wants of private misery and distress.

An English gentleman, who left St. Petersburg a week or two ago, after a residence of five years in that city, gives a similar account. He says that many of the nobility and higher families were quitting their town residences and retiring to their country seats, carrying with them their plate, jewels, and portable property of value; and the English, French, and other foreign residents were, to a much greater number than he had to wait six weeks before he could get a place in the only steamer which runs twice a week from St. Petersburg to Tekun. As a proof of the apprehension felt touching an invasion of the capital, he noticed that the houses on the side of the Neva were being pulled down, and defences erected opposite the main part of St. Petersburg.

The Emperor Nicholas has just imposed on the central provinces of the empire an extraordinary tax, amounting to the fourth of the revenue. The ukase which orders this impost, declares that the produce of the tax will be exclusively employed towards the expenses of the war which Russia maintains for the defence of the orthodox faith against the Western Powers—the enemies of that faith and of Christianity. He does not appear, however, to place much reliance on the orthodoxy of the inhabitants, for, in order to enforce this oppressive measure, he declares that the property of those who, in fifteen days, shall not have paid the first half of the new tax, will be sequestrated and sold by the Crown. Great discontent prevails among the people, on account of the severity with which the conscriptions are enforced. The landed proprietors are also in a high state of dissatisfaction, on account of the extraordinary levies, as every recruit taken from their estates inflicts a loss of 100 silver roubles. The conscription recently ordered will amount to 220,000 men, and, consequently, the loss to the landed proprietors will amount to 22,000,000 of silver roubles.

The *Augsburg Gazette* of St. Petersburg states that Count Nesselrode has been recently insulted by the people of that capital. On passing through the streets in his carriage he was hissed, hooted, and menaced, and was forced to take refuge in the house of a friend. He was accused by the people of being the cause of the war, and of having taken sufficient care to provide against its casualties, and of having acted with difference and negligence. But, whatever be the cause, the symptoms of popular indignation were not to be mistaken. The letter which relates these facts is from a Russian lady of high rank, who recounted them to a friend, with the deepest sorrow, as indicative of future troubles. It is probable that the inhabitants of St. Petersburg have already begun to feel more severely than the peasants of the interior the evils which war brings with it.

In Finland a very bad feeling prevails among the population, and several arrests are said to have been recently made there. Several regiments, consisting of natives of Poland, which had been drafted into the *corps d'armée* in Finland, have, in consequence, been withdrawn. In Poland the concentration of Russian troops is uninterruptedly continued. Russian reports say that they will amount to at least 260,000 men. Preparations are being made everywhere for quartering and supplying them with provisions. The fortresses are also being placed on a war footing, General Suchosarnich having received orders to have all the fortresses of the kingdom in a complete state of defence.

RUSSIA, AUSTRIA, AND PRUSSIA.

The prevailing impression is that Austria and Prussia are gradually drawing off from Russia. The latest proof of this is that a new protocol, composed of the Austro-Prussian treaty and the Anglo-French treaty, has been signed at Vienna by the Ambassadors of Austria, Prussia, England, and France, by which they are pledged to a community of action, with a view to the re-establishment of peace. Those conventions, thus blended into one common protocol, are regarded as an additional guarantee of the adherence of the Germanic Confederation to the Anglo-French alliance. Impatient politicians desire some more positive act on the part of Austria and Prussia, but it is something to find that they have made a step in advance, and, at all events, that they do not recede.

Simultaneously with the signing of this new protocol, we learn that the mobilisation of the fourth corps of Austrian infantry has produced a great sensation at the Russian Embassy at Vienna, and that the measure is considered at the first act of open hostility on the part of Austria.

On the other hand, Russia seems to be preparing to defend herself against Austria. The *Wanderer* of the 20th says:—"The official news which has arrived this day announce that the movements and concentrations of Russian troops on the northern and eastern frontiers of Austria have recommenced. The division of carbineers, 40 squadrons, is marching towards Bucharest."

The King of Prussia is said to have issued invitations to all members of the British Legation at Berlin, and to two or three English officers at present there, to dine with their Majesties, at a banquet to be given at Sans Souci, upon and in honour of her Majesty Queen Victoria's birthday. It is understood that the King has expressly postponed his visit to Dessau, and through the Saxon provinces, on purpose to afford this proof of cordial good-will to England.

THE BALTIC FLEET.

Simultaneously from Stockholm, Berlin, and Copenhagen, a statement reached London in the beginning of the present week that Sir Charles Napier, after a bombardment of eight hours, had demolished the Castle of Gustaffvern, at the mouth of the Gulf of Finland, and taken 1500 prisoners. The news was generally credited, but it proves to be false. News has been received from the fleet to the 16th, and it appears that up to that date, Sir Charles Napier had made no attempt on Revel, the Island of Aland, or Gustaffvern, although it was reported that he had attacked and taken all those places. The Admiral is probably waiting for the junction of the French division, and there can hardly be a doubt that his first object will be to prevent the Russian ships of war, which have been confined by the ice at Helsingfors, from effecting their escape to Cronstadt; as it is of the utmost importance to prevent the junction of the two squadrons.

A letter from Copenhagen of May 20th states that the division under Admiral Napier has lately been cruising between Hango-head and Faro. The *Wellington* ran close into Hango, the forts of which fired upon her. The signal for action was made, but it was late in the evening, and the signal was countermanded, for what reason has not transpired. It had been ascertained that Hango-head has three forts of five guns each; and that Worms, a fort between Dago and the Main, has one battery of five guns; and it was generally believed that these two points would be attacked on Monday last; and that the fleet would advance up the Gulf, taking or destroying the military defences along the coast.

On the 18th, the *Amphion* frigate and the *Conflict* corvette, which had left Memel on the 13th, returned there with a retinue of eight Russian prizes—*Alexander*, of Libau; *Louise Amelie*, *Polka*, *Louise*, and *Johanna Cor.*, of Riga; *Leonida* and *Activ*, of Persu; and *Nicolai*, of Windau. The *Amphion* and the *Conflict* had made their appearance before Libau, had put in with nine gun-boats, and had summoned the authorities to surrender all the vessels in the harbour under pain of the town being bombarded, giving them just three hours for reflection. The garrison, which consisted of 400 dragoons, were given to understand that the first shot fired at them would be the signal for commencing the bombardment; they therefore withdrew, and the above-named eight vessels, together with five others, were surrendered. These last-mentioned five were left behind, as not being worth the trouble of sending home. The crews of the English vessels gave the natives of Memel to understand that the next place to be honoured with a visit would be Riga.

This last-mentioned town was reported at Memel, even as early as the 18th, to be in flames, in consequence of a bombardment. In Riga it is said that they are building and equipping gun-boats with great energy; Dunamunde and its immediate neighbourhood are being provided with batteries: not only soldiers, but also artisans and others are employed on the works.

The French fleet arrived at Kiel on Saturday morning. It numbers eight ships of the line, four frigates, and four steamers; and it was understood at first that it would lie at anchor there only till Monday. Later accounts, however, show that on Saturday afternoon the *Lucifer* ran into the harbour, and took on board the French Consul, as well as all letters and despatches lying there for the fleet. On Sunday the whole fleet was being towed in by steamers—and, according to some accounts, would remain in harbour for a few days, according to other accounts, for a fortnight.

A strict blockade of the Russian ports has been established, as will be seen from the following official notice:—

H.M.S. *Amphion*, Harbour of Memel, May 12.

Sir,—I have the honour to inform the Consuls of her Majesty's Ports, Libau, Windau, that those ports are at length in a state of rigorous blockade; and that all the ships which leave after the 15th of May, either wholly or partially laden, will be stopped, and sent to England or France, to be there declared good prizes. This communication is to be made public in those ports.—I have the honour, &c.,

(Signed) A. C. KEY, Captain.

N. M. J. Hertslet, Esq., H.B.M. Consul at Memel.

THE OVERLAND MAIL.

The steamer *Bombay* arrived at Trieste at half-past five on Tuesday morning, in 113 hours, from Alexandria. The India Mail has advices from Calcutta, April 20; Madras, 24; Shanghai, 1; Hong-Kong, 12; Singapore, 18; Bombay, 28; Sydney, March 20, Melbourne, 24; Adelaide, 28. The Ganges Canal was opened on the 8th of April. A new version of the old invention about Russian machinations in Khiva is given in the *Delhi Gazette*. Russia is said to have concluded treaties with Persia, Bokhara, and Khiva. The articles of the treaty between Russia and Khiva are—the friends and enemies of the one state are to be friends and enemies of the other. Russia will not interfere with the domestic affairs of Khiva. A Russian Ambassador is to reside at Khiva. A subsidiary force is to be kept at Khiva of 10,000 horsemen, officered and paid by Russia. Russian, Persian, Bokharan, and Afghan slaves, now in Khiva, to be released on payment of all their value. Russia to build cantonments, and to establish a force for twenty years. Dost Mahomed demands, as the price of his alliance, 5000 Russian troops, and the necessary funds to recover Peshawur and Pashmeen.

The Chinese Patriot army is advancing towards Pekin.

The Americans have established a friendly feeling with Japan.

In Australia, several large masses of gold have been dug up at Ballarat, Castlemary, and at the old gold diggings in Mersdesig. Business at Sydney dull, and market overstocked. Gold is in advance of standard price. Prices of wool in advance. Tallow has risen 4s. per cwt.

THE SMITH TESTIMONIAL FUND.—The application of screw propulsion to ships of war the size of the *Royal Albert* and the *Duke of Wellington*—and to upwards of sixty other vessels afloat, to be speedily fitted with the same—has very properly suggested the present as a favourable time for inducing a public recognition of the merit of the introduction of the screw, due to Mr. Francis Petit Smith, and urged in an early volume of the ILLUSTRATED LONDON NEWS. Accordingly, a provisional committee has been formed for raising a fund for the presentation of a suitable testimonial to Mr. Smith, for his eminent services in bringing into practice the above system of steam navigation for the public service, and for the commercial operations of almost all maritime nations. Mr. Smith may with justice urge the *sic vos non vobis* plea; but the public are not slow to recognise such claims when clearly stated. The provisional committee includes the names and liberal subscriptions of several leading engineers, whose examples will, doubtless, be followed by that very numerous class of Mr. Smith's countrymen who take pride in rewarding whatever contributes to our national pre-eminence in invention, as does that of screw propulsion.

ROYAL NAVAL FEMALE SCHOOL.—The committee of this noble institution have issued a strong appeal to the public, in order to raise the sum of £16,000, for the purchase of a freehold estate for their School. For this purpose the committee are in treaty with the Conservative Land Society for the purchase of St. Margaret's Mansion and four acres of ground, fronting Highmond; and the Directors have most considerately agreed to extend the terms of the offer until the 24th of June, to enable the committee, aided by the public, to carry out their benevolent object.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Deanery*: The Ven. C. B. Clough to St. Asaph Cathedral. *Honorary Prebendary*: The Rev. W. H. Cox to Hereford Cathedral. *Canon Residentiary*: The Rev. Robert Bickersteth to Ripon Cathedral. *Rural Deanery*: The Rev. W. Sandys to Cashel. *Rectories*: The Rev. W. R. Bacon to Ewhurst, Sussex; the Rev. F. Morris to Nunburnholme; the Rev. D. Thomas to St. George's, near Cardiff. *Vicarages*: The Rev. W. C. Bagshaw to Whitkirk, Yorkshire; the Rev. J. Middlesex; the Rev. A. Nettleship, to Minsterworth, Gloucestershire; the Rev. W. L. Newham, to Barrow-upon-Soar, Leicestershire. *Incumbencies*: The Rev. A. Dauncey to St. James's, Pendleton; the Rev. W. Davies, to Rhondda Valley, South Wales; the Rev. G. Galsford, to Wigginton, Hertfordshire. *Perpetual Curacies*: The Rev. R. D. Lagden to North Weston, Dorset; the Rev. J. Macnaught to St. Chrysostom, Everton; the Rev. W. Randolph to St. James, Aldershot, Dorset.

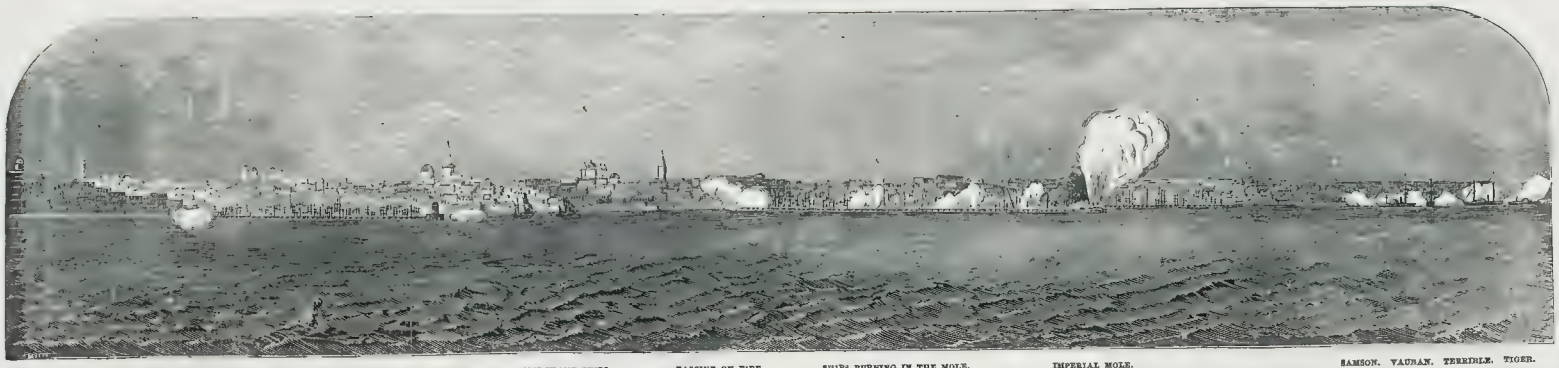
ARCHDEACON DENISON.—This reverend gentleman contradicts the report of his resignation. He writes:—"I have not resigned, and I do not mean to resign, either at the present or at any future time, the preferment and the office which I hold in the Church of England."

TESTIMONIALS.—The following gentlemen have recently received tokens of affection and esteem:—Rev. T. J. Brereton, from the parishioners of Framlingham; Rev. J. Stone, from the communicants of Billings; and the Rev. Dr. Elder, recently Head Master of Durham School, and now Master of the Charter-house School, London, by his late pupils.

THE BOMBARDMENT OF ODESSA.

WE have been favoured by a Correspondent who was present at this scene with the accompanying Sketch and descriptive details:—

"The combined fleets having anchored on the evening of Thursday the 20th ult., about three miles and a half from Odessa, on Friday the admirals sent in and demanded that all the Russian vessels in the place should be given up; allowing until sunset for an answer; and the demand not being complied with, several war-steamers were ordered to commence bombarding the military portion of the town on the following morning. Accordingly, at a quarter to eight on Saturday morning, the *Samson* and *Tiger* opened the attack in capital style, but from a long distance; and, in ten minutes, four batteries returned the fire from different points on shore, their shot falling short at first, whilst our shot and shells fell fast and thick on to and within the Mole. Meanwhile, a number



BOMBARDMENT OF ODESSA.

of French and English merchantmen, which had been detained by authority within another Mole, forced their way out, and were exposed to a cross fire from the steamers and the fort on the Mole head, apparently, however, without being much injured thereby

"At nine a.m. the *Vauban* French steamer, which had been engaged in the attack, was disabled by a red-hot shot, and hauled out of action. The *Terrible*, about this time, received some damage, resulting in the destruction of boats, the loss of a man, and the wounding of a few, which so aroused the spirit of the crew that the compliment of the Russians was soon repaid by return discharges of red-hot shot, which quickly set fire to many of their vessels. By eleven o'clock the roar of guns was tremendous; and at two, the fort on the Mole having taken fire, in about a quarter of hour blew up, with a fearful noise.

"At this moment the *Arethusa*, standing close in, was fired at from a masked battery; the shot, however passing over her, she tacked, and delivered herself of a broad-side with admirable precision, which told with great effect upon the hill battery—a part of the town low down now being on fire, from whence volumes of smoke rolled along the Mole. The boats of the steamers then got close in, in another direction; but a sharp and heavy fire suddenly opening upon them, they were compelled to retreat. The *Samson* and *Retribution* then poured in shell: at the third round the enemy's magazine blew up, and another immense building was set on fire The *Vauban* then bore down again, and played away with the rest at the Imperial Mole, destroying a great many ships whilst engaged in their destructive game. At three o'clock all the batteries were silenced, but evidently from finding their shots would not reach their assailants, and at six the steamers were signalled to retire, after a day's work almost as harmless to themselves as if they had been occupied in a pleasure trip, instead of at the awful work of war.

"During the night the whole of the Imperial Mole appeared to be in a blaze. Ships were blowing up at intervals, and there seemed to be a large fire raging in the town. Bells kept ringing until the morning, and the moment our steamers discontinued the action, the Russians commenced repairing their defences, and mounting new guns; and, on the Sunday morning, several batteries opening out on the steamers, the conflict for a time burst out afresh. The vessels, however, were recalled, a tremendous sea set in almost immediately, and thus ended the action."

We shall engrave a larger Illustration of the Bombardment next week.

H.M. SHIP "HECLA" AND "LEOPARD" RECONNOITRING.—HANGO HARBOUR, FINLAND.

THE BALTIC FLEET.—HANGO HARBOUR.

It will be recollected that an important operation previous to our Fleet entering the Baltic was a survey of that Sea. The service was undertaken by H.M.S. *Hecla*, Captain Hall; which in the accompanying Sketch is represented inshore of Rear-Admiral Plumridge, H.M.S. *Leopard*, Captain Giffard, reconnoitring the forts and entrance of Hango Harbour, in Finland: to the importance of which our Correspondent thus directs attention.

Hango Harbour and outer anchorage, which is situated at the entrance of the Gulf of Finland (north side), is a very good and safe roadstead, with sufficient depth of water for line-of-battle ships to moor inside the forts. The forts, three in number, appear strongly built of stone, or rock, and mount heavy guns, if you may judge from their appearance and the report they make: the largest is on the port, or left-hand side. Going in we counted twenty-five guns, facing to seaward, three or four of which were casemated. The fort on the starboard, or right hand, was not so large, but had more casemated guns. The third, which is situated at the bottom of the Harbour and opposite the entrance, did not appear so large as the others. A little inland there appears a sort of new battery, or breast work, thrown up.

The three batteries in the Harbour may be closely approached by large ships and once taken could be easily kept by those who command the sea, for they are surrounded by water.

The Russians, I was informed, by a Finland commander of a merchant ship, well acquainted with the place, consider it a key to that part of the country, and a most valuable and important harbour, for it is seldom or ever frozen over, on account of the strong currents, and all merchant vessels bound to Abo and other inland places, pass through the Harbour.

The Russian garrison consists of about five or six hundred troops, which they are now increasing.

The *Hecla* was fired at by the largest fort when in shore reconnoitring and sounding, and on the 18th of April. No doubt, from the favourable report of the anchorage, Sir Charles Napier will soon pay them a visit with the heavy ships, and make it an English port.

H.M.S "AMPHION" AND "CRUISER" CAPTURING TWO RUSSIAN VESSELS OFF RIGA.

CAPTURE OF A RUSSIAN PRIZE BEFORE RIGA.

A PROOF of the superiority of the screw, in a practical sense, has been shown in the recent proceedings of her Majesty's steamer *Amphion*, in the Gulf of Riga.

The *Amphion*, screw, 34 guns, Captain A. C. Key, in company with her Majesty's ship *Cruiser*, 16, screw, Commander the Hon. H. Douglas, entered the Gulf April 27, and steamed along the southern shore of the bay in search of Russian merchantmen. From information received from several Dutch and American ships boarded during the day, it was ascertained that there were several vessels blocked in the ice outside Riga Roads, waiting for the breaking up, in order to enter the Dwina.

At daylight of the 28th, ice was reported by the look-out at the mast-head. During the morning several detached masses floated by. In the afternoon the ships were nearly surrounded by ice. The whole extent of the bay skirting the horizon appeared to be an immense field of ice, varying in thickness from one to six inches, and covered by last winter's snow. Here and there it had broken, leaving open channels.

Several ships were seen in the distance, lying in the ice. One of them, which appeared to be a large barque, had hoisted Russian colours; and afterwards two tugs were seen steaming out to its assistance; but it seemed that the paddle-wheels

that which contained the body, they kept no regular position; but long ere they reached the shore they formed into two lines—that which contained the coffin being at the head of one line, and that containing the Captain and Chaplain of the *Royal George* at the head of the other; the other three of the foremost boats followed in order behind the remains of their officer. When landed, soldiers, men, and officers fell into funeral procession; the officers who attended being so numerous as to be compelled to walk five and six abreast. The distance from landing to the place of interment, Musko churchyard, Musko Island, was about two miles. When in sight of the church the bells commenced tolling, the band playing a solemn air. The church was crowded with officers and men. After the service the Chaplain gave a short eloquent address: spoke of the deceased as his beloved friend, whom he had accompanied on shore only two days previous to his death; that they had stood on the very spot where his remains were now lying, conversing about religion—the deceased commencing the subject. Many of the officers were much affected during the address. A tombstone was prepared to mark the grave, with the following inscription:—

LIEUT. FREELAND, R.M.,
Her Britannic Majesty's ship *Royal George*.

THE BALTIC FLEET.

FUNERAL OF LIEUT. FREELAND, R.M., OF H.M.S. "ROYAL GEORGE."

THE deceased, who was subject to occasional slight fits, died on the 24th ult., it is supposed either in a fit, or immediately after one. On the 25th a signal was hoisted from the Admiral's ship, the *Duke of Wellington*, ordering officers from every vessel in the fleet to attend the funeral, which took place on the 26th, and at one p.m. on that day the boats pushed off quietly, and pulled with a slow and solemn pace to the *Royal George*, where his remains were lying, and at the stern of which they collected as numerously as to extend for some great distance behind her. The four headmost boats contained the guard-band and marines, that were under his charge: the other boats contained blue-jackets, their officers, and marine officers. The solemn silence was broken by the tolling of the funeral bell, it is then that the lion-heart of the sailor quails: war or bloodshed he cares little for, but the loss of a messmate, suddenly cut off in his glory, causes the fibres of the heart to relax. During the tolling of the bell, the coffin was lowered through a port into the foremost boat, covered with the union jack, on which lay the hat and sword of the deceased; and at that moment the British ensign throughout the fleet was lowered half-mast, and kept so till the boats were seen returning from the shore. When the boats left the *Royal George*, and followed

CATCHING COLD IN THE BALTIC.—A private letter from one of the surgeons of the ships in Sir C. Napier's squadron, dated May 3, says that colds and influenza are prevalent, the whole proportion of sick being 1 in 14. Five per cent is considered to be the usual average sick list of ships on service.

THE AUSTRIAN FLAG ON THE LOWER DANUBE.—Lloyd's Company on the Danube sent to ask Sami Pacha, the Commandant of Widdin, if the passage of the river was free for steam transports. The Pacha replied that the Turkish troops would respect the Austrian flag so long as the Austrian steamers did not approach the Wallachian bank; if they did approach, he could promise nothing.

RAILWAYS IN INDIA.—A regiment would occupy six months, or the active season of a year, in marching from Calcutta to Peshawur (1446 miles), whilst by railway it could be carried in from 70 to 100 hours. With the capital at 3 per cent, 15,549 miles of railway might be constructed at £6000 per mile.

were unable to penetrate the ice, and, seeing our steamers bearing down upon them, steaming through all, they decamped, leaving behind the greater number of their floats.

The *Amphion* and *Cruiser* were at too great a distance to intercept them, and they escaped in shore into shallow water, where the steamers could not follow, and luckily for them out of range of their guns.

The *Amphion* and *Cruiser* then turned their attention to the barque, which lay embedded in a large field of thick ice, almost broadside on. They steamed full power direct for it, cutting and crushing the ice by the force of the screw. After a little manœuvring, they made a complete passage for the prize, which they towed out in triumph. It proved to be the Russian barque *Caroline*, from Portugal to Riga, laden with salt. They had already been four weeks in their late unpleasant position, drifting here and there with the ice. Their being made a prize of did not affect them much—in fact, they were rather pleased than otherwise, as their provisions and water were nearly expended, and most likely they would then have been starved; for such is the cupidity of the owners, that they would not have incurred the expense of steamers to cut the ice, but have forced them to wait in the bay until it broke up. After she was extricated, she was towed into open water.

At daylight next morning the *Amphion* and *Cruiser* weighed, and stood in towards the entrance of the Dwina to reconnoitre. The roads were pretty free from ice, but there was no shipping of any kind. In the river there were several small vessels, and some steamers with their steam up. The mouth of the Dwina is defended on the left bank by two forts; and on the right bank there is a large fort, newly built, with two tiers of guns. It was a beautiful morning, the sun shone brightly, gilding the towers of Riga, and reflecting millions of beautiful colours from the icy bay. The whole coast was lined with soldiers—three thousand of infantry and cavalry. Nothing broke the dead stillness except the splash of the lead or the boom of an occasional gun fired from the fort on the left bank. The steamer did not return their fire, being out of range. On their way back they took another Russian vessel, and sent both from Faro Sound on to England. It must have been very galling for the Russians to be forced to see two small English men-of-war doing as they pleased in the bay of their first commercial city.

FUNERAL IN THE BALTIC FLEET.

CALENDAR FOR THE WEEK.

SUNDAY, MAY 28.—Sunday after Ascension Day. Wm. Pitt born, 1756.
MONDAY, 29. King Charles II. restored, 1660.
TUESDAY, 30.—Alexander Pope died, 1744. General Peace, 1814.
WEDNESDAY, 31.—Anna Boleyn crowned, 1533.
THURSDAY, June 1.—Action between *Chesapeake* and *Shannon*, 1813.
FRIDAY, 2.—Gordon Riots commenced, 1780.
SATURDAY, 3.—Oxford Term ends. William Harvey died, 1657.

THE WAR WITH RUSSIA.

GRAND EXTRA NUMBER

NEXT WEEK, JUNE 3rd, 1854, OF THE

ILLUSTRATED LONDON NEWS,

In which the following Splendid Engravings will appear:—

A LARGE VIEW OF SEBASTOPOL,

With a DIAGRAM, and most accurate Sketch of all the FORTIFICATIONS in and near the Harbour (TWO-PAGE ENGRAVING). Also,

A PANORAMIC VIEW OF SEBASTOPOL

AND THE ADJACENT COAST (TWO-PAGE ENGRAVING).

Both Illustrations are copied (by permission of the Admiralty) from Drawings made by Lieut. MONTAGU O'REILLY, when H.M.S. *Retribution* boldly entered the Port of Sebastopol, in January last. Also,

ODESSA. THE LATE BOMBARDMENT.

Two Views of the Public Buildings.

ROYAL ARTILLERY FOR THE EAST.

(TWO-PAGE ENGRAVING).

Landing of the Royal Horse Artillery in the Bosphorus (A Page).
The Baltic Fleet in Elgsnabben Bay.
The Post-office on board the *Duke of Wellington* War-steamer.
Fortress of Revel.
Map of the Seat of War in Asia, and the countries between the Black Sea and the Caspian.
Circassians — Two Characteristic Groups.
Kustenjeh, on the Black Sea.
Brass Gun recovered at Sinope, and Fascine Battery. From Drawings by Lieut. M. O'Reilly; and copied by permission of the Admiralty.
A Coffee-house Politician at Copenhagen.

CRONSTADT:

Shipping and Fortifications. Church of the Saviour.
Statue of Peter the Great.

"FRANCE AND ENGLAND." Poetry by CHARLES MACKAY. With Original Music.

PICTURES FROM THE ROYAL ACADEMY EXHIBITION.

A Cabin in a Vineyard .. .. .. T. Uwins, R.A.
An English Homestead .. .. .. R. Redgrave, R.A.
French Lugger running into Calais .. .. E. W. Cooke.

Orders received by all Booksellers and Newsmen throughout the United Kingdom. Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MAY 27, 1854.

We suppose that the *Gazette de St. Petersburg* will speedily inform the barbarian world of Russia, and the civilised world of Europe, that solemn *Te Deums* have been sung in Moscow and St. Petersburg, to praise the Lord of Hosts for the brilliant victory achieved by the Russian navy over the British before Odessa. Whether the unfortunate *Tiger*, instead of being represented as one ship, will be multiplied into a whole fleet, remains to be seen; but Russian mendacity has no limits and no parallel; and we may therefore expect not only that the affair will be grossly exaggerated, but that the fact of the ship being stranded, and in that extremity alone falling an easy prey to her assailants, will be carefully concealed. A demand has been made for the surrender of the unfortunate prisoners taken on the occasion. As might have been expected from the heroes of Sinope, the demand has been refused, and we may, therefore, expect to hear that summary vengeance has been taken upon the city of Odessa, as a renewed attack, consequent upon that refusal, has already commenced.

A report was current during the week that Sir Charles Napier had attacked and captured the fort of Gustaffsvern, at the south-eastern extremity of the Gulf of Bothnia, and that he had made 1500 prisoners. Up to the date of the last authentic intelligence from the Baltic, no such event had occurred. Gustaffsvern and Revel will no doubt fall into our possession as soon as Sir Charles Napier deems it expedient to attack them, for neither of them is able to make an effectual resistance. But a more important object is to be achieved than the capture of fortresses, which only await Sir Charles's leisure to surrender to him. A large portion of the Russian fleet is ice-bound at Helsingfors and Sveaborg, and will, doubtless, make an attempt to escape to Cronstadt as soon as the state of the weather and the water will permit its captains to put to sea. To intercept and capture those ships will, in all probability, be the first great achievement which the Allied squadrons in the Baltic will attempt. In the meantime, the French fleet has been unaccountably retarded in its progress, and Sir Charles Napier remains without its aid. Should it not make its appearance, and if the ice in the Upper Baltic be sufficiently clear to permit the egress of the Russians from Helsingfors, the British Commander will, in all probability, be compelled to commence operations without waiting for the French reinforcement.

In the interval that must elapse before any decisive intelligence of the progress of the war can reach us, either from the Baltic or the Black Sea, or from the pestilential swamps of the Dobrudja, public attention occupies itself with the Austro-Prussian treaty, the stipulations of which have at length been made known. Much disappointment at it has been expressed by many, who, were, perhaps, too sanguine in their anticipations of the immediate alliance of Austria with Great Britain and France; but we think the document, if carefully studied, will be found to bind both Austria and Prussia to the Western Alliance. Its preamble expresses the regret of both Powers at the failure of their efforts for the maintenance of peace, and admits the obligations imposed upon them by the Vienna Protocol, which they signed in conjunction with France and England. The basis of this alliance is declared to be a mutual guarantee to resist any attack upon their respective territories, from whatever quarter it may come. This declaration admits of the interpretation of being as much directed against the Western Alliance as against Russia, and may refer to the contingency that France might, in the progress of the war, attack or invade the Rhenish provinces of Prussia, or that Great Britain and France might lend themselves to projects for the re-establishment of the kingdom of Poland, or for the independence of Hungary or Lombardy. But, notwithstanding the possibility of such an interpretation as regards this particular clause, there is no room for doubt that the treaty in its general bearing applies to Russia alone. On the 8th of April last, the King of Prussia, with a fond and foolish hope that the Czar was still amenable to reason, despatched propositions to St. Petersburg for the evacuation of the Danubian Principalities. In the new treaty between Prussia and Austria, it is stipulated that if an unfavourable answer be returned to this overture, the two Powers will bind themselves to take ulterior measures, to induce the Russian Government to suspend the advance of its armies into Turkey, and to give security for the evacuation of Moldavia and Wallachia. The Austrian and Prussian Governments also agree that the "incorporation" of those provinces with the Russian Empire, or an attempt of the Russian army to cross the Balkan, shall be considered by both of them as a *casus belli*. Exception has been taken to the phraseology in which this determination has been announced; but we think both Powers are sufficiently pledged by such an act, and that sooner or later they will severally adhere to the Anglo-French Alliance. If any doubt could have previously remained upon the subject, it would be removed by the announcement of the new Protocol which has been drawn up at Vienna subsequently to the ratification of the Austro-Prussian treaty, by which the Four Powers fully recognise the treaties concluded between Great Britain, France, and Turkey, and between Austria and Prussia respectively; so that by this document the German Powers express their approval of, and share the responsibility of, the warlike proceedings of the Maritime Powers, from which they had previously kept themselves aloof. Should this report be confirmed, we may anticipate that the war will be as "short and sharp" as the interests of humanity and civilisation can require; and that not all the mendacity of the Czar, and of his functionaries, will much longer be of use in concealing from the Russian people the great fact, that the Czar is friendless and helpless, and certain to be ignominiously as well as speedily defeated. The Count de Nesselrode has already, it appears, been exposed to the outrages of a mob in the streets of St. Petersburg. Possibly it will soon be the turn of the Czar himself to experience the mutability of popular favour, and to find that danger, if not vengeance, awaits him from his own subjects.

The proposition submitted to the House of Commons on Monday was, that the Government be authorised to issue Exchequer Bonds, bearing interest at not less than three-and-a-half per cent per annum, but virtually four, for £4,000,000, at any price and any terms determined upon by the Treasury. The object to be gained by this issue of Bonds is to put the Government immediately into possession of a sum of money equal to that amount, making with the £2,000,000 already raised by Bonds, £6,000,000, in addition to the new taxes. But a large portion of these—most of the increased Income-tax; the Malt and Spirit-duties—will not be received till the end of the present year or the beginning of the next, and the Government requires funds at once to meet the expenses of the war. On almost all occasions, when a large expenditure and new taxation have been voted, money required on the spur of the moment has been raised by loans, generally by Exchequer Bills. On the present occasion, Exchequer Bonds are preferred, which differ from Exchequer Bills, by being issued for a longer period. Exchequer Bills are issued for twelve months, and are then liable to be redeemed by the Government, or returned to it by the persons who have lent money on them, requiring payment—just as the market may make it the interest of one party to call them in, or of the other to pay them in. Practically, however, Exchequer Bills are such a convenient security for bankers and others, and the Government finds so many advantages in borrowing money on them, on lower terms than on any other security, that they are continually renewed, and rarely paid in or paid off. To meet the exigencies of the market, the interest on them is raised or lowered to keep them in circulation, and within the twelvemonth it has been lowered to 1d. per day and raised to 2d. On Wednesday the interest was further raised to 2½d. At present there are about £17,000,000 worth of Exchequer Bills afloat, at £3 7s. 5d. per cent, or 2d½. per day; and as the amount has not unfrequently been, even since the war, more than double this sum, the market would readily absorb £6,000,000 or £8,000,000 more. For many years past, however, it has been laid down as a fixed rule of finance—precisely because a large sum of money can always be readily raised on Exchequer Bills at a low rate of interest, and is, therefore, a great power available in the hands of the Government to meet any emergency—that the amount of them in circulation should, in ordinary times, be kept as low as possible. On this rule the Chancellor of the Exchequer has acted for more than a year. Observing that Railway and other Companies have issued debentures, or bonds, to be redeemed or renewed for a term of years, and the great inconvenience of Exchequer Bills being that the Government is liable, at a period when it is most in want of money, to have them returned to it, instead of money, in payment of taxes, he proposed to borrow money to the extent of £6,000,000 on Bonds, not redeemable in less than four years, and for the redemption of which Government could always prepare, instead of borrowing on an equal amount of Exchequer Bills. He hopes, we believe—and all the nation hopes—that the present war will be a short one; and while, therefore, he keeps in his hand the power of raising more money to meet an emergency by Exchequer Bills, he asked for a loan to be redeemed in not less than six years on Exchequer Bonds. Long before that period arrives he expects that the country will be at peace; and, again diminishing its expenditure and increasing its revenue, will be able to redeem the loan, throwing none of the burden of the war on remote posterity. To his proposition Mr. Baring proposed as an amendment, without suggesting any other mode of raising the money, which is indispensable till the taxes are received, "That it is not at present expedient to authorise any further issue of Exchequer Bonds, with the engagement of repayment within the next six years." The simple question whether it be expedient for the Government to borrow this money on Bonds or not, was made the peg for a very long debate. Mr. Baring, Mr. Malins, Mr. Disraeli, and others, wearied the House and the public by reiterating charges already refuted, and by taunting their adversaries with trifling errors already acknowledged. The House of Commons, sensible of the necessity of the loan, and seeing nothing inexpedient in the mode of borrowing proposed, supported the Government by the large majority of 104, in a House of 476 members, and thus gave its full sanction to the Chancellor's proposition.

Exchequer Bills, we must state, being like large bank notes, bearing interest, are chiefly used by merchants and bankers, who must keep large floating balances of money at their command, and they come very little into the possession of the middle classes. They are not used as a means of investing the savings of men of small capital. Exchequer Bonds being a more permanent security, it is supposed they will be better adapted for the investments of the middle classes, who have, to a large extent, purchased such securities from railways. Mr. Gladstone intended, by substituting Bonds for Bills, to interest a larger class of persons in floating Government Securities, and draw resources for the State from a wider surface. While we praise his intention, we are bound to explain that his failure in raising the first £2,000,000 at the beginning of the month is the consequence of his overlooking some facts. He limited the subscriptions to his Bonds to £1000. By that means he virtually offered the whole loan to large capitalists, and shut out all the little capitalists it was supposed he meant to invite to take a share in it. Only very few of these can have £1000 to put by at once for four or six years. At present, too, as may be known from the state of the Money-market, their resources are deeply engaged; money is much in demand; the Bank has recently again put up its rate of discount, the market is rising; and persons having the command of money will not, now, invest it at four per cent when they can get five-and-a-half, and may probably get six. Again, Railways have no Exchequer Bills; and they could only borrow on Bonds. For the large capitalists compelled to keep banking balances, to whom the Chancellor restricted the loan, Bills always convertible into cash at their full value are a more available security than Bonds; and thus, while the Chancellor can, without the smallest difficulty, borrow £17,000,000 or £20,000,000 on Bills at three per cent, he could not raise £2,000,000 on Bonds at four per cent, or a rate of interest equivalent to four. It is perfectly clear, from the experience of last year and the present year, that the moneyed classes prefer Exchequer Bills to Exchequer Bonds, and take them at a lower rate of interest. The railways have no Exchequer or similar bills, and the competition of Exchequer Bills with Exchequer Bonds, has prevented the success of the latter. If Mr. Baring had moved that it is not expedient to substitute Exchequer Bonds for Exchequer Bills, and that the Government be empowered to issue Exchequer Bills for the additional £4,000,000, and had abstained from all injudicious party attacks, he might have carried both moneyed men and the general public with him. All are ready to grant the Government whatever it may require. He failed, however, and the country have to pay a higher rate of interest for money borrowed on Exchequer Bonds than the Chancellor can borrow it for on Exchequer Bills.

THE COURT.

The Queen held a Drawingroom on Saturday last, at St. James's Palace, in celebration of her Majesty's birthday. The reception included the Royal Family, the whole of the Diplomatic Corps, and a very numerous circle of the nobility and gentry, numbering about 1400.

On Monday Viscount Drumlanrig, Comptroller of the Household, had an audience of the Queen, at Buckingham Palace, to present an address from the House of Commons relative to the embodiment of the militia. Her Majesty and his Royal Highness Prince Albert, accompanied by their Royal Highnesses the Prince of Wales, the Princess Royal, the Princess Alice, Prince Alfred, the Princesses Helena and Louise, Prince Arthur and Prince Leopold, left town the same afternoon for their marine residence, Osborne, Isle of Wight, where the Court arrived shortly before six o'clock.

On Wednesday her Royal Highness the Duchess of Kent arrived at Osborne, on a visit to the Queen and Prince Albert.

Her Majesty the Queen has signified her intention of honouring the Marchioness of Bredalbane with a visit, at a grand ball, to be given by her Ladyship, on the 7th of June.

Her Royal Highness the Duchess of Kent, attended by Lady Anna Maria Dawson and Lord James Murray, left town at eleven o'clock on Wednesday morning, for Osborne, Isle of Wight, on a visit to her Majesty. Her Royal Highness travelled from London by the South Western Railway.

The marriage of the Earl of Durham with Lady Beatrice Hamilton, daughter of the Marquis and Marchioness of Abercorn, took place on Tuesday morning, at St. George's Church, Hanover-square.

We are sorry to announce the alarming illness of the Hon. and Very Rev. the Dean of Windsor.

HER MAJESTY'S BIRTHDAY was celebrated at Cowes on the 24th. At noon, Royal salutes were fired from Cowes Castle, and the Royal Yacht Squadron-house battery, and the mercantile shipping hoisted their colours, and were dressed on the occasion. At Osborne House, the band of the Royal Marines, from Portsmouth, were present on the ground throughout the day, and performed several pieces. Her Royal Highness the Duchess of Kent arrived at Osborne on Tuesday afternoon. On Thursday, her Royal Highness the Princess Helena's birthday, the Marine band serenaded her Royal Highness at early morning.

HER MAJESTY'S BIRTHDAY IN DUBLIN.—On Saturday last his Excellency the Lord-Lieutenant entertained the following distinguished party at dinner:—The Archbishop of Dublin, the Lord Chancellor, Lieutenant-General the Right Hon. Sir Edward Blakeney, G.C.B.; the Lord Mayor, Right Hon. the Attorney-General, Captain the Hon. C. Lindsay, A.D.C.; Sir Henry Marsh, Bart.; Sir Duncan Macgregor, K.C.B.; Sir Bernard Burke, Ulster King of Arms; Colonel M'Lachlan, Lieut.-Colonel Larcom, the Provost of Trinity College, Major General Cochrane, the Hon and Very Rev. Dean of St. Patrick's, the Chaplain-General, the Very Rev. Dean of Leighlin, &c.

Criminal proceedings are to be instituted against the Archbishop of Fribourg for abuse of clerical authority in unlawfully disposing of Church property.

LATEST INTELLIGENCE.

RETREAT OF THE RUSSIANS FROM THE CIRCASSIAN COAST.

Accounts were received at Constantinople on the 15th that the Russians, unable to defend the sea-board of Circassia, had evacuated all their positions from Batoum to Anaps—an extent of 200 leagues. They burned all their own forts, and retired to Kutais, in the interi or

The Circassians came down from the mountains and took possession of all the posts, making prisoners 1500 men, whom they surprised at Sukkum-Kaleh. The Circassians had proclaimed a Provisional Government, under the presidency of a brother-in-law of Schamyl.

BOMBARDMENT OF SILISTRIA.

Accounts from Bucharest of the 21st state that Prince Paskiewitch had crossed the Danube near Kalarasch, and established his headquarters opposite Silistria, which had been closely invested for three days. This is the answer that the Czar gives to the request of Austria and Prussia to withdraw his armies.

Letters from Constantinople of the 15th, state that the Russians were advancing from the Dobrudja, and had cut off all communication between Silistria and Varna, as well as the sea-coast. The Allied armies were in motion, in order to co-operate with Omer Pacha, and form his reserve. One French force was on its way to Adrianople, and another on its march from Gallipoli to Constantinople. The English division of the corps of Light Infantry at Scutari received marching orders on the 14th. It was said the route was for Varna.

THE BLACK SEA.

The *Descartes* left the Sebastopol station on the 11th. The combined fleets were still cruising off that port. There was then so intense a fog that the flag-ships were continually firing guns to inform the rest of the fleet of their position from time to time. No news of the loss of the *Tiger* had reached Constantinople up to the 15th.

DEPARTURE OF THE CHEVALIER BUNSEN.—We are sorry to see that the departure of this diplomatist, who has been so much respected during his stay in England, and who has fallen a victim to the machinations of the Russian party at Berlin, must now be considered final. His Excellency only awaited the arrival of Count Bernstorff from Naples to leave England for Germany; and, on Monday and Tuesday next, the valuable collection of objects of art collected by Chevalier Bunsen at Rome and other cities by which his diplomatic life has been spent, will be disposed of by private sale at the Prussian Legation. No foreign Minister has more endeared himself to a large circle of English friends than Chevalier Bunsen; and this fact, coupled with the peculiar circumstances attendant on his recall, has caused his departure to be regarded with general regret.—*Times*, Friday.

PORTSMOUTH, Thursday Night.—The *Royalist*, 16, Commander Bate, has arrived from the China station. She reports having boarded the *Queen of the South* two degrees north of the Equator, with Sir Charles Hotham on board. She brings no news.

RUSSIAN MOVEMENTS AT GALATZ.—The ship *Cordelia* arrived at Southampton on Thursday, from Galatz, laden with grain. She left Galatz in February last, and the Russians were at that time working night and day in making preparations for blocking up the harbour, to prevent the ingress and egress of vessels. There were a number of merchant ships at Galatz when the *Cordelia* left, and she met a large fleet of merchantmen proceeding to that harbour.

THE "AUSTRALIA" SCREW-STEAMER.—H.M.S. *Meander*, from the Cape station, has arrived at Plymouth, with the *Australia*'s mails. The *Australia* got ashore at Green Point, Table Bay, Cape of Good Hope but got off, without assistance, on the 8th of April, and would sail for London on the 17th of that month. The gold was at the Cape Bank, all safe, and her cargo had been taken out. Little damage had been sustained by the vessel. The passengers remained on board.

DEATH OF ADMIRAL PARKER.—The First Senior Naval Lord of the Admiralty, Vice-Admiral Hyde Parker, died at his residence, Ham, Surrey, on Thursday evening. By this death Captain Michael Seymour (now serving as Captain of the Fleet with Sir Charles Napier) obtains his flag.

NATIONAL TEMPERANCE SOCIETY.—On Thursday night the annual meeting of the members of the society was held in Exeter-hall. A petition was adopted for presentation to Parliament, praying that public-houses should be closed on Sundays.

NAVAL AND MILITARY INTELLIGENCE.

COURT-MARTIAL ON THE OFFICERS OF THE "JASPER."—On Monday morning a court-martial was held on board the *Victory* in Portsmouth harbour, to try Lieutenant C. G. Crawley, late commanding her Majesty's steam-vessel *Jasper*, and Mr. Dyer, the acting master of the said vessel, for her loss. Several days were occupied in the inquiry, but the fire of the ship could be traced to no positive cause. She was not constructed for a man-of-war, but a packet, and her internal economy was not of a character to afford the cold deprivation so invariably hazardous to life, the court having heard all the testimony in support of the inquiry, and the opinions of the several officers sworn, came to the conclusion that there was no evidence to show that the *Jasper* took fire; therefore, both Lieutenant Crawley and Mr. Dyer exerted themselves to the utmost to endeavour to extinguish the flames, and did not leave the ship until they considered it dangerous to remain longer. They were, therefore, both fully acquitted of all blame in the loss. The other officers and ship's company were also acquitted.

DEPARTURE OF THE HORSE ARTILLERY.—The 2000-ton screw-ship *Jason*, with officers, men, and horses, of the Royal Artillery, with immense quantities of gunpowder, shot, shell, and heavy battering ord nance, and filled very deep with all descriptions of munitions of war, left Greenhithe, and passed Dover on Sunday morning at eleven o'clock for Constantinople.

STEAM-SHIPS FOR TURKEY.—The principal steam-packet companies connected with the port of Southampton have received an intimation from the Government, requesting them to hold at its disposal, from time to time, all the large steam-ships that can be made available for the conveyance of troops. Every vessel, therefore, not urgently required for the mail service will be offered to the Admiralty. The splendid, new, beautiful new paddle wheel steam-ship, of 1800 tons, and 400-horse power, built on the diagonal principle, arrived at Southampton, on Sunday, from the Thames. After an official trip, the *Tamar* will, it is believed, be despatched with the West India and Mexican mails of the 2nd of June, proceeding to Gibraltar for the transport service, if she should be required. The *Magdalena* is a sister-ship to the *Orinoco*, and capable of carrying 1200 to 1300 men to the East. The *Orinoco* left Southampton on Saturday with the 97th, consisting of 1000 men and 40 officers; she also took out 18 horses, 1000 quarter barrels of ammunition, and 60 tons of provisions. The *Orinoco* was bound for the Mediterranean. The old 97th Regiment was disbanded after the battle of Waterloo, the present one was raised about twenty years since. It was on foreign service thirteen years, and arrived in England from Canada a twelvemonth since.

EMBARKATION OF THE 42ND.—The embarkation of this gallant body of men at Portsmouth commenced soon after one o'clock on Saturday afternoon last. It was scarcely expected that they could embark until Monday, in consequence of a trifling accident to the machinery of the *Hydaspes*, which delayed her some hours at Southampton. She arrived at Spithead about nine on Friday evening, and came into harbour early on Saturday morning; and, having been placed alongside the jetty by her pilot, Mr. Richards, commenced the embarkation of the troops, which received on board the baggage. On Sunday morning at six o'clock the *Hydaspes* went out of harbour, and, without anchoring at Spithead, sailed for her destination. This fine regiment goes out about 800 strong, with 14 horses.

EXPERIMENTS IN WAR ROCKETS.—A new experiment is now being tried by Colonel Jones, R.E., with a view of using rockets as a means of defending field-works, and an experienced non-commissioned officer is in daily attendance on the Lines to fire them, and render any information required. Several modes have been tried, and, owing to the satisfactory results, it is understood that one will be adopted.—*Times*. The size used is 3-pounders, and it is stated that they will be more effective than infantry in clearing ditches of an enemy when fired from loop-holes and other available places.

TROOPS FOR GREECE.—The 46th (replacing the 97th, ordered to Canada), 63rd, 21st, 20th, and 34th Regiments, and 1st battalion of Rifles, now forming the reserved divisions, are under orders for Greece. The 63rd numbers 1030, and the 21st 1200 rank and file. The company of the 97th Regiment, moved from Armagh to Dublin, has been replaced by a company of the depôt of the 3rd Buffs, from Newry. The company of the former corps, stationed at Cavan, will be removed to Dublin on Monday next.

MINIE RIFLES.—It being determined to issue the Minié rifle not only to the Infantry regiments of the line, but also carbines on the same principle to the Cavalry, with the exception of the Lancers, the officers of Ordnance have been very actively engaged during the past week in issuing walnut-wood stocks in the rough to the manufacturer.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

A PRIVATE bereavement may become a public benefit. The late Lord Colborne, who lost his only son in 1846, has now, bequeathed his pictures to the nation. The collection was small, but choice—chiefly of the Dutch, Flemish, and English schools. We acquire, by this bequest, two more Rembrandts, in Rembrandt's happiest mood; an excellent Vandyck; and that last masterpiece of Wilkie before he took to Spain and the Holy Land, "The Parish Beadle." As it is essentially desirable in the formation of a *British* National Gallery, that our own school should be perfectly represented, we congratulate the country on its possessing the best Wilkie of his earliest period, "The Blind Fiddler," and the best Wilkie of his latest period, "The Parish Beadle."

Artists may shortly expect to see another accession of moment to the treasures of the National Gallery; the Trustees, with the consent of the Treasury, having purchased for £2800 certain pictures, of merit we are assured, from Kerr Krüger, of Minden, in Hanover. While on the subject of the National Gallery, we may mention that Government is about to appoint a salaried Director to the Gallery. The present head-officer under the Trustees is entitled Keeper, and his salary is only £300 a year; a very insufficient remuneration, as Lord Aberdeen observed, for the responsible duties attached to the office. Mr. Uwins, the present Keeper will, it is said, retire—not from inefficiency, but from age; and the salary of the Director (who has not yet been named) will be, we are told, £1000 a year.

That very able architect (in Gothic), Mr. Scott (late Scott and Moffatt), has just written what we will call in many respects an admirable letter to Sir William Molesworth, on the subject of the Royal Monuments in Westminster Abbey. Sir William has thought so well of the letter, that, in his capacity of First Commissioner of Works, he has not only printed Mr. Scott's letter, but has publicly undertaken to ask Parliament for £2500 to carry out Mr. Scott's views. There is much that Mr. Scott urges in which we entirely agree; but we would hesitate to entrust the restoration of such monuments to a mere architect. Sir William should nominate a Committee of Superintendence; and we would venture to suggest that, before Parliament accedes to the grant, a committee of architects, antiquaries, sculptors, and authors should be appointed, to decide what to touch, and what not to touch—where to begin, and where to leave off. We shall watch this matter.

The Talfourd Testimonial has been left (from no indifference, whatever, on the part of literary men) to the Oxford Circuit; and a bust of the author of "Ion" will be erected, during the present year, in the church of Stafford. Talfourd was born (it is said) at Stafford, received the first news of his elevation to the bench at Stafford, and died on the bench at Stafford.

It is a rare thing, indeed, to find an architect keep within his estimate. Mr. Pennethorne had this character, but he is about to lose it, for he requires, we observe, for the Public Record Office, £10,000 over and above his estimate of £45,280. This additional expense has been occasioned, we are told, by "the expensive character of the fittings, and the rise which has taken place in the value of labour and materials." Mr. Pennethorne must push on, for he has not only exceeded his money estimate, but the period of completion.

Government has printed, during the present week, the Report of Sir William Hooker, relative to the Royal Gardens, at Kew. The Report is dated the 5th of April, and we are told by Sir William that, during the past year, the principal additional features in the Gardens has been the formation of a fountain in the ornamental water, the completion of the new Victoria house, and of the medical department, and the accession to the museums (presents both—we English are, indeed, public-spirited) of the herbarium, or hortus siccus, of the late Dr. Bromfield, of East Mount, Isle of Wight, and of the herbarium and library of our late distinguished botanist, Mr. Bentham. The great want at the Gardens, Sir William assures us, is "more large green-houses for tall trees—confined especially—such are wanted for want of space."

Sir Charles Barry is to have made over to him (if Parliament consents) £141,294, for expenditure on the new Houses of Parliament during the year ending 31st March, 1855. He is to spend his money chiefly on what builders call carcase work; viz, on the Victoria Tower, the Peers' front towards Henry VII.'s Chapel, the Central-hall, and the Speaker's residence. The Queen's Robing-room is to be enlarged to eighty square feet; and Mr. Dyce is to have £800 additional for his legend of King Arthur—the enlargement of the room requiring certain alterations in his designs.

Mr. Panizzi, when he has his own way, can do with Chancellors of the Exchequer what no other librarians or keepers can accomplish. He is to have £61,000 for the erection of a building within the interior quadrangle of the British Museum, "for the purpose of affording increased accommodation;" and £25,000 "for cases and all other fittings." We have already alluded to Mr. Panizzi's ingenious design, and look forward, in common with the public, to the extinction of two public evils now existing in his rooms—the Museum flea, and the Museum headache.

The maps of the Royal Geographical Society are, as may be supposed, among the most important to be seen in this country. But who can see them? The Fellows of the Society are unable to see them with anything like ordinary comfort, for the Society has no decent apartment for either its meetings or its maps. Government has, at last, listened to the repeated memorials of the members, and Parliament is to be asked for £500 a year to enable the Society to exhibit to the public, free of charge, their valuable collection of maps. A condition is very properly attached to the grant—the Society is to report to Parliament from year to year the number of visitors that have inspected the maps, and to supply at the same time a general account of the expenditure of the grant.

The result of the spiriting away of the statue of George II. from Leicester-square has been that the Chief Commissioner of Works has taken (as we have already had occasion to chronicle) certain of the London statues under his particular care. He has begun with Charles I., at Charing-cross, and has laid an estimate before Parliament for "restoring the pedestal and repairing the statue." The amount of the estimate is £1000. Now, as this is more than sufficient for a pedestal new in every part, and for all that a bronze statue can require to have done to it, we would suggest (if the pedestal must be touched in our time) that the old pedestal be removed, in its integrity, to Hampton-court-gardens—there to moulder away, beautiful in its very decay. Mr. Scott's new masonry will never be surrounded with associations of the same nature as now surround that mouldering pedestal.

Martin's water-colour drawings sold, on the whole, well, considering that they were not in the style by which he acquired his reputation The highest sum was obtained for the "Manfred"—fifty-five guineas. As Turner's are now selling too high, so Martin's are now selling too low.

We have to correct an error into which we fell in our last week's notice of the late Mr. Clint. Mr. Alfred Clint assures us (and we have no doubt of the fact) that his father had not pursued his profession for the last three years, the rules of the Artists' Annuity Fund requiring superannuated members (and the late Mr. Clint was a member) to relinquish art as a profession. The "Falstaff" picture was the lengthened amusement of a veteran in art, no longer able to pursue the calling in which he had become distinguished.

It is not our fault that we have nothing to say about literature. New publications are almost wholly confined to books about Turkey and the Seat of War. Even old booksellers are raking up their old stock for books about Russia; and an adventurous publisher announces the travels into Russia of old Tradescant, who lived in Lambeth in the reign of Charles I.—was one of the earliest English collectors of things curious—and whose collections formed the original of the Ashmolean Museum at Oxford.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, MAY 25.

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer: Highest Reading	Thermometer: Lowest Reading	Mean Temperature of the Day	Departure of Temperature from Average.	Degree of Humidity.	Direction of Wind.	Rain in Inches.

Note.—The sign — denotes below the average, and the sign + above the average.

The corrected reading of the barometer decreased from 30.20 inches at the beginning of the week to 29.45 inches by the 22nd, and increased to 29.78 inches by the end of the week. The mean for the week, at the height of 82 feet above the level of the sea, was 29.73 inches.

The mean temperature of the week was 52.5°, being 1.8° below the average of the corresponding week during thirty-eight years.

The range of temperature during the week was 34.4°, being the difference between the lowest reading of the thermometer on the 19th, and the highest on the 20th.

The mean daily range of temperature during the week was 23.1°. The greatest was 34°, on the 20th; and the least 14.2° on the 22nd.

Rain fell during the week to the depth of half an inch nearly.

The weather on the 19th, 22nd, 24th, and 25th was fine, and the sky tolerably free from cloud; during the rest of the week the sky was cloudy, and the weather dull.

Lewisham, May 26th, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending May 20th, the births of 886 males, and of 803 females were registered. The averages of the same week in the nine preceding years were 719, and 696 severally. The deaths registered within the same period was 1183, showing a considerable increase, and exceeded the average of the same week, derived from the preceding ten years, corrected for increase of population, by 135. This increase chiefly arises from epidemic diseases, which number 301 deaths, while the corrected average is 212.

SANITARY CONDITION OF THE METROPOLIS.—A very numerous and influential deputation from the inhabitants of Lambeth waited upon Viscount Palmerston, Secretary of State for the Home Department, by appointment, at the Home-office, Whitehall, on Monday afternoon, for the purpose of soliciting his Lordship's interference with regard to the arrangements of the projected London Necropolis and National Mausoleum Company, who had obtained possession of nine of the arches of the London and South-Western Railway, between the Waterloo and Westminster-roads, for the purpose of depositing the corpses, prior to their removal by the company by railway to their cemetery at Woking-common; those arches being situated in the most thickly-populated part of Lambeth, and consequently having a great tendency to endanger the public health. Several members of the deputation—which consisted of Mr. William Williams, M.P. for Lambeth, Mr. Churchwarden Stratton, Mr. Churchwarden Plews, Mr. Churchwarden Gray, Mr. R. Taylor, Mr. Pursey, Mr. Bryon, Mr. King, and about twenty other highly respectable inhabitants—having stated their views, Lord Palmerston said he had no power to interfere in the matter. He promised, however, that he would confer with the authorities of the South-Western Railway Company, and see what could be done in the matter, after hearing what the railway company had to say.

NEWSVENDERS' BENEVOLENT AND PROVIDENT INSTITUTION.—The 15th annual general meeting of this excellent institution was held on Monday night, at Anderton's Hotel, Fleet-street; Mr. Wild, of Cathedine-court, in the chair. The meeting was called to the lamented death of the late James Harmer, Esq., the late president, and to the circumstances attending the communications held by the committee with Mr. Charles Dickens, who had kindly consented to be put in nomination as president, in the room of the late Mr. Harmer. The accounts of receipts and expenditure showed an expenditure of £39 8s. 8d., leaving a balance against the society of £5 4s.; but since the balance had been made up a sum of £10 7s. net, arising from a benefit at Sadler's Wells Theatre, had been received; so that, instead of a balance due to the treasurer, the funds were thus benefited to the extent of some £5 3s. The report was agreed to, several resolutions were carried, a new pensioner admitted, and Mr. Charles Dickens was elected as president with acclamation.

ANTI-SLAVERY SOCIETY.—This society held its annual meeting on Monday evening, at Exeter-hall, under the presidency of the Earl of Shaftesbury; who was supported by Sir Fowell Buxton, Mr. Joseph Sturge, Mr. G. W. Alexander, the Rev. Dr. Massie, the Rev. Dr. Hewlett, the Rev. Thomas Binds (of Jamaica), the Rev. R. Burgess, the Rev. William Owen, the Rev. S. R. Ward, &c. The noble chairman was labouring under indisposition, and, without making a preliminary address, called upon the secretary, Mr. Chanceuzy, to read the report. That document gave a detailed account of the efforts made in various countries during the past year for the suppression of slavery. The balance-sheet stated that at the commencement of the year there was a deficit of £178. The receipts for the year amounted to £800, and the expenditure to £766, leaving a present balance due to the treasurer of £321. The meeting was then addressed by Sir F. Buxton, the Rev. R. Burgess, the Rev. Dr. Hewlett, and other gentlemen; and resolutions were adopted condemnatory of slavery in all its forms, and pledging the meeting to oppose it by all the moral means in its power.

METROPOLITAN IMPROVEMENTS.—The following votes for metropolitan improvements appear in the Miscellaneous Estimates:—Battersea Park, £25,000; Chelsea Embankment, £35,000; Land at Kensington Gore, £37,500; Burlington House, Piccadilly, £140,000.

GLASS-PAINTING.—An elaborate and beautifully-designed stained-glass window is now on view on the premises of Messrs. Ballantine and Allen, at Edinburgh. It was designed by Mr. John Thomas, the well-known sculptor of the new Palace at Westminster. This magnificent work of decorative art will shortly be presented by Mr. Peto, M.P., to his Majesty the King of Denmark, and is intended for the altar window of the Chapel Royal at Frederickburg. The upper portion has fifteen upright compartments, in the centre of which is a figure of our Saviour as the Good Shepherd. In the upper central compartment the Dove is seen descending amid golden rays, surrounded by clouds; while the lower central and the dexter and sinister lights contain medallion heads of the Apostles, with deep blue backgrounds, surmounted by their emblems, and surrounded with richly dispersed and ornamental work in various colours. The other compartments contain groups of the Apostles, and Angels bearing scrolls, with quotations from the New Testament. The sinister portion of the window is filled with heraldic emblematic and national devices. The central light contains a likeness of the King of Denmark in white enamel on a ruby ground, surmounted with a laurel wreath. The Royal arms of Denmark, environed with the ensigns of the order of Danebrog and of the Elephant, are also introduced with excellent effect. The national motto Gud hjelpe Danes, with the State sword and sceptre, are also most effectively given.

THE SOCIETY OF PAINTERS IN WATER-COLOURS.

WE have already given a copious notice of this Exhibition; and now present our readers with Engravings from two of the most attractive genre pieces contained in it. Carl Haag's "Tyrolese Composer," is an able and striking performance, full of character, and admirably complete in all matters of detail. The mountaineer is seated on a bench, in the open air, with his instrument upon his lap, upon which he is inditing some new strain; his upturned eye showing that he is deep buried in reverie. The proportions of the figure denote the presence of energy and health, and the face is full of manly character. The colouring is luminous.

"MEIN VÖGLEIN" ("MY LITTLE BIRD").

PAINTED BY H. WARREN.

EXHIBITED AT THE NEW SOCIETY IN WATER-COLOURS.

THIS charming little picture forms one of the most attractive features of the present Exhibition of the New Water-Colour Society, and does equal credit to Mr. Warren's fancy and delicate, graceful pencil. It represents a Rhenish peasant girl standing in the bright morning air, near the porch of the old paternal home, carrying a pet bird upon her finger, which she addresses affectionately, "Mein Vöglein." The figure is admirably simple and natural, and the face, a pretty one, full of innocent, happy expression. The landscape and all the various rustic objects introduced are well selected, and give life and reality to a very pleasing subject. The colouring is luminous, genuine in tone, and full of variety.

We take this opportunity to make honourable mention of the very meritorious landscape pieces by Fanny Steers, which we accidentally omitted doing in our former notice.

"A TYROLESE COMPOSER."—PAINTED BY CARL HAAG.—EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.
(SEE PRECEDING PAGE.)

"MEIN VOGLEIN" ("MY PRETTY LITTLE BIRD.")—PAINTED BY H. WARREN.—EXHIBITION OF THE NEW SOCIETY OF PAINTERS IN WATER-COLOURS. (SEE PRECEDING PAGE.)

"HOME REVISITED."—PAINTED BY A. HANKLEY.—EXHIBITION OF THE ROYAL ACADEMY.

"SCENE FROM 'FAUST.'"—PAINTED BY H. O'NEIL.—EXHIBITION OF THE R...

THE ROYAL ACADEMY EXHIBITION.

THE Royal Academy consists of *forty* Royal Academicians, *twenty* Associates, and *six* Associate Engravers. Of the forty, *thirty* are painters, *six* are sculptors, and *four* are architects. Other subdivisions may be admitted—thus, of the thirty, *six* are professed portrait-painters, viz., Gordon, Grant, Pickersgill, Chalon, Knight, and Ross; *six* are professed landscape-painters, viz., Stanfield, Roberts, Lee, Creswick, Redgrave, and Witherington; *four*, whatever they once were, are now nonentities, viz., Cook, J. J. Chalon, Jones, and Ward. The remaining members it is easier to name than class; we shall, however, try to group them according to their estimation by the public—Sir E Landseer, Mulready, Leslie, Eastlake, Maclise, Frith, Webster, Herbert, Dyce, Cope, Uwins, Hart, C. Landseer, and Cooper.

All the portrait-painters and all the landscape painters are contributors to the present Exhibition; three of the four nonentities send—the exception being that continual exception, Mr Richard Cook (we wish we could change him for E W Cooke) Of the six sculptors four contribute—the absentees being Sir Richard Westmacott and Mr. Gibson, while of the fourteen we have enumerated, commencing with Landseer and ending with Cooper, all contribute—Mr. Herbert and Mr. Dyce, two of the very best, excepted.

Of the twenty Associates, eighteen are contributors. This is quite as miscellaneous a class as the general body of members. We have one architect, and an able one (Mr Sydney Smirke), two sculptors (Mr. Foley and Mr. Weekes), three portrait-painters (Hollins, Thorburn, and Boxall); and four out of doors: whom we shall enumerate much in the order [illegible] Cooper, Danby, Elmore, Frank Stone, Ward, Millais, E. W. Cooke, [illegible], Goodall, Hook, Patten, Poole, and Pickersgill. All the twenty, with two exceptions (Mr. Millais and Mr. Elmore) are exhibitors.

Of the six Associate Engravers it is almost needless for us to speak; the country is well aware that the narrow-spirited laws of the Academy [illegible] the very first excluded the best engravers from even contend[illegible] [illegible] The Exhibition is mainly supported by the sixty six we believe, with the public, that the nine hundred distinction as that of an A E R A.

It is said by the forty, the twenty, and entitled to disagree with the Academy that such is shown to the fifteen hundred and thirty-one works of art composing this present Exhibition, yield a lion's share to the shilling collection of June 1st at the end of the season It would be difficult to portion out the particular schools of art that contribute most to the treasury. Sir Edwin Landseer is, perhaps, the largest single [illegible] painters, we conceive—though portrait painting in England stands [illegible] encouraged—earn, as a class, the largest number of shillings; the landscape painters honourably serve to sell the funds, the pre-Raphaelites do their part more extensively than some suspect, while we may safely assert that the shilling received on account of the sculpture cell and the octagon dark chamber would hardly pay for the extra police attendance at the doors.

Our Engravings this week have been selected to represent two popular painters without the pale of the Academy Mr. O'Neil and Mr. Hankley. One deals in poetic and Scriptural subjects with no common hand, and the other catches every-day life with an eye like Wilkie or Webster.

Mr O'Neil has found his subject (No 249) in Goethe's great work—that noble volume of poetry which it has been the ambition of so many to render

[illegible] much as his style is what everybody under-

into English, and of which it is not too much to say that Mr. Charles Kean has just succeeded in robbing of every poetic beauty. Who does not know the story of Marguerite, and the incident which Mr. O'Neil has sought to embody?—

(MARGARET *gathers a star-flower, and plucks off the leaves one after another.*)

Faust.—A nosegay, may that be?
Margaret.—No; 'tis a game.
Faust. How?
Margaret.—No! You laugh at me.
(*She plucks off the leaves, and murmurs to herself.*)

What Mr. O'Neil has attempted to do he has done. He has entered into Goethe's meaning, and wrought with a graceful pencil and a most delicate conception of the poetry of the passage.

Mr. Rankley's "Home Revisited" (No. 62) reminds us, in subject at least, of Mr. Millais' "Release;" but never were two subjects, so like in earnest simplicity, executed on such different principles. Mr. Millais' was a prison scene; Mr. Rankley's is a garden scene. He professes to have found his subject in Shakspeare:—

As a long-parted mother with her child
Plays fondly with her tears, and smiles in meeting,
So weeping, smiling, greet I thee, my home.

This picture may be looked upon as a kind of supplement to the picture by Mr. Solomon—"Second-Class: the Parting"—where we see a boy leaving for the sea. Here we have his return; and what a touching bit of English life has Mr. Rankley painted. The Middy has returned—the coach that brought him to his home is seen, still deeply laden, winding its way along a pleasant English lane—the father sees after the luggage—he has already welcomed his son, and has left his boy to his mother and his sisters. This fine picture will recall a tear to many eyes.

We shall conclude our observations of this week with a few words on the miniatures, a branch of the fine arts in which the English excelled before they obtained distinction in any other style of painting. We had a Hilliard and an Oliver when we were borrowing Holbein and Vandyck, and a Hoskins and Cooper when we were borrowing Lely and Kneller.

The first place is due to Sir William Ross, not by age alone, but by merit. His group of the "Princesses Helena and Louisa, with Prince Arthur," is very happily arranged and very happily carried out, full of his delicate arrangement and refined touch of pencil. His female portraits are better than his male. We prefer his "Duchess of Sraabant" (791), and his "Miss Isabella Cresswell" (838), to his "Mr. Arkwright" (770). If it cannot be said this year of Sir William Ross that he has outdone his other doings, it may be safely asserted that he has maintained all his well-earned reputation.

After the Royal Academician we will place the Associate and rival, Mr. Thorburn, who is less ambitious of large treatment than heretofore. He is content for a time to view people as they appear, without throwing them into *Turnpike* backgrounds and Raffaelesque positions. What matronly beauty is observable in the "Countess of Carlisle" (787)—what female delicacy in "Lady Mary Labouchere" (804). Nor can we allow his "Lady Jane St. Maur Stanhope" (806), or his "Lady Sebright" (842), to pass without a word of approbation. His "Earl of Airlie" (805) is the best of his male portraits.

Mr. Carrick has long been favourably before the public as a miniature painter, and we are bound to commend his portraits of "Mr. Gambart" (876) and of "Joseph Ferguson, Esq., M.P." (726). He has caught the eager look of Mr. Gambart, and the intelligent expression of Mr. Ferguson.

We must repeat our renewed admiration of "Lady Mary Cholmondely" (768), by Mr. H. T. Wells. It is one of the most successful miniatures in the room.

Mr. Gullick is not a new name to us or to the public as a miniature painter, but we have seldom seen him to such advantage. His two "Ladies" (689 and 759) are well designed, and well painted; and 800 is carefully conceived and carried out. His two remaining miniatures—and they are among his best—represent a boy, "Master Green" (740) and an "Antiquary" (836). The boy is, of course, very differently employed from the F.S.A.: he is thinking of days to come; while the antiquary is creaming of old London, old London booksellers, and of Dorking as it appeared at least thirty-five years ago.

MUSIC.

The management of the Royal Opera at Drury-Lane continues to be carried on with much activity and great apparent success. The directors have put another iron in the fire. They have begun to give English operas on a large scale properly, operas in English, in addition to the alternation of operas in Italian and German with which they set out. For this purpose they are forming an English company, which already includes Mr. and Mrs. Sims Reeves, and is, we understand, to be further strengthened by the addition of other eminent performers. With the strength thy already possess they gave their first English performance on Monday last. It consisted of Auber's "Fra Diavolo," already familiar to the public in its lyrical dress. It has always been exceedingly popular in this country; and the bandit hero of the piece was one of Braham's favourite parts in the latter days of his theatrical career. It deserves its popularity, for the drama is a happy mixture of the romantic with the comic, and the music is not only gay and brilliant, but full of genius and masterly skill, entitling Auber to the praise of being, next to Rossini, the most delightful composer of comic operas now living. The performance on Monday evening was excellent. The captivating robber has always been one of Reeves's best parts; he acts it admirably, and the beautiful music is quite suited to his voice and style. Mrs. Reeves is an accomplished musician, and, in addition to her vocal attainments, is an intelligent actress. Her *Zerlina* was acting and pleasant, and she sang exceedingly well. Mr. Weiss is now acknowledged to be the first of our English basses, and is also an actor of merit. He gave the eccentricities of the English traveller, *Lord Allcash*, with much humour; and his voice and firmness conduced greatly to the effect of the fine concerted music. Mrs. Weiss looked and acted *Lady Allcash* to perfection; and her singing wanted only greater certainty of intonation to be quite satisfactory. The opera had the advantage of a stronger orchestra and chorus than it has ever had in this country; and the performance was carefully and ably conducted by Herr Lindpaintner. The house was crowded, and the piece was received with the warmest applause. On Tuesday, "Don Giovanni" (or, more properly, "Don Juan," such being the German title of the opera) was produced with great magnificence and unbounded success. The strength of the company had been greatly increased by the addition of Herr Pasque and Madame Rudersdorff, who appeared in the two principal characters; the others being sustained by performers whom we have already had occasion to mention. Herr Pasque, from the Darmstadt opera, is an artist of merit; and his representation of the character of *Don Juan*, though by no means faultless, was, upon the whole, worthy of praise. Madame Rudersdorff, who enjoys the highest reputation in Germany, both as an actress and singer, gave a beautiful representation of *Donna Anna*. She is, indeed, a singer of the highest class. Her voice, naturally powerful, as well as sweet, has received all the cultivation which art can bestow, and is capable of every variety of expression—from simple tenderness to the utmost intensity of passion. The part of *Elvira* seldom falls into competent hands; but it fell to that from the first violent state of feeling, he rushes into the boy's arms, and welcomes him home with enthusiastic fervour. *Blanche* and *Matilde* are soon made acquainted with the happy news; but such a sudden surprise to the mother would kill her with unexpected joy. They have accordingly to prepare her mind by a feigned story of a neighbour having recovered a son long supposed to be lost. The point is attained. *Adrien* comes from his hiding-place, and receives his mother's blessing and embraces. Throughout this affair, the most beautiful domestic sentiment prevails; and the diction is every where elegant; not without humour either, in *Noel's* description of the absent boy's infant tricks, which relieved the more melancholy tone with occasional provocations not only to smiles, but laughter. Acted as on Tuesday evening, it was, by four or five first-rate performers, the action was so fully and finely interpreted by each, that the utmost satisfaction was manifested by the house. The applause at the conclusion was extreme; and the objects of it were more than once summoned to receive the evening's ovation.

Philharmonic Rooms.—On Tuesday evening Captain Wilton read, in this new lecture-hall, the tragedy of "Virginius," in aid of the Fund for the Soldier's Wives and Children. His reading was gentlemanly and intelligent, nor unaccompanied with appropriate passion and gesture. During the evening, also, there were some occasional songs and music, by which the entertainment was varied and enlivened. We could have wished that a fuller room had rewarded these benevolent efforts.

THE THEATRES.

Haymarket.—A new drama, freely adapted by Mr. Planché from the French of MM. Granger and De Montessin, was produced on Saturday last. The title of the original is "Des Chevaliers de Lansquenet;" that of the English version, "The Knights of the Round Table." The knights in question are a band of ruffling, seeking adhans with the aristocracy for the purpose of directing its wealth into their own treasury. Their leader is one *Captain Cowus*, repres nted by Mr. G. Vandenhoff, whose remarkable coolness was very effective. His project is to entangle *Leonard D'Arcy* (Mr. Howe), who has come to London and spent his half-sister's property, and also furtively disposed of the claimant in her childhood—spreading the report of her death—by making him the confederate of his plans. The success in this design—for he knows that the lady in question still lives, under the name of *Perdita*; and, having escaped from the gipsies to whom she had been sacrificed, is in London seeking information of her parentage, to which her possession of a seal, with armorial bearings, furnishes a clue. She had been protected by a *Lady Boodle*, and won the heart of her son, *Ralph*; but, not wishing to degrade him by an alliance with a gipsy girl, honourably avoids his presence. *Sir Ralph Boodle* (Mr. W. Farren) comes up to London to see life, and seeks to be introduced into society by *D'Arcy*, who prepares to sacrifice him to the fraternity of "Knights," taking himself half the profits of the adventure. *Sir Ralph* is soon in the toils—arrested for his Jacobite principles, and involved in a quarrel with *General Grantley* (Mr. Chippendale), who, having met *Perdita* in the street, is struck with her resemblance to her mother, whom he had loved in his youth. A duel is concocted; and the sharpers and their victim await the General on Hampstead Heath—who comes, indeed, not to fight a duel, but to produce *Perdita*, and expose the plans of the sharpers. Such is the simple outline of the plot; but in the filling-up there is much complexity and ingenuity. First of all there is one *Tom Tittler* (Mr. Buckstone), who gets his living by horn-blowing and fencing, though born a gentleman and bred a soldier, who has love affairs on hand both with *Perdita*, and a neighbour, *Peggy Popplin* (Mrs. Fitzwilliam). The latter, *D'Arcy* wishes to substitute for his missing sister, in order to defeat the claims of *Perdita* and the efforts of *General Grantley*. This attempt brings *Tom Tittler* and *D'Arcy* acquainted, and leads on the part of the former to a fatal interference with the plans of the latter. He, for instance, gets admittance, by way of the chimney, into an apartment where *Perdita* is imprisoned, for the purpose of being forcibly married by a Fleet parson to a serviceable scoundrel, one *Snuffle* (acted by Mr. Compton), whom he disarms by means of a poker, and thus effects the liberation of the fair victim. This *Snuffle* has been selected for the purpose by *Cosens* on account of the clever manner in which he had cheated the landlord of Lockitt's coffee house out of a sumptuous dinner. The weight of it lies with Mr. Buckstone, Mr. Vandenhoff, and Mr. Howe; the levity of it with Mr. Compton; and the episode at Lockitt's, a short part, all essence, concentrated and irresistible. The female characters are not remarkably effective; but Miss Reynolds had one telling scene in the r om in which she was confined; and Mrs. Fitzwilliam, as a dressmaker apprenticed by the parish, regarding on her character, which, by the machinations of *D'Arcy*, is ruined, was sometimes interestingly situated. Some clever arrangement of the incidents is also deserving of praise. That of Mr. Buckstone's horn-blowing, used alike for the wooing of *Peggy*, and the warning of *Perdita*, may claim recognition as an artistic contrivance. Indeed, throughout, the playwright's skill is manifest; and to that the drama is indebted for its success, and which, in all probability, will include a considerable run.

Adelphi.—Mr. Charles Selby has contributed to this stage an adaptation of "Les Filles de Marbre," under the title of "The Marble Heart; or, The Sculptor's Dream." This melo-drama—such it is—consists of four acts, and an introduction: the latter is occupied with the dream, in which Phidias's studio at Athens is supposed to be intruded upon by the artist (Mr. Leigh Murray) and his friend *Gargius*, who claims three statues, representing *Aspasia*, *Lais*, and *Phryne*, which the former has just finished and been paid for, but which, such is his love for them, he would fain keep for his own contemplation. *Diogenes*, who is also present, proposes to refer the decision of the dispute to the statues themselves, who, marble-hearted as they are, turn their faces away from their creator to their purchaser. This vision is supposed to have happened to one *Rapinel*, a sculptor at Paris, whose destiny it prefigures. The artist (Mr. Leigh Murray) meets with a *Mdlle. Marco* (Madame Celeste) and two other ladies at Fontainbleau, in company with his friend *Volage* (Mr. B Webster), a journalist, and, though warned of the consequences by *Volage*, resolutely falls in love with the lady named. The progress of the passion, and regularly uses up the poor infatuated artist, affecting during six weeks the warmest affection, for the purpose of stimulating a wealthy admirer to make an offer. Successful at length, she, then, in the most heartless manner, casts off the astonished *Rapinel*, and returns to the forsaken but mother and an innocent true-hearted girl, one *Marie* (Miss Woolgar), who had loved him. Indignant and desperate, almost mad, a terrible scene of agony takes place between him and the marble-hearted woman of quality, from whom, at length, he tears himself. The latter, however, pursues *Mdlle. Marco* an unexpected sacrifice. Her equally unfeeling companions make her their sport, and affect to believe that it is she who has been rejected by the artist, not he by her; whereupon she wagers to win back his affections. In her first attempt she fails. *Raphael* returns to his studio, designing to work down the past; and is there rejoined by his friend *Volage*, and shortly after by *Marie*, when the terrible truth transpires that his mother, during his long absence, had died of grief. Poor *Raphael* still seeks relief in labour; but a mist swims before his eyes, and his mind wanders. The trial has been too hard for him, and, in a fit of frenzy, he dies. *Mdlle. Marco* comes to win her wager, and finds him a corse. Whereupon the three marble statues of the ladies reappear, and the curtain falls. To Mr. Webster, as the good-hearted journalist, and Mr. Murray, as the over-sensitive artist, too much praise cannot be rendered. They are admirable. Madame Celeste had a difficult part to play in all senses of the phrase, but played it with uncommon success even for her, and with a finish never excelled. In situation and dialogue, the play is diffuse and profuse; but there is significance in the expression and beauty in the sentiment and feeling alive, and interests us to the end in the development of passion and character.

St. James's.—Mdlle. Fix made her first appearance on Monday with M. Regnier, in "Valerie;" and both re-appeared on Wednesday, in the parts of *Mathilde de Percenal*, and the old domestic *Noel*, in the comedy of "La Jeie fait Peur," by Madame Emile de Girardin. This piece, though in one act only, is of extraordinary merit and interest. Mdme. Allen, too, made her début in the character of *Madame de Lussac*. *Blanche* was supported by Mdlle. Luther. No wonder, with so strong a cast, that the theatre was crowded with a brilliant audience. The whole effect of the piece depends upon the skill with which the subject is unfolded. The despondent mother, sunk to prostration, mourns for the supposed death of her son, *Adrien* (M. Leon); nor will be comforted, notwithstanding the sympathy of her daughter *Blanche*, and *Matilde*, her only betrothed. *Noel*, full of hope himself, would inspire hope in others When at length the young man suddenly appears, the excess of his surprise, however, produces a shock which only a good mother heart could sustain. M. Regnier's acting of this situation was superb: when recovered, she sinks into a beautiful state of feeling, he rushes into the boy's arms, and welcomes him home with enthusiastic fervour. *Blanche* and *Matilde* are soon made acquainted with the happy news; but such a sudden surprise to the mother would kill her with unexpected joy. They have accordingly to prepare her mind by a feigned story of a neighbour having recovered a son long supposed to be lost. The point is attained. *Adrien* comes from his hiding-place, and receives his mother's blessing and embraces. Throughout this affair, the most beautiful domestic sentiment prevails; and the diction is every where elegant; not without humour either, in *Noel's* description of the absent boy's infant tricks, which relieved the more melancholy tone with occasional provocations not only to smiles, but laughter. Acted as on Tuesday evening, it was, by four or five first-rate performers, the action was so fully and finely interpreted by each, that the utmost satisfaction was manifested by the house. The applause at the conclusion was extreme; and the objects of it were more than once summoned to receive the evening's ovation.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Monday.

SALARIES OF SCOTCH SCHOOLMASTERS.

The Earl of Aberdeen, in answer to the Duke of Buccleuch, stated that the salaries of schoolmasters in the Scotch parochial schools would now be reduced to a maximum of £27, the bill by which their incomes would have been increased having been rejected by the House of Commons. The Government would, however, at the earliest opportunity, take steps for restoring the schoolmasters' salaries to their former amounts. A bill was in preparation for that purpose.

The Navy Pay Bill and Manning the Navy Bill were respectively read a second time.

HOUSE OF COMMONS.—Monday.

EXCHANGE OF PRISONERS.

Sir J. Graham stated that instructions had been transmitted to Admiral Dundas, enjoining him not to liberate any Russian subjects that might be captured, except under a proper understanding with the Russian authorities respecting the exchange of prisoners. Touching the reported successes obtained by the Count de Raspier, the Government were able to give no definite information, the last official despatches being dated on the 5th instant, when the Commander-in-Chief was only on the point of leaving the coast of Sweden.

COMMITTEE OF WAYS AND MEANS.—EXCHEQUER BONDS.

On the motion for going into Committee of Ways and Means,

Mr. T. Baring complained that the changes which the Chancellor of the Exchequer had introduced into the resolutions that were to be proposed to the committee had debarred him (Mr. T. Baring) from moving the amendment, of which he had given notice, upon the preliminary question.

The Speaker then left the chair, and the House resolved itself into committee.

The Chancellor of the Exchequer briefly explained the situation in which previous votes of the House had left the financial arrangements of the Government. Those arrangements were twofold—first, as existing to the permanent provision of revenue for the public service; secondly, (with regard to the supply of cash for immediate purposes. Decisive votes had been passed authorising the expenditure of money, and formal votes indicating the ways and means by which it was to be raised. He had now to take the opinion of the House on the single question how the ready money that was wanted should be obtained; and this question, he intimated, turned simply upon the narrower alternative whether it was most expedient to resort to an issue of Exchequer Bills, or authenticate the Ministerial project of Exchequer Bonds.

Mr. Disraeli charged the Chancellor with sharp practice. The had asked for certain votes on the plea of administrative convenience and under the pledge that the decision of the House was in no waycommitted upon the principle of the measure; and now these votes were accounted decisive, and the House barred from the possibility of rescinding or even of discussing them.

The Chancellor of the Exchequer explained. The resolutions in questions were wanted—as to the provision of ways and means; order to authorise the revenue officers to take steps for levying the enanced imposts; and, with regard to the floating debt, in order to validate the contracts already opened with subscribers to the new bonds. Ample opportunity, he added, would be afforded for discussing the principles involved in these resolutions when the bills into which they must be embodied came before the House.

Some further complaints were urged and explanations offered on this point. At length the resolution, empowering the Government to issue £2,000,000 of Exchequer Bonds, was put from the chair.

Mr. T. Baring moved his amendment declaring that "it was not at present expedient to authorise any further issue of Exchequr Bonds with the engagement of repayment within the next six years." The hon. member minutely reviewed the dealings of the Chancellor of the Exchequer, since he first took office, with the funded and unfunded debt of the country, and accused him of making many blunders which entangled the public revenue in repeated losses and embarrassments. Adverting to the resolution immediately before them, he remarked upon the danger of borrowing money at short dates, under pledge of repayment at given periods which it might be most inconvenient and expensive to redeem when the time came. The transaction as actually a loan, and should have been boldly announced as such, as contracted upon the most advantageous conditions.

Mr. Wilson vindicated the conduct of the Government with regard to their dealings with Exchequer Bills, the public balance the Bank of England, the Converted Stocks, and other points where blame had been assigned. Passing on to the immediate question, he urged that the choice now before them lay between paying for the war expenses out of revenue, or raising it by loan. He then examined the social characteristics of the proposed Exchequer Bonds, and pointed o many advantages and conveniences which they possessed as the medie for obtaining supplies of ready money.

Mr. Muntz denounced the financial schemes of the Government, exposing the errors they had committed, and enumerating a variety of losses and damages which, as he alleged, they had inicted upon the public.

Mr. Laing encouraged the House in anticipating ess to the new Exchequer Bonds, by setting forth the example of se railway companies. Sixty-four millions sterling were now under an to those companies, who obtained money on their bonds with peet ease, and on most advantageous terms.

Mr. M'Gregor considered that the Chancellor of the Exchequer had been unjustly and unreasonably attacked.

Mr. J. Hadley believed that the proposed pl for raising money was business-like and expedient.

Mr. Disraeli could not treat the question befo them as one merely of detail. It grew out of the general principles i which the present Chancellor of the Exchequer had managed he public finances. These principles he considered to be fallacious from the beginning erroneous. Briefly dwelling upon those earl transactions which had undergone so much discussion, he contend that the reduction of the interest on Exchequer Bills, the conversion of South Sea Annuities, the preparation of a large fund in the face of war, the continuance of the Income-t under a fallacious show of ultimate extinction, the system on which that impost was maintained, the absorption of the old balances, and the tampering with the funds of the Savings' Banks, constituted a series of faults and blunders which no wise or prudent minister would have committed. Out of these blunders our present difficulties had grown. The Chancellor had offered to borrow money at a cent for money, and yet could not get it. He had shown himself incompetent to deal with the *bulls* and *bears*, and had been forced appeal to the *stags* of the Stock Exchange. And now came a last fit for raising a loan in masquerade. The scheme was not sanctioned by precedent, was subject to many inconveniences and dangers, and called upon the committee to repudiate it.

Mr. Gladstone saw no reason for parking into any lengthened vindication of his by some policy. Reeing Mr. Disraeli catalogue of alleged errors, he declared that the duction in the Exchequer-bill interest had turned out profitably the country, and challenged a direct vote on the subject. To the allation that he had brought out a peace budget when war was probable replied by denying the doctrine that to tax should be removed so ng as any interruption of peace seemed possible; remarking, ber's, that the Opposition themselves had incessantly endeavd to accomplish further reductions of taxation, obliging n to engage in constant conflicts for the rescue of various ps of the public income. Declaring that he stood by that Budget, Gladstone acknowledged the loyal spirit in which the country responded to the calls now made on it for increased resources, and attributed the ability to answer those calls in great measure to the ease and sperity derived from judicious legislation in former years. The Chancellor of the Exchequer then detailed the character and the motives the scheme now proposed for obtaining money. Of the seven milli of new taxes lately voted, the greater proportion could not be realized for many months. The Malt-tax would produce little or nothing the winter, and the return from the double income-tax would come in until a yet later period. While the increased resources were so obtained, the outgoings were rapid in their incidence and necessarily certain in their amount. To provide for this interval, and supply a dent margin for that uncertainty, he had asked for leave to issue the Exchequer Bonds, and still insisted, in spite of all criticism, that the ress could not be called a loan, seeing that it would create no additio the permanent debt. With regard to the expediency of the partic description of stock, he admitted that it was novel in form, and ount of its novelty might encounter some difficulties in the City, he contended that the new bonds were likely to be very useful. convenient to all parties, and believed that they were appreciated ng the capitalist classes.

Mr. T. BARING briefly replied. He doubted that the money was really wanted; but if it were so, the market would supply the amount bearing only three per cent interest, and a loan was on many accounts preferable to the proposed bonds.

On a division there appeared—For the resolution, 200; for the amendment, 186: majority for the Government, 104.

The resolution was then agreed to.

The House having gone into committee on the Stamp Act, passed certain resolutions relating to the duty on duplicates of deeds and other documents.

HOUSE OF LORDS.—TUESDAY.

On the motion of the Bishop of OXFORD, the Episcopal and Capitular Estates Bill was referred to a select committee.

The Common Law Procedure Bill was passed through committee, after some discussion, in which Lord St. Leonards and the Lord Chancellor bore the principal parts.

The Church-building Acts Bill also went through committee.

HOUSE OF COMMONS.—TUESDAY.

MIDDLESEX INDUSTRIAL SCHOOLS BILL.

A good deal of time was taken up in the discussion of an amendment by Mr. Mullings to a clause in the Middlesex Industrial Schools Bill. The object of the amendment was to deprive the trustees of the power of directing pub.ic worship to be celebrated in the schools according to the religious persuasion of the prisoners, provided there be a sufficient number of each to justify a separate service. Upon a division, the amendment was rejected by 190 to 108; and the bill was ordered to be read a third time on a future day.

ABOLITION OF CHURCH-RATES.

Sir W. CLAY moved for leave to introduce a bill for the entire abolition of Church-rates. It was admitted on all hands, that the question could not remain in its present state. Upon the justice and the propriety of an adjustment, argument may be said to be exhausted. Since he last addressed the House on this subject two important circumstances had occurred—the decision of the House of Lords in the Braintree case, and the Census report on the subject of Religious Worship. The legal decision went thus far—that to make a Church-rate valid there must be the assent of a majority of the ratepayers present in vestry. Of fifty-eight contests which had taken place, sixteen had determined in favour of the rate, and 42 against it. With regard to a substitute, his conviction was that none was needed. Should the House be of a different opinion, a portion of the available Ecclesiastical funds might be applied to the purposes for which Church-rates have hitherto been demanded. Where Church-rates have been abolished, no want of funds has been felt for keeping the sacred edifices in repair. Christian liberality has been sufficient.

Mr. PETO, in seconding the motion, expressed his gratification at the circumstance of its mover being a member of the Church of England. On the part of the Nonconformists, he disclaimed all hostility to the Establishment. Nothing could afford that body greater pleasure than to witness her prosperity—meaning by the word her effectual reform, and the full development of her vast resources to further the advance of pure and undefiled religion throughout the land.

Mr. WIGRAM opposed the bill. There were places so poor that the churches could never be kept in repair except by means of a rate. The churches were built for the benefit of all, and open to their attendance. They appertained to the national establishment, and should be supported by the nation.

Mr. PACKE confessed that legislation was most desirable on the subject, but could not approve of the present measure.

Captain SCOBELL wished to abolish the Church-rate as such, but would not leave the churches unprovided with special funds for their maintenance. He enforced the expediency of re-distributing the property of the Ecclesiastical Establishment.

Lord STANLEY believed that the country had practically settled the question, and the House should accept it. There were difficulties attending every proposition for providing funds to keep the churches in repair. The system of voluntaryism might not be free from them, but it was the only principle that now could be adopted

Mr. R. PHILLIMORE suggested that all Dissenters should be exempted from the compulsory payment of the rate, upon their making a declaration that they did not attend the church.

Mr. DRUMMOND considered that the abolition of Church-rates was equivalent to robbing the Church. If rates and tithes were abstracted from the Church they should justly belong to the State.

Mr. J. RUSSELL admitted that the present system was attended with many lamentable and scandalous incidents; he dwelt upon the necessity of discovering some fair basis whereon the controversy could be settled before any attempt was made to settle it, then pointed out some of the perplexities that attended the search for such a foundation, and finally recommended that the question should be left unsolved for the present session. He could not consent to withdraw the Church-rate without first providing the fund that was to supply its place. He did not fear that the bill would leave the churches to fall into ruin, but apprehended that, if the present measure were entertained by Parliament, it would tend to diffuse throughout the country an impression that the bond of union between the Legislature and the Establishment was becoming weak.

The House divided—For leave to bring in the bill, 130; against it, 62; majority, 67.

Leave was then given, and the bill brought in.

The Industrial and Provident Societies Bill went through committee.

HOUSE OF COMMONS.—WEDNESDAY.

PROPERTY DISPOSAL BILL.

The adjourned debate on this bill was resumed by Mr. MALINS, who supported the measure. The inmates of convents avowedly renounced all control over their temporal concerns, and the law could not be accused of going too far, even if it treated them as being civilly deceased with regard to the disposal of property. The bill before the House was simply short of this provision, as it merely cast upon the donees of property from nuns the burthen of proving that the donors had exercised free will in the matter.

Sir J. YORKE regretted to find the promoters proceeding with the bill after the proof they had received of the spirit in which the measure was received in Ireland, and of the animosities it was certain to excite among the Roman Catholic population. He denied that the Government opposed measures like this for the sake of obtaining Roman Catholic support. They resisted them because they were opposed to the fundamental spirit of the Reformation; and being animated by the same feeling, he was confident the House would negative the second reading of the bill.

Sir J. PAKINGTON protested against its being supposed that the supporters of this bill were actuated by a persecuting spirit, or that the provisions of the bill were at all opposed to the principles of toleration established by the Reformation. In the absence of a bill of this nature there was only one alternative for the House to adopt, and that was to revive the law which held nuns to be civilly dead.

Mr. FITZGERALD described the measure as discreditable to its author, being, as it was its present, insulting in its language, and oppressive in its enactments.

After a desultory discussion, in which Mr. George, Mr. Liddell, and Lord Bernard supported the bill, and Mr. Bowyer, Mr. F. Scully, and Mr. J. O'Connell opposed it,

Mr. Serjeant SHEE said the bill in its very nature would be destructive of the objects which the framers of the Emancipation Act desired to promote, for it would enact all the evil which resulted from the old law of civil death without enacting any of its good.

Mr. FREWEN remarked upon some proceedings at recent meetings in Ireland, which he considered a reverse of peaceable or loyal.

Sir J. FITZGERALD and Mr. NAGUIRE opposed the bill. The latter hon. member was still addressing the House, when the Speaker gave warning that the time allowed for discussion had expired. The debate accordingly stood once more adjourned.

HOUSE OF LORDS.—THURSDAY.

This being Ascension Day, their lordships did not meet.

HOUSE OF COMMONS.—THURSDAY.

Mr. Smith took the oaths and his seat for Hertfordshire, in the place of the late Mr. Halsey, lost in the *Orpheus* steamer a few weeks ago.

THE OATH BILL.

The Sheriffs of London appeared in the bar clothed in their robes of office, and presented a petition from the Court of Common-council in favour of the Oaths Bill.

On the order of the day for the second reading of the Oaths Bill,

Sir R. THESIGER said, there were not doubts in his mind as to the expediency of bringing forward this measure; and the dilatory course pursued by Lord J. Russell in the matter seemed to indicate similar feelings upon the subject. The many were evidently opposed to public opinion: for, looking at the returns of petitions upon the subject, it appeared that the petitions against the bill preponderated greatly over those presented in favour of it. The hon. and learned gentleman proceeded to contrast the speeches of the noble Lord upon, and to question his political consistency, in the matter. The memorable letter of the noble Lord to the Bishop of Durham was chiefly remarkable for a vigorous condemnation of those who Jesuitically attempted to touch the prerogative of the Crown in religious matters. The Ecclesiastical Titles Bill was introduced into the House upon the same principle; and now the noble Lord wished that House to pass the bill, the chief effect of which must be to strike at the supremacy of the Crown, and thus to undermine the fundamental principles of the Constitution. Lord Lyndhurst and other high authorities had truly asserted that the supremacy of the Crown in religious matters was part of the Common Law of the land. Lord John Russell had endorsed that maxim on previous occasions; but he had been compelled to sacrifice those opinions he had professed on the prerogative of the Crown. The Supremacy Oath was the key-stone of the arch of the English Reformation; and all Protestants ought to look with jealousy and suspicion at any attempt to overthrow it, for the purpose of erecting Judaism and Roman Catholicism upon its ruins. The bill now before the House was nothing more than a mutilated and mutilated recognition of the Oath of Supremacy. Under what influence was it that the noble Lord had come forward unsolicited to assist those Roman Catholics, whom he had, on previous occasions, so strenuously opposed? The Roman Catholics had never asked for the proposed change, and the present bill was an unworthy attack of the leader of that House on the religious bulwarks of the country. The hon. and learned gentleman concluded by moving, as an amendment, that the bill be read a second time that day six months.

The CHANCELLOR of the EXCHEQUER defended Lord John Russell from the charge of inconsistency in this matter. The noble Lord had given his pledge in 1846 to introduce a measure for the alteration of the oaths in that House; and it was not until 1847 that Baron Rothschild became connected as a representative with the City of London. He (the Chancellor of the Exchequer) thought that the honourable and learned gentleman had conceded too much to the noble Lord when he said that this bill contained a maimed and mutilated acknowledgment of the oath of supremacy. The bill contained nothing whatever about the Oath of Supremacy. His noble friend had made no attempt to make good one part of his case by founding his bill upon its acknowledgment of the Oath of Supremacy. What was the fact? That which was called the Oath of Supremacy does not really declare the supremacy of the Crown. It contains two propositions—the first was an abjuration of what is called the deposing doctrine; and the second was an abjuration of the power and jurisdiction of the Pope within this realm. The assertion of the authority of the Crown must be sought for from other sources. He would remind the hon. and learned gentleman that there were other classes in that House, besides the members of the Roman Catholic Church that refused to concur in the religious supremacy of the Crown. He alluded to the Dissenters, and to the members of the Presbyterian Church Establishment of Scotland. He thought it was greatly to be regretted that the House should attach any weight and value to declarations of this kind, which they do not carry out themselves. Our strength lies in the attachment of the people to the constitution of the country. That attachment was best promoted by encouraging everything that tends to unite class to class, and man to man. He was convinced that the harmony and usefulness of our institutions were best promoted by the exclusion of everything that keeps alive unhappy topics of religious discord, and the more we can reduce our enactments to a state that will correspond with the various religious opinions of our fellow-subjects, the better we can discharge that duty that is entrusted to us on behalf of the Crown and of the people. In his opinion, it was most desirable to get rid of words, which encumbered the body of the oath; which were utterly useless for good, and but pitfalls to tender consciences; which tended to weaken, rather than to strengthen, the general application of the oath itself, and which kept up a constant source of heartburning in that House.

Mr. NAPIER strongly condemned the bill, and contended that it was their duty to their country, their Sovereign, and themselves, to hold by those securities which the wisdom of their ancestors had set up from time to time. Those securities were found necessary against foreign aggression, like those safeguards embodied in the Bill of Rights, and were ever recognised as the very basis and foundation of our Protestant Constitution.

Mr. J. G. PHILLIMORE objected to the clause which exempted benefited clergymen from taking the oath of supremacy.

Mr. LIDDELL, Mr. NEWDEGATE, and Mr. WHITESIDE, severally opposed the bill.

Sir J. WALMSLEY and Mr MIALL supported the measure.

Lord J. RUSSELL said that the House of Lords having several times rejected the new Bill, he thought it would be right to propose that persons returned by the electors of this country should be allowed to take their seats without a test of any kind, upon taking an oath to which no religious objection could be made. The noble Lord then proceeded to combat the arguments brought forward by the opponents of the present measure, and contended that it was calculated to promote the greatest harmony amongst all classes, and to confer much moral advantage upon that House and the country.

Mr. DISRAELI said, although he had always voted in favour of the admission of Jews, he was sorry the noble Lord, by his present mode of dealing with the subject, compelled him to vote against the present measure. The noble Lord had empanelled the success of the Jew's cause in that House by mixing up that question with other matters upon which very strong feelings existed in the country. Up to this moment the Jews had no reason to complain of their cause. The agitation in their favour only commenced about seven years ago, and the measures for their admission to Parliament were supported by large majorities in that House, and by respectable minorities in the other House. He, however, considered that the noble Lord had greatly damaged their cause by pressing forward so objectionable a measure as the present.

Upon a division, the numbers were—

For the second reading	.. .. ..	247
Against it	.. .. ..	251
Majority against the second reading		4

The bill was therefore lost, and the Government defeated!

HOUSE OF LORDS.—FRIDAY.

The Earl of CLARENDON, in reply to the Marquis of Clanricarde, was understood to say that the negotiations connected with the treaty recently entered into between Austria and Prussia were carried on most secretly, and the convention itself was only made public after it was signed. The papers in relation to Greece were very voluminous, and would be laid before Parliament in the ensuing week. Her Majesty's Government had no reason to suppose that any treaty had been recently entered into between Russia and Persia. By the last information received, it appeared that Persia had bound herself to observe a strict neutrality during the war between Russia and Turkey and the Western Powers. He believed that no treaty had been entered into between Russia and Bokhara or Khiva.

On the motion for the third reading of the LAW of Landlord and Tenant (Ireland) Bill,

The Earl of CLANCARTY moved the omission of the 37th clause, providing compensation for tenants in certain cases. He though that the provision was a direct infringement upon the rights of private property.

The Earl of DONOUGHMORE and the Earl of DESART supported the clause.

Upon a division the amendment was negatived by a majority of 41 against 10.

The bill was then read a third time and passed.

The Powers of Leasing (Ireland) Bill was also read a third time and passed.

The Navy Pay Bill and the Manning of the Navy Bill severally passed through committee.

The Church Buildings Act Amendment Bill was read a third time and passed.

HOUSE OF COMMONS.—FRIDAY.

THE "TIGER" STEAMER.

Sir J. GRAHAM, in reply to Admiral Walcott, stated that the Government had received no official information respecting the alleged loss of the *Tiger*; but from indirect reports which had transpired, no reasonable doubt could be entertained of the loss of the vessel.

THE "SIMOOM" STEAM-SHIP.

The same right honourable Baronet, in reply to a question from Mr. Macartney, stated that slight delays had arisen in the transport of troops from England by the *Simoom*, owing to the defects in the construction of her engines. The vessel had, however, arrived safely at Gibraltar.

THE WAR.

In reply to questions from Mr. Headlam and Mr. M. Gibson, Sir J. GRAHAM said that the ports on the Russian coast in the Baltic were in a state of effective blockade, but that he had so such information as to the ports in the Black Sea. It was not intended to commence a blockade of Archangel in the White Sea.

Lord J. RUSSELL, in reply to Lord D. Stuart, stated that a copy of the Protocol of the Four Powers would be shortly laid before Parliament. The Allied treaty was included in the Protocol.

EXCISE-DUTIES BILL.

The House then went into committee with the view to the consideration of the Excise-duties Bill.

Mr. WILSON proceeded to explain the new scale of duties as regarded Scotch and Irish distillers, and stated that the increased duties of last year had not tended to augment illicit distillation.

Mr. HUME was in favour of raising the duty to the highest point consistent with the non-encouragement of smuggling.

Mr. J. FITZGERALD moved an amendment to one of the clauses, to the effect that the increased duty upon Irish spirits should take effect from midnight of the 8th of May, so as to exclude all transactions which took place during the day, and which must have been gone into in total ignorance of any increase being intended

The CHANCELLOR of the EXCHEQUER resisted the amendment on the ground of precedent, and the necessity of protecting the revenue.

The amendment was negatived by 136 to 40. The bill then passed through committee.

The Income-tax (No. 2) Bill also passed through committee.

THE OXFORD UNIVERSITY BILL.

The House then went into committee upon the Oxford University Bill.

Clauses up to 25 having been agreed to, the House resumed, the Chairman reported progress, and asked leave to sit again.

THE BUILDERS' BENEVOLENT INSTITUTION.—A special general meeting of the friends and subscribers to this useful institution was held at the London Tavern, for the purpose of electing three pensioners from a long list of candidates: Mr. G. Bird, the treasurer, presided. The report congratulated the supporters of the institution on its increasing prosperity, and the corresponding benefits the directors have been enabled to confer by adding to the number of pensioners. The subscriptions and donations received during the past year amounted to £1404 8s. 6d., and the amount now invested is £4050. After all doings to the great success which had attended the late ball held at Willis's Rooms, under the able superintendence of Mr. Joseph Bird, the hon. secretary, the report concluded by stating that the total number of pensioners now upon the fund is thirteen males and eight females. The election of one male and two females from a list of twelve candidates having been proceeded with, the meeting separated.

REPORT ON SMALL-ARMS.—The select committee appointed to consider "the cheapest, most expeditious, and most efficient mode" of providing small-arms for the public service, have not sanctioned the view that the Ordnance Department should take the manufacture into its own hands. They recommend a continuance of the contract system, with such modifications as will give the contractor greater confidence in the continuity of orders, and by this means men of skill and capital will be induced to apply themselves heartily to the manufacture. As a check upon extravagance in price, and for testing the applicability of machinery to the construction of the musket, it is recommended that the manufactory at Enfield be continued, and that separate accounts be kept so as to ascertain distinctly the matter of cost.

EMBARKATION OF THE 11TH HUSSARS, AT KINGSTOWN.

THE busy scene engraved upon the next page is one of the many illustrations which the Services now present of the movements towards the seat of the War. Here we have the Embarkation, on the 15th ult., of a portion of the 11th Hussars, on board the troop-ship *Tyrone*, in Kingstown harbour. This splendid vessel, which was built last autumn, at Bathurst, is 1197 tons register, and carries the pennant of Captain Randall, R.N. It has been chartered by Government for four months certain, and eight or twelve, if required to convey troops to the East. This fine vessel is fitted up for 60 horses in the lower hold, 70 men between decks, and 6 officers in the poop cabin. She had on board 54 horses, 62 men, and 5 officers. Of infantry, she accommodates 600 troops and 25 officers. The men were in high spirits, and fraternised with the sailors admirably; all joining at the evening twilight in singing, in very good style, "Auld Lang Syne," "Auld Lang Syne," and other favourite songs. There are on the main-deck four 18-pound guns; each of the crew, fifty in number, is furnished with a musket and bayonet; and there is also on board an ample supply of cutlasses, pikes, pistols, and ammunition. Considering and taking into consideration the number of soldiers also on board, there was little fear of anything untoward occurring to the noble ship or her gallant freight from attacks. Her great speed is another security. On her passage from Liverpool to Dublin, with but a light wind, she sailed at the rate of 10½ knots per hour, close hauled; and she has attained the rate of 15 knots, or nautical miles, per hour, running free. This gives us hope that it will not be long before we hear of the gallant 11th being safely landed in the East.

YACHTING.

ROYAL LONDON YACHT-CLUB.

THE first match of the season came off on Saturday, the 20th inst., for a purse of twenty sovereigns, and five sovereigns for the second yacht. The day was too veritable a Queen's day to be otherwise than a very fine yachting one. Indeed, it appeared at first as though there would not be wind enough to make any progress at all; but in the return, wind and tide were both favourable. The members of the club and a numerous company of ladies were conveyed to the starting manner, which left London-bridge about nine o'clock, and called at Blackwall pier about ten. On arriving at Erith, they found the following yachts ready to start:—*Romp*, nine tons, Mr. S. P. Mumford; *Cormorant*, twelve tons, Mr. J. Funcourt; *Mischief*, thirteen tons, Mr. J. R. Kirby; *Kitten*, thirteen tons, Mr. T. Harvey, jun. One minute per ton was allowed by the larger to the smaller yachts. The intended course was from Erith, round a flag boat moored off Coal-house Point, about three miles below Gravesend, and back to another flag boat moored off North Woolwich. The start took place at 11h. 34m.; and, after divers changes in the positions of the yachts, they arrived at Northfleet Hope. At this period it was evidently impossible to accomplish the projected course, and they accordingly re-canted time, the tide coming up very fast, and there being scarcely any wind. Accordingly, at Gravesend, the steamer dropped her anchor for the boats to round there, instead of making a dreary attempt to reach Coal-house Point. *Mischief* rounded at one minute past three, *Kitten* at fifty-six minutes past three, *Cormorant* at fifty-eight minutes past three, and *Romp* at five minutes past 4. Meantime the wind had freshened a little, and in the above order the yachts, aided by the tide, soon reached the goal at North Woolwich: *Mischief* rounding the flag-boat at 5h. 30m.; *Kitten*, at 5h. 55m.; *Cormorant*, at 6h. 0m. 30s.; *Romp*, at 6h. 16m. In spite of the scarcity of wind, the day was, on the whole, spent very pleasantly. Both in going and in returning the steamer passed the *Vason*, a large troop ship, with a detachment of the Royal Artillery on board destined for the East; and the company saluted their countrymen with several rounds of hearty cheers, and other demonstrations of good will, which were as cordially responded to by the soldiers. The occasion was also honoured by the presence and performances of a portion of the Artillery band.

ROYAL THAMES YACHT-CLUB.

A beautiful and exciting race took place, on Monday last, with some of the fastest vessels of this distinguished club for two valuable pieces of plate. The distance contested was from Erith, round the Nore Light, and back, for second-class boats; and from Erith round a boat moored at Southend, for the third-class vessels. The following entered and contended:—

SECOND CLASS.

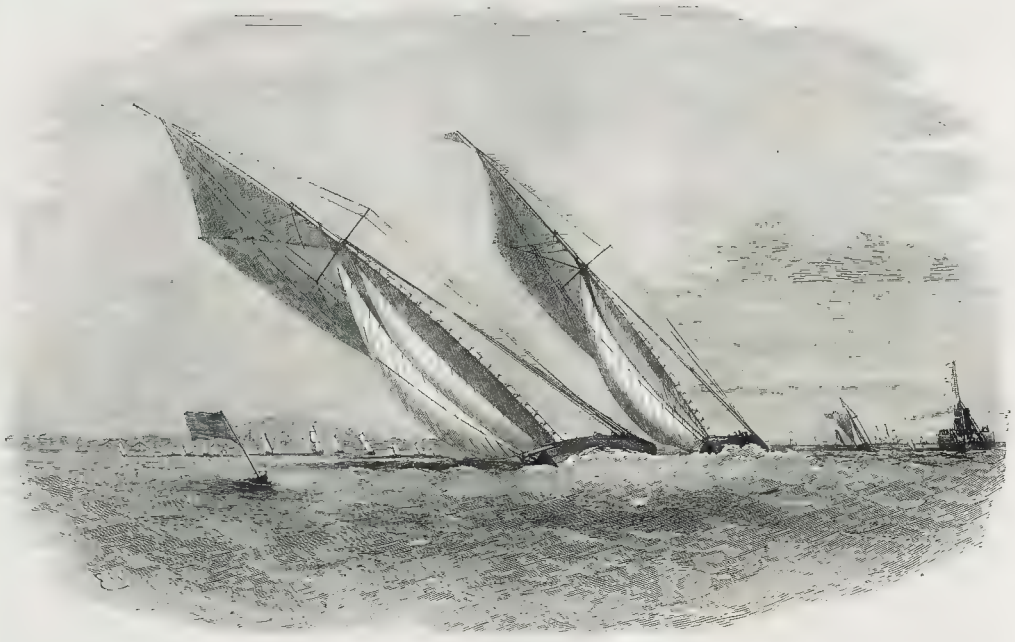
Yachts.	Tons.	Owners.
Phantom	19	Mr. S. Lane.
Thought	25	Mr. George Coope.

THIRD CLASS.

Vesper	16	Mr. F. Roberts.
Vampire	15	Mr. C. Wheeler, jun.

Although there were but two boats of each class, they had attained much celebrity, and were so evenly matched, that the interest created throughout was much greater than on many occasions when there has been a larger number.

The *Prince of Wales*, belonging to the General Steam Navigation Com-



"PHANTOM." "THOUGHT."

ROYAL THAMES YACHT-CLUB MATCH.—THE "PHANTOM" WINNING AT KEITH.

pany, capitally provisioned by Mr. Crawford, had been chartered for the club; and, considering the very unfavourable and threatening aspect of the weather early in the morning, was extremely well attended by visitors. The *Merry Andrew*, *Gemini*, and *Petrel* steamers, with visitors, and a vast number of gentlemen's yachts, accompanied the match. The start took place at 11h. 37m. The *Thought* made a better start than the *Phantom*, and, at Greenhithe, was a quarter of a mile a-head; but her lead throughout was ever and anon jeoparded by the *Phantom*, which sometimes was a less, sometimes a greater, distance astern, all the way down to the Nore. While this was going on with the larger craft, a most animated struggle was ensuing between the smaller, who never left each other, made the closest run conceivable, and rounded the boat at Southend—the *Vampire* at 1h. 47m., and the *Vesper* at 1h. 47m. 30s. The *Thought* and *Phantom*, in the same positions as before, arrived at the Nore Light in the following time:—

	Hrs.	Min.	Sec.
Thought	1	59	0
Phantom	2	0	30

It wanted something like two hours to low water but the wind, with the exception of six or seven boards, was favourable all the way up, and taking the Kent side, they reached the Lower Hope, where beating commenced. Here and afterwards the vicinage of the *Phantom* to the *Thought* became unpleasant. She waited upon her very closely, continued to gain as they neared Gravesend, and off Rosherville reached by her to windward. In the way up from there they were close by the side of each other, and the greatest excitement continued throughout the remainder of the distance, as the slightest defect in nautical skill on the part of the one must have given to the other the victory. The *Phantom* just contrived to keep a length or so ahead; and the four boats ultimately came in as follows:—

THIRD CLASS.

	Hrs.	Min.	sc.
Vampire (winner)	5	15	3
Vesper	5	20	0

SECOND CLASS.

	Hrs.	Min.	Sec.
Phantom winner	5	37	0
Thought	5	37	10

The winners were favoured with loud cheers, and Mr. Gren, in very appropriate speeches, presented the prizes to the owners of te winning boats, who replied in becoming terms.

We have Engraved the close of this most interesting mtch. Both vessels were sailed to perfection, but the sequel still mainins for the *Phantom* her proud position of the fastest vessl of hoclass afloat. The company returned to London after the match, higly delighted with the day's amusement, to which the excellent banof the Blues greatly contributed.

EMBARKATION OF THE 11TH HUSSARS AT KINGSTOWN, ON BOARD THE "TYRONE" TROOP-SHIP, FOR THE EAST.—(SEE PRECEDING PAGE.)

EXHIBITION OF THE ROYAL BOTANIC SOCIETY, REGENT'S PARK.

CONSECRATION OF ST. MARK'S NEW CHURCH,
TOLLINGTON PARK, HOLLOWAY.

On Monday was consecrated this Church, the first stone of which was laid by Lord Robert Grosvenor, M.P., on the 12th of May, 1853. The edifice is, in plan, cruciform, consisting of nave, transepts, choir, and chancel; with small side aisles to the choir, and an octangular vestry as an adjunct to the chancel. The tower is placed near the south-west angle of the structure; and stair-turrets at the intersection of the nave and transepts give access to the galleries. There is also a western gallery, in the rear of which are placed the organ and childrens' seats. The accommodation provided is for 1075 persons.

The roof timbers, pulpit, and desk are stained and varnished. The chancel is paved with Minton's encaustic tiles; and the windows of the choir and chancel are filled with stained glass.

The Church is built of Kentish rag stone, and Bath stone dressings, and is enclosed with a dwarf rag-stone wall and iron railing. The edifice has been designed to suit a limited site presented to the Church Commissioners, in 1846, by Mr. William Bainbridge, as leaseholder, in conjunction with Messrs. Gwilt, freeholders. The cost (£5,000) has been defrayed by voluntary subscriptions, aided by a grant of £210 from her Majesty's Commissioners, and £500 from the Metropolis Churches Fund.

NEW CHURCH OF ST. MARK, TOLLINGTON PARK, CONSECRATED ON MONDAY.

The architect is Mr. A. D. Gough, of Lancaster-place; the builders being Messrs. Dove Brothers, of Islington.

One of the stained glass windows was presented to the Church by Thomas Chauntler, Esq.; the other by separate subscription.

At the commencement of the Consecration, on Monday, a full choral service was ably led by a few ladies and gentlemen of the neighbourhood, and well sustained in a devotional manner by the entire congregation. The prayers were read by the Rev. John Lees, M.A., the Incumbent; and an eloquent and impressive sermon was preached by the Bishop of London. The collection at the offertory amounted to £220.

The evening services of the day were conducted by the Rev. C. W. Edmonstone, M.A., Incumbent of St. John's, Patron; and the Rev. Henry Venn, B.D., Prebendary of St. Paul's, formerly Incumbent of St. John's Church, of which the new Church is a district chapelry.

THE ROYAL BOTANIC SOCIETY OF LONDON.

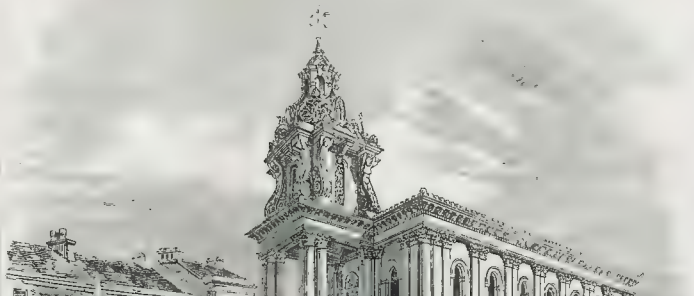
The first Exhibition of Plants and Flowers by this Society, for the present season, was held on Wednesday last. The weather, which appeared in a very unsettled state in the early part of the day, cleared up before two o'clock, and an immense number of persons visited the Gardens. Nothing could exceed the beauty and vigour of the plants and flowers, except, perhaps, the elegant and picturesque arrangement under which they were exhibited. On former occasions the flowers have been divided and shown in separate compartments, but on Wednesday the whole, with the exception of the American plants, were exhibited under one awning. The tasteful arrangement of the grouping, and the skilful manner in which an undulating surface, profusely covered with the most gorgeous products of nature, had been substituted for the former system, reflected much credit upon Mr. Marnock, under whose superintendence the landscape department of the Gardens is placed.

The bands of the 1st and 2nd Life Guards and the Royal Horse Guards (Blue) assembled at two o'clock in front of the Conservatory, and performed the National Anthem, in commemoration of her Majesty's birthday. The selection of music was appropriate. At six o'clock the three bands again assembled at the south end of the Broad-walk, and marched to the orchestra, playing the War-March of the Priests (Mendelssohn), and the National Anthem.

The tickets sold up to the preceding evening amounted to the extraordinary number of 29,418.

LIST OF PRIZES.

Stove and Green-house Collections (sixteen Plants)—1st, Mr. Collyer, of Dartford; 2nd, Sir E. Antrobus.
Ditto, of Twelve Plants—1st, Mr. Frazer, of Leyton; 2nd, Messrs. Rowlandson, of Tooting.
Ditto, of Ten Plants—1st, Mr. Laurence, of Bath; 2nd, Mr. Farmer, of Cheam.
Ditto, of Six Plants—1st, Mr. Coster, of Streatham; 2nd, Mr. Bradbury of Streatham.
Cactæ—1st, Sir E. Antrobus; 2nd, Mr. Scott, of Leyton.
Cape Heaths, ten species—1st, Messrs. Rowlandson, of Tooting; 2nd Messrs. Frazer.
Ditto of eight species—1st, Mr. Collyer; 2nd, Miss Trail.
Ditto of six species—1st, Mr. Bradbury; 2nd, Mr. McMullen, of Clapham.
Orchids—1st Prize, Mr. Laurence, Farnham Castle; 2nd, Mr. Kerr, of Chesbunt; 3rd, Ditto.
New and Rare Plants 1st, Messrs. Veitch, of Exeter; 2nd, Messrs. Henderson, Wellington-road.
Greenhouse Azaleas of Eight Plants—1st, Messrs. Lane and Son, Berkhampstead; 2nd, Messrs. Frazer, Leyton.
Ditto of Six—1st, Mr. Farmer, Cheam; 2nd, Mr. Bassett, Stamford-hill.
Ditto of Six—1st, Mr. Bradbury, of Streatham; 2nd, Messrs. Frazer.
Rhododendrons—2nd, Messrs. Lane and Son.
Orchidaceæ, twenty species—1st prize, Mr. Warner, Hodesden; 2nd, Mr Kerr.
Ditto, sixteen species—Messrs. Rowlandson, of Tooting.
Ditto, twelve species—1st, Mr. Farmer; 2nd, Mrs. Webb, of Hodesden.
Ditto, six species—1st, Sir E. Antrobus; 2nd, Mr. Rack, Croydon-lodge.
Roses of ten varieties—1st, Messrs. Lane; 2nd, Mr. Frazer, of Hertford



NEW TOWN-HALL AT BURSLEM, FOUNDED ON WEDNESDAY.—(SEE NEXT PAGE.)

Ditto, six varieties 1st, Mr. Rowland, of Lewisham; 2nd, Mr. Crawley, Luton, Beds.
Calceolarias, six plants—1st, Mr. Tregwell, of Bath; 2nd, Mr. Miles, Uxbridge.
Cinerarias—1st, Messrs. Henderson, Pine apple-place.
Ditto—1st, Mr. Bishop, Regent's-park.
Pelargoniums, twelve plants—1st, Mr. Turner, of Slough; 2nd, Mr. Dobson, of Isleworth.
Ditto, six plants—1st, Mr. Foster, of Windsor; 2nd, Mr. Steel, of Hampstead.
Ditto (Fancy), six plants—1st, Mr. Turner; 2nd, Mr. Gaines, of Battersea.
Ditto, ditto, six plants—1st, Mr. Steele; 2nd, Mr. Newdegate, Blackheath.

NEW TOWN-HALL, BURSLEM.

THE foundat on-stone of this handsome edifice was laid with great ceremony on Wednesday, the natal day of her Majesty. The design is in the Italian style of architecture, and occupies a regular parallelogram, 100 feet long by 60 feet wide. The principal features of its elevation consist of a rusticated basement, relieved by large windows, the jambs and arches of which are deeply coved. Surmounting this is a coupled pilastered façade of the Corinthian order, in the intercolumniations of which are placed circle arched windows, to light the main hall. At the west end projects a large portico, rusticated at the basement, and having an arched entrance sufficiently wide to admit carriages to drive to the door, and thus allowing their inmates to alight protected from the weather; while the upper portion forms a portico, from whence public speakers may address large audiences in the Market-place below. The whole is surmounted by the bell-chamber and clock-turret.

The building internally will consist of three stories, the lower one of which is occupied by cells for police purposes, heating apparatus, and a kitchen. The ground-floor will contain a police-court, magistrates' room, a board-room, a news-room, offices of the Local Board of Health, and a residence for the hall-keeper. These are approached and divided by a corridor, commencing in an entrance at the east end of the building, and terminating in the entrance-hall approached by the main DETAILS of letter mentioned, and from which two handsome flights of stone stairs lead to the principal floor, which is entirely occupied by the main hall, having at its opposite end a permanent orchestra, and beneath it lecturers' and perfor mers' rooms

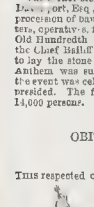
The Architect is Mr. G. T. Robinson, now of Leamington, formerly of Wolverhampton; and the contract has been taken by Mr. Young, of Lincoln. The illustration is from a lithograph published by the Surveyor to the Local Board of Health, Mr. Ralph Hales, who is also Surveyor of the Works for the Building.

The foundat one-stone of the New Hall was laid on Wednesday, by William Lowndes, Esq., who was escorted from Longport Hall to the site by a procession of bands of music, Lod es of Odd Fellows, Courts of Foresters, operative s, flags and banners; and having arrived at the site, the Old Hundredth Psalm was sung, and a prayer offered by the Rector, the Chief Bailiff presented the trowel to Mr. Davenport, who proceeded to lay the stone; a salute of thirty-five guns was fired, the National Anthem was sung, and the proceedings terminated. In the evening, the event was celebrated by a public dinner, at which Mr. Davenport presided. The foundation ceremony was witnessed by from 12,000 to 14,000 persons.

OBITUARY OF EMINENT PERSONS.

THE REV. ELIAS THACKERAY.

THIS respected clergyman died on the 20th ult, at the Vicarage, Dundalk, aged eighty-three, having been upwards of half a century Vicar of that town, and for thirty-seven Rector of Louth.



Mr. Thackeray was a scion of the well-known Cumberland family of Thackeray. After being educated at ETON, he became a Fellow of Queens' College, Cambridge, and studied for orders. But a regiment of Fencible Dragoons being raised in Cambridge, he accepted a troop, and proceeded with his regiment to Ireland, early in 1797; and during the insurrection that occurred in that and the subsequent year, he saw some service, being on duty on the landing of the French prisoners at Buncrana, on Lough Swilly, county Donegal. After Sir Charles Morlaise Warren's action, he was the officer selected by the Commander-in-Chief, the Earl of Cavan, to convey the celebrated Wolfe Tone as a prisoner to Dublin.

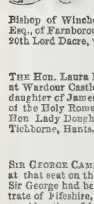
While stationed at Londonderry, Mr. Thackeray married Rebecca, daughter of Sir Hugh Hill, Bart., and M.P. for that city, and sister of the Right Hon. Sir George Hill, Bart., who died Governor of Trinidad: by this lady he has no issue.

After having resigned for some time the superintendence of the Fencible corps, in which he had successively attained the rank of Major, Mr. Thackeray followed up his original intention of entering the Church. He was ordained by the late Archbishop Lord Hardwicke, then Lord Lieutenant of Ireland; and, after having held for some time the incumbent of Limavady and Ardee, he was appointed to the living of Louth.

Mr. Thackeray took great part in re-modelling and re-organising the Protestant Charter Schools of Ireland.

The popular author, W. M. Thackeray, is a cousin of the deceased, and has illustrated him in his tour through Ireland. In another, and a somewhat sarcastic, work of Mr. W. M. Thackeray, the satirist's pen appears checked, and a very graceful and becoming compliment is paid to the profession to which belonged "the gentle Elias"—no doubt meaning his relative.

BARBARINA, DOWAGER LADY DACRE.



THE Dowager Baroness Dacre died at her residence in Chesterfield-street, Mayfair, on the 17th instant, in her 82nd year. This lady was almost the last of that brilliant and intellectual *coterie* of which Miss Burney, once Madame D'Arblay, was the chief ornament.

Lady Dacre was third daughter of the late gallant Admiral Sir Chaloner Ogle, Bart., by Hester Lady Ogle, youngest daughter and co-heir of Dr. Thomas, Bishop of Winchester. She married first, Valentine Henry Wilmot, Esq., of Farnbrough, Hants; and secondly, December 4, 1819, Thomas, 20th Lord Dacre, who died, without issue, March 21, 1831.

THE HON. MRS. MACDONELL.

THE Hon. Laura Macdonell, wife of Lieut.-Col. Macdonell, C.B., died at Wardour Castle, Wilts, on the 19th inst. Her Ladyship was the third daughter of James Everard, ninth Lord Arundell, of Wardour, a Count of the Holy Roman Empire. She leaves an only surviving sister, the Hon. Lady Doughty, relict of the late Sir Edward Doughty, Bart., of Tichborne, Hants.

SIR GEORGE CAMPBELL.

SIR GEORGE CAMPBELL, of Edenwood, near Cupar, in Fifeshire, expired at that seat on the 20th instant, aged 76. For upwards of fifty years Sir George had been a Deputy-Lieutenant and zealous efficient Magistrate of Fifeshire, and he was respected throughout the county. In consideration of his active services in preserving the peace during the agitating period of the passing of the Reform Bill, he received the honour of Knighthood in 1833.

Sir George Campbell was the elder son of the Rev. George Campbell, D.D., the learned and eloquent Minister of Cupar, by his wife Margaret, only daughter of John Hallyburton, Esq., of the Fodderance. Sir George's younger brother is the present distinguished Chief Justice of England, Lord Campbell. Sir George married, in 1824, Margaret, daughter of A Christie, Esq., of Ferrybank, and had issue, three sons and two daughters. The latter are Margaret Charlotte, wife of David Jones, Esq., of Pantglas, M.P., and Frances, wife of the Hon. Fitzgerald Algernon C. Capel, R.N.

HEALTHY STATE OF ENGLAND.—In France the annual mortality is as 1 in 42 individuals: in Prussia, it is 1 in 36; in Austria, it is 1 in 33; in Russia, as 1 in 29; whereas in England it is as only 1 in 56.

NATIONAL SPORTS.

BATH RACES.—TUESDAY.

Lansdowne Trial Stakes.—Nathan, 1. Octavia, 2.
Second Year of the Biennial Stakes.—Caliph, 1. Mishap, 2.
Biennial Stakes.—Quieton, 1. Bessie, 2.
Somersetshire Stakes.—Hataplan, 1. Aribbas, 2.
The Members' Stakes. Postulant, 1. Cabie, 2.

WEDNESDAY.

City Cup.—Kataplan, 1. Jephson, 2.
Weston Stakes.—B. f. by Hercules, 1. Bessie, 2.
Dyrcham Stakes.—Nolsette, 1. Postulent, 2.
Aristocratic Handicap.—Defiance, 1. Garforth, 2.
Sailing Sweepstakes.—The Hero, 1. Rally, 2.

LATEST BETTING AT TATTERSALL'S.—FRIDAY EVENING.

DERBY.—5 to 1 agst Daviot (3 yrs 8 st) 9 to 1 agst Andover (colt) 12 to 1 agst Result, 15 to 1 agst Neville (6); 14 to 1 agst Hospodar (3); 100 to 8 agst Wild Huntsman (3); 20 to 1 agst Knight of St. George. (3); 6 to 1 (t) 20 to 1 agst King Tom; 40 to 1 agst Marpeau (3); 40 to 1 agst Rueben; 50 to 1 agst Ascarat (4 and 5); 1000 to 12 agst Ile de Paris (3); 1000 to 10 agst Prince Arthur (3); 1000 to 10 agst Champagne (3); 1000 to 10 agst the Duke of Lancaster and Wickford coupled.

THE GREAT ANNUAL GATHERING AT EPSOM takes place on Tuesday the 30th, continuing the three following days—being the only meeting for the week. The principal events will be, on the first day, the "Woodcote Stakes, the "Manor Plate," and the "Epsom Summer Handicap." On Wednesday, the great "Derby Stakes" and the "Epsom Cup," will be contested for. Thursday will bring decisions on the "Epsom Four-year-old Stakes," the "Two-year-old Stakes," and the "Grand Stand Plate." On Friday this great national holiday will close with "The Oaks," the "Great Surrey Foal Stakes," &c., &c.

HEROIC CONDUCT OF A YOUNG LADY.

—One night last week the house of John Colpoys, Esq., Spring-lodge, Kilmeaden, was forcibly entered being plundered by a gang of robbers; one of whom, a young fellow, got into the parlour chimney from the top of the house. Mr. Colpoys' niece slept in the room next to the chimney, and on hearing some noise in the chimney, awoke her uncle, and handing him a gun, posted him outside the house to watch the top of the shaft. She then returned to the parlour, and caused a great blaze to ascend from the grate, which obliged the robber to jump from the top, when Mr. Colpoys fired with small shot. The young lady having brought her uncle another gun, he kept the robber at bay, while she went and got assistance. The robber was then secured, and sent to Ennis gaol.

BROMPTON HOSPITAL.—The Commissioners of the Exhibition of 1851 have granted the use of Gore-house for the purpose of holding a grand fancy-fair and bazaar, in aid of the funds of the Hospital for Consumption at Brompton. Her Majesty has graciously accorded her patronage to the undertaking, which is appointed for the end of June—and it is intended to celebrate the completion of the eastern wing of the institution. By the erection of this wing, the original design of the hospital is carried out, and additional beds are afforded for 140 patients. The wards will now accommodate 230.

LOCAL RATES.—From a return issued on Saturday last, it appears that that £10,374 286 was raised in the counties of England, for the year ending Lady-day, 1852, for local rates. In Wales, the amount was £500,676. For England, the items are—Poor rate, £6,172,101; highway rate, £1,624,083; county rate and county police, £768,913; borough rate, £505,934; land tax, £1,602,759.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that the supply of Stock has been tolerably good, there has been a full average Money business do.ng in the Consol Market this week, and prices have been well supported. In some instances they have steadily advanced; and, altogether, matters in the City have worn a favourable appearance. An official notice has been issued to the effect that, on and after the 21st inst., the interest on Exchequer Bills now in circulation will be reduced from its present rate of 2½d. to 2d. per diem, being equal to 7s. 7d. per annum; consequently, the future rate will be £3 8s. 5d. This notice has produced a steady rise in the quotations. In addition to the above, the Directors of the India Board have intimated that the rate of interest on India Bonds has been advanced from £3 5s. to £4 per cent. These alterations have unquestionably been rendered necessary from the insurrection at the Money Market, which, since we last wrote, has been extensive fully. First-class Bills, having three months to run, have been done at 6 per cent; whilst the discount houses are now allowing 4½ per cent upon money on call, and 5 per cent with three months' notice.

On Monday the English Stock Market was rather inactive, owing to the undecided character of the new Austrian official documents bearing upon the War in the East. The Three per Cents opened at 88½ to 89¼, and closed at 88¾. The Three per Cents Reduced were 88 to 87¾; and the New Three-and-a-Quarter per Cents, 88¾ to 89 and 88¾. India Stock marked 223; Bank Stock, 202½ to 205. Exchequer Bills were 2s. dis. to 2s. prem.; and India Bonds, 10s. to 6s. dis. There was an improved business done on Tuesday, and the quotations for the Three per Cents Reduced were 87¾ to 88¼; the Three per Cent Consols, 88¾ to 89¼, the New Three-and-a-Quarter per Cents, 88¾ to 89; and Consols for Account, 88¾. 89. Bank Stock Bonds were quoted at 2s. 3 prem.; Exchequer Bills sold at 2s. to 2s. 3 pm. On Thursday Consols were very firm. The Three per Cents were 89¼ ⅛ ¼ for Money, and 89¼ ⅛ ¼ for the Account; the New Three-and-a-Quarter per Cents marked 88¾ to 89¼; and the Three per Cents Reduced, 88¼; Exchequer Bills advanced to 1s. and 4s. prem.

Most Foreign Bonds have been steady, but the amount of business doing in them has been very moderate. The following are the leading prices:—Brazilian New Five per Cents, 97¾; Danish Five per Cents, 100¾; Mexican Three per Cents, 24¾; Peruvian Five per Cents, 84¾; Portuguese Four per Cents 39¾; Russian Five per Cents, 95¾; Russian Four-and-a-Half per Cents, 89¾; Spanish Three per Cents, 39; Ditto, Passive, 4¼; Dutch Two-and-a-Half per Cents, 59¾; Dutch New Four per Cents, 97¾; Ardinian Five per Cents, 86¾.

The business doing in the Joint-Stock Bank Shares has been steady. Australasia have marked 79; Commercial of London, 31½; English, Scottish, and Australian Chartered, 8; London Chartered of Australia, 20¾; Oriental, 47; Provincial of Ireland, 10; Union of Australia, 29¾. Miscellaneous Securities have realised the following rates:—Australian Agricultural, 45¾; British American Land, 7⅞; Canada Six per Cent Bonds, 103¾; Crystal Palace, 9; Ditto, New B Shares, 3¾; London Docks, 102; East and West India, 106; St. Katharine, 80; Peel River Land and Mineral, 4¾; Peninsula and Oriental Steam, 56¾; Ditto, New, 39¾; Scottish Australian Investment, 2¾; Van Diemen's Land, 2¾; Hungerford-bridge 8s ares have marked 13; Waterloo, 6; Waterloo Old Annuities, of £8, 28; Vauxhall, 21. Waterworks Shares have been tolerably firm. Berlin, 11¾; East London, 129¾; Grand Junction, 70; Ditto, New, 47; Kent, 80; Lambeth, 57; Southwark and Vauxhall, 89¾; West Middlesex, 167; Ditto, New, 164. In Insurance Companies Shares we have very few transactions to notice. We annexed are the leading quotations:—Albion, 92; Atlas, 19¾; Argus, 23; County, 125; European, 15¾; Globe, 126; Guardian, 65¾; London, 29; Pelican, 45; Phœnix, 120 ex div., and bonus; Provident, 4¾; Royal Exchange, 235; Sun Fire, 250; Ditto, Life, 85; United Kingdom, 6¾.

The imports of the precious metals have been extensive, viz., about £450,000, chiefly from Australia and the United States. The demand for gold on Continental account has been rather limited.

The Railway Market has presented no feature of novelty. It may be called steady, whilst business is estimated to any extent. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 23¾; Caledonian, 55¾; Chester and Holyhead, 12¾; Eastern Counties, 6¾; Great Northern, A Stock, 73; Ditto, A Stock, 73; Great Southern and Western (Ireland), 80¾; Great Western, 74¾; Lancashire and Yorkshire, 61; Leeds Northern, 19¾; London and Blackwall, 6¾; London and Brighton, 101; London and North-Western, 97½; London and South Western, 78¾; Midland, 59¾; Norfolk, 46¾; North British, 31¾; North Staffordshire, 13¾; Oxford, Worcester, and Wolverhampton, 25¾; South Eastern and Dover, 14; Ditto, Oswestry, 10¾; South Eastern, 62¾; Thames Haven Dock and Railway, 2¾; York, Newcastle, and Berwick, 65¾; Ditto, Extension, 11¾ York and North Midland, 40¾.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 94; Hull and Selby, 102¾; Midland Bradford, 89¾.

PREFERENCE SHARES.—Caledonian, 93; Eastern Counties New Six per Cent Stock, 12¾; Great Northern Five per Cent, 114; Ditto, Five per Cent, redeemable at 10 per cent premium, 107; Ditto, Four-and-a-half per Cent, 98; Great Western Three per Cent Guaranteed, 85¾; Manchester, Sheffield, and Lincolnshire, £6, 4¾; North British, 99¾; Oxford, Worcester, and Wolverhampton, 90; South-Eastern, 93; Waterford and Kilkenny, 1¾; York, Newcastle, and Berwick, 88.

Mining Shares have been rather flat. On Thursday Agua Fria were 13; Australian, 2¾; Imperial Brazilian, 42; New Granada, ¾ to ⅞; Port Phillip, ¼; Quartz Rock, ⅝; and West Marpesa, ¾.

Friday Evening.

We have had a very firm market for Consols to-day, and prices have had an upward tendency. At one time they were done at 89, for Money; but the leading quotation has been 89¾. The Three per Cents Reduced have marked 88¾; and the New Three-and-a Quarter per Cents, 89¾. India Bonds and Exchequer Bills, 4s. prem. Foreign Bonds and Railway Shares have been very firm.

THE MARKETS.

CORN EXCHANGE, Friday.—Since Monday there has been a decided increase in the supply of English wheat up to this morning, when the arrivals of that article fresh up supply was moderate. [illegible] of wheat of home growth realised fully the currency of Monday. We were well supplied with foreign wheat [illegible] prices rather. Low and middling qua ities were considered 1s per quarter lower, without much inquiry. The show of barley was but moderate; yet the demand was heavy, at barely stationary prices. In malt very little was doing, on former terms. With oats we were well supplied. Sales progressed slowly, and the quotations were rather easier. Beans, peas, and flour were unaltered.

ARRIVALS.—English: wheat, 1430; barley, 120; malt, 3700; oats, 810; flour, 1071. Irish: oats, 10,170. Foreign: wheat, 49,850; barley, 3350; oats, 19,010; flour, [illegible] sacks, 11,670 barrels.

English.—Wheat, Essex and Kent, red, 72s. to 82s.; ditto, white, 75s. to 90s.; Norfolk and Suffolk, red, 71s. to 81s.; ditto, white, 74s. to —s. per qr. Barley, 34s. to 36s. per qr. Malt, grinding, 56s. to 58s.; distilling ditto, 57s. to 59s.; malting ditto, 60s. to 64s. Lincoln and Norfolk malt, 57s. to 59s., brewers' ditto, 60s. to 62s. Rhenish and Westphalian, 57s. to 59s. Oats, Essex and Suffolk, 31s. to 35s.; Yorkshire and Lincolnshire ditto, 27s. to 29s.; potato ditto, 30s. to 33s.; Youghal and Cork, black, 24s. to 26s.; ditto, white, 28s. to 32s.; Dutch beans, new, 44s. to 46s.; ditto old, 48s. to 50s.; grey peas, 44s. to 46s.; maple, 47s. to 49s.; white, 47s. to 49s. Flour, best marks, 42s. to 44s. per quarter Town-made flour, 40s. to 42s.; Suffolk, 35s. to 38s.; Stockton and Yorkshire, 37s. to 39s. per 280 lbs. *Foreign.*—Arrivals: Wheat, —.

Seeds.—For most kinds of seeds the demand is rather inactive, but we have no change to notice in prices. Cake supports former rates.

Linseed, English, sowing, 74s. to 76s.; Baltic crushing, 64s. to 68s.; Mediterranean and Odessa, 62s. to 70s.; Hamburgh, —s. to —s. per quarter. Coriander, 12s to 13s. per cwt. Brown mustard-seed, 10s. to 12s.; white ditto, 9s. to 14s.; and tares, 7s. 6d. to 8s. per bushel. Carraway-seed, 24s. to 26s. per cwt. Coarse and fine linseed cakes, English, £10 10s. to £12 0s.; ditto, foreign, £10 to £11 10s. per ton. Rapeseed cakes, £9 10s. to £9 15s. per ton. Canary, 44s. to 46s. per quarter. English fine-crossed, white, 68s. to 80s.; ditto, red, 44s. to 56s. per cwt.

Potatoes.—The arrivals of wheaten bread in the metropolis are from 10d. to 11d.; of household ditto, 8d. to 9½d. per 4lb. loaf.

Imperial Weekly Average.—Wheat, 78s. 9d.; barley, 37s. 2d.; oats, 25s. 6d.; rye, 46s. 6d.; beans, 39s.; peas, 41s. 7d.

The Six Weeks' Average.—Wheat, 79s. 1d.; barley, 37s. 1d.; oats, 25s. 8d.; rye, 50s. 6d.; beans, 39s.; peas, 41s.

Duties on Foreign Corn.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Liquorice.—The sale for all kinds of rum is rather inactive. Prout Lanzarotte, 5s. 6d. to 5s. 6½.; East India, 2s. 2d. to 4s. 6d per gallon. The demand for Sicily is dull, and late rates are barely supported. Genuine Spanish liquorice terms

Coals (Friday).—Buddle's West Hartley, 20s. 6d Old Adair's, 21s. 0d.; Stewart's, 19s.; South Kelloe, 18s.; Whitworth, 7s 3d.; Cowpen, 22s. 6d per ton.

Hops (Friday).—The plantation accounts are not below very favourable, there is rather more business doing in our market, and the quotations have an upward tendency. Some parcels of the duty are 100,000. This week's imports are 95 bales from Antwerp, and 50 from New York. Mid and East Kent pockets, £5 15s to £8 10s.; Weald of [illegible] £4 15s to £5 5s; *Smallfield* (Friday).—The supply of beasts here to-day being very moderate, [illegible] attendance of buyers on the morning, the demand for that description of stock ruled [illegible] at a further advance in the quotations of 2d per 8lbs. The top [illegible] were [illegible] the primest Scots, and the inferior [illegible] were [illegible] off steadily, at full prices. Otherwise, the demand was [illegible] at late rates. The primest Downs realised 4s 10d per 8lbs; but [illegible] terms. Mitch cows were firm at from £15 to £20 each.

Per 8 lbs. to stink the offals.—Coarse and inferior beasts [illegible] coarse-woolled ditto, 4s. 6d.; prime ditto, 4s. 8d.; prime Scots, 5s.; coarse-woolled ditto, 4s. 6d.; prime ditto, 4s. 8d.; prime South Down ditto, 4s. 10d. to 5s. 0d.; large [illegible] oxen, 4s. 0d. to 4s. 6d.; prime small ditto, 4s. 10d. to 5s. 0d.; large hogs, 3s. 6d. to 3s. 8d.; small ditto, 3s. 10d. to 4s. 0d. Calves, 4s. to 4s. 8d. Pigs, 3s. 8d.

Head of cattle at market:—Beasts, 2,000; sheep, 20,000; calves, 300; pigs, 300.

Newgate and Leadenhall (Friday).—Generally speaking, the trade ruled steady, as follows:—

Per 8 lbs. by the carcase. Inferior beef, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 8d. to 4s.; prime large ditto, 4s. 0d. to 4s. 2d.; prime small ditto, 4s. 4d. to 4s. 6d.; large coarse woolled mutton, 3s. 8d. to 4s. 0d.; middling ditto, 4s. 2d. to 4s. 4d.; prime ditto, 4s. 6d. to 4s. 8d.; large lambs, 5s. 0d. to 5s. 6d.; small pork, 4s. 6d. to 4s. 10d.; lamb, 5s. 8d.

GREAT HARBOUR HILL ESTATE, ST. JOHN, SUSSEX

The very desirable Estate is close to the Borough Station, with a frontage to the 5th road from Slough to Windsor. It commands extensive and beautiful views of Windsor Castle and the surrounding country, and adjoins the grounds of the late Sir John Ilicesbell and Upton Park, and is in close proximity to the parish church. At a Public Meeting of the Members of the Society, held on this and other estates purchased by the Society, the Rev. [illegible] Chairman, it was resolved that the Numbers of the Allotments, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 704, 630, 707, 148, 23, 867, 844, 735, 256, 772, 1020, 132, 1010, 538, 903, 971, 865, 230, 405, 205, 366, 1038, 1041 were forthwith drawn, and in consequence of the applications being increased they have also been drawn for Nos. 1042, 1043, 1044, 1045, the selected Seats at Staines, Middlesex, is now in course of allotment. The Society's building plots, with frontages of 40 feet by a depth of 70, are for £10, frontage of 30 feet, £25. Rights of choice on the above estates are now on sale, at the Offices of the Society, where plans may be seen, a register is kept for public inspection, with prices affixed. For lists, prospectuses, rules, and conditions of sale, apply to Mr. Watkin, Solicitor; Mr. John Cleave [illegible] Chapter-house Court, Shoe-lane, 80, Cheapside; or to the Secretary, Sharon, £50; monies, shares, or deposits may be sent (interest allowed upon all deposits, paid-up shares, and subscriptions six months in advance.

JOHN T. COX, Secretary.

In a few days,

ANNA; or, Passages from a Home Life. being a New and Enlarged Edition of "Passages from the Life of a Daughter at Home." Fifth Edition. Foolscap 8vo. Price 5s. 6d. cloth.

"As a picture of the power of religion is gradually subduing the asperities of a gloomy disposition and a stern temper, this story is exceedingly beautiful."—Edinburgh Review

SEELEY, Fleet-street and Hanover-street.

Fourth Edition, with Engravings, 5s., cloth,

THE LIFE of the Rev. H. W. FOX, B.A., Missionary in South India. By the Rev. G. T. FOX, M.A. With a Preface by Bishop MILVAINE and Rev. H. V. ELLIOTT, M.A. "An instructive, impressive, and very lovely view of real and elevated piety."—Bishop M'Ilvaine

SEELEY'S, Fleet-street and Hanover-street.

Foolscap, with Map, 5s., cloth,

A MEMOIR of the Rev. W. A. B. JOHNSON, Missionary at Regent's Town, Sierra Leone. With a Preface. By the Rev. WILLIAM JOWETT, M.A.

"That wonderful record of missionary labour and missionary success."—Hon. and Rev. B. Waldegrave at Church Missionary Meeting.

SEELEYS, Fleet-street and Hanover-street.

In small 4to. with Engravings, 18s., cloth,

JOHN DE WYCLIFFE: a Monograph. By ROBERT VAUGHAN, D.D.

"The 'Life of Wycliffe,' by my eloquent, indefatigable, and very learned Friend, Dr. Vaughan."—Sir James Stephen's Lecture.

SEELEY'S, Fleet-street and Hanover-street.

Crown 8vo, with numerous Engravings, 6s., cloth,

ISRAEL in EGYPT: being Illustrations of the Books of Genesis and Exodus, from existing Monuments.

"This book is one of the most remarkable publications of our time, and can hardly fail to excite the attention of the Christian world."—Christian Witness

SEELEYS, Fleet-street and Hanover-street.

In twelves, price 2s., cloth,

NUNS and NUNNERIES. Sketches compiled from Romish Authorities.

"The anonymous compiler of 'Nuns and Nunneries' has rendered a most important service to the cause of truth and liberty; and, from 'Romish authorities' has poured light into the dark recesses of those conventual establishments, into which so many innocent and unsuspecting girls have been entrapped by the influences of the fanatical fervour of Romish zealots."—Christian Times

SEELEYS, Fleet-street and Hanover-street.

In small 8vo, 7s., antique binding,

LEAVES from the JOURNAL of MARIAN DRAYTON A.D. 1553-1554.

"A book which whoever begins to read, will not permanently lay aside till he has finished it. The sentiments and feelings, expressed with so much naturalness of manner, are invariably those of the Christian great swoman, and the incidents are such as might easily be supposed to have occurred, and yet are sufficiently uncommon to give them a special interest. Some passages are exquisitely beautiful, and the entire book is the production of a highly-cultivated and gentle mind, under the influence of deep and enlightened piety."—Evangelical Christendom

SEELEYS, Fleet-street and Hanover-street.

Second Edition, small 8vo, 7s., cloth,

THE KINGS of the EAST; showing from Scripture and from History the Power for whom the mystical Euphrates is being dried up.

"I have been reading a curious book, called 'The Kings of the East.' The object is to prove that East India Company is the Power intended to be used as the means of restoring the Jews to Palestine. The author makes out his case ingeniously by collating prophecies with accomplished facts."—Lieutenant Waghorn's Journey to Damascus, Vol. II., p. 144.

SEELEYS, Fleet-street and Hanover-street.

In post 8vo, price 10s. 6d., cloth,

HORÆ EVANGÉLICÆ; or, the Internal Evidence of the Gospel History. By the Rev. T. R. BIRKS, M.A., Rector of Kelshall.

"Not also do we acknowledge the appearance of a book with so much pleasure and thankfulness as we have felt in glancing at the head of an article the title which we have just written: for it is the title of a work which is not only in itself worthy of all praise, but which arrives at the right moment, is well demanded by present exigencies, and will, we are persuaded, contribute timely help to many anxious and inquiring minds."—Christian Observer

SEELEYS. Fleet street and Hanover-street.

This day is published, price 6d.,

Second Edition.

THE EUPHROSYNE WALTZES, composed and dedicated, by permission, to the Right Honourable the Countess of MOUNT EDGCUMBE, by FLORA ROSS CONDY. Price 3s.

London: ROBERT COCKS and Co., New Burlington-street, Music Publishers to the Queen.

Second Edition.

THE ROVADO WALTZES. Composed by LAWRENCE GODWIN, and dedicated to all the Pretty Girls in the kingdom. ADDISON and HOLLIER, 210, Regent-street, London; and all Musicsellers.

NEW MUSIC by H. ROSAMBERT.

EVELINE, Song. Second Edition.

The MAID of the MIST, Quadrille.

VISIONS of CHILDHOOD, Song. Poetry by Longfellow.

London. CHARLES JEFFERYS, 21, Soho-square.

VILKINS and his DINAH, as sung by Mr. ROBSON (with his Portrait), and all the correct words in Music, price 3d. Also, the Correct Words of "Wilkins and Dinah Polka and Quadrille," 3d. each The three pieces, free by post, for fifteen stamps Published only in the MUSICAL BOUQUET, at the Offices, 192, High Holborn, and 20, Warwick-lane, Paternoster-row. Comp.s a Catalogue gratis.

CHEER, BOYS, CHEER! Far upon the Sea, the Song Farted have we been, and Mighty Niagara, 6d. each. To the Wast, to the West (Land, Land, Land! and three others, at 3d. each; forming the whole of the Songs in Mr. Russell's Entertainment of the Songs of the Sea, complete, 1s. 6d. Also, the Correct Words and Music of Cheap Editions. Published in the MUSICAL BOUQUET, at the Offices, 192, High Holborn, and 20, Warwick-lane, Paternoster-row.

COLLMICK.—Messrs. BOOSEY and SONS have just published Four NEW MORCEAUX for PIANOFORTE, by HOLLMICK. No. 1, Le Retour de la Jeune Fille, Romance, 3s. 2. Chanson à boire, 3. Farewell: a transcription of a celebrated Song in German Vaudeville, 3s. 4. Le Rêve, or a Night Dream, for a solo and duet. Also, another edition of the celebrated Scenes Galop de Concert.

BOOSEY and SONS, 28, Holles-street.

JULLIEN and CO.'S MUSICAL PRESENTATION and CIRCULATING LIBRARY continued. Subscribers to this library can select their music from upwards of 500,000 printed copies. Terms of subscription, 42s. Prospectuses of music. Terms of subscription, three guineas per annum. The principal feature which distinguishes this Library from all others is, that the subscribers, besides having liberally supplied on loan during the year with all standard and new vocal and pianoforte compositions, are also presented with three pieces selected for every two guineas, which may be selected by themselves during the term of subscription. Prospectuses forwarded free, on application to JULLIEN and CO., 214, Regent-street.

MR. LAND begs to inform his Pupils and Friends that he has returned to London for the Season from his provincial tour, and RESUMED INSTRUCTIONS in SINGING 6, Foley place, Portland-place.

PIANOFORTES and HARMONIUMS.—GEO. LUFF and SON, Makers to her Majesty, have instruments in every variety of style, size, and price, for sale, exportation, or hire. Drawings per post. 123, Great Russell street, Bloomsbury

PIANOFORTES for HIRE, at CHAPPELL'S, The best PIANOS, by the great makers, of every description, New and second-hand, for SALE or HIRE.—50, New Bond-street.

PIANOFORTES.—COOPER and SON'S MICROCHORDONS (Improved Cottages, with patent extended sounding-boards and Repetition Actions). These splendid Pianos are of extraordinary rich and full tone, and of peculiar delicacy and elasticity of touch; are confidently recommended for standing well in tune, are in cases of the choicest woods, and are, in every respect, the most beautiful instruments ever manufactured. The prices are very moderate.—68, Berners-street, five doors from Oxford-street.

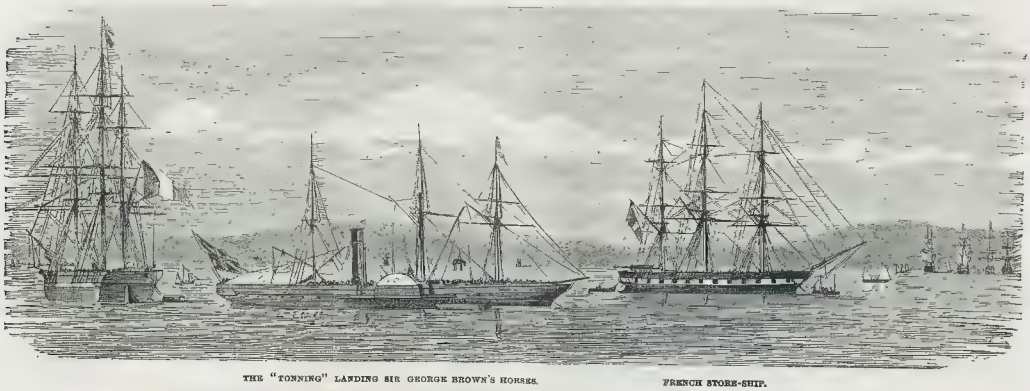
HARMONIUMS, at TOLKIEN'S, 27 and 28, King William-street, London-bridge. H.-T has a large variety in oak, mahogany, and rosewood cases, with 1, 2, 3, 5, and 12 stops, by the celebrated ALEXANDRE, of Paris, which he is enabled, at very moderate prices, to offer excellent instruments for sale.

TOLKIEN'S COLONIAL PIANOFORTE.—This patent instrument is peculiarly adapted for extreme climates The woodwork is prepared with a solution impervious to water and destructive to insects, and a suitable folding-plate the length of the rose-plank, on which are inserted the tuning-pins, and prevents any injury to it if any part be being affected by heat or damp. These beautiful instruments are superior to any other yet made. Height, four feet.—TOLKIEN, 27, 28, and 29, King-William-street, London-bridge.

TOLKIEN'S 25-GUINEA ROYAL MINUTO PIANOFORTES.—H. T., the Original Maker of a 25-Guinea Pianoforte, has, by the care he has devoted to all branches of the manufacture, obtained the highest reputation throughout the universe for his instruments, unequalled in Durability and Delicacy of Touch, more especially for their exactness in standing in Tune in the various Climates of our Colonies. They are in Elegant Cases of the choicest Walnut, Rosewood, and Mahogany. Packed in mat and wood cases for abroad, for 2½ Gs. extra.—H. Tolkien's Old-Established Manufactory, 27, 28, and 29, King William-street, London-bridge.

PIANOFORTES, 25 Guineas each.—KING and CO., 20, Soho-square, London (established 1850), submit for inspection a large and varied STOCK of their ROYAL PIANOFORTES, 25 guineas each, in rosewood, compass 6½ octaves, at 25 guineas each, which, from the combinations of elegance with economy, the high quality of the materials employed, and the increasing care devoted to all branches of the workmanship, have obtained the highest reputation, not only in Great Britain, but throughout the whole universe. KING and Co. being the actual manufacturers, an immense advantage will be found in purchasing from their warehouse, where may be obtained grands, cottages, and square pianos, with or without the iron plate, of every description, by the most eminent manufacturers, including those of Broadwood, Collard, Allison, Kirkman, Erard, Pleyel, Wolff, and Co., Chappell, Cramer, Beale, and Co., Addison and Hollier, Lindsay Sloper, Rolfe and Son, Metzler and Co., Lipp and Sons, Worrell, Tomkinson, Dale, Rosenkranz, Oetzmann, Jones, Tolkien, Williams, Mott, Hopkinson, Collinet, Pape, Schwieso, Ellard, Gray and Davison, Wornum, Tschudi, Nunns and Clark, Scholey, Woodward, Hill, Ivory, Bevington, Gilbert, Hyde, Bussell, Hawkes, Lonsdale, Hicks, Barker, Hall, Hunt, Bishop, Hopkins and Rodwell, Ashdown and Parry, Lee and Lamb, Hodson, Hall and Son, Bentley, Hall and Co., Bell, Hall and Co., Hall and Co., Hall and Co.,

PANORAMIC VIEW OF GALLIPOLI.



THE "TONNING" LANDING SIR GEORGE BROWN'S HORSES. FRENCH STORE-SHIP.

"JEAN BART." "MONTEBELLO" FLAG-SHIP. "NAPOLEON." "ALGHE." FRENCH CAMP. TURKISH STEAMER, WITH RECRUITS FROM SMYRNA.

ENGLISH TRANSPORT. THE "TRENT" STEAMER, WITH WELSH FUSILIERS ON BOARD.

GALLIPOLI.—LANDING-PLACE.—(SEE NEXT PAGE.) FRENCH CONSUL'S HOUSE.

THE ALLIED FORCES AT GALLIPOLI.

THE Duke of Cambridge and suite arrived at Gallipoli on the 8th, at three o'clock p.m., on the arrival of the *Caradoc*, with the Royal standard at the main, and a French line-of-battle ship hoisted the union jack at the main, and thundered out a salute of 101 guns each, which shook the crazy old town to its foundation. Generals, Aides-de-camp, Consuls, Attachés rushed off to dress themselves in full uniform; guards of honour were sent for; and the French authorities set about to make preparation for the reception of his Royal Highness. But while all this commotion was going on, the Duke, dressed in a plain shooting coat and round hat, stepped on shore, attended by Lord J. Macdonald, and, having picked up an intelligent emigrant of a marching regiment who happened to be lounging about, proceeded to pick out his way through the corkscrew lanes of Gallipoli towards the General's. Mr. Brodie, the Attaché, who had arrived at Gallipoli a week previously from Constantinople to represent Lord Stratford de Redcliffe, met his Royal Highness; and all who were aware of his arrival, hastened to pay their respects to him. The contrast between the landing of the Duke of Cambridge and of Prince Napoleon was most striking; but it may be doubtful whether the show and display of the latter's reception was not more calculated to produce a proper impression on the minds of the Orientals. In fact, the absence of our fleets from these waters, the preponderance of the French, their vigorous behaviour, and the dependence of our forces on the boats of their fleet, has produced an effect which it will require some time and [illegible] to counteract. It is very hard [illegible] that Turk or Greek that a [illegible] gentleman in a tweed jacket can command and disband an army, or represent as much power as a courtier [illegible] bullet-headed Arabian, with glittering sabre, plumes, and gold lace, in rich uniform.

After a short conference, his Royal Highness, accompanied by Sir R. England, Brigadier-General Eyre, and Sir Colin Campbell, and followed by the staff, went to the camp of the 50th Regiment at Soulari, about four miles from the town. Here the excitement was, if anything, greater than before; guards of honour were thought of, and immediate preparations were made for having the regiment under arms; when the Duke intimated that he wished merely to look at the soldiers as they were. He was accordingly conducted round the tents by Lieut.-Colonel Waddy, and was apparently much pleased with the manner in which the encampment was laid out. After tasting the soldiers' rations, his Royal Highness continued his ride a short distance into the country. He returned to Gallipoli, and immediately embarked under hearty cheering from the French vessels; to which the *Vulcan*, which had just arrived from Constantinople, lent her aid.

Sir George Brown left Gallipoli on the 7th for Soutari; but previously to his departure he inspected the regiments under his command.

Soon after daybreak the tents of the Rifle Brigade, of the 50th Regiment, and of the 93rd Regiment, forming the working brigade at the camp of Bulair, were struck, and the whole encampment was broken up. At the same time the 4th Regiment, 28th Regiment, and 44th Regiment struck their tents at the Soulari encampment, about two miles from the town of Gallipoli, and proceeded on their march towards Bulair—there to take up the quarters vacated by the other brigade. The mass of baggage belonging to these regiments was enormous. The trains of bullock and buffalo carts, of pack horses and mules, and of led horses, which filed along the road to Gallipoli, seemed sufficient for the army of Xerxes. For seven or eight miles the teams of country carts, piled up with beds and trunks, and soldiers' wives and tents, were almost unbroken. And now and then an overladen mule tumbled down, or a wheel came off, and the whole line of march became a confused struggle of angry men and goaded cattle. It so happened that two French battalions were moving out to fresh quarters (for, in the excellent line of their sanitary arrangements, they change their camps nearly once a fortnight) and to a less perceptible degree at a glance than ours, they carried much less impedimenta than our regiments. There is considerable difficulty in accounting for this, because, without a complete knowledge of the internal economy of both armies, comparison is difficult; but it may be fairly supposed that the absence of wives, and the small kit of the French officers, as well as the inferior size of the tents, go far to account for it. Another matter to be taken into consideration in the officers' baggage is, that Frenchmen live in their uniform; while we all know how much a soldier is quite happy without his mufti: he must have his wide-awake, and shooting jacket, and dressing-gown, and evening-dress, and a tub of some sort or other, and a variety of gay shirting, pictorial and figurative—while the Gaul does very well without them.

After a brief inspection by Sir George Brown and staff, accompanied by the French General, and a number of officers, the Rifles and 93rd Regiment continued their march to the shore, where they were to embark for Soutari, while both the 50th and 4th their new camp at Soulari. The French Admiral had, with the greatest promptitude, sent the launches and boats of the fleet to the piers, and in about one hour the whole of the two regiments, consisting of nearly 2000 men, were shipped on board the *Arabian* and the *Golden Fleece*; their baggage took a longer time, and there was considerable difficulty in getting the horses on board. The *Orient* and *Sir George Pollock* transports conveyed the horses and baggage; and, under the superintendence of Lieutenant Rendell, R.N., the officers shipped them, in spite of many inconveniences, was effectively accomplished. Sir George Brown and his staff went on board the *Golden Fleece*, in which Colonel Lawrence, Major Marcott, Captain Ebrington, and the officers and men of the Rifle Brigade were embarked. The 93rd were stowed away comfortably in the *Andes*; and the *City of London* having taken the two transports in tow, the little flotilla left their anchorage unostentatiously, and moved on at dusk to Constantinople.

Drunkenness continues to be the great evil of the Allied army at Gallipoli. In one company of the 93rd Regiment, upwards of twenty men were brought up one morning at the camp to answer for this offence. A huge gaunt Highlander, who had been fraternising with some Zouaves, presented a ludicrous appearance on coming up before his officers. He had, in the height of his convivial good-fellowship, exchanged the greater portion of his dress with an African soldier, and when morning brought reaction he must have been rather horrified to find himself in a fez cap, a blue jacket embroidered with red worsted, a bright blue sash round his waist, and enormous Dutch-built scarlet pantaloons flapping about his legs. He had forgotten the yellow facings and lace he was ordered up he displayed the plaid hose of his regiment beneath the gay nether garment of the French soldier. What became of the corresponding Zouave, who must have made rather a sensation among his comrades when he appeared before them in kilt and coiffure, has not been satisfactorily ascertained; but the woebegone, sheepish, and utterly prostrate look of the Highlander, as he presented himself in his borrowed wardrobe, can never be forgotten by those who witnessed it. The "fraternising" is so vigorous and cordial as to have become rather a nuisance to commanding officers of regiments.

The Turks are much pleased with political caricatures, and a number of *Punch* affords them infinite delight. Lately, a representation of the Sultan as a bottomless sedan-chair, seemingly supported, but really hampered, by the allegorical representatives of France and England, gave great amusement to the population of Gallipoli. They quite understood the force of the satire, and exclaimed, "Pekli pekli" (very good).

THE ILLUSTRATION upon the preceding page, sketched by a Correspondent at Gallipoli, represents the active life of the head-quarters, commencing with the landing of Sir George Brown's horses from the *Tonning*, on the 23rd ult. Passing several French ships, we reach a Turkish steamer, with recruits and colours, hailed from Smyrna. The large steamer below is the *Trent*, with the 23rd Royal Welsh Fusiliers (Major Lysons) on board, and waiting to tow the *Tonning*, which had become disabled, to Constantinople. In the lowermost portion of the view is the town of Gallipoli, and its fortifications, and the busy landing-place; the extreme point of the view being the French Consul's house, behind which lies the Turkish Camp, looking towards the Sea of Marmora.

THE QUAIL.

AT Christmas last we introduced to our readers a history of the Turkey—as a subject not inappropriate to the season, and at all times inviting. A few months have passed by and spring has returned, bringing with it our summer migratory birds—those, namely, that leave our latitudes in autumn, and pass the winter in more genial climes, to revisit us when "the winter is over and gone," and the flowers of the earth burst forth in all their beauty and fragrance. The swallow now makes its appearance, and "the voice of the turtle is heard in our land."

It is not, however, to these birds—of which so much has been said and sung—that we now call our readers' notice, but to another, generally little considered, yet of which the history cannot fail to prove acceptable, the more so as we introduce it at an apt and fitting Conjuncture. The bird to which we allude is the Quail, a migratory visitant to Europe, and decidedly one of the most interesting of those which sojourn in our island.

Few are well acquainted with the habits and manners of the Quail. Its local distribution in our island, and that only during a few months of the year, is one great reason of this popular ignorance; to which may be added its comparative scantiness even in the districts it frequents, save in a few very congenial localities. In the northern counties the Quail rarely makes its appearance, nor is it much more abundant in our central districts.

The Quail is a migratory bird of the Gallinaceous Order—a circumstance in itself sufficient to give it interest in the eyes of a naturalist, moreover, it is connected with historical events of remote ages, and is therefore peculiarly interesting to the Biblical critic; it is so, for other reasons, to the sportsman; it is one of the most delicious of the feathered tribe which is brought to the table of the epicure; its spirit renders it a favourite with many, and its beauty with all. No excuse, therefore, is needed for introducing such a bird to the notice of our readers.

THE EUROPEAN QUAIL (*Coturnix dactylisonans*) is doubtless the *ορτυξ* (*ortyx*) of Aristotle. It is *la Caille* of Buffon; *le Crobiel* of the same author; *Quaglia* of the Italians; *da Wachtel*, and *Wachtel Feldhuhn*, of the Germans. It is called *Soflar* and *Rikine* in the ancient British tongue. According to Col. Sykes, it is the *Lohak* of the Mahrattas. It appears to be the *Selav* of the ancient Israelites; *Selavi* or *Selwee* of the Arabs; but on this point we shall have occasion to make some observations.

The Quail enjoys a very extensive range; it is found throughout the whole extent of Northern Africa, and probably much farther to south of that continent than has been supposed. From Africa it is spread over all the countries north of the Mediterranean, and thence eastward to India: whether the ordinary Quail of China is specifically identical with our own, has yet to be ascertained. The exact limits of the northward range of the Quail, whether in Asia or Europe, do not appear to be very precisely ascertained; but these, as is ever the case, are doubtless, regulated by the supply of food and the features of the country. We shall look for the Quail in vain along the borders of the boreal latitudes, or among snow clad mountain ranges.

The general resemblance in form (of course not in size) between the comparatively small Quail and the partridge is very striking; and as the latter, with its short, rounded, concave wing, is not remarkable for great powers of flight, the extent of the migratory journeys of the former have appeared surprising, and, indeed have sometimes been received with incredulity. Now, although the partridge cannot be called a migratory bird, yet in some of the more southern regions it is said to shift its quarters. We suspect, however, that the observation, if correct, applies to a very distinct bird, namely, the Greek partridge (*Perdix Graeca* of Brisson and other writers); for our partridge is very rare in Southern Europe. Be this as it may, the Quail is far better fitted for flight than the partridge: for example—the first quill feather of the wings is of equal length with the succeeding ones—giving to the wing a sharpness of outline which does not see in the wing of the partridge, in which the three anterior quill feathers are exceeded by the fourth and fifth; hence it is less concave, and more pointed, a circumstance which makes great difference as to the comparative capabilities of aerial locomotion. Let it not, however, be supposed that we consider the Quail as a bird remarkable for its powers of flight—rather the contrary: all we mean is that it is capable of accomplishing journeys of a considerable extent, at a stretch, and after resting, in order to recover strength, of continuing such journeys—annually, having left Northern Africa, it at last settles for a time in France, Germany, or even in the British Islands—to return thither again when the appointed time arrives. Probably, however, our island-bred birds do not pass beyond the borders of Southern Europe.

We dwell thus upon the migratory powers of the Quail, because we have been led, from childhood upwards, to consider it as a bird of passage. It is introduced to us as such, in the Book of Exodus. We there read of flights of Quails extraordinarily strong to afford a supply of food to the distressed Israelites in the wilderness; and hence we involuntarily regard this bird with more than ordinary interest. Its name is associated, in our minds, with an event important in itself, but conducive to others, which have changed the very framework of social life throughout the whole of the civilised world.

It must not, however, be concealed that the claim of the Quail to this historical position is contested. It has, in fact, more than one rival in the pages of Biblical criticism. Of these, strange to say, one is not a bird, but the locust; this was the opinion of Ludolph. On the other hand, Rudbeck supposed that the supply of food which "at even came up and covered the camp," was presented by shoals of some species of flying-fish. The former opinion is untenable; the latter is astonishingly absurd. All the most able commentators agree that it was a bird. But here starts up the difficulty. The following species suggest themselves as worthy of coming under review:—the European Francolin—locality, Southern Europe, North Africa, and Asia (See Gould's "Birds of Europe"); the Greek and the Barbary Partridge—both appertaining to the red-legged group, and of which the latter is probably the "Partridge of the Mountains" (Sam. xxvi. 20); the Katta or Sand-Grouse (*resolvable into three or four species—Petrocles alchata, Pt. alchata, Pt Guttatus*, and *Pt. exustus*), excluding others belonging to more distant regions; and, lastly, the Quail. Now, by common consent, the choice lies between the Katta or Sand-Grouse, and the Quail.

By able pleaders, much might be said on both sides. Let us look first to the claims of the Katta (we leave the precise species for the determination of our great ornithologist, Mr. Gould, in whose magnificent and elaborate work on the "Birds of Europe," in course of publication, the Arabian and other Asiatic Sand-Grouse are figured and described at large. It is known that in Palestine and around its borders, the Katta is astonishingly abundant. Whatever may be its habits during the breeding season, it certainly associates in vast flocks during the greater portion of the year; and, in the stony districts of the country beyond Jordan, it swarms in such multitudes, that phalanx after phalanx arise, like dense clouds passing through the sky, and vanishing in the distance. Burckhardt was astounded by their numbers around the precincts of Bogra. He thus graphically writes:—"The quantity of Kattas here are beyond description; *the whole plain seemed sometimes to rise*; and, far off in the air, they are seen like *large moving clouds*." In the country to the east of the Dead Sea, and among the hilly districts of Edom, their numbers are incredibly excessive: they arise *en masse* from the ground in such dense array, that the Arabs (and especially the boys and young men, who delight in the sport) often bring down three or four at a time, by hurling a heavy jereed among them. In Syria, according to Russell, this bird is to be found the whole year round, but in vast flocks chiefly during the months of May and June; when, even in Northern Syria, the sweep of a cimeter has been known to enclose six entire and well-loaded dishes of the spirited little asses of that region. The Turks are remarkably partial to the flesh of this bird; but it is rejected by the Franks of Syria, who consider it dark-coloured and dry. Burckhardt is strongly of opinion that the Katta and the Selav of the Israelites are identical.

Let us now, passing over much ground, turn to Hasselquist, the pupil and friend of Linnæus. Hasselquist travelled in the East. He was a man of no ordinary talent, and had been educated in the school of rigid accuracy. Now, this able observer, carefully distinguishing between the Katta and the Quail, sent an account of the former to Linnæus, under the title of *Tetrao Israelitarum*. Giving a separate account of the latter bird, he says, "I think it alone worth a journey from Jerusalem to the Red Sea to meet with the partridge of Arabia or the Holy Land, *which has never been before described*. These birds are, without a doubt, the *Quails* of the Israelites:" remarks which will not apply to our Quail, nor to the Continental Red-legged Partridge.

We extract the following passage from a letter to Linnæus, relative to the Katta:—

If natural history can give any information in the interpretation of the Bible, this bird is certainly the same with the Quails of the Israelites; and they alone (the Quails) would reward the toil of a journey to the banks of the Jordan. So great was my own personal delight in this discovery, that, forgetting myself, I almost lost my life before I could obtain possession of a specimen.

Subsequently he observes that, about Whitsuntide, the Arabs carry many thousands of them to Jerusalem for sale. This, we are informed, is still true, with respect to the Katta, but not so with respect to the Quail. Unfortunately, Linnæus knew little or nothing about the Sand-Grouse; and Hasselquist does not give its native name of Katta. Hence Linnæus to whom we are not assured that specimens were ever sent—or, if sent, received by him makes Hasselquist's *Tetrao Israelitarum* a synonym of his *Tetrao Coturnix*—that is, our common Quail. Here lies the difficulty; but, when Linnæus called the American turkey *Meleagris* (adverting to Ovid's fable), we cease to wonder at the mistakes of uncertainty in the dawn of zoological science. That Linnæus should be followed by Gmelin and other compilers, as regards this point, need not surprise us, and is scarcely worthy of notice.

So far with regard to the claims of the Katta, a desert-bird. Now, let us turn to the Quail. A well-known writer says, that both the Katta and the Quail are *migratory* birds, and that, as is evident, "the birds which fed the Israelites were in the act of migration." That the Katta is partially migratory we by no means deny; but it is far from being so extensively migratory, or so regularly so, as is the Quail. Thus far we gain nothing on either side. Egypt and Syria, during the month of March, when the wheat is ripening, the Quails (as Hasselquist states) spread themselves over the country in vast flocks; and multitudes, in ancient days, are caught by means of nets, for the purpose of food: to say nothing of the necessity of destroying them by wholesale for the sake of preserving the grain. They then pass northwards, returning in the autumn, but not in such numbers as before. They have twice crossed the Mediterranean—first into Asia Minor, thence spreading through Southern Europe, and so onwards: secondly, on their return, and in each journey not without great slaughter. Here we might cite authorities from ancient times to the present, proving that the migratory movements of the Quail have remained unchanged throughout the change of empires.

Something has been said of the wind which brought the Quails to the camp of the Israelites. It was a south-east wind, drifting over Arabia from the Arabian Sea, and far more likely to hurry forward flocks of the desert-loving Katta than the meadow and cornland-haunting Quail. Yet the wind might have had a bearing from Southern Persia, sweeping across the Persian Gulf. Now, from Southern Arabia—the *Arabia Felix* of Strabo—and from Southern Persia, multitudes of Quails, "thick as autumnal leaves in Vallombrosa," might have been carried onwards to the Desert of Sin, east of the Red Sea. The same observations apply, it may be said, with equal if not more force to the Katta; but we must not forget (such is our answer) that 3300 years have passed, altering the whole superfices of Southern Persia, Arabia, and Egypt; rendering vast tracts, once the granaries of mighty nations, now sandy wastes, where the foot of the camel may disturb the Katta and the Stone Curlew, or Thick-knee (*Œdicnemus crepitans*), as it wends its way across the still lion-haunted desert, but where the Quail will hardly find itself in comfortable quarters. What, then, is our opinion? We answer with Sir Roger de Coverley—"Much may be said on both sides." While we admit the fact that the Quail migrates in overwhelming multitudes, we are not without a lurking suspicion that the Israelitish bird was the Katta. Nay, might not flocks of both species have been Providence-directed to supply a rude wandering people, who knew little about the specific distinctions of scientific zoology? Thus then we leave this part of our subject.

Although the Quail is certainly a migratory bird, it is not so altogether—no not even in our own island, where, in favourable spots some few appear to be stationary, if not always, nurse in the spring by visitors from the South, which rear their progeny and depart on the approach of autumn. In India we believe that the Quail is truly stationary, it is more than partially so in Portugal, Spain, Italy, and South-eastern Europe (Greece excepted); although, in winter it is joined by arrivals from the North, and in spring by accessions from the deserts of Northern Africa, seeking a congenial breeding-place.

The same observations apply to Candia, Greece, the Greek Islands, to the great peninsular projection of Asia Minor, from the Isle of Cyprus on the south to the long line of northern coast thence over the Black Sea from Schumla to Odessa, and eastward to the Crimea, and beyond. This is a vast extent of country; to which Spain, France, Germany, the Austrian States, and Poland—in fact, the whole range of the south of Russia in Europe—may be added. Throughout this range the Quail is both migratory and resident, more resident, perchance, than we imagine, could we ascertain the numbers of permanent settlers—an unobserved remnant, in wilds thinly tenanted by man, and but a little previously covered by myriads. We might here enter into the accounts of the migratory movements of the Quail as recorded in the works of the ancients—of the multitudes condensed into vast clouds, which, scattering themselves, exhausted their journey easy prey to the inhabitants of the numerous isles of Greece. To refer again to the Scriptures is, perhaps, out of place; but, if anything proves the Quail to have been the Selav of the Israelites, it is the recorded fact that for a whole month six hundred thousand men, with women and children in proportion, were supplied with food by these birds, which lighted in numbers beyond the powers of calculation, for some miles, in and around their encampment. "He rained flesh also upon them as dust, and feathered fowls like as the sand of the Sea."—Psalm lxxviii., 27. Refer also to Exodus.

This narrative prepares us for the accounts given by the Classic writers from Aristotle to Pliny, which have been sometimes deemed exaggerations. The former, after stating that immense flocks, driven out of their course (across the Mediterranean) by adverse winds, are often swept into the sea, proceeds to state that they sometimes settle on vessels in such numbers as to cause their sinking from the overloading of the masts and rigging; and that, by a rare chance, they alight on the ship by night. Looking at the vessels as light craft resembling our fishing-smacks, plying along the coast, and considering Pliny's acquaintance with the shores of the Mediterranean, we cannot refuse credence to this positive statement. Even in modern times, when the Quail is perhaps less multitudinous than it was formerly, before the destructive gun was known, the authentic accounts on record are sufficiently startling. During the periodical flights of these birds between Europe and Africa, and *vice versâ*, the shores and islands of the Mediterranean are replete with myriads—Sicily swarms with them. Their autumnal visit is looked forward to with great anxiety, and they there encounter wholesale destruction, the gun, the net, and the simplest missiles being all in requisition. On the coast of Naples, according to Montagu, and within a comparatively limited space, 100,000 have been counted as the produce of a single day's work. In this manner we might pass along the European shores of the Mediterranean; but, were we to do so, we should be too long delayed by the "Isles of Greece:" everywhere a repetition of the same wholesale destruction of the Quail is as vigorously carried on. According to Baron de Tott, no country abounds in Quails more than the Crimea. During the summer, these birds are dispersed over the country; but, at the approach of autumn, they assemble together, and cross the Black Sea, to the southern coasts, whence they afterwards transport themselves to a warmer climate:—"The order of the migration is inexplicable. Towards the end of August, on a serene day, when the wind blows from the north at sunset, and promises a fine night, they repair to the strand, and take their departure at six or seven in the evening, and have finished a journey of fifty leagues by break of day." They are plentifully haunted, and meet with the usual reception, thousands being taken alive, in addition to those killed on the spot.

But we have said enough, so far, and must draw nearer home.

All who are acquainted with the poultry-markets of London and the provincial towns of England, have seen, during April and May, numbers of Quails pent up in low cages, waiting—like the friends of Ulysses, or the companions of "Eu-Sindbad of the Sea" for their coming destiny. Pretty creatures! who can gloat at them, thus confined and confined, without a feeling of pity? [illegible] and the sportsman, with his gun and dogs, [illegible] and these captives to durance and death [illegible] ure and the net; and are obtained principally in France and the Netherlands. These are all, generally speaking, hens: hence it is well known the predominance of the species that the Quail [illegible] is preponderous. Now, the reason why these prisoners are [illegible] simply this: the males, in flocks, precede by several days the arrival of the females; and, like sailors from a long voyage spend their earnings in the neighbourhood of the place of debarkation. The quail-pipe imitating the low note of the female, is heard, the male utters his clear whistling trisyllable pee-vor-ree, by way of answering, and in this manner scores of time are drawn into the trap. The story has a moral, so it be read aright.

Now for the Quail as a British bird. It is seldom that the Quail visits our island before the middle of May: but here we must except some permanent residents, more numerous in our southern counties, than has yet been suspected. In our midland districts the Quail is rare, and still more so as we advance northwards. It is the bird of the lowlands, tenanting plains and undulating tracts under rich cultivation, or chalk hills of moderate elevation, where barley grows abundantly. It is decidedly terrestrial—we have never heard of its taking refuge in a tree. It loves the scrubby borders of cornlands, which afford it sheiter; rough stony fields; or the very centre of wide lands, where wheat, canary-seed, mustard-seed, and the like, grow in acres. As a proof of the continuance of the Quail during the winter in some of the congenial counties of our island we may here appropriately introduce the following note, kindly communicated to the writer by Mr. Gould. It runs as follows:—

January 2nd, 1854.

Weather very severe—hard frost, with much snow. Visited Leadenhall-market. Quails at four different stalls—all British killed. One dealer had twelve fresh up from Cambridgeshire; from which county, he informed me, he had Quails every week during the autumn and winter. Another dealer had Quails from Suffolk, and said they frequently had them at this season from Ireland. It is clear, therefore, that this bird far more commonly remains in the British Islands during winter than is generally supposed. The twelve alluded to above had all been shot, apparently, on the same day, as was inferred from their uniform freshness and similarity. The legs of both sexes at this season are pale straw-

yellow on the toes; nails horny; bills greenish olive white; the covering of the nostrils a little darker, that is more olive; eyes hazel brown. As regards weight and fatness, the whole were in fair condition; in one specimen the flank feathers were chestnut, except the longitudinal stripe of greyish white down the centre of each; the stem of these feathers quite white; and between this stem and the chestnut a longitudinal line of black. This specimen (probably a young but adult male) had the shoulders, wing coverts, and secondary quill feathers minutely freckled and barred with brown, a fawn stripe running down the centre of each.

Mr. Gould adds a comparison of the Quail from Madras, and of a specimen killed on the borders of the Mediterranean with the birds bred in our island. The Madras bird differs in several particulars, into which we need not here enter, and appears to be distinct from its European congener.

The Quail, as we have said, is polygamous; and, probably, as in the case of the ruff (*Machetes*) and the wild turkey, some battles take place among the males for the maintenance of territorial right, and the sole supremacy of an Oriental *harâem*. The breeding place is chosen either in the centre of fields of grain, or amidst the covert of bordering scrubs or rough spots of ground. The young bevy varies from eight or ten to eighteen in number. The nest is a slight depression in the ground, either natural or scratched, for the reception of the eggs.

A flock of Quails, consisting of one brood, or perhaps two broods united, varying from ten to twenty, or even more, is called, in sportsmen's language, a "bevy." When flushed, they rise with startling suddenness, and, without attempting to soar, sweep along in a straight line with arrow-like velocity. Sometimes the whole bevy rises simultaneously, sometimes only two or three individuals from the same spot at the same instant, but always with a suddenness almost startling to the unpractised gunner—a circumstance which renders Quail shooting by no means so easy as might be supposed.

The food of the Quail consists of grain, and seeds of various plants, not to the exclusion of insects and their *larvæ*. The feeding time commences with the earliest peep of dawn, or an hour or two before, and continues till daybreak. As the evening twilight draws on it again takes its food. During the middle portion of the day it lies perdue in its covert; basks in the sun; and dusts and preens its plumage. Should rain set in, it retires to a sufficient shelter, under brushwood, rough stones, or on old hedgerow banks, to which the young coveys often resort. When scattered over a field they lie very close.

Among the ancients the Quail was not generally served at table. It was supposed to feed on hellebore and poisonous seeds; and, moreover, to be subject to fits of epilepsy (see Pliny); hence it was regarded, not as a *dainty*, but a *dangerous*, dish—except, perhaps, by the knowing epicure.

The high spirit, ardour, and pugnacity of the Quail, have been celebrated from ancient times to the present. "As quarrelsome as Quails in a cage" was a Greek proverb. Quail-fighting, as might be expected, was a favourite amusement with the Greeks and Romans, who kept it in numbers for this purpose, as our forefathers did game-cocks. In India and China, Quail-fighting (as well as cock-fighting) is a popular amusement. We do not know what the Chinese *Game Quail* is; but in India, according to Colonel Sykes, it is not our species, but the Argoondah Quail (*Coturnix Argoondah*), which is in repute.

From a brief notice of the Quail as a fighting bird, we pass on to a consideration of it as a singing bird. Forbear to laugh, courteous reader, for the Quail is, and has been time immemorial, celebrated for its "sweet voice." Athenæus notices the "song of the Quail." Now, the fact is that all piping sounds were agreeable to the ancients—the Gryllus and Cicada made music to their ears; and in Spain, at the present day, grass-hoppers are kept in little rush cages for the sake of their song. Cervantes, in his "Don Quixote," expressly alludes to this custom. In the east, the Stone Curlew (*Edicnemus crepitans*) is highly esteemed for its music. Mr Lane (see "Arabian Nights," Vol. III., p. 82), especially alludes to it, and quotes Hasselquist in corroboration of his own personal testimony. This bird is the *Keerawan*; or, more correctly, *Kárdwan* of the Arabs. The Turks and Egyptians value it much if they can get it alive, and keep it in a cage for its singing.

Bechstein dilates largely upon the song of the Quail. Unfortunately, he puts its voice into words, without meaning, failing therefore to convey his ideas to his readers. A few notes for the piano, or flute, would have been better both for writer and reader; but Bechstein, throughout his book on song-birds, errs egregiously on this very point.

EUROPEAN QUAILS.

Who can attach the same sound as rung in his ears to *made* words? However, we will give the substance of what he says, as a finale:—In the breeding season, the male commences by softly repeating tones resembling *verra-verra*, followed by *pievorie*, uttered in a bold tone (the last we have heard, not the *verra*). This tone is given while the neck is raised, the eyes shut, and the head inclined to one side, as if in the attitude of listening. Among the *fanciers*, the birds that repeat the last syllables ten or twelve times consecutively are the most esteemed. The song of the female only consists of *verra verra, papa-papa*—the two last being those by which the male and female attract each other's attention. The angry cry of the male is *quillah* (now pronounced we know not); but the note of simple complacency is a purring murmur.

The accompanying Engraving is copied, by the express permission of Mr. Gould, from his work, the "Birds of Europe"—a noble monument of zoological industry and acumen, as well as of the highest artistic excellence. So great and so unexpected was the sale of this work, that, within a few years after its completion, every copy was disposed of; and as the lithographic drawings were erased, when the promised number of copies was struck off, we fear that no subsequent edition will ever take place; which, indeed, cannot, unless by the re-drawing of the whole of the plates, at an enormous expense. The transition from the birds of Europe to those of Asia is so natural, and so necessary in the sequence, that we can scarcely be surprised that the "Birds of Asia" should be now in progress.

W. C. L. M.

PARIS FASHIONS FOR JUNE.

YOUR readers (says our Correspondent) will scarcely be surprised to learn that the war in the East bids fair to exercise a great influence on the Fashions. Ladies already adopt for their dresses, Turkish patterns and designs; Arabian crescents; Persian figures, or hieroglyphics (*chiffres Persanes*): everything will in some degree have reference to the war. Ribbons will represent the Bosphorus, in the same manner as we already see silk handkerchiefs printed with the map of the Black Sea, or the Baltic. This fashion may be open to ridicule; but the Eastern patterns and designs are very rich and ingenious, and such of our designers as possess good taste, may produce patterns in the styles of the East, which may become popular. Notwithstanding all that has been invented during the last half-century, the shawls of Cashmere are still unrivalled, and at this season they are exceedingly fashionable. Within the last two years we have seen many Cashmere shawls with a plain ground, and the corners and middle, or pattern in the centre embroidered with gold, mixed with the silk: these shawls are very magnificent; few are seen worn by promenaders in the streets; but for ladies in carriages,

PARIS FASHIONS FOR JUNE.

BONNETS.

they are a highly approved accompaniment to a handsome morning visiting costume, or for the theatre. Bracelets and brooches in the shape of crescents, have already appeared. We should also mention puffed ribbons (*rubans bouffants*) for the trimmings of dresses; they are placed on the volants, and ornament also the bodies, the basques, and the sleeves: they have a charming effect, are of very varied shades of colour, and are ornamented with designs or patterns, which they help to bring out in relief. Mantelets this year are worn very short behind, and in front also; they are indeed, rather very short scarfs, than mantelets. They are made in taffetas, with ornaments of velvet and lace, for spring and autumn; for the summer, they are of tulle and ribbons of velvet, alternately, and trimmed with lace. Some trimmings of feathers are still seen worn: this style should be reserved for winter; at present, fringes, puffed ribbons, and ruches, are alone used. The Canezou is not much worn: it is in black lace and velvet alternately; the bands of velvet laid on the sleeves lengthwise, and disposed also in the same manner from the top to the waist on the front of the body; two bands in front descending as far and down upon the basque, and behind disposed as a trimming in the style of braces. For summer these garments are made still more cool and graceful, in white lace, ornamented with ribbons to match the colours of the petticoats, or made to accompany petticoats of white muslin, with coloured ribbons at the waist of about seven inches width. Volants are very much in fashion, and are worn with plain petticoats, full of pattern, and ornamented with trimming on the front of the petticoat, so as to resemble an apron.

THE ENGRAVINGS.

Ball Dress for Young Lady.—Ribbons passed through the bands of hair, and bunches or tufts of flowers. Body of dress completely covered with Valenciennes lace. A bow of coloured ribbon on the body. Triple petticoat of white muslin, having patterns designed in colours.

Morning Visiting Dress.—Bonnet of crape. Mantelet of embroidered taffetas, trimmed with lace. Dress: plain petticoat, without volants, barred or striped; the intermediate space embroidered in coloured silk.

1.—*Bonnet* of worked straw, mixed with imitation tulle, trimmed with flowers surrounding the back part of the head above the curtain, which is edged with a small pattern in ruche straw, bordered with tulle and narrow blonde. Inside, the bonnet are blue flowers mixed with white blonde, and white bands.

2.—*Bonnet* of pink taffetas, having three ruches on the edge, in the middle; the crown and curtain are ornamented with a ribbon *froncé*, the interior trimmed with crape and roses.

3.—*Bonnet* of white crape, with three rows of blonde falling backwards: the first row, on the edge of the bonnet, is pretty long towards the lower part, and has trimming of Heart's-ease flowers on the inside.

4.—*Bonnet* with crown trimmed with a wide ribbon, which is *froncé* at the corner of the bonnet, and continues to form the bands; a similar ribbon, scolloped, forms the trimming of the edge, together with a pang, in blonde.

For ladies who wear curls of hair, the inside trimming is put on higher up, and is much less in quantity, the curls of hair filling up the space around the cheeks.

PARIS FASHIONS FOR JUNE.

THE BALL AT THE FRENCH EMBASSY.

COSTUMES.

SOUBRETTE (LOUIS XV.), LADY ADELAIDE CURZON. ELIZABETH OF AUSTRIA (CHARLES IX.), LADY PALMERSTON. COURT OF LOUIS XI., LADY MOLESWORTH. COURT OF LOUIS XV., LADY BEAUMONT.

PUBLIC interest was excited in so unusual a degree by the late *Bal Costumé* at the French Embassy, and there were so many peculiar accompanying circumstances distinguishing it from ordinary fashionable *réunions*, that a few Illustrations, conveying some idea of the brilliancy and rarity of the costumes worn, will, doubtless, be acceptable to our readers.

LADY ADELAIDE CURZON

Wore a dress modeled from the era of Louis XV. It was white silk, looped over a skirt of blue taffetas; corsage to correspond, with guipure lace; bouquet of roses, fastened with an aigrette of diamonds. Coiffure poudrée, with hat of black velvet, bordered with pearls and diamonds, aigrette of diamond fastenings, and blue feathers.

VISCOUNTESS PALMERSTON

Appeared as Elizabeth d'Autriche, wife of Charles IX. The over dress was of rich black velvet embroidered in gold; the body embroidered in gold, and fastened with jewels, diamonds, and chains of diamonds; long sleeves of velvet, under-sleeves of grey satin and gold braid, striped with pearls; under-skirt of grey satin, richly embroidered in gold with pearls and precious stones. Black velvet hat covered with diamonds and precious stones; veil, spangled with gold

LADY MOLESWORTH

Appeared in the character of the Queen of Louis XI. of France. Her dress was composed of a jacket of scarlet velvet slit, with deep border trimmings of ermine, fastened in the front with a band of velvet, the slit being entirely covered with magnificent diamonds and emeralds; skirt of scarlet velvet and gold cloth embroidered with bands of massive fleurs-de-lis. Royal coiffure of the period, composed of a tiara crown of diamonds, emeralds, and long gold veil. The splendour of this costume, and its adaptation to the stately physique of the fair wearer were much admired.

LADY BEAUMONT.

This lady's costume illustrated the luxurious epoch of Louis XV. It was composed of a dress of blue satin embossed with gold bouquets, trimmed with point lace, ruches, and roses; corsage to correspond, with lace; stomacher of diamonds and precious stones; under dress of pink moire, covered with costly lace, and trimmings. Coiffure of roses, enriched with diamonds.

HER EXCELLENCY MADAME DE MOSKOUS

Wore a Greek costume. Jacket of rich velvet, ornamented with gold; petticoat of fine damask and brocade, embroidered with gold and pearls; vest, white satin, embroidered with gold.

COUNTESS OF GLENGALL.

Costume of Louis XIV., composed of a rich black tunic, lined with yellow silk, trimmed all round with two flounces of Brussels point, and coloured brocaded ribbon; body and sleeves ornamented with diamonds and pearls; a white silk petticoat, brocaded with coloured flowers, trimmed en tablier with point lace, diamonds, and real pearls. Head-dress, powdered; diamonds, pearls, and gold.

MARCHIONESS OF AILESBURY.

The costume of the noble Marchioness evinced the tasteful and skilful adaptation which were to be expected in so distinguished a leader of fashion. Her Ladyship adopted the character of Blanche of Castile, and wore a chasuble of cloth of gold, with a petticoat and mantle of velvet, sown with fleurs-de-lis in gold. Her coiffure was magnificent, and resplendent with costly diamonds.

DUCHESS OF WELLINGTON.

The costume chosen by her Grace was that of the lovely and ill-fated Marie Antoinette and was copied, we understand, from a drawing by Lebrun. The robe was of crimson velvet with bouffe, fastened by diamond clasps, bordered with white satin, with gold, and with lappets of lace; the corsage ornamented with diamonds and lace. Hat of crimson velvet, with feathers, and a coronet of diamonds, and veil falling over the shoulders; coiffure, powdered and ornamented with diamonds.

MADAME VAN DE WEYER.

This lady, the daughter of one of our British merchant princes, appeared (*apropos* of her husband's country) in a rich characteristic costume of the kind worn in Flanders, at the Court of Marie de Bourgogne.

THE DUCHESS OF MONTROSE

Appeared as a lady of the Court of Louis Quinze, composed of a white dress, looped up with pink roses, over a petticoat of white. Hair powdered, and a profusion of emeralds.

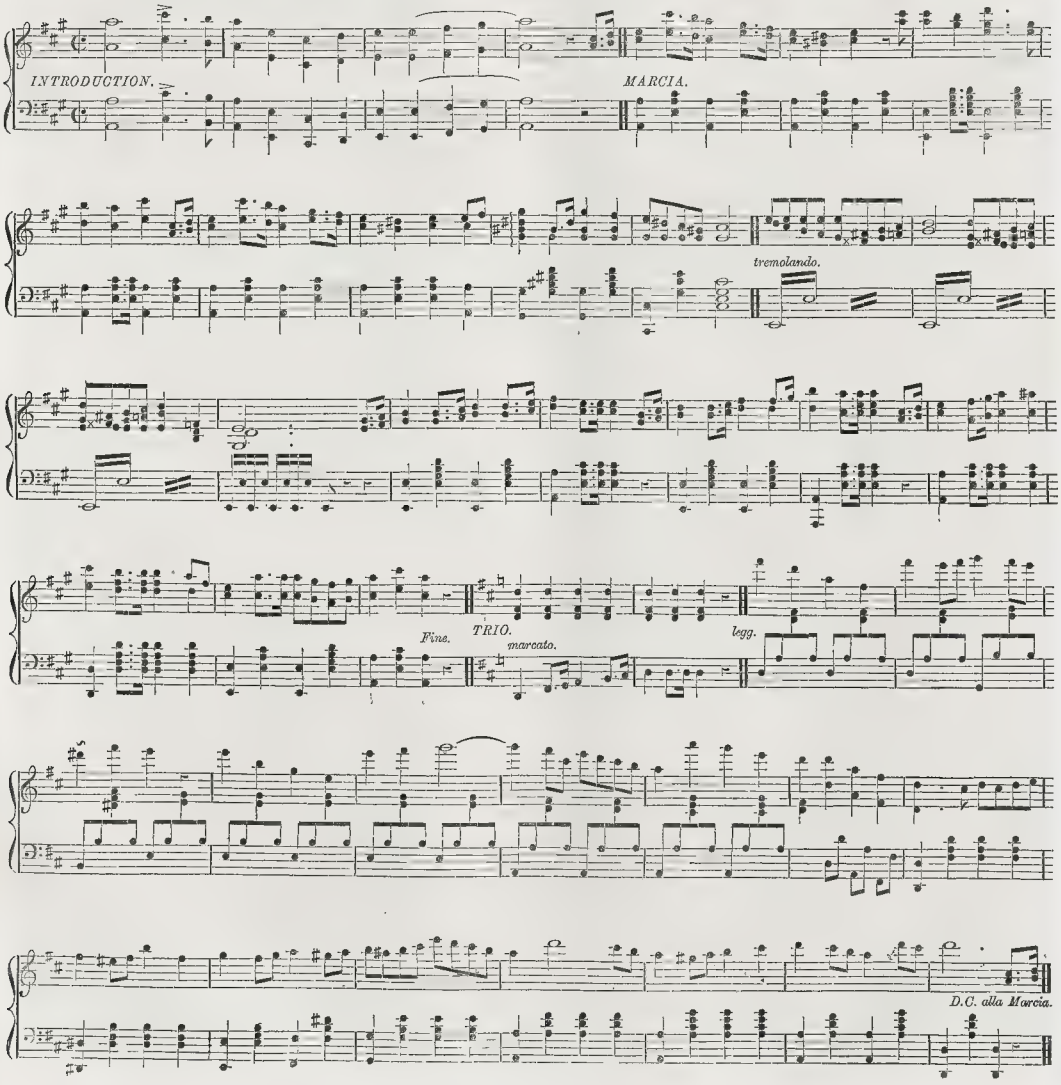
COUNTESS WALEWSKA.

We have already taken special notice of the appearance of the amiable and beautiful lady of the French Ambassador, and need therefore only observe, whilst giving the details of her dress, that in person as well as attire, her Excellency was a graceful and effective impersonation of the character represented by her. The costume was of the seventeenth century, the Duchess de Nevers. It be pointante, with sleeves of green velvet adorned with passementerie in gold, and with bunches of fine pearls, collar of fine lace, petticoat elevated on both sides, under petticoat of spangled velvet, embroidered with silver, shoes of white satin, embroidered with silver. Head-dress of green velvet, ornamented with precious stones, and with a plume of white feathers, veil covered with stars in gold. Her Excellency's youthful son accompanied her in the character of page.

COSTUMES.

GREEK, MADAME DE MOSKOUS. COURT OF LOUIS XIV., COUNTESS OF GLENGALL. BLANCHE DE CASTILE, MARCHIONESS OF AILESBURY. MARIE ANTOINETTE, DUCHESS OF WELLINGTON. MARIE OF BOURGOGNE, MADAME VAN DE WEYER. COURT OF LOUIS XV., DUCHESS OF MONTROSE. DUCHESS DE NEVERS, COUNTESS WALEWSKA

MARCH COMPOSED BY HER EXCELLENCY THE WIFE OF OMER PACHA.



FINE ARTS.

EXHIBITION OF WORKS OF THE SCHOOLS OF ART, GORE-HOUSE.

THE Exhibition of the "advanced works" of the Students of the various Schools of Art was opened to the public on Monday, at Gore-house The productions exhibited comprise specimens of almost every variety of decoration applicable to manufacturing processes, as well as studies from anatomical models, flowers, and other objects of still life.

The Schools so represented are those of Aberdeen, Belfast, Birmingham, Chester, Cork, Coventry, Dublin, Dudley, Durham, Finsbury, Glasgow, Limerick, Macclesfield, Manchester, Metropolis (Normal training and Female Schools), Newcastle-on-Tyne, Paisley, Potteries, Sheffield, Stourbridge, Warrington, Worcester, and York. There are eighteen other schools, including Bath, Bristol, Hereford, Leeds, Nottingham, and Wolverhampton, which do not send any contribution; but it is explained that the majority of these schools have only been opened within the present year.

The works exhibited are classed under certain specified stages of instruction, as stage 2—anatomical studies, chiefly based upon some well-known antique statue; 14, painting (general) direct from nature; 15, painting groups of natural objects, as specimens of composition of colours; 16, painting the human figure, or animals, in monochrome, from casts; 17a, painting the human figure, or animals, in colour, from the flat; 17b, painting the human figure, &c., from nature; 18, modelling ornament; 18a, modelling the human figure, &c., from casts; 18c, modelling the human figure, &c., from nature; 20, modelling flowers, fruits, foliage, and objects of natural history, from nature; —the above being merely imitative processes, intended to give the student executive power: and, considering the age of the students exhibiting, and the periods they have been under tuition, many of the specimens are extremely creditable. Stage 22a takes a higher aim, namely, elementary design; and the process adopted in it is to give out a natural object as a type, to be ornamentally displayed and arranged to fill a given form agreeably as to quantity and contrast, and in accordance with the laws of colour; each school being required to send four specimens in the present instance the object so given was the wood-anemone—a flower well a fapted for ornamental application, and capable of great variety of treatment, as the numerous studies seat in—some hundred in number—sufficiently prove. This, by the way, is one of the most gratifying portions of the Exhibition; the students of the several schools having been left to the exercise of their own discretion and taste in the application of the natural "type," both as respects composition and colouring and the result, in many instances, being extremely successful. Stage 22d holds a somewhat analogous position to the last, only that, in place of treating natural objects as the type, historic styles of ornament are resorted to, the object being, by copying and re-combining characteristic examples, as types of styles, to impress upon the mind of the student their leading peculiarities. As we have no doubt of the useful and wholesome effect of studies in stage 22a, we have our misgivings touching those in 22d; considering that the imitation, or re-adjustment of the conventional features of by-gone styles can only impede the growth of the inventive faculty, and promote a fatal mannerism which is too prevalent amongst us already.

In stage 23, (Technical Studies), the student makes his first essays to apply his knowledge to practical use—in other words, to produce designs for the ornamentation of cutlery, plate, and other articles of manufacture. In the words of the Report, "it must be observed, that such essays should as yet be received with much allowance;" but, at the same time, when errors in principle in the application of ornamentation are obvious (as is the case in some instances before us, including some very uncomfortable handle knives), the heads of the department may have done useful service by pointing them out. We remark in these examples, and in those in stage 23c (Special Class for Surface Decoration), too much disposition to resort to the bankneyed models of by gone times, without, in many instances, any apparent guiding principle in their selection as regards fitness.

In Porcelain and Miniature Painting are some very creditable specimens, as far as the execution goes; but they are, with few exceptions, copies from originals more or less known. In short, the inventive has not yet been combined to a equal degree with the technical faculty among the students of these schools: and it was hardly to be expected it should, perhaps; but, until it is, we should rather keep back than press forward the powers of production. We single out this branch of study, ascertained the attractive medium in question, should be preferable as an evidence of real progress than the most elaborate effort of copyism.

Upon the whole—qualified only to the extent we have stated—the present Exhibition of students'-work is gratifying and encouraging; and, we doubt not, will in time be followed by others fraught with still deeper import to our art-industrial progress.

Eleven money prizes, ranging from £10 to £2 each, and amounting in the aggregate to the goodly sum of £48, have been awarded during the present Exhibition contributing to the present Exhibition. These rewards are very properly given, by way of encouragement to continued application on the part of the students; but they should not even tacitly be construed into a recommendation, in a commercial sense, of the particular objects for which they have been awarded. This would be a great mistake; which would infallibly place the schools in a very false position with regard to the manufacturing interests. We make this remark in no unfriendly spirit, but purely with the view of preventing disappointment.

THE NORWICH WELLINGTON MEMORIAL.

Mr. G G. Adams has completed the model for his colossal statue of the Duke of Wellington, executed for the city of Norwich; and has exhibited it at his studio in Lisson-street, during some days past, previously to being cast in bronze. It is a pedestrian statue, measuring 8 feet 6 inches high: the attitude simple and manly. The Great Commander is represented as of about the age when he was in the zenith of his military fame—just after the crowning victory of Waterloo: and the face, which is very like, is studied much after the portraits painted by Lawrence about that period. He is at irad in an undress frock-coat, with a sash round the waist, and a military cloak over the shoulders; his right hand rests upon the sword, whilst the left slightly grasps the cloak, which hangs in easy folds. Behind, at the Duke's feet, is a howitzer, which is the only accessorial object introduced. The statue is intended to be placed upon a pedestal of red granite of the height of eight feet six inches; upon which will be affixed a bronze tablet, exhibiting the numerous decorations of the Duke, skilfully grouped, surrounded with a trophy of arms and flags, upon which the names of his principal victories are inscribed; beneath will be the simple inscription "Wellington." Altogether, this will be a memorial well worthy of the Great Commander, and the wealthy city of Norwich for which it has been executed.

On the occasion of our visiting Mr. Adams's studio to inspect the above, we also saw busts of the Duke of Beaufort and the Marquis of Anglesey—both in progress—both promising to turn out excellent likenesses. We also caught a glimpse of the medal intended for the commemoration of the approaching inauguration of the Crystal Palace, and which is nearly completed. On the obverse, of course, are profiles of the Queen and Prince Consort; and on the reverse a group of Britannia in the centre, with, on one side, Industry, with the usual emblems of the Arts and of Plenty, which is their proper attribute; History, inscribing the decorative features gathered or imitated from all parts and all ages of the world—alluding, probably, to the various Courts. Above is Fame; and in the background, in low relief, a distant view of the Crystal Palace, in its present form.

KEW GARDENS.—It appears that the number of visitors to Kew Gardens has increased, in the last ten years, from 16,114, the number in 1843, to 51,518, which was the number in 1853, and the largest ever recorded.

THE COLLAPSING BOAT.—The Rev. Mr. Berthon, of Fareham, has invented a "collapsing boat." He proposes to construct immense life-boats, to carry sixty or eighteen feet wide, which, when stowed away, would only occupy as many inches. Their draught of water, with 3-0 men on board, will not exceed twelve feet; and they will carry and work in the heaviest gales on board our ships.

MILITIA RENDERS TO GOVERNMENT OFFICIALS.—The Board of Customs discovers that letter-writing and idleness have been adjuncts to clerkship in the Customs House for a long time past. Many of the officers, it appears, have been in the habit of writing private letters, and transacting their own business, during the hours when they were supposed to be attending to the duties of their offices. Lord Palmerston, it is said, has directed that the practice is to be discontinued in London, and the collectors and comptrollers at the several ports throughout the kingdom, have been furnished with the order for the immediate dismissal of the clerks, officers and others under their supervision.

CHESS.

TO CORRESPONDENTS.

SYDNEY H.—It is quite of two solutions, and is in other respects unsuitable.
NED LOCK, New York. They are, though too easy for publication, by no means without promise.
A SPECTATOR. Try the effect of recording the result of each evening's play in your Club, or, better still, though it will add very much to your secretarial duties, try what taking down the best games, and sending them for criticism to one of the Chess organs will do. We believe if this latter plan were adopted in the provinces, clubs, there would soon be a marked improvement in play.
G C—The position of the celebrated "Indian Problem" is—1. B to Q B sq; 2 K moves; 3. R to Q 2nd, 4. R to Q 1 h, double check, and mate. Black's moves are forced, and therefore we do not print them.
J. T. C., of Ayde. It admits of another, and a very obvious solution; beginning with B to K 8th.
J. W., Brighton.—There is no difficulty in obtaining a copy of "Walker's Treatise," though the work is now quite superseded. With respect to the Chess-men modeled by the late Staunton, we also, if requested, will send you to address a note to the Messrs. Wedgwood, "Etruria" Potteries, Staffordshire.
F. W. A., of Brixton, is thanked for his obliging attention.
J. G. C.—It shall be reported on in our next Number.
T. S.—The St. George's Cross Club is a rival name to Chess amateurs who are only occasional visitors to London. The subscription of a country member is only One Guinea per annum, for which he receives all the current Nos. of a spacious, well-appointed Club-house, and the practice of good Chess play to the society of gentlemen.
RUM, Cardiff.—In the Solution of No. 532, White's first moves should be *R to K R sq*; Black's, *K to K 6th*. It is impossible to effect mate in three moves by the method you propose.
PERSEUS.—Of the beautiful Problem No 533, we have not yet received the correct Solution from more than half-a-dozen correspondents. Try it once more.
SOLUTION OF PROBLEM No 533, by P. T. W.; Frank, Mermaid, Sab, Ernest, Fitz-Grub, True Blue, D. D., Chas, Mordecai, Potcaster, Willy, Gidipus, Crib, are correct.

SOLUTION OF PROBLEM No. 533.

		And Black struck his flag.	

(a) Not nearly so attractive as the customary move of P to 5th.
(b) Mr. Stern might have cramped his opponent's game considerably, and have won a Pawn besides, we believe, if he had played P to K B 5th at this moment.
(c) White plays the termination with his usual soundness and ability.
(d) Taking the Bishop with his Queen would have been still more disastrous to him.
(e) He has evidently no good move left.
(f) The best and most expeditious mode of giving the *coup de grâce*.

Brilliant *partie* between Mr. B. GREVILLE, one of the leading English amateurs, and M. DE RIVIERE.
(*Scotch Gambit.*)

WHITE (Mr. G.)	BLACK (M. de R.)	WHITE (Mr. G.)	BLACK (M. de R.)
1. P to K 4th	P to K 4th	16. Kt takes B	Q to Q Kt 3rd
2. K Kt to K B 3rd	K Kt to Q B 3rd	17. Q to her 6th	P to K 7th
3. P to Q 4th	Kt takes P	18. Kt to K B 2nd	B takes P (*e*)
4. Kt takes P	Q Kt to K 2nd	19. P to Q B 3rd	Q R to Q sq
5. B to Q B 4th	P to Q 3rd	20. Q to K B 4th	K R to K sq
6. K Kt to Q 2nd(*a*)	K Kt to K B 3rd	21. Q R to K sq	Q takes Kt
7. Q Kt to Q B 3rd	P to Q B 3rd	22. Q takes B	R to K 4th
8. Castles	K B to K 2nd	23. Q to K B 3rd	Kt to K 5th (*f*)
9. P to K B 4th	Castles	24. B takes K B P (ch)	K to R sq
10. Q B to K 3rd (*b*)	P to Q 4th	25. Q takes K P	Kt takes R
11. P takes P (*c*)	P takes P	26. Q takes K	Kt to K B 6th (double ch)
12. B to Q Kt 3rd	P to Q 5th		
13. P to K 5 6th	Q Kt to Q B 4th	27. K to R sq	Q to K 8th (ch)
14. Kt takes Kt	B takes Kt		
15. Kt to Q R 4th (*d*)	P takes B	28. R takes Q	Kt to K B 7th
		Checkmate (*g*)	

(a) A smart attack may be got by taking the K B Pawn, instead of retreating the Kt, but the defence, if carefully managed, has the best of the battle in the long run.
(b) Better to have pushed on bold y with the K B Pawn. This affords Black too much time.
(c) He appears to have no better move. If he play P to K 5th, Black retreats the attacked Kt to K sq, &c.
(d) We should have preferred R to K 2nd, since White was almost certain of winning a Pawn eventually for the one we moved.
(e) From this point M. de RIVIERE plays with great spirit and elegance.
(f) Cleverly done vol
(g) It is not often that a player has the good fortune to be enabled to give Domino's classical and beautiful mate. In the present instance it occurs very happily, and seems an appropriate finale for so pretty a game

CHESS ENIGMAS.

No. 871.—By Signor ASPA.

White: K at Q B 4th, R at K B 4th, B at K Kt sq, Kts at Q 3rd and Q B 3rd, Ps at K Kt 2nd, K B 2nd, K 2nd and 4th, Q R 2nd, 3rd, and 6th.
Black: K at Q B 3rd, Ps at K 3rd and 4th, Q B 2nd, Q R 3rd and 5th.
White to play and mate in five moves.

No. 872.—By Herr F. CAPPAZ.

White: K at K Kt sq, R at Q Kt sq, Kts at K R 8th and Q 4th; Ps at K R 2nd, K B 4th, K 2nd, Q Kt 7th, and Q R 3rd.
Black: K at Q B 6th, Q at Q B sq, R at Q B 7th, B at K B 8th; Ps at K Kt 7th, K 6th, and Q 4th.

EPITOME OF NEWS—FOREIGN AND DOMESTIC

The Prince Regent of Baden is about to visit Baden-Baden. A marriage is spoken of between him and the Princess Louisa, daughter of the Prince of Prussia, who is at present at Baden: she is only sixteen years old.

The eleventh annual meeting of the archers of the United Kingdom will be held on the race-course, Shrewsbury, on Wednesday and Thursday, the 5th and 6th of July.

The Rev. Dr. Raffles, of Liverpool, one of a party travelling in Italy, was recently arrested there, and imprisoned three days, for wearing a white hat, and having in his writing-desk a pen-wiper of the shape and colour of a cockade.

The high price of coal and freights costs the Peninsular and Oriental Company an additional £300,000 a year at the present time.

The deficit in Austria for the year 1853 amounts to above 56,000,000 florins. It is rumoured that the direct taxes will be increased 25 per cent.

Upon the occasion of the recent announcement of a free discharge to the convicts in Newgate prison, Dublin, under sentence of penal servitude, so overjoyed were four of them at the sudden intelligence that they dropped dead.

The Chamber of Deputies of Luxemburg has been dissolved, and the Electoral Colleges convoked for the 14th of June.

James Clack, one of the Bristol and Exeter Railway Company's servants, has been in that company's employ twenty years and nine months, and during that period has travelled a million of miles—a distance equal to forty times round the globe.

The *Corriere Mercantile* of Genoa, states that fresh corn-riots have occurred at Pisa, Lucca, and Siena, but that they had been successfully quelled.

The European and American Electric Printing Telegraph Company have contracted with the Admiralty to lay down a subterranean line of telegraph from Whitehall and Somerset-house to the naval establishments at Deptford, Woolwich, Chatham, Sheerness, Deal, and Dover.

The *Madrid Gazette* contains a Royal decree, authorising Messrs. Zaanronis and Co., of Cuba, to establish a regular steam service between Cuba and France and England. Eight steamers, of 220-horse power each, are to be employed.

Two tug steamers and a sloop, with divers, have been for some time at work at the wreck of the *Tayleur*, and have succeeded in recovering a portion of her valuable cargo, consisting chiefly of bale goods

A lump of pure gold, weighing 27 lbs, was lately found at Yankee hill, Columbia, by a poor Italian, who, the day before, begged a dollar to purchase a breakfast

While the proportion of police to population is in metropolitan districts one in 462; city of London, one in 244; Liverpool, one in 466; in Stockport it is only one in 3585.

The Bible presented by George Fox, the founder of the Society of Friends, to the meeting-house at Swarthmoor, near Ulverstone, and which for some time has been lodged in private hands, is about to be restored to its original place.

Two emissaries of Kossuth were hanged on the 29th ult., at St. George, in Transylvania. Their names were Joseph Varady and Franz Barfalis

Fifty out of the 53 Scotch members were present at the division on the Scotch Education Bill; and of these 36 voted for, and 14 against it.

A smart shock of earthquake was felt at Messina on the 23rd ult. It lasted about four seconds. No damage was done.

The London and North-Western Companies have agreed with Professor Gluckman for the purchase of the right to use his invention on their lines for communicating between the guards and drivers of railway trains.

M. Kossuth is expected at Sheffield on Whit-Monday, at a public demonstration in favour of the independence of Poland.

A Temperance missionary has been appointed for the town of Derby. He attends the police court every morning to hear what drunken cases are brought forward, and afterwards endeavours to reform the parties who get convicted of the offence.

The symptoms of blight, which had manifested themselves on the stems of the vines in Sicily, in the course of last month, have since disappeared, and all the plants look healthy and promising.

Mr. T. B. Macaulay, M.P., who has been unanimously elected president of the Edinburgh Philosophical Institution, in the room of Professor Wilson, deceased, has accepted "with pride and gratitude the honourable office."

Louis Napoleon's cousin, young Prince Lucien Bonaparte, the second son of the Prince de Canino, has taken holy orders.

The courts of justice in Edinburgh are now connected with the telegraph office, so that there will be means for transmitting messages to any part of the kingdom.

The ex-Queen of the French was to leave Seville for England on the 16th inst

Intelligence has been received of Dr. Livingston, the South African missionary traveller. He had penetrated as far northward as 14° south latitude, where the climate began to be very unhealthy, both he and his people having frequently suffered from fever.

Albert, *ourrier*, member of the Provisional Government of the Republic in France, who had been detained since 1848 as a prisoner of state at Belleisle, has been removed to Tours, on account of ill health.

Professor Waagen, the Director of the Picture Gallery at the Royal Museum, Hamburg, will shortly leave for London, at the invitation of Prince Albert. He stay is likely to be a long by one.

The Court of Policy of British Guiana offers to furnish £3000 for the purpose of encouraging direct steam communication between the colony and Great Britain.

It is said that three Marshals of France will shortly be created. General d'Hautpoul is named as one, and it is considered not unlikely that General Baraguay d'Hilliers may be another.

Mr. Wakley, at an inquest held a few days since, said he had, during the time he held office as coroner for M dlesex, holden inquests on two children, under seven years of age, who had committed suicide.

The Prince of Prussia has been prevailed on, at the especial request of the King, to return to Berlin on the 7th June, the anniversary of the death of their father, a day always observed by the Royal Family.

The *Africain*, of Constantina, states that an immense caravan is being at present organised to go to Timbuctoo, for the purpose of inducing the natives to commence trading with Algeria.

The foreign Princes who are Knights of the Garter are the King of Hanover, the King of the Belgians, the *Emperor of Russia*, the King of Wurtemberg, the King of Prussia, the King of Saxony, the reigning Duke of Saxe Meiningen, the reigning Duke of Brunswick, the reigning Duke of Saxe-Coburg and Gotha, and the Prince of Leiningen.

The young men employed in the City warehouses have commenced a movement to induce their employers to close their warehouses at two o'clock on Saturday.

The leprosy is spreading so rapidly in Norway that fears are entertained of its becoming a general sickness, as in the Middle Ages.

In an old house in the Rue de Klingsher, Lubeck, some workmen recently discovered a tin box, containing small silver coins worth about 58,000 francs, and all belonging to the old Hanse towns.

There has been a heavier fall of snow this cold season at Cabool than ever. In the city it fell to the depth of two yards, and in the suburbs more than that. Many houses fell, and buried several persons under heaps of mud and snow.

For Agricultural Statistics, to be collected in the three kingdoms, the sum of £18,000 is required in the Miscellaneous Estimates for the present year.

The sea is a shop for the sale of *samshoo*, or rice-whisky, in Hong-Kong, which bears over its door the following inscription: "The joys of Paradise are nothing compared to a perpetual *drunk!*"

All possible exertions are being made for completing St. George's hall, Liverpool, so as to be ready for opening at the beginning of September.

The King of Holland incurred some danger last week in consequence of the horses running away with his carriage, and galloping at a fearful rate through several streets, before the coachman could pull them in. His Majesty remained quietly seated in the carriage, and in that way escaped all injury.

The passengers on board the steam-packet *Cracens*, which left England a few months since for Australia, amused themselves by publishing a newspaper on board, called the *Southern Cross*, or *Antarctic Gazette*. Seven copies of this journal were printed and published at the Cape of Good Hope, and have reached England.

Three writers in the *Figaro* were fined 500 francs each on Saturday last, for having asserted that M. Jules Janin, at the commencement of his literary career, had written both in the *Quotidienne* and the *Figaro* two journals differing in politics.

The French Government, instead of resorting to a loan, will, it is said, obtain four millions sterling of the Credit Mobilier Bank, on the security of Treasury Bonds.

It is generally understood in military circles that on the occasion of the ensuing Brevet, a Field Marshal's baton will be conferred upon General Viscount Combermere, the oldest survivor of Wellington's compeers.

Carriage entrance 61 and 63, St. Paul's Churchyard.
Wholesale entrance 59 and 59, Paternoster-row

AT WARWICK HOUSE
every article is marked in plain figures, and Ladies will find that, while every facility will be offered for their ready inspection of a most beautiful collection of materials, the importunities to purchase (too frequent in this branch of trade) will never be permitted by the new firm of NICOLL, HAYNES, and SIMES, 142 and 144, REGENT STREET.

WARWICK HOUSE DRESS-MAKING DEPARTMENT.—This is a new feature to the above Establishment, and will offer great facilities and saving of expense to Ladies, who may more than counterbalance the increased duty or taxation by selecting their dresses from an immense assortment in the Lower Warm Rooms, and by having them made up in the new Upper Rooms by skilled artizes, whose services are engaged. It is anticipated that this novel principle will be appreciated by the Patronesses of this Establishment, as it must be manifest that a considerable part of the ordinary expense and trouble may be saved.
Ladies attending her Majesty's Drawing-rooms, and not having fixed town residences, will find the above arrangement for their use, and a private entrance in Warwick-street
NICOLL, HAYNES, and SIMES, 142 and 144, REGENT-STREET.

THE WARWICK-HOUSE MANTLE.—The configuration of the newly-adopted Garment has been Registered (3 and 7 Vic., cap. 65): the price ranges from One Guinea and upwards; but the cost is necessarily governed by the material used. Such can be bought in London only of NICOLL, HAYNES, and SIMES, 142 and 144, Regent-street.

THE WARWICK-HOUSE DRESS.—The design for this Robe has been carefully prepared for this Firm by one of the first Artists in Paris. It is not only of an ornamental but a lady-like in its colouring, and particularly in the materials adapted for the season now commenced, and is also Registered 3 and 7 Vic., cap. and can be had only in London of NICOLL, HAYNES, and SIMES, 142 and 144, Regent-street.

WARWICK HOUSE.—FAMILY LINEN
By the above Advertisements it will be seen that the Sale of all Small wares is discontinued in the Establishment, and in their stead will be now concentrated a first and well-organised Department.
That for Household Linen is pre-eminently so, and to the Honourable Respect, Public Companies, and Families, offers the fa. cering advantages—viz., names, crests, or coats of arms may be worked into the design of all damask Table Cloths, thus removing much liability of loss when sent to the laundress, or by other accidents.
Sheets in pairs, and towels, &c., in dimens, ready hemmed (and marked if necessary), all of the best description, and at the most moderate prices
NICOLL, HAYNES, and SIMES, 142 and 144, REGENT-STREET, LONDON.

AT WARWICK HOUSE,
BRIDAL VEILS with Flouncings, and other Accompaniments of a Wedding Trousseau, are always on view
LACE and other MANTLES, for Fêtes and Dinners, en demi ciliete
Also, IRISH POINT-LACE, in sleeves, habit-shirts, chemisettes, collarets; and in Honiton Lace.
BLOND LACE'TS, for her Majesty's Drawing-rooms, from six shillings and sixpence, for her Majesty's Drawing-rooms, from six
NICOLL, HAYNES, and SIMES 142 and 144, Regent-street.

FORD and COMPANY,
MANTLE, SHAWL, and FUR WAREROOMS,
34, Oxford-street,
Four doors east of Newman-street.

THE ILLUSTRATED LONDON NEWS

No. 685.—VOL. XXIV.] SATURDAY, JUNE 3, 1854. [WITH TWO SUPPLEMENTS, 1s.

THE WAR:

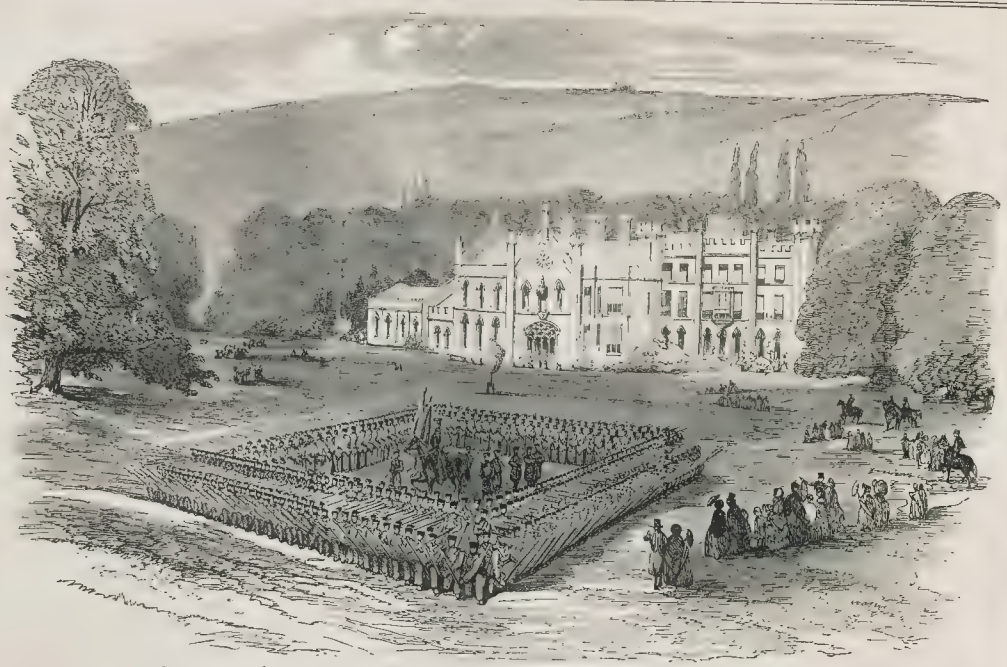
AS AFFECTING INDIA, AUSTRALIA, AND AMERICA.

THE European interests of the War are numerous and complicated; but the perils and difficulties which it will create are by no means confined to one portion or one hemisphere of the globe. The presence and power of Great Britain are felt in every quarter of the world. Our possessions are so large, and our political and commercial relations with other States so varied and so extensive, that it is impossible for us to wage war against any first-rate Power without creating a concussion whose effects may be felt in the remotest regions. Already the War embraces Europe and Asia; and circumstances may occur by which not only America, but even Australia, may be drawn within its vortex.

As regards India, the Czar is quite aware how sensitive the British people are on everything that appertains to the stability and splendour of their power in that great dependency. With dominions which have Prussia and Austria upon one line of frontier, and China and Tartary upon another, the Czar is in one sense as much our neighbour in the East as he is in the West. There can be no doubt, if he do not in the present stage of the conflict attack us on the side of our Indian possessions, that it is for want of the power, and not of the will. It is certain that intrigues and manœuvres of every kind are employed in his behalf in all the countries that lie between Egypt and India; and that he has more especially directed his efforts to embroil us with our old enemy, Dost Mahomed, and to induce the Shah of Persia to take up arms against Turkey. That he has not made similar efforts in China is, perhaps, only attributable to the fact that China is at this moment in the throes of a sanguinary revolution, and utterly unable to be operated upon, for want of a Government having power to negotiate. In estimating the future complexities of the War, those which may be evolved in Central Asia should not be lost sight of. They have, we may be sure, attracted the attention not only of the Home, but of the Indian Government. The rumour brought by the last Overland Mail, that the Czar had actually concluded treaties of alliance with Khiva and Bokhara; and that he had prevailed upon the Shah of Persia to declare war against the Ottoman Porte, is no doubt a *canard*, invented by Russian agents, with the view of distracting the public mind in England and France, and filling it with exaggerated ideas of the vast powers and resources of Russian diplomacy. But it is likely to fail of its effect—however much it may suit the temper and pursuits of Englishmen, in India, to give it credence. The Czar has chosen to give the war a religious character; and such Mahomedan allies as Dost Mahomed, the Shah of Persia, and the Khans of Khiva and Bokhara, whom he would be delighted to attach to his cause, are far more likely to be repelled than to be attracted, by his onslaught against the territory of an unoffending Mahomedan Sovereign. These Powers can have no sympathy, either with his political or his religious objects. The hostility of the Khans of Khiva and Bokhara counts for as little as their friendship—and would be a matter of small moment either to Turkey or her Allies. The hostility of Persia might be more embarrassing; and it is not unlikely that its corrupt and effete Court may, by means of Russian bribery—present or prospective—take the suicidal course of lending itself to the enemy of its power and its faith. It is certain that the Czar is endeavouring to accomplish this end. It will be unfortunate for Persia if he succeed; but it is scarcely to be anticipated that it will very greatly derange the plans of the Allies. Dost Mahomed would be a more formidable foe; but our Indian Government and its gallant army would be quite sufficient to deal with him, in case of emergency, without causing any drain of men or money from Great Britain. Our Indian Empire can defend itself; and the Czar will have too much to do on the Danube and in Circassia, to spare either a rouble or a Cossack for a war on our Indian frontier He has, it appears, two or three, if not a greater number of ships of war in the Chinese and Japanese waters; and we may expect to hear, as one result of the War, which he has forced England to declare against him, that these vessels, whatever their number will be forthwith captured. Our naval squadron in the East is reported to have been long on the look-out, and to have only awaited the arrival of the official declaration of war, to pounce upon and seize them.

Some alarm has been expressed with reference to the defenceless state of Australia. The Czar has two ships of war in the Pacific; and their commanders might as easily destroy Sydney or Melbourne, as Admirals Hamelin and Dundas could have de-

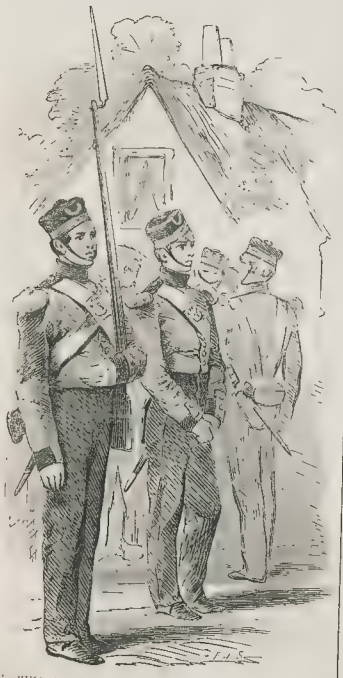
THE BALTIC FLEET POST-OFFICE, ON BOARD H.M.S. "THE DUKE OF WELLINGTON." (SEE NEXT PAGE.)



THE ROYAL BUCKS (KING'S OWN) MILITIA FIELD-DAY, IN THE PARK OF WYCOMBE ABBEY.—THE REGIMENT FORMING A SQUARE.

INSPECTION AND GALA-DAY OF THE ROYAL BUCKS (KING'S OWN) REGIMENT OF MILITIA, AT WYCOMBE ABBEY.

AMONGST the stalwart and trustworthy host of reserve who hold themselves in readiness, "when wanted," to serve their country wherever and however the national interests may require it, no corps has signalised itself more by the cheerful alacrity of its patriotism than the subject of our Engravings.



PRIVATE OF HER ROYAL BUCKS (KING'S OWN) MILITIA.

The Royal Bucks (of which Lord Carrington is Colonel in-Chief) was the first regiment enrolled under the Militia Act of 1852, and one of the first embodied for actual service. It musters 749 strong; and volunteers were so numerous, that no less than 600 refusals took place. The fervent loyal feeling amongst the men is practically manifested in the fact that, out of a total of 749, only five were absent when the regiment was called out in the beginning of May; since which, until Friday, the 26th, it was exercised in the grounds of Lord Carrington's beautiful seat—Wycombe Abbey—preparatory to proceeding to Weedon Barracks.

In October last, when the Regiment was inspected by Colonel Burke, K.C.H., Superintendent-General of the Recruiting Department for the Army, that experienced officer expressed himself in terms of warm admiration respecting its discipline and general efficiency; and the manner in which the men acquitted themselves during the May exercises elicited an equally gratifying amount of eulogium from several distinguished military officers who were from time to time present.

At the inspection which took place on the 26th ult., the usual evolutions of a field-day were gone through under the direction of the noble Colonel (Lord Carrington), in the absence of Lieut.-Colonel Fitzroy, who, not having quite recovered from the effects of the accident with which he met some time since, whilst hunting, was unable to attend. The regiment passed in slow and quick time, advanced in line, formed squares to resist cavalry, went through the manual exercise, re-formed in column, deployed and saluted. All the movements were executed with a precision and completeness that would have done honour to a force of regulars. This is the less to be wondered at, as the corps has the advantage of being officered in considerable proportions by gentlemen who have seen service in the regular army. Amongst them may be enumerated Lieut.-Col Fitzroy, Major Wm. Cavendish, son of the respected member for the county, and who formerly served in the 10th Hussars; the Captains, Grove (Adjutant since 1825), Young, Pratt, Hodgard, Creston, &c. The men have been drilled by sergeants attached to the regimental staff, who have been selected from old soldiers of the Grenadier Guards.

Altogether, it may be fairly stated, that nothing whatever has been omitted which the exertions and liberality of the Colonel, seconded by his officers, could accomplish towards securing the highest efficiency.

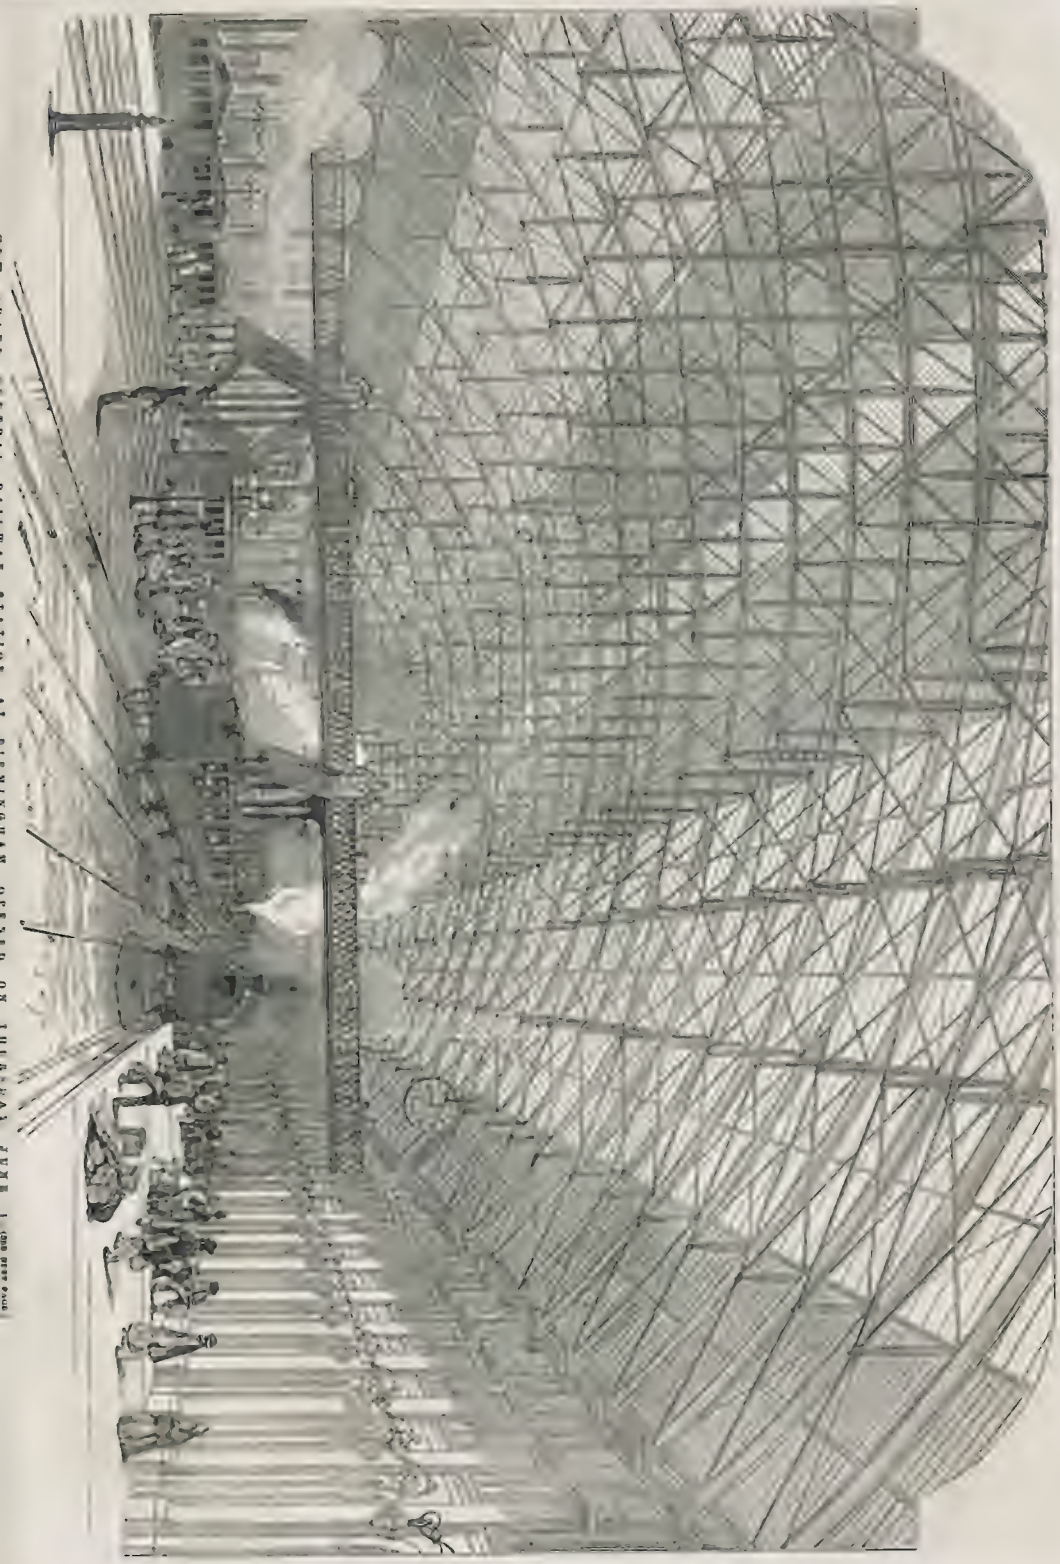
On Thursday, the 25th (the day preceding the "inspection"), there was a grand gala-day in the Abbey park. A display of Old English sports took place. The several prizes were gifts from the noble Colonel, Lord and Lady Carrington and their youthful and beautiful family, accompanied by numerous friends, were present. On the "gala-day" an admission charge of one shilling was made to the general public, who assembled in such goodly numbers that a considerable sum was realised, and is to be appropriated to the Fund for the Benefit of Soldiers' Families.

Some interesting historical recollections are connected with the antecedents of this corps. It is the only militia regiment in Great Britain bearing the double designation of "Royal" and "King's Own." Both titles were bestowed by George III.: the first when the regiment acted as the Royal Body guard at Weymouth, in 1794; the second, in 1808, when men and officers volunteered for military service in the Peninsula. It was likewise the first militia corps which volunteered to go to Ireland during the "troubles" of 1798; and, on its return, in 1799, volunteered into the regulars, and furnished 400 men, with a due proportion of officers, to the 4th, or "King's Own" Infantry—the staff of the militia regiment being still retained at home, and the ranks quickly filled. The offer to proceed to Spain in 1808 was declined, but in most complimentary terms, by the Ministry of the day; and, in 1813, the Royal Bucks once more went to Ireland, whence, on the formation of "provisional battalions" of Militia, it joined the 1st Provisional Battalion, and embarked for France, where it remained whilst the Allied armies held possession of that country. One of the officers, now on the staff, Captain Grove, is a veteran of forty-seven years standing. He joined in 1807, and in 1812 volunteered into the 14th Foot, with which regiment he served in Sicily, Malta, and Genoa, and afterwards with his battalion in France.

It will thus be perceived that the Royal Bucks King's Own is a corps of historical distinction, whose loyalty and patriotism are hereditary. The majority of its present members are fine young fellows in the early prime of manhood.

Officers and men have volunteered for any service whatever that may be required; and their being selected so soon for duty at Weedon is a marked compliment to the praiseworthy spirit evinced by them. Rumour whispers that it is not improbable that, at no distant day, the regiment may have the honour of doing duty at Windsor.

NEWS STORE IN THE BALLARAT GOLD-FIELDS.—(SEE PRECEDING PAGE.)



NEW GRAND CENTRAL RAILWAY STATION AT BIRMINGHAM.

THE progressive extension of the railway system has led to the erection of several buildings for its general purposes; and these structures are entitled to rank amongst the most stupendous architectural works of the age. It is true that a certain critic of the day has sneered at the general taste displayed in our railway edifices, and the designs of engineers may not be sufficiently ornate for the architect's standard; nevertheless, the combined genius of both professions to meet our railway requirements have produced some striking results; and the London and North-Western Company, as the proprietors of the largest railway in the kingdom, have just added to their buildings a station of corresponding magnitude; erected for the accommodation of their own immense traffic and that of the Midland, Stour Valley, and North Staffordshire lines. This grand Central Station, which was opened on Thursday last June 1st, is situated in New-street, Birmingham. The entrance is at the bottom of Stephenson-place, where is a plain gateway leading to the main front of the station and hotel, which we shall describe more fully and illustrate next week. Entering the Station by an arcade, we arrive at the booking-offices for the respective railways; and, passing through these, emerge on a magnificent corridor or gallery, guarded by a light railing, and open to the Station (but enclosed by the immense glass and iron roof), from whence broad stone staircases, with bronze rails, afford access to the departure platform. We then stand on a level with a long series of offices, appropriated to the officials of the Companies; and a superb refreshment-room, about eighty feet long by forty broad, divided into three portions by rows of massive pil ars.

We have now reached the interior of the Station, which our Artist (Mr. J. M. Williams) has so accurately and effectively represented upon the preceding page; and the details of which we abridge from *Aris's Birmingham Gazette*:—

We must ask the reader to imagine that he stands on a stone platform, a quarter of a mile long; that behind him is a range of forty five massive pillars projecting from the Station wall; that in front of him are ten lines of rails, four platforms, and a broad carriage-way, bounded by another range of forty-five massive iron pi lars; and that, above all this there stretch a, from pillar to pillar, a semicircular roof, 1100 feet long, 205 feet wide, and 80 feet high, composed of iron and glass, without the slightest support except that afforded by the pillars on either side. Let him add to this, that he stands on a stone platfor a quarter of a mi e long, amidst the noise of h f a dozen trains arriving or departing, the trampling of crowds of passengers, the transport of luggage the raising of veils, and the noise of two or three hundred porters and workmen, and he will have a faint pic n of the scene witnessed daily at the Birmingham Central Railway Station.

The roof merits more particular description. It consists of 36 principals or arches of iron, strongly framed together. The upper bar, which is called a rib, is curved in the segment of a circle; and each end rests upon a pillar, but between the rib and the pi lar an ingenious system of rollers is introduced, so as to allow of either expansion or contraction by atmospheric changes. From each rib depend, at regular intervals, twelve "suspenders," which are laced together by diagonal bars. The lower ends of the struts are attached to a bar of iron, called the tie-rod; and which corresponds in curvature with the rib. Each of these principals weighs about 25 tons. They are placed at intervals of 24 feet from each other. Each rib is composed of five distinct pieces, riveted together. These pieces, or metal bars were raised by means of a travelling stage; and the last rib was fixed on the anniversary of the day when the first pillar was set up. The pillars weigh 3 tons 12 cwt. each. From rib to rib numerous "purlins" are stretched; and these serve to support the smaller divisions of the glazed roof. The roof is composed of glass and corrugated iron—the former bearing a proportion of three-fourths to the latter, which runs along in a broad strip on each side, and in two bands on the crown of the arches.

The ends of the station, both at Worcester-street and Navigation-street, are screened off down to the tie rods with glass. It is prop sed, we understand, to continue the roof to Navigation-street-bridge, but the continuation will be ridge-and-furow, like the Great Exhibition of 1851. We must not omit to notice that ample provision is made for ventilat on, by raising a lantern over the centre bay of the principals, and continuing it down the whole length of the roof. An elegant iron bridge crosses the station from the booking-offices' corridor, and affords passengers a safe and efficient means of reaching the further platforms by flights of steps descending from the bridge.

The Station-roof has been constructed by Messrs. Fox and Henderson; and the building contracted for by Messrs. Bremner and Gwyther. The engineer is Mr. Baker, who has been assisted by Messrs. Livock and Son.

We shall complete our description and illustration of this fine Railway structure next week.

CALENDAR FOR THE WEEK.

SUNDAY, June 4.—Whit Sunday.
MONDAY, 5.—Whit Monday.
TUESDAY, 6.—Census taken, 1841. Jeremy Bentham died, 1832.
WEDNESDAY, 7.—Barber Week. Oxford Term begins.
THURSDAY, 8.—Dr. Chandler died, 1766.
FRIDAY 9.—St. Anthony. Lilly, the astrologer, died, 1681.
SATURDAY, 10.—Oxford fired at the Queen, 1840.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING JUNE 10.

Sunday	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
M. A.	M. A.	M. A.	M. A.	M. A.	M. A.	M. A.

TO CORRESPONDENTS.

SAXONENSIS.—*Arms* of Praed, of Tre vethow: Az. six mullets arg.—three, two, and one. Crest: Out of a five-leaved ducal coronet or, a unicorn's head arg., maned and horned gold. Arms of Rosearrock, of Cornwall: Or, a chev. gu. in chief, two roses of the last; in base a fleur-de-lis az. Crest: A lion ramp. ppr. ducally gorged arg. We cannot find the Coats of Hammond, or Sise, of St. Ives.

AN OLD SUBSCRIBER.—Mr. Benyon de Beauvoir is dead.

ARTHUR.—There do not appear to be any Arms registered to the name of Merchave.

A SUBSCRIBER.—In the absence of a paternal Coat of Arms, a mother's family Arms cannot be adopted.

NEPTUNE.—There is no purchasing in the Royal Navy.

A SUBSCRIBER, Woodford.—The children of English parents, born abroad, are, to all intents and purposes, English.

UN HOMME MILITAIRE is desirous of knowing why, in the British army, there is no 5th Dragoons.

G. H.—Nec prece nec pretio.

W. T.—There are not, we believe, any registered Arms to the name of Tomes. The "authority" from which our Correspondent derives his information as to the "Windsor" bearings, is no authority at all.

A. Z., Abingdon.—From your description, we should suppose your coin to belong to a numerous class termed "reading counters," made at Nuremberg in the sixteenth century. It is of no value.

J. S., Lancing, Sussex.—Count Alexander Walewski, Ambassador of France at the Court of St. James's, married, first, in 1831, Catherine Caroline, youngest sister of the present Earl of Sandwich. Her lady-ship died in 1834, leaving two children, since deceased. The present Countess Walewska was correctly described in the brief biographical memoir appended to her portrait in our last Number. The Count has two children, one son and one daughter, by his second wife.

E. W. D., Ireland.—We cannot inform you.

E. A. M.—A mercurial barometer is much better than an aneroid. A standard barometer of Barrow is the best.

A CORRESPONDENT.—The hours of attendance for the allowance of spoiled stamps are from Twelve till Two o'clock, on Tuesdays, Thursdays, and Saturdays, during which time affidavits sworn in the country cannot be received.

R. H.—The proportion in the human family, in which males and females are born, is as 106 to 100.

C. T. A.—Our statement is correct. The "*Royal Albert* steam-ship was named by her Majesty, and not by the Princess Royal, as stated by some journals.

R. S.—Invariably; but always kept in the rear for the purpose of affording aid to the wounded, and their services are made available wherever required. In cavalry the trumpeters remain with their troops; and in the infantry the drummers march with their companies.

*** THE CENSUS.—The Two Supplementary Pages, with Corrections, are given in the Supplement published with the present Number. In binding, they form pages 33 and 34 of the Census, published April 22.

THE SEAT OF WAR.

In preparation, several Large and Important

ILLUSTRATIONS OF THE WAR;

INCLUDING

A PANORAMA OF VARNA,

And the Adjacent Coast, from a Drawing by Lieutenant MONTAGU O'REILLY. Also a Large Engraving of

THE ALLIED COMMANDERS IN THE EAST.

The Fort of Chaneh Kaleh (Dardanelles); the *Magicienne* in Hango Bay; Views in Finland; Sketches at Schumla, &c., &c.

Next Week,

A SPLENDID VIEW OF THE CRYSTAL PALACE AT SYDENHAM.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JUNE 3, 1854.

EIGHT thousand French troops have landed in the PIRÆUS, and a detachment of the British fleet is cruising off the shores of Greece. The occupation of that kingdom is complete; and the King and Queen of Greece have received a very significant warning that if they do not cease their intrigues in favour of Russia, and their attempts to stir up rebellion in Turkey, they will be dethroned without further parley. The Austrian Government has been officially informed by Great Britain and France of the step thus taken, and has expressed its entire satisfaction and full concurrence; from which the Czar may learn, if he were previously unaware of the fact, that he need reckon no longer upon any aid or comfort from the Austrian Sovereign. Though to the impatient mind of people at home, who long to hear of victories, such as the capture of Sebastopol, Revel, Helsingfors, Cronstadt, and St. Petersburg, the war may seem to march but slowly, events are visibly converging to the point which will convince the Czar that he stands alone—that Greece cannot, that Prussia dare not, and that Austria will not, give him the slightest assistance; and that he will have to bear, ere many weeks elapse, the hostility not only of the great Maritime Powers, but of Germany and Scandinavia. All that his relatives and friends appear anxious to achieve in his behalf, is the restoration of the *status quo ante*. But the day has gone by for such a compromise. Such terms might have been granted him six months ago, but cannot now be entertained. To allow the Czar to withdraw from the Principalities without punishment, would be neither just nor politic. His word is not to be trusted. He has broken his faith. He has proved—and proves every day—that falsehood is a part of his system; and "he lies," as the Great Napoleon said of his brother and predecessor, "both to God and to man." He must, therefore, make restitution for the past, and give security for the future. Turkey requires a "material guarantee;" and Europe requires one in a still greater degree, not only on the shores of the Black Sea, but on those of the Baltic.

While Sir Charles Napier has been acting in the Baltic so as to give warranty for the belief that the rumoured seizure of the Fort of Gustaffsvern, which was extensively circulated, was premature only, and destined to be verified on a future day, the Turks, even without Anglo-French assistance, have been able to repulse the Russians from before Silistria. At the date of the last accounts, the fortress still held out; and if ultimately it be obliged to surrender, the first business of the Allies, now rapidly arriving on the scene of action, will be to re-capture it, provided that it be deemed advisable to molest Prince Paskiewitsch in a position of which he will not be able to take the slightest advantage. If the way to the Balkan were clear before the Russians, the possession of Silistria would be absolutely necessary to them; but, with the Turks at Schumla, the British and French fleets in the Black Sea, and large detachments of the British and French armies at Varna, Prince Paskiewitsch will be unable to turn the possession of Silistria to any ultimate benefit, even should he succeed in capturing it—a matter which, to say the least, is extremely doubtful, and which will cost him much time and loss to accomplish. On the 18th ult. Lord Raglan and Marshal St. Arnaud, left Constantinople, in separate steam-vessels, for Varna, whither they were followed by the Seraskier, or War Minister of the Sultan. On their arrival a Council of War was held, on which the future plan of the campaign was decided upon. Subsequently the British and French Generals had an interview with Omer Pacha, so that all the doubt and uncertainty which may have previously existed in the mind of the Ottoman Commander, as to the arrival and plans of the Allies, have been removed.

Of course no information of the plan of the campaign has been permitted to transpire; but it is known that the Allied troops at Constantinople will be forthwith conveyed to Varna, and that another portion, from Gallipoli, will be stationed in the rear of the Balkan, at Adrianople. A combined military and naval attack will in all probability be made upon Sebastopol as soon as the necessary arrangements are completed for that purpose. We shall not indulge in the habit of some of our contemporaries, of criticising the operations, present or prospective, either of fleets or of armies. The British public has confidence in the Commanders of both services; and, if apt, at times, to be impatient that so little has yet been done, relies upon their judgment and sagacity as much as upon their valour; and anticipates, from the union of those qualities, and the excellent spirit both of soldiers and sailors, a certain and complete, though it may be a tardy, victory of our arms, and of the rightful cause for which we struggle.

WE regret to learn that Lord Raglan and Marshal de St. Arnaud have come to the resolution of preventing, as far as they can, the transmission of news from the seat of war. It is understood that several of the Correspondents of the London daily journals, at Constantinople and elsewhere, are connected with the army. These gentlemen have received intimation that they cannot be allowed to proceed with the army on active service, unless they renounce their connection with the press; and as military regulations are necessarily paramount to all others in the minds of military men, they must, of course, submit. We think the result will prove unfortunate. The dislike of Marshal de St. Arnaud to the press is intelligible; but Lord Raglan ought to know sufficient of the temper and habits of his countrymen, to be aware that any censorship or silence of the newspaper press, which may be tolerated in France, will not be tolerated in England. The people of this country must and will have news from the seat of war; and if the military authorities will not assist the indefatigable Correspondents of the London press in procuring accurate intelligence, he need not be surprised if reports not quite so trustworthy as might be wished should find their way into the journals. He may control military men, and prevent them from sending reports of the operations of the war in every respect to be depended upon; but he cannot prevent civilians from gathering and transmitting news and opinions. The public is too earnest in the war to wait without murmurs until it may suit the convenience of General Officers to write their dry official despatches, and until the *London Gazette* comes lumbering into daylight with its small modicum of intelligence, a month or six weeks after date. The commanding officers of the Anglo-French expedition will, with all their power and despotic authority, find the Correspondents of the daily and weekly press too strong for them. They may shut up one source of information, but the stream will percolate into new channels; and the *quasi* ubiquitous gentlemen who rejoice in the title of "Own Correspondents" will establish agencies undreamed of by military martinets; and collect news in spite of difficulties and obstructions of every kind. As it will be utterly impossible to silence them, and as the value of authentic information is not to be denied, might not the Generals in command discover a method of utilising what they cannot prevent? We are quite aware that a Newspaper Correspondent may inadvertently publish a fact which it might be for the interest of the army, and the convenience of the General, to conceal; but we are quite certain that there is no gentleman, whether a soldier or a civilian, in the employment of the London press, who would give currency either to a fact or to an opinion if he knew it would prove detrimental to the public service. If the military authorities could so far conform to the spirit of the times, and to the natural wishes of the people, as to put themselves in friendly communication with the Correspondents of the newspapers, and to inform them in confidence of any facts or rumours, which they might deem it advisable, for any reason whatsoever, to abstain from publishing, we are quite certain that those gentlemen would make it a point of honour and of duty to obey. But if military men set the press at defiance; if they put obstructions in the way of those who seek for accurate information, and for no other; and if they look upon them as spies, and interlopers, and public enemies, it is to be expected that evil consequences will result. News will be transmitted from the seat of war, however much the Generals may object; and they will only have themselves to blame if that news should not in every instance be quite correct, and if it should now and then be tinctured with a spirit of hostile criticism. The people of England do not like their brave soldiers to fight in the dark. Publicity is the rule of life in all our national affairs; and we should as soon tolerate a Parliament sitting with closed doors, as an army fighting our battles without a record of its doings in the public journals. Omer Pacha is reported to have followed the example of Lord Raglan and Marshal de St. Arnaud, if he have not been directly instigated by them to ostracise the public press. We earnestly hope that the three Generals may be induced to reconsider the matter. With a fortunate unanimity, the British press and its Correspondents are agreed with the people, that the war is just and necessary. They have no wish but to report facts correctly, and to supply that daily and weekly history which is the life-blood of a free people. The Generals might make useful allies of the Newspaper Correspondents. If they choose to transform them into unrecognised hangers-on of the army, or as bitter critics of its operations, we think, with all due deference, that they will be ill-advised.

A CASE occurred in the Court of Common Pleas, a few days ago, which, although originating out of circumstances in themselves trivial, involves some curious and delicate questions of constitutional freedom. Our boasted Liberty of the Press, and our noble Jury system are, as it seems to us, to some extent imperilled by a decision which has been come to in the case of Hakewill, *v.* Ingram, on Saturday last. The circumstances of the case are simply these:—About the time when Mr. Fitzroy's Bill for the Protection of Women was passing through Parliament, the *Lady's Newspaper*, in the course of advocacy of a measure so important to the peculiar interests of its readers, published an article entitled "Woman and her Master," in which the insufficiency of the then existing law for the protection of women from wrong was insisted upon, and illustrated by two cases which had recently appeared in the Law and Police Reports. One of these cases was that of Mrs. Hakewill, of whom it was stated by the writer in the *Lady's Newspaper*, that, after having obtained against her husband a judgment in the Ecclesiastical Court, for the restitution of conjugal rights, she "found her miseries so aggravated on her return to her husband, that she was compelled to resort to a police-court for the little help which our glorious English Constitution gives to the English wife and mother."

Upon the appearance of this publication, Mr. Hakewill, the husband in question, brought an action against the proprietor of the *Lady's Newspaper* for libel, and the case was tried before Mr. Justice Crowder, the question turning simply upon whether the matter complained of was libellous or not. The Judge held that it was, and directed the Jury accordingly; but the Jury held that it was not, and insisted upon their view of the case, by returning a verdict for the defendant. Against this verdict the plaintiff now appeals; moves for a new trial, upon the ground that the verdict was contrary to the ruling of the Judge; and this motion, after argument by counsel on both sides, the Court affirms—three Judges (Chief Justice Jervis, Mr. Justice Cresswell, and Mr. Justice Crowder) being in favour of the rule, and Mr. Justice Maule, alone, against it.

Now, as we observed at the outset, constitutional questions of very great importance are placed at issue in this in itself really trumpery case. There is first the grave question as to whether

a JURY, in civil actions for libel, is bound to submit to the laying down of the Judge as to the libellous nature of the matter complained of; and to give a verdict for damages, in a case where in their consciences they are unanimously of opinion that no damages has been done. In criminal suits for libel, the contrary principle was boldly and triumphantly asserted by Erskine half a century ago, and has since been confirmed by Act of Parliament; the Jury alone having to decide both upon the fact of publication, and as to whether the matter published be a libel or not. In civil cases the principle has not been established upon quite so broad a basis, nor upon the same authority, but still is pretty well defined. According to the judgment of the Court of Common Pleas, on Saturday last; "the Jury, no doubt, have the power of deciding whether a publication is libellous or not; but they are also bound to take from the Judge what is the legal definition of a libel." We do not dispute the position as here set forth by the learned Judges, from whose application of the principle we feel bound to dissent; but we aver that, in the case of Hakewill v. Ingram, all was done that is above prescribed;—the Judge explained to the Jury "the legal definition of a libel;" and the Jury, taking that definition into account, decided that the publication complained of was not libellous; or, in the words of Justice Maule—"In this case the Jury, having been properly directed as to what a libel was, had found that this publication was not libellous." Now, we submit that a verdict arrived at in this manner ought not lightly to be disturbed; and that, if the Judges were to pretend to go further than is above prescribed to them, and—instead of confining themselves to defining what a libel is—were to insist upon deciding whether every particular publication, the subject matter of an action, be a libel or not, they would entirely supersede the higher and more responsible province of a Jury, leaving them only to decide upon the bare fact of publication, and, supposing the Judge to have found for the libel, the amount of damages to be awarded;—the last part of the question being a somewhat difficult one in cases (such as that of Hakewill v. Ingram) where, contrary to the view of the Judge, they might consider that no libel had been published, and, consequently, no damages at all ought to be given.

With respect to the case, as it affects the liberty of the press, and particularly in what respects the exercise of some of its most important and useful functions, we are diffident of saying anything at present, as our doing so might savour of pretending to prejudice the merits of an issue yet pending before a court of law. We will content ourselves with observing that, as the question first discussed is one which affects the relative rights and authority of Judges and Juries, this second question is one which affects the rights of public opinion generally, and one therefore entitled to most serious and dispassionate consideration.

THE COURT.

The Queen and Prince Albert, accompanied by the Prince of Wales, Prince Alfred, the Princess Royal, the Princesses Alice, Helena and Louise, Prince Arthur and Prince Leopold, arrived in town at two o'clock, on Tuesday, from Osborne. In the evening, her Majesty honoured the Royal Italian Opera with her presence. His Royal Highness Prince Albert, attended by the Marquis of Abercorn, Viscount Torrington, and Captain Du Plat, honoured the Archbishop of Canterbury with his company at Lambeth Palace.

On Wednesday the Queen held a Court at Buckingham Palace. His Excellency the Chevalier Bunsen had an audience of her Majesty, and presented his letters of recal as Envoy Extraordinary and Minister Plenipotentiary from the King of Prussia. In the evening the Queen and the Prince Consort, with the Prince of Wales, the Princess Royal, and Princess Alice, honoured the performance of the French Plays with their presence.

The Marquis of Ormonde and Mr. Frederick Cavendish have relieved of their duties as the Lord and Groom in Waiting.

Her Royal Highness the Duchess of Kent, attended by Lady AREA Maria Dawson and Lord James Murray, arrived at her residence, Clarence-house, St. James's, on Saturday afternoon, from Osborne, Isle of Wight.

The Marquis of Lansdowne opened the magnificent saloons of his fine mansion on Tuesday night for the reception of company. A brilliant circle of the aristocracy and fashionable world responded to his Lordship's invitation.

The Earl of Carlisle returned to England, from his Eastern tour, on Tuesday last.

NAVAL AND MILITARY INTELLIGENCE.

ON the 6th June the Admiralty wish to receive tenders for the conveyance to Constantinople of 100 tons of guns, the heaviest of which weighs six tons. On Monday tenders were to be sent in for the hire of one or two ships of from 500 to 600 tons, to convey drafts of regiments, consisting of about 436 men, from the river Thames, Portsmouth, and Cork, to Quebec.

THE BREVET.—There is no longer a doubt on the subject of the issue of a Brevet, but as to the number in which each grade it may reach is not fixed. The belief is that the following will be pretty near the limits:—All the Lieutenant-Generals of 1846 to be Generals. All the Major-Generals of 1846 to be Lieutenant-Generals. All the Colonels of 1846 to be Major-Generals. The Lieutenant-Colonels, down to Brevet of 1846, to be Colonels. The Majors, down to Brevet of 1846, to be Lieutenant-Colonels. All Captains down to end of 1843, to be Majors. So it we understand to be the extent to which promotion is to be immediately given, and we hope that before the next month (June) is a week old we may have the satisfaction of announcing a large Brevet, so long expected and so much needed.—*Naval and Military Gazette.*

ARMAMENT OF THE "ROYAL ALBERT."—Mr. Hall, from the Ordnance Department has been at Sheerness, this week, taking the necessary admeasurements on board the *Royal Albert* screw steam-ship for her armament, gun-carriages, &c. She is not to carry 121 guns, as has been currently reported. The true armament she is to carry is as follows:—Gun-deck, 32 32 pounders, 68 cwt., 9 feet; middle deck, 32 32-pounders, 58 cwt., 9 feet 6 inches; main deck, 32 32-pounders, 42 cwt., 8 feet; upper deck, 12 68-pounder, 95 cwt., 10-inch shot or shell, on a traversing pivot, and 24 32-pounders, 42 cwt., 8-feet guns. She is also pierced for 3 waist-guns on each side on her upper deck, which can at any time be put into her if necessary. A strong staff of the riggers and labourers are engaged getting in her machinery by the masting sheers.

THE *Stromboli*, 6, steam-sloop, Commander Hall, sailed from Portsmouth on Sunday morning, with shot and shell, for the Black Sea fleet. The *Tribune*, 36, steam-frigate, the Hon. Captain Carnegie, sailed on the same evening for the Mediterranean and Black Sea.

MR. E. J. SMITH, a senior clerk in the Inland Department of the General Post-office, has been selected by Lord Canning to act as postmaster to the British expeditionary force in Turkey. He is to be stationed at Constantinople, and will be placed under the immediate orders of the Commander-in-Chief.

ESSEX RIFLE MILITIA.—The Essex Rifle Regiment of Militia were marched from the Tower on Wednesday, under the command of their Colonel, Lord Jocelyn, to Hyde-park, where the men went through a number of field evolutions, in the presence of several distinguished military officers—who were pleased to express their satisfaction at the precision and soldier-like way in which the men accomplished several most intricate manœuvres. Whilst the men were on the ground, her Majesty accompanied by some of the Royal children, drove through the Park, and the regiment, forming line, saluted the Queen.

ENGLAND AND FRANCE.

[We regret that we are unable to publish, this week, the Music of the following SONG. It will appear in an early Number of the ILLUSTRATED LONDON NEWS].

I.

Who dare disturb the lands,
Arming their felon bands,
Lifting their blood-red hands?
Let them advance!
Two mighty States combined,
Both of one heart and mind,
Combat for humankind,—
England and France!

II.

Friends of the rightful cause,
Guardians of Europe's laws;—
Guilt in its schemes shall pause,
Awed by their glance!
Where their twin banners wave
Freedom shall bless the slave;—
Glory attend the brave
England and France!

III.

Foes of our Peace and Right,
Tempt not the useless fight;—
Vain is your arm of might,—
Vain, sword and lance!
True hearts repeat the cry,
"England, and Liberty!
England, and Victory!
England and France!"

Note.—The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The corrected reading of the barometer decreased from 29.83 inches at the beginning of the week, to 29.59 inches by the 27th; increased to 29.69 inches by the 28th; decreased to 29.51 inches by the 29th; increased to 29.82 inches by the 31st; and decreased to 29.78 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29.714 inches.

The mean temperature of the week was 5.7°, being 2.9° below the average of the corresponding week during 38 years.

The range of temperature during the week was 28.2°, being the difference between the lowest reading on May 29, and the highest on June 1.

The mean daily range of temperature during the week was 21.2°.

Hail fell on the first five days of the week; the fall on the 27th being very heavy: on the 28th a thunder-storm occurred, and on the 30th thunder was heard; but lightning was not seen. With the exception of the last two days, when it was fine and dry, the week has been unsettled and showery, the air being in gentle motion only.

Rain fell during the week to the depth of rather more than one inch and four-tenths

For the month of May the mean reading of the barometer, at the level of the sea, was 29.869 inches. The highest temperature during the month was 70°, on the 17th and 20th; and the lowest was 34.8°, on the 30th. The range of temperature during the month was, therefore, 35.2°. The mean of all the highest temperatures by day was 61.9°, and of all the lowest by night was 43°. The mean daily range of temperature during the month was, therefore, 21.2°. The mean temperature of the month was 51.6°, being 1.7° below the average of the corresponding month during 38 years. The mean temperature of evaporation for the month was 47.9°. The mean temperature of the dew point was 43.5°. The mean degree of humidity was 76 (complete saturation being represented by 100). The fall of rain during the month was 3.6 inches.

Lewisham, June 2, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending May 27, the births of 860 boys, and of 787 girls, were registered. The numbers for the same week in the preceding nine years were 701, and 671 respectively. The number of deaths registered within the same week was 1143, exceeding the average of ten years, corrected for the increase of population, by 127.

CONVERSAZIONES OF THE INSTITUTION OF CIVIL ENGINEERS.—On Tuesday evening the President, James Simpson, Esq., gave the annual conversazione, which was attended by the leading men of science, artists, and their patrons. The fine theatre and the drawing-rooms, in the house of the institution in Great George-street, Westminster, were prepared with great taste for the occasion. The walls were hung with some choice pictures by Etty and Landseer, and other distinguished painters; and upon the tables were some exquisite productions in metal-work, and the ceramic arts. In the theatre, the exhibition of working models was very attractive, including those of the *Tyne* steam-ship, and Parratt's life-raft. Upon the central table, the display of war inventions excited much interest; and rifles and pistols were numerous among the latter was Jones's patent revolving pistol, with from four to twelve barrels, in which the revolving motion is entirely superseded, and the operation of cocking for the whole number of discharges is performed at the time of loading. The lighting and ventilation of the theatre was most efficient; and the entire arrangement, under the superintendence of Mr C. Manby, F.R.S., the able Secretary of the Institution, received high commendation. The rooms were crowded throughout the evening.

THE NATIONAL SOCIETY.—The annual general meeting of the members of the National Society for Promoting the Education of the Poor in the Principles of the Established Church, was held at the Central School-room, Westminster, on Wednesday, at twelve o'clock; his Grace the Archbishop of Canterbury in the chair. The attendance was exceedingly small. The total number of schools now in union with the society amounts to 10,202. Of these 182 have been added during the last year. From the training institutions in Manchester-buildings, and in Smith's-square, 63 masters and 68 mistresses have been sent out since the date of the last report to take charge of schools.

CONSECRATION OF THE LAMBETH NEW BURIAL-GROUND.—The solemn and imposing ceremony of consecrating the new burial-ground for the extensive parish of Lambeth was performed on Tuesday afternoon, by the Lord Bishop of Winchester, in the presence of most of the parochial officers and a great number of influential parishioners. The spot selected for burying the dead of this parish is situated in Garrett-lane, between Tooting and the Wandsworth road, and comprises thirty acres of land—twenty acres to be appropriated for the interment of members of the Church of England, and the remaining ten acres for the burying of Dissenters. The whole is undergoing a thorough drainage, and in the course of a year or two, when properly laid out with trees and shrubs, will present anything but an unpleasant appearance. The Legislature having wisely ordered that every burial-ground in the parish of Lambeth should be closed from this day, in future the interments must take place in this ground.

FARRINGDON-STREET EXTENSION.—The demolition of a considerable number of houses is in progress in Silver-street, Turnmill-street, Charles-street, Castle-street, and Peter-street, Great Saffron-hill, to clear the ground for the formation of this important thoroughfare. In addition to the above, the Commissioners appointed by the City to carry out this improvement have obtained possession of the houses required to be pulled down in Coppice row, Falcon place, Ray-street, Hatte-place, Mutton hill, Vine-street, Onslow-street, and Round-court, and in a few days their demolition will commence.

LATEST INTELLIGENCE.

THE BOMBARDMENT OF HANGO.

In the afternoon of the 22nd ult., the *Dragon*, Captain Wilcox, was ordered to take up a position close by an island, where a buoy had been previously laid down. This position flanked the principal fort, Gustavus Svard, and only two guns evidently, out of the many that mounted the walls, could be trained to bear upon her. The vessel was now ordered, by signal from the flag-ship, to try range of guns. She immediately opened fire. After the second or third shot the fort replied. The ship and fort thus continued the engagement for about three hours and a half, during which several of the *Dragon's* shells burst right over the centre of the fort, and must have caused severe loss. Two of the shells which struck the walls did considerable mischief, smashing up one of the embrasures. The engagement was not a rapid one; on the contrary, a slow and steady fire was maintained on both sides. The *Magicienne* was ordered, somewhat later in the day, to a corresponding position on the opposite side of the small, narrow, rocky island in question, and opened an effective fire upon one of the masked batteries on the land side, into which she threw several shells. The battery replied with shell, and, it is thought, with red-hot shot, but the *Magicienne* was evidently out of range. The *Basilisk* next joined the group. Meanwhile, the *Hecla*, Captain Hall, was engaging the fort Gustavus Adolphus. Several of her shot and shell told with great effect. All the shots from the fort against the *Hecla* fell short. The *Hecla* remained at her anchorage for the night. The other steamers were recalled about half-past four. The guns of the forts must have been worked at extreme elevation. The fire was, therefore, a plunging one, and but little ricochet in consequence. The *Dragon* alone had any casualties—one man killed, and another wounded. She was struck three or four times.

GALLANT EXPLOIT OF THE "ARROGANT" AND "HECLA."

The *Arrogant* has been detached from the fleet for a considerable time, employed in reconnoitring the enemy's posts and shores about Hango Bay. While so employed, the *Hecla*, commanded by Captain Hall, whose services in the China war are so well known, joined her. Both ships planned a little expedition of their own, which has turned out quite a gallant manœuvre.

The two ships proceeded up a narrow river, and on anchoring on the evening of the 19th ult., the enemy, from behind a high sand-bank, in a thickly-wooded place, fired upon one of the boats, which was at that time pulling at a distance of from six to eight hundred yards from the shore, round-shot also striking the *Hecla*. Both ships beat to quarters, cast loose their guns, loaded with shot and shell, which they poured into the wood and against the sand barricade, whence the enemy was quickly dislodged. The vessels were not further molested that evening—the anchorage was shifted for the night, and all made snug, with watches posted.

At two in the morning both ships again weighed, the *Hecla* leading, both ships' companies standing by their guns. After about three hours quietly feeling their way along the intricate navigation of the river, both ships came suddenly within range of an enemy's battery. The *Hecla* opened fire, which was quickly answered from the forts; the proximity upon which stood the battery was crowded with soldiers, fine stalwart-looking fellows, with long grey coats, and spiked steel helmets glittering in the sun. While the battery was firing upon the *Hecla*, the *Arrogant* let fly a whole broadside amongst the soldiery. A troop of horse artillery, when the smoke cleared off, was observed scampering away. A prolonged and heavy fire of musketry now ensued from the wood, and Minié balls fell thick on board both ships. The *Arrogant* now got aground within twenty yards of the battery. However, before attempting to haul the ship off, the enemy's guns were dismounted by a broadside, and the ship was then got off in safety. On passing the fort where the guns had been dismounted, a terrible sight was witnessed—a gun during its blown to fragments, guns dismounted, helmets and knapsacks strewed about without owners.

The town of Kokness now opened, and there lay the ships, the objects of the expedition. The *Arrogant* was obliged to anchor here, as the water was shallow; the *Hecla* proceeded on, but another battery now opened fire upon her. The *Arrogant*, swung broadside on, kept up a cannonade, while the *Hecla* passed, firing shells on the enemy as she did so, and, on completion of a barges, took her in tow, and steamed away with her, to the horror of the inhabitants. When this little expeditionary force was returning, they were joined by the *Dauntless*, she having been sent on by the Commander-in-Chief to ascertain the cause and source of the firing, which was distinctly audible as the squadron steamed into Hango Roads. The *Hecla* had several shot through her funnel, steam-pipe, and hull, one shot passing right through the ship's side. The round-shot and shell went over the *Arrogant*. Both ships were studded with Minié balls. The *Arrogant* had two men killed, and four wounded; and the *Hecla* had one man shot, and four wounded.

Captain Hall was resolved not to leave without carrying back some military trophy. He gallantly landed with his marines, threw them out as skirmishers, while himself and a party of men hoisted one gun (an iron one) into his boat, and placed it on board the *Hecla*.

The *Arrogant* and *Hecla*, with their prize in tow, joined the fleet on the 21st. The Commander-in-Chief hoisted the signal, "Well done, *Arrogant* and *Hecla*." The flag-ship manned the rigging; her example was followed by several other ships—all of whom gave the heroes three hearty cheers.

[We have received a plan of the attack, and shall give an Engraving of it next week.]

THE WAR ON THE DANUBE.

OMER PACHA, Marshal St. Arnaud, and Lord Raglan have reviewed the Turkish army. Marshal St. Arnaud made a flattering speech, to the effect that he was happy to serve with such troops against the Russians. At Silistria, affairs remained without alteration on the 28th ult. The Danube continued to rise. Skender Bey had beaten the Russians near Kalafat, and had taken a position on the Lesser Balkan. The regiments organising in the Caucasus are to join the Turkish Danubian army. It is said that Schamyl has gained an important victory over the Russians in the Caucasus.

ANNIVERSARY GATHERING OF THE METROPOLITAN CHARITY CHILDREN.—The anniversary meeting of the charity children of the different parochial schools of the metropolis, in St. Paul's Cathedral, took place on Thursday. It was evident that the attraction of this very interesting ceremonial has not at all diminished; but, on the contrary, increased; for the numbers that flocked to the metropolitan cathedral this year were beyond the precedents of former anniversaries. Long before ten o'clock, at which hour the doors of the cathedral were opened, a great crowd had assembled in the churchyard, and the number was again sensibly undiminished until the time for the commencement of the service. There was, as usual, the full choral service; and the sermon was preached by Dr. Prince Lee, the Bishop of Manchester. The effect of the scene was magnificent in the extreme. The charity children—many of them in their quaint costumes—were present to the number of about 4000, and the congregation fully occupied every place set apart for their accommodation.

SHIPWRECKED FISHERMEN AND MARINERS' ROYAL BENEVOLENT SOCIETY.—The fifteenth annual meeting of the above philanthropic institution was held at Willis's Rooms, on Tuesday, May 23rd, Vice-President Admiral William Bowles, C.B., in the chair; supported by the Right Hon. Earl Manvers, Admiral Vernon Harcourt, Vice Admiral Sir George F. Seymour, G.C.H., C.B.; Rear-Admiral Sir George A. Westphal; Captains Sir George Back, R.N.; Hon. Francis Maude, R.N.; W. J. Cole, R.N., K.H.; M. H. Sweny, R.N.; Charles A. Barlow, R.N., C.B.; Duncombe, R.N.; Howes, R.N.; Schomberg, R.N.; Woodford, R.N.; Lowe, R.N.; Campbell, R.N.; Pierce, R.N.; —Cressinghame, Esq.; Lieut. H. Colquhoun, R.N.; Montagu Gore, Esq.; Major Montagu, Rev. Dr. Sinclair, Richard Lewis, Esq.; — Forster, Esq. From the annual report, it appeared that the income for last year was between £8000 and £9000. The disbursements for relief amounted to £5812.

KOSSUTH AT SHEFFIELD.—Arrangements have been concluded for holding a demonstration at Sheffield on Whit-Monday, in favour of Hungarian nationality. The ex-Governor of Hungary has promised to be present, and it is expected that Sir Joshua Walmsley will accompany him. Mazzini who was to have been one of the party, is not at present in England. There are to be two meetings—one an open-air meeting, about noon.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—MONDAY.

A WAR MINISTER.

Lord J. RUSSELL, in reply to Mr. Drummond, said the question as to the appointment of a responsible Minister of War had been under the consideration of the Government, but no positive decision had yet been come to. As soon as a decision was arrived at he would inform the House.

OCCUPATION OF GREECE.

In reply to Mr. Milnes, the same noble Lord explained the transactions which were now proceeding with regard to Greece. The complicity of the Greek Government with the insurrectionary movements in Turkey having been effectually proved, a French regiment had been sent to Greece, and would be joined by a British force, with instructions to occupy the Pirœus; but the commanders were armed with discretionary power, which the noble Lord supposed they would gladly exercise, under certain contingencies, to extend their occupation to Athens itself.

Sir J. GRAHAM detailed the arrangements made for the transmission of letters to and from the fleets in the Baltic and the Black Sea.

THE BRIBERY PREVENTION BILLS.

The second reading of the Canterbury Bribery Prevention Bill having been moved, the ATTORNEY-GENERAL announced the intention of the Government to withdraw the bill, as well as the four measures with reference to the boroughs of Cambridge, Kingston, Maldon, and Barnstaple.

In the course of a brief debate which followed this announcement, Lord J. RUSSELL stated that he intended to propose the continued suspension of the writs for the five boroughs in question until the two general bills for preventing bribery and corruption, which now lay before a Select Committee up-stairs, had been fairly discussed in the House.

Mr. DISRAELI made an elaborate attack upon the Government in the course of which he remarked that seven important bills had been introduced by them during the session. Three of them had been defeated—those for remodelling the Law of Settlement, for changing the Educational System in Scotland, and for re-constructing the Parliamentary Oaths. Three more had been withdrawn—the bill now under discussion, the Civil Service Bill, and the Reform Bill. One remained still in suspense for reforming the University of Oxford, having already suffered much damage, with a probability of ultimate discomfiture. Remarking upon the weakness of the Ministry as shown by their inability to carry their measures, and on their rashness in bringing important questions before the Legislature without the ability to settle them, the right hon. member adverted to the personal position occupied by Lord J. Russell, whom he taunted with having deserted his party, and taken a subordinate place among his most virulent opponents.

The motion that the order for the second reading of the Canterbury Bribery Prevention Bill should be discharged, was then agreed to

A similar motion having been made with regard to the next bill, respecting the borough of Cambridge,

Lord J. RUSSELL took the opportunity of replying to Mr. Disraeli. Since the reform of the House of Commons, Ministers, he remarked, no longer employed their old and pleasant security of commanding majorities. The right hon. gentleman himself, when he was a Minister, brought forward a plan of finance on which he had bestowed considerable labour, but was not so fortunate as to obtain the sanction of the House for it. But though (Lord J. Russell) regretted the failure of several measures, the Government had obtained the sanction of the House on other points of yet greater consequence. Their negotiations before the war, their measures for carrying it on, and their financial policy, had all received authentication by the Legislature. Upon some of these questions the Opposition had not ventured to challenge a vote, on others they had been defeated by considerable majorities—a result which warranted the inference that whatever confidence the Government could obtain in the House Mr. Disraeli could boast of none.

Mr. DISRAELI returned to the personal charge, and accused Ministers of having obtained the sanction of the House to their foreign policy, by keeping back the most important of the papers relating to the negotiations. He went on to charge the noble Lord with unfair and factious opposition to the Derby Administration. Scarcely had he retired from office, from which, let it be remembered, he had been driven, not by any efforts of the Opposition, but by discreditable quarrels with his own colleagues, when he united into factious opposition, thus using every combination of faction in order to defeat the establishment of the militia force upon the voluntary system. With reference to a charge made by the noble Lord (Mr. Disraeli) had made the Jewish Disabilities Bill a mere political convenience, voting or not voting against it, as best suited him. he gave it the most unequivocal and unqualified denial.

Sir G. GREY, deprecating the tone which the debate had taken, declared that the friends and colleagues of Lord J. Russell still retained their old confidence in him unshaken

Colonel PEEL (who spoke from the Opposition benches) disclaimed all sympathy with the personal assault which Mr. Disraeli had directed against the noble member for London.

The order of the day for the second reading of the bill was then discharged.

Upon the motion for the discharge of the order of the day for the second reading of the Kingston Hall Bribery Prevention Bill,

Lord J. RUSSELL again rose and defended himself from the personal attacks of Mr. Disraeli. As regarded the present Cabinet, he was happy to say that they were agreed upon all general principles of domestic policy. As to the conduct of the war, if he should be of opinion that the Government was not carrying it on with that degree of vigour which makes war successful, and with a view to a peace which alone could be safe and honourable, from that moment he should cease to be a member of it.

Mr. OSBORNE charged Mr. Disraeli with having erroneously contradicted the statement made by Lord J. Russell, to the effect that he (Mr. Disraeli) had absented himself from debates and divisions on behalf of Jewish emancipation. Mr. Osborne referred to "Hansard," for the purpose of showing that he had been absent from at least one division, and on another had voted in the negative

The personal interchanges were continued by Mr. Disraeli, Sir J. Pakington, and other members; among whom was Mr. Bright, who protested against the precedent set by the present Government, in first involving the country in a war, and then claiming exemption from the ordinary casualties that could befall a Ministry, on the plea that they had not had the means while carrying it on.

The CHANCELLOR of the EXCHEQUER, after touching upon a personal charge addressed against himself by Mr. Disraeli—that he had assailed Lord Derby with "sanctimonious eloquence"—corrected Mr. Bright's misapprehension as to the rights and privileges of a Ministry during the progress of a war. He then sketched the career of the existing Administration, and enumerated their performances during the last session, pleading that pending circumstances rendered the present session altogether exceptional, and contending that the charge brought against them, of legislative impotence, was altogether unwarrantable.

The discussion then terminated; and the orders for second readings of the three remaining bills (Kingston, Maldon, and Barnstaple) were discharged.

The Exchequer-bonds Bill, the Stamp-duties Bill, and the Ecclesiastical Courts Bill were severally read a second time. The Excise duties Bill passed through Committee, and the Consolidated Fund Bill was read a third time and passed.

PAROCHIAL SCHOOLMASTERS OF SCOTLAND

The LORD-ADVOCATE of Scotland moved for leave to bring in a bill to regulate the salaries of the parochial schoolmasters of Scotland—a temporary measure—the provisions of which he briefly explained. He likewise vindicated his motives in introducing the Education Bill. After a short discussion, leave was given.

HOUSE OF LORDS.—TUESDAY.

The Railway and Canal Traffic Regulation Bill passed through Committee.

The Manning the Navy Bill, the Navy Pay Bill, and the second Common Law Procedure Bill, were severally read a third time.

HOUSE OF COMMONS.—TUESDAY.

There being only thirty-six members present at four o'clock, the House immediately adjourned to Thursday.

HOUSE OF LORDS.—THURSDAY.

The Duke of NEWCASTLE, in answer to a question from the Earl of Ellenborough, repeated his former statement, namely, that her Majesty's troops serving in the East, had been provided most amply with means of transport as far as the sea was concerned.

The Consolidated Fund (£8,000,000) (No. 2) Bill was read a second time.

The Bills of Exchange Bill was read a third time and passed.

The Railway and Canal Traffic Regulation Bill, as amended, was reported.

The Prisoners' Removal Bill passed through Committee.

Lord CANNING, in reply to Lord Beaumont, said that two officers were to be sent out to the East as Postmasters to the Army and Navy.

HOUSE OF COMMONS.—THURSDAY.

Mr. HUME gave notice of his intention, after the recess, to move a resolution to the effect that it would promote the moral and intellectual improvement of the working classes, if facilities be given for opening the Museums, Marlborough House, and other similar institutions to the public on Sundays, after the hours of Divine Worship.

Sir J. GRAHAM, in reply to Mr. MASTERMAN, stated that orders had been sent to the Admirals of the Allied fleets in the Baltic and the Black Sea to institute a blockade of the principal Russian ports.

BUSINESS OF THE HOUSE.

Sir J. PAKINGTON moved the adoption of the resolutions arrived to by the Committee which sat on the business of the House, and of which he was the Chairman. The first resolution was—"That it be an instruction to all Committees of the whole House to which Bills may be committed, that they have power to make such amendments therein as they shall think fit, provided they be relevant to the subject matter of the Bill, but that, if any such amendments shall not be within the title of the Bill, they do amend the title accordingly, and do report the same specially to the House."

After some discussion, the resolution was agreed to.

Several other resolutions of a technical character having been agreed to, the last resolution proposed was as follows:—"That the House at its rising on Friday do stand adjourned till the following Monday."

Mr. Bright, Mr. F. French, Lord D Stuart, and Mr. Hume, severally addressed the House against the resolution.

Mr. DISRAELI thought that the existing system afforded a popular privilege to independent members.

Lord J. RUSSELL thought it would be inexpedient to propose a resolution of this kind—restricting the powers of debate without the general concurrence of the House. He recommended the withdrawal of the resolution.

Sir J. PAKINGTON having assented, the resolution was withdrawn.

The Income-tax (No. 2) Bill was read a third time and passed.

OXFORD UNIVERSITY BILL.

The House went into Committee upon the Oxford University Bill, resuming the consideration of the clauses from the twenty-sixth clause which related to private halls.

Amendments were moved by Mr. Ewart, Mr. Mowbray, and Mr. Goulburn; some with a view of extending those halls, and others of rejecting the clause altogether.

The Government, however, after considerable discussion, succeeded in carrying their clause.

There was very little progress made in the measure throughout the night.

HOUSE OF LORDS.—FRIDAY.

ROYAL COMMISSION.

The Royal Assent was given by Commission to the County Courts Extension Acts; the Boundary Survey (Ireland); the Navy Pay, &c.; the Manning the Navy; the Great India Peninsula Railway; the Guild of Literature and Art; and to nearly forty other Bills of a local character

The Lords Commissioners were the Lord Chancellor, Earl Granville, and the Duke of Argyll.

Lord MONTEAGLE, in moving for copies of a correspondence which passed between the Right Hon. H. Goulburn, when Chancellor of the Exchequer and the Governor of the Bank of England, with respect to allowances made to the Bank for public services, and with respect to the advances upon deficiency bills, contrasted the financial policy of former Governments with that recently adopted. He contended that it was a most dangerous practice for the Government to allow the Bank to exercise unlimited control over the circulating medium of the country.

Earl GRANVILLE resisted the motion, upon the ground that the correspondence was a private character. He assured the House that there was no intention whatever to issue paper money beyond the limit already provided for by Act of Parliament.

Lord MONTEAGLE was satisfied with the explanation given, and would not press his motion.

THE WAR.

The Marquis of CLANRICARDE, having alluded to the progress of the war, expressed an opinion that attention should be directed towards Archangel, which timber traffic of a large kind with the district of Russia. The trade of Archangel would be impeded chiefly by our ships of war, and they would prove far more damaging to Russian commerce than any blockade of the Baltic or the Black Sea.

The Duke of NEWCASTLE replied that the port had not been overlooked by the Government of England or France. If Archangel had not been blockaded, the House might rest satisfied that there were good grounds for not having taken that course—whatever blockade was undertaken would be an efficient one.

Lord BEAUMONT regretted to hear that Archangel was not to be blockaded, for it was highly essential that the war should be prosecuted with vigour.

The Earl of ABERDEEN assured the House that the war would be carried on with all the vigour and effect which the Governments of France and England could bring to bear upon it.

The Duke of NEWCASTLE observed that the blockade of Archangel would depend upon the decision which might be come to, by the British and French Governments conjointly.

The Earl of ELLENBOROUGH suggested the advisability of appointing a War Secretary, who should be responsible for the operations of the war.

The Earl of ABERDEEN said, the matter had received the serious attention of the Government, and at the proper time their opinion on the subject would be stated to Parliament.

Their Lordships then adjourned till Friday the 9th of June.

HOUSE OF COMMONS.—FRIDAY.

On the motion of Lord J. RUSSELL, it was agreed that the House, at its rising, do adjourn till Thursday next.

The noble Lord also moved "That in the cases of the city of Canterbury, and the boroughs of Cambridge, Kingston upon-Hull, Maldon, and Barnstaple, where the seats of the members have been declared void by Election Committees, on the grounds of bribery or treating, no motions for the issuing of new writs shall be made without seven days' previous notice being given in the votes."

Mr. O. STANLEY considered that the course proposed was utterly inadequate to meet the gravity of the evil. At the very least, no writ should be issued till the Select Committee on the Bribery Bills had reported.

Mr. BUCK was of opinion that it would be better to allow the past to be forgotten, and to withdraw the Bribery Bills.

Mr. DISRAELI concurred in the course proposed by the noble lord.

Mr. L. KING moved that the writs be not issued until December 30.

Mr. T. DUNCOMBE characterised the course proposed as a pusillanimous proceeding on the part of the Government, and called upon Lord J. Russell to introduce another bill for the effectual punishment of those guilty boroughs.

Lord J. RUSSELL explained that his intention was that the writs should not issue till the Bribery Bills were disposed of. Should these bills not pass into law, it would still remain with the House to say what course it should take with regard to these boroughs.

Mr. L. KING having withdrawn his amendment, the noble Lord's motion was agreed to.

Sir C. WOOD, in reply to Sir J. Pakington, stated that the Indian Government had instituted a special inquiry into the practicability of substituting an Excise-duty in respect to salt, in place of the present mode of contract.

THE IONIAN ISLANDS.

Lord J. RUSSELL, in reply to Mr. Hume, stated that the question of the neutrality of the Ionian flag had been referred to the law officers of the Crown, and their opinion was that the Ionian Islands could not be deemed a neutral state, and must take part in any war that may be waged by Great Britain.

THE BALTIC FLEET.

Sir J. GRAHAM informed the House that a despatch, dated May 23rd, Bay of Hango, had been received from Sir Charles Napier, describing a gallant feat of arms performed by the steam-frigate *Arrogant* and a smaller steamer, the *Hecla*, under Captains Yelverton and Hall, in cutting out some Russian merchantmen anchored within an inlet, at ten miles distance from the sea, under the guns of a fortification. Sir C. Napier characterised the exploit as worthy of the best days of the British Navy. The English and French fleets had by this time joined in the Gulf of Finland, numbering twenty-eight sail of the line, and frigates and steamers in proportion

THE CHANCELLOR of the EXCHEQUER, in reply to Mr. Headlam, stated that it was not his intention to bring in a bill this session to impose a tax upon corporate property. He thought it would be preferable to delay taking that step till he had seen how the machinery employed in levying the Succession-duty performed its functions.

THE CLOTHING OF OUR ARMY.

Mr S. HERBERT, in reply to Mr. G. Heathcote, stated that it was the intention of the Government to take steps to make the dress and accoutrements of the army more convenient. The Commander-in-Chief had caused patterns of the dress and accoutrements of soldiers in all the European regiments to be obtained, with the view of ascertaining what improvements could be adopted. Lord Raglan was also engaged in effecting improvements in the dress of the army under his command. The soldiers had already been supplied with linen coverings for helmets and shakos, similar to those used in India.

The Customs-duties (Sugar) Bill passed through Committee.

The Excise Duties Bill was read a third time and passed, notwithstanding the opposition of some of the Irish members, who divided the House twice upon amendments for the postponement of the measure.

The Excise Duties (Sugar) Bill was read a second time.

The Merchant Shipping Bill passed through Committee

The Jurors and Juries (Ireland) Bill was read a second time.

Several other bills upon the paper, were forwarded a stage.

Lord PALMERSTON obtained leave to bring in a bill to render more effectual the police in counties and boroughs in England and Wales; also a bill to amend the law relating to youthful offenders.

Adjourned until Thursday next

MUSIC.

THE musical event of the week has been the re-appearance of Grisi at the ROYAL ITALIAN OPERA. It is now certain that her brilliant career is almost run. She is to appear only for a few nights, and then take leave of the stage for ever. It is announced that her farewell performances will include only a few of her principal parts, the foremost of which is *Norma*, in which character she appeared on Thursday night. As might be expected, the greatest interest was excited, and every part of the house was crowded. On her entrance she was received with a burst of applause, which continued for several minutes. She looked as noble and beautiful as ever. Her voice, though a little (and a very little) diminished in power, seemed to have even more than its former sweetness. She never sang the charming "Casta Diva" more expressively; and her action, throughout the whole piece, retained all its undivalled grace, energy, and passion. At the end of the famous trio which closes the first act (the finest passage of the opera), she was twice recalled with acclamations. and similar enthusiasm attended the final fall of the curtain. The part of *Adalgisa* was performed, for the first time, by Mdlle. Marai, whose reception was very favourable. Tamberlik was the *Pollione*; and Lablache, for the first time at this theatre, appeared in his old part of *Oroveso*.

The ROYAL OPERA at Drury-lane has produced nothing new, unless the appearance of Sims Reeves in the character of *Edgardo*, in "Lucia di Lammermoor," be considered a novelty. It is, indeed, his first appearance in that part at the Royal Opera; but that is all, for his performance of it, both in Italian and English, is quite familiar to the public. It is marked with his usual merits and faults: on the one hand, much dramatic energy and passion, especially in the final scene, combined with great power and beauty of voice; on the other, those mannerisms which seem to be growing upon him and detract from the charm of his singing—the worst of which are, his drawling die-away closes, and his habit of alternating between shouts at the full stretch of his voice and whispers almost inaudible, without anything in the sense to justify such violent transitions. Pity that a singer so great in many respects should injure his own reputation by indulging in habits which, if persisted in, will become inveterate and incurable. The character of *Lucia* has been very respectably sustained by Miss Birch. The only English opera yet performed has been "Fra Diavolo," which is no English opera at all, but only a French opera with English words. The brigand has long been one of Reeves's most popular parts. Neither has anything new been done in the German department. "Don Giovanni" has been repeated; and Madame Rudersdorff has established herself in the favour of the public by her fine performance of *Donna Anna*. But the "Zauberflöte," last week announced for this evening, with this lady in the character of *Pamina*, appears to be ailjourned from week to week. The truth seems to be that the managers of this establishment have too many irons in the fire. By adding English opera (which, after all, is not genuine English opera) to the German and Italian branches with which they set out, they are, we fear, involving themselves in expense, difficulties, and embarrassment—preventing themselves from bringing out the standard works they have promised, and from doing justice to those which they are performing. There are already grounds of complaint as to the quality and completeness of the German chorus. The orchestra has also considerably degenerated: it now wants many incompetent hands not in it at first Those who attempt too many things are unable to do any of them well. Had the Drury lane managers confined themselves to German opera, by far the most successful branch of their concern, they would have been able to give performances such as have never yet been heard in England—performances, too, in which they have no competitors. In Italian opera they have to contend, on unequal terms, with their powerful rival in Covent garden; and, as to English opera, it is obvious that, by tacking it to their scheme, they will neither do good to English opera nor to themselves. English opera, to raise its head and flourish, must stand on its own foundation, independent and alone.

AMONG the benefit Concerts of the week, the most remarkable have been those of Mr. Kiallmark, Herr Oberthür, and Mr. Neate. Mr. Kiallmark's Concert, on Monday morning, at the Hanover-square Rooms, was of a high class. He had provided a complete and select orchestra—a thing seldom done at benefit concerts—which enabled him to give some of the classical works of the great masters, particularly Mozart's Symphony in G Minor, Weber's Overture to "Oberon," and Mendelssohn's "Wedding March," in the "Midsummer Night's Dream." Mr. Kiallmark displayed his powers as a pianist by a very fine performance of Hummel's Concerto in B Minor, and Moscheles's "Recollections of Ireland." There were vocal pieces by Miss Louisa Pyne, Madame Amedie, Miss Barclay, Mr. Lefort and Signor Belletti. Herr Oberthür's concert, on Tuesday, was very interesting to the amateurs of the harp, on which instrument he is a masterly performer. He played a fantasia, in which several fine Scottish airs were introduced; a duet, with Miss Arabella Goddard, on the harp and piano; and another duet with Signor Regondi, the latter gentleman playing the concertina. There were songs and duets by Madame Clara Novello, Mdlle. Sedlatzek, M. Lefort, and other favourite performers.—Mr. Neate concluded, on Thursday morning, his series of performances of classical pianoforte music. These performances have been admirable, and worthy of Mr. Neate's high reputation. They have consisted of the finest sonatas and concerted pieces of Mozart, Beethoven, Mendelssohn, and other great masters, intermixed with several of his own compositions—works of high merit. All these concerts attracted crowded and fashionable audiences.

THE committee for conducting the next FESTIVAL OF THE THREE CHOIRS—to be held this season at Worcester—are making preparations for performances on a greater scale than usual. They have already engaged the following vocal performers:—Madame Viardot Garcia, Madame Castellan, Mrs. Weiss, Madame Clara Novello, Miss Dolby, Signor Gardoni, Mr. Sims Reeves, Mr. Lockey, Herr Formes, and Mr. Weiss. They endeavoured to obtain the services of Madame Goldschmidt (Jenny Lind), but have received an answer from her in which she says that "her plans for the season are of such a nature as not to allow her to accept the flattering offer made by them." The Festival takes place in September.

VISIT OF THE JUDGES TO ST. PAUL'S CATHEDRAL.—Sunday last, being the first Sunday in Trinity Term, the Judges, attended by the Lord Mayor, the Sheriffs, and other civic functionaries, attended Divine Service in the afternoon at St. Paul's Cathedral, in accordance with ancient custom. Of the Judges the following were present, namely:—Barons Parke, Alderson, and Platt; Justices Cresswell and Compton; and Serjeants Manning, Thompson, Miller, and Atkinson. The sermon was preached by the Hon. Montagu Villiers, under the spacious dome of the cathedral. Every accommodation was given to the public by the officers of the cathedral; and the police rendered quiet, but most effective, assistance in preventing any undue intrusion. The service lasted exactly two hours.

"ANDOVER," THE WINNER OF THE DERBY, 1854

TOWN AND TABLE-TALK ON LITERATURE, ART, &c.

We wish we could tell in what way our leading authors are employed at the present moment. Let us try. The Nestor of our poets is still adding new notes to his pleasing collection of poems; Mr. Hallam is adding and dating new notes to his great historical works; Lord Mahon is completing his "History of England;" Mr. Macaulay is busy with Sacheverell and the Bedchamber Intrigue; Mr. Carlyle is making Frederick the Great to live, as he has made Oliver Cromwell, Samuel Johnson, and Robert Burns; Milman meditates Scriptural epics, but is chiefly intent in maintaining the new opening to St. Paul's—that epic in stone and lime; Mr. Lockhart has just retired, like Milton, to a "garden house;" Mr. Wilson Croker is still on Pope; and Mr. Ruskin is indulging in paradoxes as wild as any to be found in Warburton.

The statue of Professor Wilson is to be an out-door statue, and in bronze. The committee are busy, and a London committee is talked about. No sculptor has yet been named. Wherever Ebony is read, Wilson is admired. The statue is due equally to the poet and the man.

The great war in which we are now engaged is connected with a little artistic episode, on which artists whose reading extends beyond the annual Academy catalogue, frequently and fondly enlarge. Our Civil Wars scattered the collection of Charles I.; the first French Revolution gave us the Orleans Gallery; our own ignorance of art, and in a comparatively peaceful period, allowed the far-famed Houghton Gallery to be sold to the Empress Catherine. When this war is over, and Peace hath her victory, we should claim—so artists and amateurs allege—the Houghton Gallery as one of the *minor* conditions of peace.

Among the art exhibitions at Messrs. Christie and Manson's, during the present week, the attractions have been the water-colour drawings of the late William Oliver, and a choice Clarkson Stanfield, "Tilbury Fort" Mr. Oliver possessed a fatal facility in art, yet he was clever. The Stanfield (to be sold on Monday) is a capital example of a thoroughly English artist. Let us add that the subject, Tilbury Fort, is essentially an English subject—smacking of the Thames, the Spanish Armada, and Queen Elizabeth.

Mr. Cockerell, R.A., has retired from the office of Architect to the Dean and Chapter of St. Paul's, and Mr. Penrose has been appointed his successor. A better appointment could not have been made. This mention of St. Paul's and Mr. Cockerell reminds us of a strange anachronism, and a strange description, in an otherwise excellent drawing by an architect of the same name, in the present Royal Academy Exhibition. We allude to the "Thanksgiving in St. Paul's after the Victory over the Spanish Fleet, 1718," in which we find costumes of the year 1718; and, strange to say, the recently-erected warehouses in St. Paul's Churchyard are shown, as if they existed in the reign of George I. The error of description is, that the view is an exterior, and not an interior—it is a procession to St. Paul's: the Thanksgiving was inside St. Paul's.

The Guildhall Wellington monument has been entrusted to Mr. Bell the sculptor of Dorothea, and other works of poetic beauty and portrait character. The selection will not be unpopular with the public, for Mr. Bell, if he does not command approbation, will assuredly not offend against artistic rules and military etiquette. To allow the monument to appear as a companion to the Nelson, Alderman Beckford's monument will be removed to another compartment. Mr. Bell has an ample field, and a good subject before him—for the City is sadly deficient in good sculpture, and the man he has to honour is European and enduring in his reputation.

The last example of Mr. Cousins's skill in the art of engraving fully confirms his high reputation as an engraver, and most deservedly places him with the great mezzotinto artists he is known to admire—Fisher, M'Ardell, and Raphael Smith. We allude to Mr. Sant's much-commended picture of the "Infant Samuel"—one of the leading attractions of recent Royal Academy Exhibitions. Sir Joshua did not catch the inspired look of the boy—he has copied a mere good-looking child—a common type of boy to be met with in every studio; but Mr. Sant has caught the Scriptural Samuel; and Mr. Cousins has translated Mr. Sant's picture with the feeling of a painter, and the fidelity of an accomplished engraver.

Three fresh Exhibitions of Art in London are about to open. The British Institution is nearly ready with its annual Exhibition of the Works of Ancient Masters (of which we hear favourable accounts); Mr. Gambart is engaged in getting up an exhibition of Turner's pictures (the management could not be in better hands); and Mr. Graves is busy arranging the choice examples of modern Belgian art which the King of the Belgians entrusted to the Great Irish Exhibition of last year. The British Institution will charge its customary shilling for admission; Mr. Gambart will, most properly, charge the same sum for the Turner Exhibition; but the Belgian pictures will, under Mr. Graves's care, be a free exhibition—though necessarily restricted to artists, and amateurs of art.

A very old and esteemed friend of the late Mr. Justice Talfourd has written to us on the subject of Talfourd's birthplace. He is said, as we observed last week, to have been born at Stafford; but this, it appears, is not the case. The town of Reading, which claimed him for her son, and returned him to Parliament as her member, on more than one occasion, was the birthplace of Talfourd. "Talfourd," our Correspondent writes, "pointed out to me the *very house*, in the parish of St. Lawrence, in the town of Reading, in which he was born; and the fact of his birth there has been lately corroborated by his venerable mother, who is still living." The historian of Berkshire will do well by noting the circumstance, and marking the particular locality. The bust for Stafford has been confided to Mr. Lough.

The literary effects of the late Sir William Betham, sold at Sotheby and Wilkinson's, on Thursday last, included an autograph letter from Oliver Cromwell to his son Henry, dated April the 21st, 1656, and printed in Carlyle's "Cromwell." This most characteristic letter fills three sides of a sheet of yellow foolscap; is wholly in Cromwell's hand; has his signature, "Oliver, P.," with his seal in wax, and the address. The price was not too great—seventeen pounds ten shillings. Curiosities rife with associations such as this letter unquestionably contains are now eagerly coveted by all who care to live in the past, and to be taken, as it were, into the very presence of a great man who conceived and accomplished changes of which we still feel most sensibly the good rather than the evil effects.

THE THEATRES.

St. James's.—A kind of dramatic idyl, under the title of "Au Printemps," was produced on Wednesday, when M. Lafont took his benefit at this theatre. It is in verse, and written by M. Léopold Laluyé. The stage, as usual with many dramas of its class, is divided into two scenes, but with a more natural disposition than ordinary, for they represent two different sections of a wood, in which an old and a young couple are severally engaged in courtship. The young are exceedingly romantic, and the old exceedingly utilitarian; and the contrast of the two styles of wooing constitutes the piquancy and point of the action. With a fabric so slight, almost all depends on the performers. Mdlles. Luther and St. Georges, with MM. Leon and Tourillon, gave both animation and distinctness to their several parts; but an example of reality in which the two extremes of character are reconciled, as in the actual world. Her Majesty and Prince Albert were present, the audience being numerous.

Marylebone.—The "Love Chase" was performed on Monday, *Neighbour Constance* being supported by Mrs. Wallack, with remarkable vivacity and force. The management close this theatre to-day till September, when it will re-open for the performance of the legitimate drama, including some new and original productions, for which preparations on an extensive scale are understood to be making.

Olympic.—Mr. Wigan, after a long absence, returned to the stage on Monday. The play was "The First Night," and attracted a large audience.

Lyceum.—This theatre, it is announced, will be re-opened on Whit-Monday.

Willis's Rooms.—A dramatic reading of the Second Part of Shakespeare's "Henry IV." was delivered on Thursday evening, by Mr. Wightwick, author of "The Palace of Architecture." Most performances of the sort have lately been rather actings than readings. Mr. Wightwick does not err in that direction; indeed, he does not aim at a stage-interpretation, but an intelligent distribution of emphasis fitted for the drawing-room. Not that he is deficient in a talent for impersonation; for his *Sir John Falstaff* was clear; and even forcibly delineated; but he is guilty of no exaggeration, and affects no broad distinctions. He is much to be commended for his taste and judgment.

NATIONAL SPORTS.

EPSOM RACES.

Tuesday.—A dreary morning was this, to begin the great metropolitan racing holidays! Rain fell heavily during Monday night, and a dull morning, with strong showers met the assemblage on Epsom Downs. At noon, however, the weather cleared up, and a pleasant afternoon made amends for the earlier disappointment. The following were the events of the day:—

Craven Stakes.—Defiance, 1. Lascelles, 2.
Woodcote Stakes.—Flatterer, 1. Mary, 2.
Epsom Summer Handicap.—Axwell, 1. Hazelnut, 2.
Horton Stakes.—Remnant, 1. New Brighton, 2.
Manor Plate.—Roebuck, 1. Hazelnut, 2.
Heathcote Plate.—Ephesus, 1. Austrey 2.

Wednesday.—To make amends for the forenoon of Tuesday, nothing could be finer than the weather this morning, and, indeed, the whole of the day. The various railway trains brought detachments of visitors from London, Brighton, Portsmouth, and the towns on the south coast. Nor was the old road neglected, and vehicles of all grades brought their freights to swell the assemblage on the "Derby Day;" but at no time did the pleasure-seekers and business-men average the number on the Downs of recent years. A capital day's sport, however, satisfied, or ought to do, the concourse met for that purpose. The following is a list of the day's sport:—

Carew Stakes.—Ephesus, 1. Defiance 2.

THE DERBY.

Andover	..	..	..	..	(A. Day)	1
King Tom	..	..	..	..	(Charlton)	2
Hermit	..	..	..	..	(Wells)	3
Early Bird	..	..	..	..	(Aldcroft)	4

The following also ran:—Dervish, Autocrat, Woodcote, Hospodar, Welham, The First Lord, Mare Antony, Middlesex, Canute, Winkfield, Punchbox, Grey Plover, Neville, Bracken, New Warrior, Papageno, Knight of St. George, Alembic, Rodomel, Coup d'Etat, Wild Huntsman, Champagne, Maryas.

Betting at starting: 7 to 2 agst Andover, 10 to 1 agst King Tom 20 to 1 each agst the Hermit and Early Bird.

After the usual preparatory canter, the horses returned to the paddock, and were soon afterwards called to the post by the starter. The *coup d'œil* at this moment was extremely picturesque: the thousands of spectators surging up against the rails the vast masses on the hill-side—the multitude crowding the inclosures and the Grand Stand—had their eyes immediately riveted, as it were, on one point—the starting place. Sawdy, and in a compact form, the horses proceeded towards it from the paddock, the colours of the riders having a gorgeous effect in the broad sunshine. At the very first signal a beautiful start was effected. Hospodar immediately went to the front with Mare Antony, Canute and Wild Huntsman pedar, and Dervish lay about sixth. Mare Antony and Canute then dropping off. At the road, both Hospodar and Wild Huntsman were beaten. Hermit now took the lead, followed in close order by Andover, King Tom, Dervish, Knight of St. George, Maryas, Early Bird, and New Warrior. Andover waited to the half-distance, when he went ahead, followed by King Tom, who made a very resolute effort, but was beaten easily by a length. Half a length between the second and third, and a neck between the third and fourth. Dervish, Maryas, New Warrior, and Wild Huntsman were the next four. Value of the stakes, £5050.

Epsom Town Plate.—Mishap, 1. Roebuck, 2.
Epsom Cup.—Kingston, 1. Hatchplan, 2.
Durdans Stakes.—Vaultress, 1. Glenstrae, 2.
Great Exhibition Plate.—Assayer, 1. Noisette, 2.

THURSDAY.

Four-Year-old Stakes.—Dabchick, 1. Tobolski, 2.
Two-Year-old Stakes.—Bessie, 1. Fara, 2.
Grand Stand Plate.—Miss Bolton, 1. Axwell, 2.
Selling Stakes.—Pebble, 1. Emperor, 2.
Coldham Plate.—Eliza, 1. Orinoco, 2.
Queen's Guineas.—Advice, 1. Comet, 2.

FRIDAY.

Members' Plate.—Defiance, 1. Noisette, 2.

THE OAKS.

Mincemeat	..	..	..	..	..	1
Meteora	..	..	..	..	..	2
Bribery	..	..	..	..	..	3

Railway Plate.—Glenstrae, 1. Monze, 2.
Foal Stakes.—Champagne, 1. Middlesex, 2.
Derby and Oaks.—Child of the Mist (objected to), 1. Vaultress, 2.
Visitors' Plate.—Assayer 1. Roebuck, 2.

Races for next Week.—On Wednesday, Thursday, and Friday, the Manchester meeting takes place: Lenham Races, also, will be held on Wednesday; and on Thursday and Friday the Southwell meeting comes off.

Cricket.—The United All England Eleven v. Thirteen of the University of Cambridge and Two Professionals.—This match was commenced at Cambridge on Monday last, and, after two days' contest, ended in favour of the United Eleven. The score stood:—The University, two innings, 167; the United Eleven, first innings, 38; second ditto, 80, and eight wickets to go down.

LEAVING RACES—THE RETURN FROM THE DERBY.—(SEE PRECEDING PAGE.)

EXHIBITION OF THE ROYAL ACADEMY.

"FRENCH LUGGER RUNNING INTO CALAIS."—PAINTED BY E. W. COOKE.

We resume this week our critical notices of the Royal Academy Exhibition; and call in, as is our custom, the aid of the graver, to do what the pen cannot do. We should be glad to carry this kind of joint illustration still further than hitherto we have enabled to effect; but the arts of war demand so many of our columns, that we are obliged to render less justice to the Academy and the arts of peace than it is our wish to have done. Still we shall give our readers a fair taste of the Academy; and, in addition to our illustrations of last week (favourable examples of excellence in their way), we now supply two other illustrations.

"A CABIN IN A VINEYARD."—PAINTED BY T. UWINS, R.A.

First is Mr. Cooke's "French Lugger running into Calais," in which the painter makes us feel the breeze from off his canvas. With what accuracy is everything painted: How true a sky is above our heads (we feel that we are in that lugger)—how those waves lash against the boat and the pier! Those sea-gulls that follow in its rear are having ample pickings from the living stores that, heeling to the sides of that well coated craft. Mr. Cooke is never happier than in pictures like these. You hear the vessel snorting through the waters as she nears the pier: surely those sailors, the men are crying aloud to their companions in the lugger. Stanfield, Vanderelde, and Turner, were never finer.

We have also engraved Mr Uwins's "A Cabin in a Vineyard," which, in the Catalogue, has the following epigraph:—

A mother having laid her children to sleep in the rudely constructed *cabons* of the Garde de Vignes returns, with natural anxiety, to stand a moment's look at them, whenever her course of labour brings her to the spot. The man's dog, left in care of his master's things, assumes the guardship of the children, and seems to say—" all is well."—*Notes in the South of France.*

The picture has the characteristics of Mr. Uwins's best manner, and is altogether a very interesting scene of peasant life.

FINE ARTS.

"NELSON BEFORE THE BATTLE OF TRAFALGAR." BY J. T. BARKER.

At a moment when, after a peace of unusual duration, we are again entering upon a war, stupendous in magnitude and import (a "little war" we never can have), the mind naturally reverts to the great captains of a past age, whose lives gave lustre to Britis h arms Nelson, the darling hero of Englishmen, was not more distinguished by his brilliant successes than by his entire—his absolutely religious—devotion to his country's cause, and his strong conviction of its righteou ness. There is also a painful, and almost romantic, interest attached to the manner of his last great achievement, and the fateful death in the very moment of victory. Having for months chased the combined fleets of the enemy over half the world, he at length caught them at Trafalgar, where he destroyed them utterly. During all the intervening operations, which led to this great event, Nelson foresaw in the consummation of his own glory a service to his nation and to humanity; and he almost favoured the conviction which had long been upon his mind, that, in gaining it, he should lose his life. He discoursed freely in this strain with Captain Hardy before the event; and, when Captain Blackwood, taking leave of him on the morning on his own ship, the *Euryalus*, said—" I trust, my Lord, that, on my return to the *Victory*, I shall find your Lordship well, and in possession of twenty prizes," Nelson replied—" God bless you, Blackwood; I shall never see you again!" The prediction was verified in a few short hours.

At early dawn on the 21st of October, 1805, the day of the victory of Trafalgar, Nelson, having made all the necessary preliminary dispositions, repaired to his cabin (that little plain stern cabin, which is still to be seen, just in the state it was, in the *Victory*, as she lies in Portsmouth harbour); and, after writing to Lady Hamilton, and bequeathing his child to the nation in whose cause he had sacrificed his whole life, addressed himself humbly to the God of Battles in a prayer, the words of which he had previously committed to writing:—

May the great God, whom I worship, grant to my country, and for the benefit of Europe in general, a great and glorious victory; and may no misconduct in any one tarnish it; and may humanity, after victory, be the predominant feature in the British fleet. For myself, individ ually, I commit my life to Him who made me; and may His blessing light upon my endeavours for serving my country faithfully. To him I resign myself, and the just cause which is entrusted to me to defend. Amen, amen, amen.

A more sublime and touching incident than the one so presented to the mind, could scarcely be found in the whole of the annals of arms; and Mr. Barker has done well in selecting it for the subject of a grand historical picture, which we lately in spected at Messrs. Leggatt's, Cornhill, and which is at present on view at M'Lean's, in the Haymarket. In this work the likeness has been carefully studied from the best printed materials, for, although Mr. Beechey and Mr. Braxman, from Nelson's face, a short time before he sailed on his last memorable expedition, and which is in the possession of his Lordship's family. The character inf used into it is one of dignity, high purpose, and sublime resignation. The careful manipulation has been employed in the execution of this, as of all other parts of the picture—the partial defect in the right eye being sufficiently indicated; though not to an extent to become disagreeable. On the rude table at which the hero kneels is the prayer which he has just penned; and many minor details in troduced in other parts of the picture, are his sword and cocked-hat, a chart of the Mediterranean, a telescope, and a bucket of water, with a swab in it—all admirably real in effect. The otherwise monotonous aspect of the cabin is cleared for action, is charmingly relieved by the introduction of the warm rays of the morning sun peering in round the edges of the yet closed green serge curtain; and a glimpse of the sea, and of one of the ships of the fleet, with the union jack just rising, through the open port.

Altogether, this is a very gratifying and effective picture; and, we doubt not, will receive all justice at the hands of M. F. Joubart, who has undertaken the engraving of it in the pure line manner.

"THE DUKE OF WELLINGTON AT APSLEY HOUSE," BY J. T. BARKER

This picture, though executed previously to the preceding one, comes later in historical order. They are both by one artist, similar in size, and will make admirable companion pieces illustra ive of our two most memorable heroes. The Duke is represented seated in his private cabinet at Apsley House, in the chair made of the wood of the elm tree under which he stood at Waterloo, with his old-fashioned escritoire before him, intently engrossed in the perusal of the despatches describing the great, but murderous, victories gained by British arms at Peroszepore. He has just come to the passage where something like a "pause" is made of his consideration for the two most distinguished regiments; and at the unacou-tomed and unwelcome suggestion he grasps the elbow of the chair with involuntary impulse, not altogether pleasing;—and very nobly, by the way, did Wellington, in the House of Lords, defend the brave fellows, whose deeds and long services he will knew and appreciated, from the charge thus, perhaps unthinkingly, made against them. As will appear by the date, above mentioned, this portrait was taken when the Duke was in his seventy-eighth year, and still actively engaged in his important official duties. The face is marked with an intelligence and purpose which seem to defy age; and may be taken as the best type of Wellington in the closing years of his ever active career, and just before the manifestation of the last symptoms of physical decrepitude, which only shortly preceded his death.

This picture, which has been most elaborately and successfully finished in every point, has been engraved in Mr. Lupton's best manner, by F. Bacon, whose name is in itself a sufficient guarantee for the satisfactory character of the result.

"THE 'VICTORY' TOWED INTO GIBRALTAR." BY C. STANFIELD, R.A.

Stanfield's fine picture of the *Victory*, with the body of Nelson on board, towed into Gibraltar, Oct. 28, 1805, the property of Mr. Fete, M.P., is at present on view at 23, Cockspur-street, previous to being engraved in his finest line manner by Cousens. This fine work was one of the gems of last year's Exhibition at the Royal Academy, and is equally fine in its fine artistic execution, and the poetic sentiment so full of melancholy and of grandeur, which pervades it. It forms a noble tailpiece to the grand history of England's greatest commander; and will be viewed with veneration by all who prize their country's fame.

ARCHÆOLOGICAL DISCOVERIES AT FOUNTAINS ABBEY.—On Wednesday last a most interesting collection of objects, lately found during excavations at Fountains Abbey, was exhibited at the soirée given by the Earl de Grey to the Institute of British Architects, in St. James's-square. We shall engrave a few of the above archæological rarities shortly.

ST. PAUL'S SCHOOL.—The annual apposition of the scholars of St Paul's School took place in the presence of a large assemblage of the friends of the pupils, on Wednesday. At two o'clock Dr. Kynaston, the High Master, the other masters, and several members of the Mercers' Company, entered the school-room, and were heartily cheered by the boys. The several speeches were delivered with the facility and correctness which usually accompany a careful and precise training.

CHURCH RATES IN KENSINGTON.—The following is the result of the two days' poll of the parish of Kensington:—For the 3d. rate, 836; for the 1½d. rate, 318; majority for the 3d. rate, 63.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—*Bishopric:* The Queen has selected the Most Reverend the Lord Archbishop of Dublin for the see of Meath, to be Lord Bishop of Bath and Wells. *Archdeaconries:* Rev. C. Dodyson, to Richmond. Rev. R. Wickham, to St. Asaph. *Rectories:* Rev W. Carus, to St. Maurice, Winchester; Rev. E. R. Hampden, Alton Bishop, near Hereford; Rev J. Murray, to North Walsham; Rev G R. Turner, to New Windsor. *Vicarages:* Rev. R. Eden, to Wymondham, Norfolk; Rev J. K. Owen, to Lydiard Tregoze, Wiltshire; Rev. C. Thorn hill, to Burwell, near Newmarket; Rev. T Williams, to St. George's, St. Asaph; Rev. T. Woodruff, Alton Hants. *Incumbencies:* Rev. E. W. Burton, to All Saints Church, Gordon-square; Rev. W. Cooke, to St. Andrew's, Sale Moor, Cheshire; Rev. C. B. Dalton, to St. Michael, Highgate; Rev. T. G. Jones, to Quarry-bank parish, Kingswinford, Staffordshire. *Perpetual Curacy:* Rev. J. M. Hobson, Norfolk; the Rev. F.

ENTHRONEMENT OF THE BISHOP OF SALISBURY.—The Right Rev. Dr. Walter Kerr Hamilton, who has recently been con-ecrated to the Bishopric of Salisbury, was enthroned in the Cathedral Church of his diocese on Wednesday last, the 31st inst.

TESTIMONIALS.—The following clergymen have recently received tokens of affectionate esteem:—The Rev. J. Boultbee, late curate of Holy Trinity Church, Nottingham, by his congregation; the Rev. W. Campbell, from the parishioners of Hillesdon, Norfolk; the Rev. H. Sanderson, D.D., Head Master of the Well ngborough Grammar school, by the pupils.

ILLNESS OF THE DEAN OF WINDSOR.—The Hon. and Very Rev. the Dean of Windsor is very dangerously ill at his residence, Buckingham, near Glastonbury.

THE ROMAN CATHOLIC CLERGY.—POLITICAL MEETINGS.—According to the Irish Catholic papers, the synods which met within the last fortnight have taken decided steps in reference to the interference of priests in politics. They do not state precisely the nature of the new statutes; but so far as can be gathered they are mainly directed to prevent the occurrence in future of the appearance of a voice dissonant in the clerical body. It is said that there is a statute forbidding any priest to canvass or others in conduct political agitation in the parish of another without his express consent. The same principle of course extends to dioceses. It is also said that there is a rather stringent statute with reference to the appearance of the clergy at political banquets.

SOUTHWARK BRIDGE.—On Monday, the first stone of this structure, to be erected near the south end of London-bridge, by the Commissioners of the Western Division of the Borough Pavements, was laid with the customary formalities after which the event was commemorated by a public dinner, at the Bridge-house Hotel, at which Mr. B. Sir pson, Esq., the treasurer, presided. Of the l ower, which is of Gothic design, we shall present our readers with an Engrav ing next week.

CANDLEWICK WARD.—On Tuesday last, the inhabitants of the Ward of Candlewick entertained their respected ex-deputy, Mr. Jeremiah Evans, at a public dinner; on which occasion Sir George Carroll, in their name, presented him with a handsome silver centre-piece, as an acknowledgment f his va uable services in the Court of Common Council for thirty-two years. The plate, of excellent design and workmanship, was executed by Mr. Clarke, King William-street, City.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The late inactivity in the Consol Market has been followed th's week by a decided reaction. A large amount of business, chiefly for Money, has been transacted in Consols, the prices of which have advanced to some extent. The improved prices have, however, led to some rather heavy sales of stock, amongst which the Bank of England has figured largely. This must be attributed to the anxiety on the part of some influential parties to realise after making good profits. The Bank has sold S ock evidently for the purpose of increasing the amount of acco nmodation to the mercantile classes. In the early part of the week, money in the Stock Exchange was obtainable on Government security at 2 per cent; but, subsequently, the rate has advanced to 4. The supply of capital in Lombard-street still continues large; yet the lowest rate of discount for first-class paper, having two months to run, is 5 per cent; in some instances, 5 per cent has been given for money on call, at some of the discount houses.

During the past week, the range in the price of Consols was 4⅛ in April, 3½; and in March, 6¼ per cent. The fluctuations last month established a rise in the quotations of ⅜ per cent. The Scrip of the New Exchequer Bonds has been delivered. The transactions in it have been trifling, at from ¾ to ¼ prem.

On Monday, Bank stock was done at 204 to 206. The Three per Cents Reduced were 90½; the Three per Cent Consols, 91¼ to 91⅜; the New Three-and-a-Quarter per Cents, 90⅞ to 91½; and Consols for Account, 91⅛ to 91⅜. Exchequer Bills, par to 1 prem.; India, advertised, 2s. discount. There was less activ i y in the Market on Tuesday, and the quotations were drooping. The Three per Cents Reduced varied from 89⅞ to 89⅜; the Three per Cent Consols, 90 to 90⅛; and the New Three-and-a-Quarter per Cents, 90½ to 90⅝; Long Annuities, 1860, were 4 9-16ths; Ditto, 1859, 4 4-16ths; India Stock sold at 203 to 205; India Bonds, 1s. dis. to 4s. prem.; Exchequer Bills, 2s. to 6s. prem. Very little doing on Wednesday, owing to the running for the Derby having drawn almost all the frequenters of the Exchange to Epsom. Bank Stock was 204 to 206; the Three per Cent Reduced were 89⅝; the Three per Cent Consols, 89⅞; and the New Three-and-a Quarter per Cents, 90⅝ to 91; India Stock marked 203; Exchequer Bills were 1s. to 3s. prem.; Ditto, Advertised, 1s. to 4s. prem.

On Thursday Consols ranged from 91⅜ ⅝ to 91 ¼ up to 91⅝, both for Money and the Account. The Three per Cents Reduced were 90⅜; and the New Three-and-a-Quarter per Cents, 90⅝ 91. Exchequer Bills, 1s. dis to 2s. prem.

All Foreign Bonds have been in good request. In some instances, rather an important rise has taken place in their value. The following are the leading prices during the week:—Ecuador Bonds, 3½; Mexican Three per C nts, 24½; Portuguese Four per Cents, 40; Russian Five per Cents, 99¾; Russian Four-and-a-Half per Cents, 84; Sardin ia Five per Cents, 84½; Spanish Three per Cents, 40; Spanish New Deferred, 19½; Ditto, Certificate of Coupon, 4⅝ per cent.; Venezuela Three-and-a-Half per Cent, 20¾; Brazilian Five per Cents, 99½; Chilian Six per Cents, 103; Granada Deferred, 6¼; Peruvian Three per Cents, 47; Dutch Two-and-a Half per Cents, 61; Dutch Four per Cents, 83½.

The imports of bullion have shown a falling off, when compared with the previous week: but we learn that about £700,000 in gold is on passage from Australia, exclusive of £330,000 in the steamer. The exports have been very moderate, and the exchanges are still unfavourable, a resumption is by no means improbable.

There has been rather a firm market for Joint-stock Bank Shares. Australians has been done at 72¾; English, Scottish, and Aust ra lian Chartered, 8⅝; London Chartered of Australia, 20⅛; London and Westminster, 58⅝; Oriental, 4⅝ ex bonus; Provincial of Ireland, 51; Union of Australia, 71. Miscellaneous shares have ruled firm, as follows:—Australian Agricultural, 46½; Australian Royal Mail Steam, 3⅝; Canada Six per Cent Bonds, 108; Crystal Palace, 6⅝; Ditto B Shares, 2½; General Steam Navigation Company, 3½; Hudson's Bay, 14; Peel River Land and Mineral, 5⅛; Peninsular and Oriental Steam, 52½; Ditto New, 35½; Van Diemen's Land, 14½; Hungerford-bridge Shares have been dealt in at 12; Waterloo, 1½; Vauxhall, 2⅜. Berlin Waterworks, 1⅞; East London, 129½; Grand Junction, 70; Kent, 80; Lambeth, 97; West Middlesex, 107. Insurance Companies Shares have been rather flat. Albion, 9½; Atlas, 18½; London, 29; Pelican, 7; Provident, 42; Royal Exchange, 235; Sun Fire, 260; Ditto, Life, 65; United Kingdom, 5½.

The market for Railway Shares has been in a healthy state. Prices almost generally have improved. The "calls" for the present month are only about £200,000. The total for the first half of the present year has reached £7,224,220, against £6,606,000 in the same period in 1853. The following are the official closing prices on Thursday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 20⅞; Caledonian, 87; Dublin and Belfast Junction, 43; Eastern Counties, 14⅞; Edinburgh and Glasgow, 58; Edinburgh, Perth, and Dundee, 74; Great Northern, 88½; Ditto, A Stock, 73; Ditto, B Stock, 123; Great Southern and Western (Ireland), 84¾; Great Western, 75½; Lancaster and Carlisle, Thirds, 11 prem.; Lancashire and Yorkshire, 61⅛; Leeds Northern, 13; London and Blackwal, 8½; London, Tilbury, and Southend, 6⅞; London and North Western, 89½; London and South-Western, 79⅜; Manchester, Sheffield, and Lincolnshire, 30; Midland, 69⅛; Midland Great Western (Ireland), 44¾; North British 32⅜; North Staffordshire, 9⅜; Scottish Midland, 8½; Shrewsbury and Birmingham, 58; South-Eastern, 69½; South Wales, 34½; Vale of Neath, 18; York, Newcastle, and Berwick, 67½; York and North-Midland, 49.

LINES LEASED AT FIXED RENTALS.—Hull and Selby, Half Shares, 61; Midland Bradford, 24.

PREFERENCE SHARES.—Eastern Counties, New Six per Cent Stock, 12⅜; Great Northern Five per Cent. 114; Ditto, Redeemable at Ten per Cent prem., 107; Ditto, Four-and-a-Half per Cent, 10; Great Western, Four-and-a-Half per Cent, 97; London and South Western Thirds, 74; Manchester, Sheffield, and Lincolnshire, New £10 Shares, 8⅜; Ditto, £5, 4½; Oxford, Worcester, and Wolverhampton, Six per Cent, 98; South-Eastern, Four-and-a-Half per Cent, 100; York and North-Midland, New Purchase, 9½.

FOREIGN.—East Indian, 22; Ditto, Extension, 1¼; Grand Trunk of Canada, 4⅞; Great Western of Canada Shares, 19½; Northern of France, 35½; Paris and Strasbourg, 30½; Royal Danish, 40.

MINING Shares have been tolerably firm, but the business doing in them has been very moderate. On Thursday Cobre Copper were 45⅞; Colonial Gold, 1; Santiago de Cuba, 4¼.

Friday Evening.

The Market for Consols has been very steady to-day, and prices have had an upward tendency. The Three per Cents Reduced were 90⅝ ⅞; the Three per Cents Reduced, 91⅜; and the New Three-and-a-Quarter per Cents, 91⅝. Foreign Bonds and Railway Shares are rem

THE MARKETS.

CORN EXCHANGE (Friday).—The show of English wheat in to-day's market was very limited; and, as the attendance of buyers was small, the demand for all kinds called inactive, at Monday's decline in the quotations. Foreign wh eat—the imports of which are but moderate—moved very ll y at late rates. We were but indifferently supplied with barley, in wel h p ly we were in fair request, at late rates. Of malt we had a full supply for beans and peas, on former terms. There was a moderate business done in flour, at steady q uotations.

ARRIVALS.—English wheat, 3151 barls.; barley, 3230; malt, 2050; oats, 490; flour, 690 sacks; Irish oats, 3120. Foreign: wheat, 11,120 barls.; barley, 3,800; oats, 15,230; flour, 2150 sacks, 4190 barrels.

Mark Lane.—Wheat: Essex and Kent, red, 72s. to 80s; ditto, white, 75s. to 80s. Norfolk and Suffolk red 71s to 81s ditto, white, —s. to —s. rye, 45s. to 50s.; grinding barley, 34s. to 40s.; fine ditto, 42s. to 44s.; malting ditto, 44s. to 46s.; Lincoln and Norfolk malt, 62s. to 65s.; brown ditto, 56s. to 60s.; Scotch and Ware ditto, 60s. to 65s.; chevalier ditto, 70s. to 74s.; Yorkshire feed oats, 23s. to 26s.; potato ditto, 24s. to 28s.; Dongal and Cork, black, 24s. to 26s.; ditto, white, 26s. to 28s.; cock beans, new, 40s. to 42s.; tick ditto, old, 44s. to 46s.; maple, 42s. to 43s.; white, 42s. to 43s.; grey peas, 40s. to 42s.; marrowfat, 46s. to 48s.; flour, 37s. 2d.; cake, 28s. 11d.; rape, 32s. 3d.; linseed, 38s. 2d.; peas, 41s. 3d.

Liverpool.—Wheat, 1s.; barley, 1s.; oats, 1s.; rye, 1s.; beans, 1s.; peas, 1s.

Tea.—Fine green qualities are in request, and 1d. per lb. dearer. Other sorts low, the demand is in a sluggish state. Common round congou, 11d. per lb.

Sugar.—Our market has ruled dull this week, and the quotations have given way from 6d. to ½s per cwt. Mid. to fine yellow Barbadoes has changed hands at 42s. to 43s.; brown ditto, 40s. to 42s. 6d.; brown Mauritius, 40s. to 42s.; low to fine yellow Mauritius, 42s. 6d. to 44s.; fine grocery yellow 43s. 6d. per cwt. Refined goods have been in limited request, at 1s. per cwt. lower. Lump, 52s. to 54s. per cwt. Up to Saturday last, duty was paid on 2,515,759 cwts., against 2 431 7 6 dit to, in 1853.

Coffee.—All kinds move off slowly and the quotations have a downward tendency. Good and native, 45s. per cwt.

Rice.—This article is very dull, and to effect sales lower prices must be submitted to.

Provisions.—The better market is in a depressed state, and pr ices have fallen from 4s to 6s. per cwt. We have a very tolerably fair demand for bacon, the value of which has an upward tendency. Other kinds of provisions are unaltered in value.

Butter.—The business doing in our market is confined to small parcels. P.Y.C. on the spot is quoted at 114s.; and for August delivery, 108s. per cwt.

Oils.—Linseed is very dull, at 37s. on the spot and 41s. for September. All other oils, as well as turpentine, command very little attention.

Spirits.—The rate left for rum is in a depressed state, on lower terms. Proof Leewards, 1s. 6d to 1s. 6½d.; East India, 2s. 2d. to 2s. 2½d. per gal. In brandy next to nothing is doing, and prices are still drooping. Genevs seadons spirits command previous rates.

Hay and Straw.—Monday's day, £3 10s. to £4 5s.; clover ditto, £3 15s. to £5 5s.; and straw £1 15s. to £2 2s. per load

Wool.—The public sales have been brought to a close. Prices have declined, compared with the previous auctions, from 6d to 1d per lb.

Potatoes.—New English are selling at from 5 s. to 23s ; and foreign, 15s. to 18s. per cwt. The supply is increasing

Hops (Friday).—The unfavourable accounts from the plantations have produced considerable firmness in our markets, and prices are on the advance. This week's imports are 6 bales from Rotterdam, and 105 ditto from Ostend Mid and East Kent mockets, 4l 4s. to 5l 5s.; Weald of Kent, £7 10s. to £9 0s.; Sussex, £6 10s. to £8 0s.; Farnham, £8 8s. to £9 9s. per cwt.

Coals (Friday). Baring's Hartley, 20s ; Hetton, 21s ; Lambton, 21s ; Eden, 21s ; Wylam, 21s ; Hartley, 21s ; Adelaide, 21s ; Tanfield Moor, 21s ; Tees, 21s ; Tyne, 21s ; Wear, 21

PARKINSON and FRODSHAM, Chronometer Makers to the Queen, beg to call the attention of parties to their improved manufacture of WATCHES, CHRONOMETERS, and CLOCKS, to which much greater accuracy is attained, and the price considerably reduced. 4, Change-alley, Cornhill, opposite the Royal Exchange Established upwards of fifty years

C. F. HANCOCK, JEWELLER and SILVERSMITH, buys respectfully to inform the Nobility and Gentry that he has RE OPENED his premises, 2, BRUTON-STREET (which have been extensively enlarged to meet the demands of its increasing business), with an entirely New and Splendid Stock of Jewellery, Silver and Plated Articles, and begs a call to this opportunity of returning his most grateful thanks for the favours of past years, and earnestly so soli a continuance of the same. 2, Bruton street, Bond-street.

SARL'S ARGENTINE SILVER PLATE.—17 and 18, Cornhill.—This beautiful metal continues to stand unrivalled amongst all the substitutes for Silver. Its intrinsic excellence, combined with its brilliant appearance defies all competition. It is upwards of thirteen years since this manufacture was introduced by SARL and SONS to the public, and, notwithstanding the many spurious and unprincipled imitations, the utmost demand exists for the former producers; thus giving a convincing proof of its having answered the end proposed, which was to produce an article possessing the durability and appearance of solid silver at one-sixth its cost. The magnificent stock has recently been enriched with many novel and novelties in dinner, tea, and breakfast services, and never possessed so many attractions as at the present time. The Spoons and Forks equipment includes all the various patterns that are made in solid silver. A new and enlarged Pamphlet of illustrations, with Prices, is just published, and now ready for circulation. It may be obtained gratis by applying at the manufactories.—Sarl and Sons, 17 and 18, Cornhill. Cautious.—The public are hereby cautioned that no article is genuine, except purchased at Sarl and Sons'. No other parties are authorised to sell it.

WATCHES.—T. COX SAVORY and CO., 47, Cornhill, London, submit for attention a most complete stock of Fine-class SPECTACLEWORK WATCHES, for which being made by themselves, can be strongly recommended for accuracy and durability. A written warranty is given with each.

S. MORDAN and CO.'S MANUFACTURE, THREE 23, City-road, London.

CAUTION.—PATENT EVER-POINTED PENCILS.—S. MORDAN and CO. are daily receiving complaints from the public of the brittle nature of their truly useful invention, which has now been before the public above thirty years. S. M. and Co. cannot undertake to guarantee that the Pencils of the name be stamped legibly on the case. A quantity of counterfeits are constantly pressed on the public, as being of a greater profit to the salesman, but will be found of no value in use.

CHALK PENCILS made from the Cumberland Lead, prefixed by Mr. Brookman's Patent Process. By Mordan and Co. have the satisfaction in asserting that each excellent pencils on every respect are only to be obtained of them, and from the Sole Proprietor, Mordan, purpose quence of the Cum erland Company having disposed of the whole of their stock of crude black lead to parties in Germany, by which they are enabled to offer their Cedar Pencils, made from the only pure lead extant, with the confidence that their assertions will be fully corroborated by the public. The highest encomiums have been pronounced on the e Pencils by painters, engineers, draughtsmen, and others, and draughtsmen of the greatest eminence in their several professions, and whose testimonials have been published in the Times. The following names are selected —

Chas. Barry, R.A., &c.	Copley Fielding, Esq., P.W.C.S.
C. L. Eastlake, Esq., R.A.	W. Wood, Esq., R.A.
I. K. Brunel, Esq., F.R.S.	David Robert, Esq., R.A.
Stephen Smith, Esq., R.A.	T. Webster, Esq., R.A.
R. Westmacott, jun., Esq., F.R.S	H. C. Wilson, Esq., Director, Geological Museum, Jermyn-street
B. Pyne, Esq., P.S.A.	
Philip Hardwick, Esq., R.A.	

Each Pencil is stamped "Warranted Pure Cumberland Lead. S. Mordan and Co., London."

S. MORDAN and CO.'S PATENT COMBINATION LITHOGRAPHIC and COPYING PRESS.

By the aid of the most simple mechanical arrangements, the Patentees have succeeded in producing a most efficient and portable Printing and Copying Machine, equally well adapted for the Counting-house, Office, or Library. With this Press every person may readily become independent of his Printer.

This excellent machine is produced at a less cost than the cheape t Lithographic Press in the market, and, in addition to its capability of doing the work of a Lithographic Press, it is an excellent and easy Copying Press, so that it may be said that this latter qualification is obtained by the purchase gratis.

To be obtained from the leading Stationers in the Kingdom.

An Emigrant's House fitted up complete, to accommodate a seventy-five persons, and many other Buildings, covering no more of ground. Every Building may be seen perfectly erected, previous to being packed for shipment, thereby enabling any inexperienced person to re-erect them without difficulty. The number of work is managed in the most extensive drying-rooms at Old House. Apply at the works; or at Mr. R. Manning's, 63, Gracechurch-street; Messrs. Baker and Sons, Basinghall-street; Messrs. Fox, Brownes, and Co., Glasgow; T. Mather, Newcastle, Messrs. M'Donald, Bathurst, 7, Fenchurch-street.

THE BEST FOOD FOR CHILDREN AND INVALIDS.

ROBINSON'S PATENT BARLEY, for making the superior barley-water in fifteen minutes, has not only obtained the patronage of her Majesty and the Royal Family, but has been awarded a prize by every class of the community; and is acknowledged to stand unrivalled as an eminently pure, nutritious, and light food for infants, children, and invalids, much approved for making a delicious custard-pudding; and excellent for thickening broths or soups.

ROBINSON'S PATENT GROATS form another diet universally esteemed for making a superior gruel in fifteen minutes light for supper; and, alternately with the Patent Barley, is an excellent food for children and invalids, being particularly recommended by the Family as the purest and best preparation of the kind extant, and far preferable to the fine oats Groats

Prepared only by the patentees, ROBINSON, BELVILLE, and Co., purveyors to the Queen, 64, Red Lion-street, Holborn, London.

ESTABLISHED IN 1841.—By Appointment, To the Queen, GENERAL MOURNING WAREHOUSE, Nos. 247, 248, and 249, Regent-street.

The Proprietors of this Establishment desire most respectfully to submit that, from their having been so many years engaged in the SALE OF MOURNING ATTIRE, and from the immense business transacted in their warehouses, and from the numerous commands they receive to attend in various parts of the country, they are enabled to sell their goods on more advantageous terms than any other house in London.

Messrs. JAY have ever been deemed it unnecessary to quote prices, from a conviction that a Person

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

[We have received the following from our Special Correspondent at the seat of the war, and find by the post mark at Belgrade that it took twelve days to travel from Schumla to that place].

SCHUMLA, May 8, 1854.

I take the opportunity of a courier to Widdin to give you the latest intelligence from this place. We hear that some days since the town of Fokstcham, in Moldavia, was burnt by accident, and the Russians lost all their stores, ammunition, and provisions. Fokstcham was the head-quarters of their commissariat. The fire commenced in the hospital, and spread so quickly, that it could not be stemmed. Only a few houses, I am told, remain. Since my last letter was dispatched, the Russians have bombarded Silistria, but have not done much damage. Their armed batteries are too far to do any serious damage, unless the river be crossed. This the enemy has not done.

The greatest astonishment has been felt here at the news contained in the London journals of the 19 h ult. The departure of the Prussian Ambassador is looked upon as a prelude to warlike preparations against England, and, consequently, against Turkey. There are many Prussian officers in the Turkish service; and the news has taken them by surprise after the energetic speech of M. Von Bonin in the Chamber, and the conditions with which the granting of extraordinary supplies was clogged by that assembly.

The British fleet, which left Odessa on the 26th ult., has gone to Sebastopol, but only for the purpose of blockade. It is supposed that they will make no attempt at bombardment. The details of the affair at Odessa have reached this place, and astonished us on account of the small loss sustained by the combined squadron. The steamers which acted were so worked as to steam round a circle and to fire as they steamed. This, I believe, is a novelty in the art of warfare, which is highly interesting to note.

We do not, as yet, know here whether the French Ambassador has left Constantinople or not. But it is generally supposed that he has, not perhaps for the reasons given, but because for some time past he has been on the eve of a recall.

Behram Pacha, or rather, Colonel Cannon, has left this on a complimentary mission from Omer Pacha to the British and French Generals.

Prince Napoleon Bonaparte, who commands a French division, is daily expected at Varna, from whence he will come and visit this place.

MAY 6.—I informed you, in a previous letter, of the advance of the Turks into Little Wallachia, consequent on the retreat of the Russians from that portion of the ground hitherto occupied by them. I told you that the Turkish forces, having advanced as far as Bailleschdi, and found no enemy before them, had returned again with their main force to Kalafat, and contented themselves with advancing their outposts. Since those operations took place, orders were dispatched from hence to the Commander-in-Chief in Kalafat, to the effect that the troops should advance from thence and occupy Little Wallachia as fast as the Russians evacuated it. Accordingly, on Monday, the 1st of May, a corps of cavalry, under Skender Bey, advanced to Radovan, which was found occupied by some Russian horse and Cossacks. Skender Bey, at the head of his men, charged into the place with such impetuosity that the enemy retired almost immediately, losing 100 men killed, twelve prisoners, and sixty horses. In consequence of this success, Skender Bey has been raised from the rank of Lieut.-Colonel to that of Colonel.

I hear that, on Wednesday last, the 3rd inst., an engagement took place before Nicopolis, between the Russians and the Turks. I have, however, no details of the engagement, and therefore merely notify the fact.

A BASHI-BOZOUK.—FROM A DRAWING BY JAMES ROBERTSON, ESQ., OF CONSTANTINOPLE.

THE BASHI-BOZOUKS.

THE Bashi-bozouks are an "institution" (if we may so far profane the word) of the past, a relic and evidence of Oriental barbarism, which it will take all the reforming energies of the Abdul-Medjid dynasty, backed by the force of example, set by his Western Allies, to subdue or improve. What the "Janissaries" were to the capital the Bashi-bozouks are to the provinces: a voluntary and irregular band of marauders, who, under pretence of fighting for their Sovereign, commit every act of brigandage and atrocity upon their unfortunate, unarmed fellow-subjects. In the hope of pay or plunder, those fierce and untameable bands have gathered in great numbers from all parts of the wide Ottoman empire to the defence of the sacred standard of Islamism; creating, we apprehend, more trouble and difficulty to the regular army of Omer Pacha than they can be expected to do good. Armed in all sorts of fashions by themselves, or wholly unarmed, as the case may be, they, for a trifling monthly pay, find their own subsistence (how and where the cry of the helpless will too often tell), and, ready to turn their hand to anything, have sometimes been of use in light skirmishing operations, but in the regular movements of the battle-field, in the face of, or in connection with, disci-

plined troops, they can be of no use. It has been urged as a plea in extenuation for the numberless enormities committed by the Bashi-bozouks, that they are in arrears of pay, and have nothing but their own industry, and their chances of the road, to depend upon for their subsistence. There may be something in this apology as far as plunder goes, but nothing can be said for the shocking cruelties with which their acts of robbery have been accompanied; and Omer Pacha has found it necessary to make some severe examples from amongst their numbers, both to deter others from similar crimes, and as an example to his own regular troops.

From the last accounts from Constantinople, it appears that measures are about to be taken—measures imperatively necessary now that the operations of the war are about to be carried on upon a truly European scale, to rid the Ottoman cause of these dangerous allies, or at least effectually to curbe their evil propensities. By virtue of an arrangement between the Commanders-in-Chief of the three armies, with Marshal St. Arnaud at their head, General Jousouf was to take the command of the Bashi-bozouks; and their officers and sub-officers were also to be French. The Bashi-bozouks who *do* not choose to serve under these conditions will be sent to Gallipoli; these who *do* will have to mind their p's and q's.

THE TREATY BETWEEN ENGLAND, FRANCE, AND TURKEY.

(From the *Moniteur*.) PARIS, May 23.

Napoleon, by the grace of God and the national will, Emperor of the French,

To all present, and to come, greeting:

On the report of our Minister the Secretary of State for Foreign Affairs,

We have decreed and decree as follows:

Art. 1.—A treaty of alliance, destined to guarantee the integrity and independence of the Ottoman Empire, having been signed at Constantinople on the 12th of March of the present year 1854, between the French Empire, the United Kingdom of Great Britain and Ireland, and the Sublime Ottoman Porte, this treaty having been ratified, and the respective ratifications having been exchanged on the 8th of May, the said treaty, the tenor of which follows, will receive its full and entire execution.

TREATY.

His Majesty the Emperor of the French and her Majesty the Queen of the United Kingdom of Great Britain and Ireland having been invited by his Imperial Majesty the Sultan to aid him in repelling the aggression directed by his Majesty the Emperor of All the Russias against the territories of the Sublime Ottoman Porte—an aggression by which the integrity of the Ottoman Empire and the independence of the throne of his Imperial Majesty the Sultan are menaced; and their said Majesties, being fully persuaded that the existence of the Ottoman Empire, within its actual limits, is essential to the maintenance of the balance of power between the States of Europe, and having, in consequence, consented to give to his Imperial Majesty the Sultan the assistance he has asked for this object, it has appeared fit to their said Majesties, and to his Imperial Majesty the Sultan, to conclude a treaty, in order to declare explicitly their intentions, agreeably to that which precedes, and to regulate the manner in which their said Majesties will lend assistance to his Imperial Majesty the Sultan.

With this view their said Majesties and H. I. M. the Sultan have named as their plenipotentiaries—

Baraguay d'Hilliers, Viscount Stratford de Redcliffe, and Mustapha Redschid Pacha.

Art. 1. His Majesty the Emperor of the French, and her Majesty the Queen of the United Kingdom of Great Britain and Ireland, having already, at the request of his Imperial Majesty the Sultan, ordered powerful divisions of their naval forces to repair to Constantinople, and to extend to the Ottoman territory and flag the protection that circumstances would permit, their said Majesties engage, by the present treaty, to co-operate still further with his Imperial Majesty the Sultan for the defence of the Ottoman territory, in Europe and Asia, against the Russian aggression, and employing for this end such a number of land troops as may appear necessary for attaining this object; which land troops their said Majesties will forthwith dispatch towards such and such points of the Ottoman territory as shall be judged expedient; and his Imperial Majesty the Sultan agrees that the English and French land troops, thus dispatched for the defence of the Ottoman territory, shall receive the same friendly reception, and shall be treated with the same consideration as the French and British naval forces already employed for so as time in the Turkish waters.

Art 2. The high contracting parties engage, each on his part, to communicate reciprocally to each other, without loss of time, every proposition that one of them might receive from the Emperor of Russia, whether directly or indirectly, with a view to the cessation of hostilities, or to the conclusion of an armistice or peace; and his Imperial Majesty the Sultan engages, moreover, to conclude no armistice, and to enter into no negotiation for peace, nor to conclude any preliminary of peace, nor any treaty of peace, with the Emperor of Russia, without the knowledge and consent of the high contracting parties.

Art. 3. As soon as the object of the present treaty shall have been attained by the conclusion of a treaty of peace, his Majesty the Emperor of the French and her Majesty the Queen of the United Kingdom of Great Britain and Ireland will make arrangements at once for withdrawing immediately all their military and naval forces employed for realising the object of the present treaty, and all the fortresses or positions in the Ottoman territory that shall have been provisionally occupied by the military forces of France and England shall be restored to the authorities of the Sublime Ottoman Porte within the space of forty days, or sooner, if possible, to date from the exchange of the ratifications of the treaty by which the present war shall be terminated.

Art. 4. It is understood that the auxiliary armies shall preserve the faculty of taking such part as may appear suitable in the operations directed against the common enemy, the Ottoman authorities, whether civil or military, not claiming to exercise the least control over their movements; on the contrary, all aid and facility shall be afforded them by these authorities, especially for their disembarkation, their marching, dwelling or encampment, their subsistence and that of their horses, and for their communications, whether they may act together or may act separately.

It is understood, on the other hand, that the commanders of the said armies engage to maintain the strictest discipline among their respective troops, and will cause to be respected by them the laws and usages of the country.

It is of course understood that property is to be everywhere respected. It is, moreover, understood on either side that the general plan of the campaign shall be discussed and agreed upon between the Commanders in Chief of the three armies if a considerable part of the English or French troops should be in line with the Ottoman troops, no operation can be executed against the enemy without having been previously concerted with the Commanders of the allied forces. Lastly, due attention shall be paid to every requirement, relative to the wants of the service, addressed by the Commanders-in-Chief of the auxiliary troops, whether to the Ottoman Government through the medium of the superior military authorities, or, in case of urgency, to the local authorities, unless paramount objections distinctly stated, may prevent its execution.

Art. 5 The present treaty shall be ratified, and the ratifications shall be exchanged at Constantinople within the space of six weeks, or sooner if possible, to date from the day of signature.

In faith of which, &c.

NAPOLEON.

THE BRITISH CONSUL AT VARNA.—It is, perhaps, not generally known that our Consul at Varna, Colonel Neale, whose name so frequently occurred in accounts from the East, has himself seen and shared in much severe military service, and is therefore particularly well suited for his present post. Lieut.-Colonel Edward St. John Neale, now British Consul at Varna, was a distinguished officer in the Liberating Army of Portugal, of 1832, and was present, in command of a Company, in every action in which the British troops in the Portuguese service were engaged during the war that secured Donna Maria on the throne. He was afterwards with the British Legion in the earlier and more fortunate part of their career in Spain. Having obtained the order of St. Ferdinand, for the valour he displayed at the capture of St. Sebastian, Colonel Neale left Spain, and went with Colonel Hodges to the Consulate in Bosnia-Servia, which he managed for eight months alone, during Colonel Hodges' absence. Having subsequently been Vice-Consul at Alexandretta, Colonel Neale was appointed Consul at Varna, the 28th May, 1847. Colonel Neale is on terms of intimacy with Omer Pacha, and is much esteemed by that famous General. The family to which Colonel Neale belongs, has long been creditably known in the civil and military service of British India.

THE TATERNAL RUSSIAN GOVERNMENT.—A recent fact strikingly illustrates both the fears of the Russian Government and its method of proceeding. A tradesman of the capital having failed, closed his shop, situated in one of the most frequented quarters of the city. This circumstance, apparently so ordinary, excited a sensation, and the Government arrested the tradesman and transported him at once to Siberia for having failed at a critical time, and thus betrayed the uneasy state of trade. The police found upon inquiry that the immediate cause of the failure was a claim made by a nobleman for a sum of money due to him. The nobleman was fined 15,000 roubles, and ordered to leave St. Petersburg, and reside on his property.

THE TREATY BETWEEN AUSTRIA AND PRUSSIA.

The following is a translation, from the original German, of the defensive and offensive treaty between Austria and Prussia. The military, or so-called "*Secret Stipulations*," which contain the eventualities spoken of in the convention, are not annexed:—

OFFENSIVE AND DEFENSIVE TREATY BETWEEN PRUSSIA AND AUSTRIA.

His Majesty the King of Prussia and his Majesty the Emperor of Austria, penetrated with profound regret at the fruitlessness of their previous efforts to avert the outbreak of war between Russia on the one side, and Turkey, England, and France on the other, considering the moral obligations imposed on them by having signed the last Vienna protocol; seeing the constant augmentat on of military measures on both sides, and the increasing dangers emanating therefrom to the general peace; persuaded as to the high mission which, on the threshold of a fanesfe future, is allotted to them and to Germany, intimately allied with both States, in and for the interests of European welfare; have resolved to unite—during the existence of the war which has broken out between Russia on the one side, and Turkey, France, and England on the other—in a defensive and offensive alliance; and have named for the conclusion thereof the following Plenipotentiaries:

His Majesty the King of Prussia, his Minister-President Baron von Manteuffel, &c.

His Majesty the Emperor of Austria, his Actual Privy Councillor Baron von Hess, &c. &c. &c. Actual Privy Councillor Count Thun von Hohenstein.

The same after exchanging their full powers, found in due order, agreed upon the following points —

Art. 1. His Majesty the King of Prussia and his Imperial Apostolical Majesty reciprocally guarantee to each other the possession of their German and non-German territories, so that any attack made upon the territory of the one, no matter whence it may come, shall be regarded as a hostile attack upon the territory of the other.

Art. 2. In the same manner the high contracting parties hold themselves bound to safeguard the interests of Germany from all and every threat, and regard themselves, consequently, as bound to resist every attack upon any portion of their territory, in case that one of them should, in accord with the other, find itself required to move (*vorrücken gehen*) in defence of German interests. Agreement as to the initiative (*eintritt*) of the eventuality just mentioned, as well also as to the extent of assistance to be afforded, shall form the subject of special arrangements, which are to be considered as integral portions of the present treaty.

Art. 3. In order to give the necessary weight and strength to the offensive and defensive alliance, which is established between the two great German Powers bind themselves, in case of need, to hold a portion of their military force fully prepared for war, at given epochs and at given points, to be determined between them. Special stipulations shall also ensue as regards the time, extent, and mode of employing this military force.

Art. 4. The high contracting parties will invite all German States to adhere to this alliance in such measure as is provided for by Art. 47 of the Vienna concluding Acts, so that the legal federal obligations may receive such extension by adhering States as the present treaty points out.

Art. 5. Neither of the high contracting parties will, during the existence of the alliance, conclude any separate treaty whatever with other States which does not fully harmonise with the principles of the present treaty.

Art. 6 The present treaty shall be submitted as soon as possible, for the ratification of the august Sovereigns.

VON MANTEUFFEL.

VON THUN.

Done at Berlin, April 20, 1854.

ADDITIONAL ARTICLE TO THE OFFENSIVE AND DEFENSIVE TREATY CONCLUDED BETWEEN AUSTRIA AND PRUSSIA.

According to the stipulations of Art. 2 of the treaty concluded this day between his Majesty the King of Prussia and his Majesty the Emperor of Austria, relative to the conclusion at an offensive and defensive alliance, the more explicit understanding as to the initiative in the eventuality wherewith the action of one high contracting party for the common defence of the territory of the other shall be grounded, will form the subject of special arrangements to be considered as integral portions of the principal treaty.

His Majesties have not been able to overlook (*haben sich die Erwägung nicht entziehen können*) the consideration that the indefinite prolongation of the occupation of his Highness the Sultan's territory on the Lower Danube by Russian troops will endanger the political, moral, and material interests of the whole German Confederation. They therefore declare, and this in so much higher degree the further Russia extends her war operations, that the high contracting parties will, during the existence of this alliance, conclude any separate treaty whatever with other States which does not fully harmonise with the principles of the present treaty.

THE GOVERNMENT, ADMINISTRATION, AND INTERNAL CONDITION OF THE RUSSIAN EMPIRE.

FOR the last forty years the Russian Empire has excited the alarm of many politicians and statesmen, and the curiosity of the people in all the civilised countries of the world. Much of the alarm has lately subsided, for the "big bully" has been proved by experience to be like other bullies, a coward and a false pretender; but the events of the last twelvemonth have tended to increase, rather than to allay, the curiosity that previously existed. Everybody wants to know something more of the man whose ambition has convulsed the world, and something more of the semi-barbarous State over which he rules. The press teems with books and pamphlets upon the subject, and it would seem as if all other literature were suspended, except that which relates to the Czar and his empire, his army, navy, and resources, and the character of himself and his people. The events of the war are as yet not sufficient of themselves to satisfy the public craving, and the broad-sheets of our daily and weekly contemporaries are expected to record not only the progress of our armies and the negotiations of our diplomatists, but to give their readers some insight into the internal condition of the State which it has become the duty of the Allies to humble and restrain. For this purpose we present our readers with a brief and succinct account of the powers and functions of the Czar, the state of his Army, Navy, Police, and Administration, and such details of the condition of the Nobility and People as we have been able to collect from the principal works that have lately been published upon the subject. The picture thus drawn of the Russian Empire is by no means a favourable one; but all travellers, whatever their country or their condition, are unanimous in their reports of the degraded condition of all classes of the Russians. There is little contradiction between German, French, and English writers. The system of Government is a brutalising despotism, and it has produced the only fruits that could have been expected of it; and, were the despotism not tempered by the fear of assassination, it is possible that it might have grown still more vicious and degrading than it is. Its natural consequence may be briefly stated as a discontented and plotting nobility, a dissolute and ignorant priesthood, and a people of slaves, ignorant, sensual, and stolid, looking upon the knout as the emblem and the arm of Government, and worshipping the Czar with as much servility as the native Africans exhibit towards their Fetiches. The Czar is, in fact, the Fetich of the Russians, and will be treated perhaps with as little ceremony, when his devotees discover how powerless is their idol to save them from the disasters which his evil passions have brought upon his country.

THE CZAR.

The Czar is the absolute lord and master of Russia and of the Russian people. His will is law. He is head of the State and the Church, and claims to be the vicegerent of God on earth. A reverence for the Czar, amounting almost to idolatrous worship, is instilled into the Russians from their earliest childhood; they breathe it with the air; it is their chief mental food, and moulds their whole course of life. Next to the name of God, the name of the Czar always occurs in the religious vocabulary of the people, in whose eyes the two names have become the next thing to synonymous. "All comes from God and the Sovereign." "God is too high, the Czar is too far distant." "A man who is beaten by the Czar's orders is worth two who have not been." "What is mine is the Czar's." "Near the Czar near death;—fear not the judgment but the judge." Such are a few of the proverbs current among the Russian peasants and people, which show the dread estimation in which the Czar is held by them

The following passages from the Russian Catechism, as taught to children in schools, show in a still more powerful manner the extent of his despotic authority and assumption of almost Divine power:—

Question 1.—How is the authority of the Emperor to be considered in reference to the spirit of Christianity?

Answer.—As proceeding immediately from God.

Ques 2.—How is this substantiated by the nature of things?

Ans.—It is by the will of God that men live in society; hence the various relations which constitute society, which, for its more complete security, is divided into parts called nations, the Government of which is intrusted to a Prince, King, or Emperor; or, in other words, to a supreme ruler; we see, then, that, as man exists in conformity with the will of God, society emanates from the same Divine will, and more especially the supreme power and authority of our Lord and Master, the Czar.

Ques 3.—What duties does the Orthodox teach us, the humble subjects of his Majesty the Emperor of Russia, to practice towards him?

Ans.—Worship, obedience, fidelity, the payment of taxes, service, love, and prayer; the whole being comprised in the words worship and fidelity.

Ques 4.—Wherein does this worship consist, and how should it be manifested?

Ans.—By the most unqualified reverence in words, gestures, demeanour, thoughts, and actions.

Ques. 5.—What kind of obedience do we owe him?

Ans.—An entire, passive, and unbounded obedience in every point of view.

Ques. 6.—In what consists the fidelity we owe to the Emperor?

Ans.—In executing his commands most rigorously, without examination in performing the duties he requires from us—and in doing everything willingly, without murmuring.

Ques. 7.—Is it obligatory on us to pay taxes to our gracious Sovereign the Emperor?

Ans.—It is incumbent on us to pay every tax in compliance with his supreme commands, both as to the amount, and when due.

Ques. 8.—Is the service of his Majesty the Emperor obligatory on us?

Ans.—Absolutely so; we should, if required, sacrifice ourselves in compliance with his will, both in a civil and military capacity, and in whatever manner he deems expedient.

Ques. 9.—What benevolent sentiments and love are due to the Emperor?

Ans.—We should manifest our good-will and affection, according to our station, in endeavouring to promote the prosperity of our native land, as well as that of the Emperor, our father, and of his supreme family.

Ques. 10.—Is it incumbent on us to pray for the Emperor, and for Russia, our country?

Ans.—Both publicly and privately, beseeching the Almighty to grant the Emperor health and integrity, happiness and security. The same is applicable to the country, which constitutes an indivisible part of the Emperor.

Ques. 11.—What principles are in opposition to these duties?

Ans.—Irreverence, disobedience, infidelity, malevolence, treason, mutiny, and revolt.

Ques. 12.—How are irreverence and infidelity to the Emperor to be considered in reference to God?

Ans.—As the most heinous sin—the most frightful calamity.

Ques. 13.—Does religion, then, forbid us to rebel and overthrow the Government of the Emperor?

Ans.—We are interdicted from so doing, at all times, and under all circumstances.

Ques. 14.—Independently of the worship we owe the Emperor, are we called upon to respect the public authorities emanating from him?

Ans.—Yes; because they emanate from him, represent him, and act as his substitutes; so that the Emperor is everywhere.

Ques. 15.—What motives have we to fulfil the duties above enumerated?

Ans.—The motives are twofold some natural, others revealed.

Ques. 16.—What are the natural motives?

Ans.—Besides the motives adduced, there are the following:—The Emperor being the head of the nation, the father of all his subjects (who constitute one and the same country), Russia is thereby alone worthy of reverence, gratitude, and obedience; for both public welfare and individual security depend on submissiveness to his commands.

Ques. 17.—What are the supernatural revealed motives for his worship?

Ans.—The supernatural revealed motives are, that the Emperor is the Viceregent and Minister of God to execute the Divine commands; and, consequently, disobedience to the Emperor is identified with disobedience to God himself; that God will reward us in the world to come for the worship and obedience we render the Emperor, and punish us severely to all eternity should we disobey and neglect to worship him. Moreover, God commands us to love and obey from the inmost recesses of the heart every authority, and particularly the Emperor—not from worldly consideration, but from apprehension of the final judgment.

Ques. 18.—What books prescribe these duties?

Ans.—The New and Old Testaments, and particularly the Psalms, Gospels, and Apostolic Epistles.

Ques. 19.—What examples confirm this doctrine?

Ans.—The example of Jesus Christ himself, who lived and died in allegiance to the Emperor of Rome, and respectfully submitted to the judgment which condemned him to death. We have, moreover, the example of the Apostles, who both loved and respected them; they suffered meekly in dungeons, conformably to the will of the Emperors, and did not revolt like malefactors and traitors. We must, therefore, in imitation of those examples, suffer and be silent

Ques. 24.—At what period did the custom originate of praying to the Almighty for the prosperity of the Sovereign?

Ans.—The custom of public prayer for the Emperor is coeval with the introduction of Christianity, which custom is to us the most valuable legacy and splendid gift we have received from past ages.

Such is the code of religion in Russia, and such the means by which the Czars have contrived to sow the seeds of despotism throughout the land. So long as the the Russian people retain this blasphemous catechism, so long will Russia continue to have need of a dictator.

THE ADMINISTRATION—THE FUNCTIONARIES OF THE GOVERNMENT.

Although the Czar is the sole and irresponsible head of the Administration, it suits his convenience to have a deliberative body or Parliament to assist him. The Administration consists of three principal Councils—the Council of the Empire, the Holy Synod, and the Directing Senate. The Council of the Empire, established in 1810 by the Emperor Alexander, is composed of forty members, chosen from among the Princes of the Royal blood, statesmen, generals, and admirals, and has five departments. The first relates to the laws; the second, to the army and navy; the third, to civil affairs; the fourth, to public economy and commerce; and the fifth, to the affairs of Poland. When the Council of the Empire meet collectively, the Czar is the speaker; but when a particular department meets, a President is elected. The Holy Synod is entrusted with the direction of ecclesiastical affairs, and is composed of a Metropolitan, three Archbishops, a Bishop, the Father-confessor to the Czar, an Archimandrite, an Almoner-General to the Army and Navy, and a Protopope or first High Priest. This Synod holds its sittings chiefly at Moscopoe, but on particular occasions at St. Petersburg, and is presided over by an Attorney, who is the Czar's representative. The Directing Senate, founded in 1711, by Peter the Great, and consisting of about 100 members, elected by the Czar, is the chief tribunal of the Empire. It has eleven department, six of which meet at St. Peteraburg, three at Moscow, and two at Warsaw. In a general meeting of the Senate, affairs are decided by majority; but in the departments the votes must be unanimous. Besides these, there are eleven Ministries created by the Emperor Alexander. 1st, the Ministry of the Imperial Household; 2nd, that of Internal Affairs; 3rd, Foreign Affairs; 4th, War; 5th, the Navy; 6th, Education; 7th, Finance; 8th, Justice; 9th, Imperial Post; 10th, Highways; 11th, Board of Control of the Empire, auditing all accounts of the Empire. The Ministry for Foreign Affairs provides the Ambassadors, which are three in number, and sent respectively to the Courts of London, Paris, and Vienna; and the seventeen Ministers Plenipotentiary which are sent to the other principal capitals of the world. Every chief town of a province has a Chamber of Regency, composed of four Councillors, and presided over by a Civil Governor; and every town has a municipality, or *duma*, elected annually, and composed of two Burgomasters and four Councillors, whose principal duties relate to the di-putes of citizens. There is likewise a Common Council, called the Council of Six, whose members are chosen every three years. In every province there is a Chamber of Finance, consisting of a President and a given number of Councillors, and having four State institutions, viz., the Commission for Liquidating the National Debt, and three banks.

THE LAW AND THE MAGISTRACY.

The state of the Law in Russia is at the present day precisely what it was in the time of Peter the Great. Nominally the laws have been altered and modified by the Czar Nicholas and his predecessor Alexander, but they have been merely re-arranged and modernised in expression. The Ukases issued by the Czar, on his sole authority, and which form the laws, are stated by a recent traveller to amount to upwards of 40,000, arranged under 2000 different heads, and interspersed with postscripts and *nota benes*—the whole filling forty-five folio quarto volumes. These Ukases are often directly at variance with each other, and are many of them ridiculously puerile. Some of them interdict the use of English hats and French waistcoats, and forbid smoking in public places.

Russian law is described by all writers as a greedy, rapacious bully—an ogre fattening upon the estates of the rich and the bones of the poor. Money will buy anything in Russia. The Judge sells his judgment to the highest bidder; so that justice is to be purchased like any more tangible commodity. Barristers are not only the most corrupt of the corrupt, but they are illiterate and ill-informed persons. Special pleaders arrange beforehand how the case shall be settled, and share the spoils amicably between them, in order that they may subsist during the trial. A law case often lasts from twenty to thirty years, and is seldom known to be decided in less than ten. As there is no justice to be found in Russia, so there is no word to express the idea of it in the Russian dictionary.

THE POLICE.

The Police are the most rapacious class of men in the whole Empire. They live chiefly on plunder and on bribes, to obtain which they resort to all manner of intrigues and dishonest actions This state of things is, to a certain extent, brought on by the insufficient wages allowed to them by the Government; the *Natschalnika*, or Comm's aries of Police, receiving no more than from twenty to twenty four pounds a year, and the subordinate officers scarcely sufficient to provide them with the commonest necessaries of life. Nothing can be done in Russia without the supervision of the police. A person can scarcely even stir abroad without being followed by one or other of this exceptionable sort of valets. If a man fall down in a fit in the streets, the police must pick him up; and, if no policeman be at hand, the man must lie there till one arrives, it being against the law for any non-official person to offer him the least assistance. No measures are taken for the relief of a person suffering from an accident until after a regular statement has been drawn up as to the colour of the individual's hair and eyes, his form, his features, his clothes, &c. Cases are related, in recent as well as in ancient books of travel, of persons drowning before the eyes of hundreds of their fellowmen, and of murders committed in the public thoroughfares; of which the passers-by have remained mere spectators, from fear of incurring the odium of the police by interfering. These disgraceful regulations are said to have been framed originally with a view to prevent *robbery*; for the Government authorities, being themselves dishonest, suspect every one else; and look upon a person that takes hold of a drowning man's coat to save him, as being in the act of purloining that article.

If a person is unfortunate enough to lose any article of dress, or to be robbed of the same, he suddenly finds himself entangled in the meshes of those human spiders, who, pouncing upon him unawares, solemnly charge him with having lost his watch or mantle, as the case may be, and peremptorily demand a fee for the trouble they have been put to on his account. This done, the police note down particulars as to the amount and quality of the lost goods, and leaving their victim to reflect at his ease on the roubles of which he has been fleeced, return after a short time for another fee. Woe to the man who is audacious enough to refuse the demands of these guardians of the public property! From that moment he becomes the *protegé* of the police, who will not fail to make him aware of the fatherly interest they take in his lost property, and in all his doings, even to the smallest and most trivial action.

The police are expressly forbidden to interfere with persons found drunk in the streets. The reason for this is that the Government has a monopoly in the manufacture and trade of spirituous liquors. When it is added that large revenues amounting to 50,000,000 roubles, or £3,000,000 sterling, are annually drawn from this source, it will easily be conceived why the Government should encourage drunkenness. But, by a strange anomaly, the police are directed to take into custody every person found smoking in the public thoroughfares. Government is not in a position to draw large revenues from tobacco, and consequently looks upon smoking in the light of a public nuisance, and punishes it accordingly.

The posting system of Russia is a department of the police, in which the system of bribery is carried to a great extent. The post-masters must be bribed before they will confess to having a horse in their stables; and when once the honest truth is purchased, another fee must be paid to make it worth the station-master's while to harness or saddle the animals required. The departure of passenger-boats depends entirely on the good pleasure of the police. The registered day of sailing is not regarded. No circumstances, however urgent, will induce them to let the boat start, unless they receive a gratuity. They take a sort of instinctive pleasure in delaying things as much as possible, and chuckle over the fearful faces of their victims, knowing that sooner or later the growing impatience of the traveller will produce them roubles. It is a matter of no small difficulty to travel from one Russian town to another. Instances are on record of travellers having had to spend several days in obtaining permission to leave a particular place. The passport must be taken to the police-office to be examined and re-examined, and, after being handed about from one official to another, be finally allowed to get far days among a heap of other documents of a similar description. In the meanwhile, no notice whatever is taken of the traveller, unless, indeed, he be so far initiated into the mysteries of Russian society as to give the functionary a bribe.

No position whatever can be maintained in Russia without bribery. Even the Governors of provinces must bribe the officials in their service if they have any desire to become popular rulers; and the neglecting to do so is often followed by loss of position and degradation for life. A circumstance is related by Mr. Oliphant, which gives strong proof of the instinctive dishonesty of the Russian people. He describes the case of a steam-boat company on the Volga, which, although their boats were in great demand, and well freighted with passengers and goods, not only realised no gains, but actually sustained a heavy annual loss. The directors, instead of calling the officials to account—for that were useless, thieving being practically no crime in this portion of the world—at once transferred the management of their affairs to a few Englishmen resident in Russia. A complete change in the prospects of the company was the consequence of this change of hands, and, instead of loss, an influx of unlooked-for profits was the result.

An interesting anecdote is related by M. de Lagny, which further illustrates the question of bribery and official robbery in Russia. The Czar, it seems, having been made aware of the innate rottenness of his empire, by the investigations of some German gentlemen whom he had deputed to inquire into the subject, related to Count Orloff all he had learned on the subject, and exclaimed with concentrated indignation:—"Every one robs me throughout the empire; every one around robs me! In whatever direction I choose to glance I behold only pilferers and robbers. There is only one person, one single person, who can walk proudly with head erect. Of this person at least I am sure!" As he said these last words, he looked at his favourite very fixedly and very strangely: and the Count, imagining that the Emperor was alluding to him, bowed to the ground, to thank his august master for having had the goodness to think him an honest servant. But the Czar, striking himself on the breast, added:—"And that person who does not rob is myself! I am the only person throughout the empire who does not steal!"

It has been stated by several writers that the Czar has done his best to put a stop to the corrupt practices of the police. This, Galovin denies, and gives an unpublished anecdote as a proof of the error of such statements:—

The Emperor (observes that writer) asked General Martinoff one day how it was that the Commissioners of Police had such fine horses, and such handsome furs—whether they bought them with their pay? "They have eleven to twelve hundred roubles a year," replied the General. "And how much do they spend?" "From ten to twelve thousand," was the reply. "How, then, do they manage?" "I must leave your Majesty to guess." "That is a point upon which I never thought before," replied the Czar.

The Russian historian assures his readers that the Czar has since done nothing whatever to amend this state of things.

THE NOBILITY.

The nobility are divided into two classes, the Boyards and the Tchinn.

THE BOYARDS, or feudal nobility, amounting to about 225,000, are the owners of the soil and of the peasantry that live thereon. The most wealthy of these serf-proprietors are Count Cheremetieff and Count Stoganoff, the former of whom is said to possess as many as 100,000. The Boyards occupy a position somewhat similar to that of the ancient chieftains under the feudal system of England, Scotland, France, and Germany. But, although their power as a great political body has long been on the wane, yet it is evident that they must exercise a very great influence both on the Government and the interior condition of the empire, so long as they own so large a portion of the land and of the population, whom—like kings and despots—they can scourge, imprison, or execute, at pleasure.

The principal noble families of Russia are, or pretend to be, of foreign extraction—the more illustrious claiming their descent from Italian, Tartar, and Georgian ancestors. It is the peculiar pride of each noble to be able to prove that he is not a Russian in blood; and the length to which the Boyards carried their boasts of precedence one over the other, is said to have irritated one of the early Czars to such a pitch that he one day ordered all their genealogical tables to be publicly burnt.

The Boyards are described by all travellers in Russia as being a degraded and licentious class. There are, no doubt, a few honourable exceptions; but that the bulk of the aristocracy are ignorant and brutal appears to be an incontestable fact.

There are three universities in Russia—viz., those of Moscow, Kharkoff, and Kief, intended for the instruction of the nobility, and to which the Czar is anxious to restrict them; and it was to effect this purpose that he instituted a tax on all noblemen going abroad. The character of the information and intellectual training provided by these establishments is described by those who have inquired into the subject to be of the narrowest and most superficial description; all liberal views being carefully excluded, and history—which is the principal study of Russian students—so obscured and perverted as to render the instruction so obtained even worse than none at all. By far the most enlightened of the aristocracy are such as have been brought up in foreign schools. But it must not be imagined that every nobleman finds it expedient to provide all his children with the benefits of education. This is far from being the case, even on the testimony of Krusenstern, in his "Progress of Public Instruction in Russia," who, although notoriously partial to the cause of Russia, states that the average number of noble children receiving instruction of any kind is no more than one in five.

The tax levied upon the nobility for the privilege of travelling abroad amounts to as much as £80 a head. But all the money in the world will not induce the Czar to grant his permit if he suspect the party of having political reasons for leaving the country; and a full and accurate

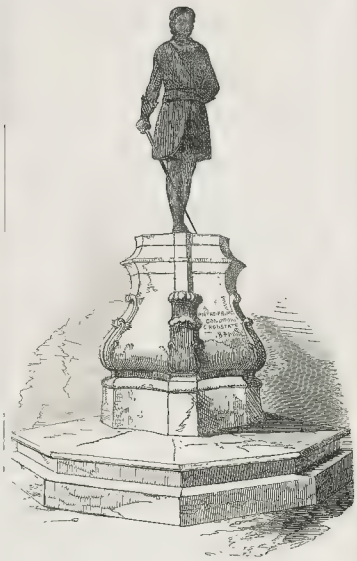
CATHEDRAL CHURCH OF THE SAVIOUR, AND THE OBSERVATORY, AT CRONSTADT.

CRONSTADT.

IN the ILLUSTRATED LONDON NEWS for April 8th, we Engraved, from a series of original sketches, the principal fortifications of this reputedly impregnable port. We now Engrave two Views of the public buildings, &c., of the town, also from sketches by a Correspondent.

Cronstadt may be considered at once the outwork, the arsenal, and the commercial *entrepôt* of St. Petersburgh. Eight leagues of water separate the two localities; but that water is seldom more than eight feet deep, so that all large vessels, and even the packet-steamers, are obliged to stop and unload at Cronstadt. Ships of war are, indeed, built at St. Petersburg, where there are excellent building and graving docks, but they are always sent to Cronstadt to be rigged and armed. Cronstadt itself contains three ports—one used for commercial purposes, another for the repair and outfit of ships of war, the third as a station for the Russian Navy. Cronstadt lies upon the island of Kottline, three leagues in length by half a league in breadth. Its western point, is however, much narrower. Sand-banks surround it on every side, except at the south-east extremity, where the town and harbour are situated. Along the opposite coast of Ingria, another sand-bank stretches, and extends so far into the sea as to leave but a narrow and winding channel by way of entrance to Cronstadt Harbour. Within the port, moreover, the water is from six to seven fathoms deep, but the channel in places is barely four—a depth by no means sufficient for huge 131-gun ships like the *Duke of Wellington*, for whose passage even the Sound was not considered safe.

The town of Cronstadt is described by Mr. Lang, as very regularly built, and containing many fine, straight, and well-paved streets, and several public squares. The houses, however, with the exception of those belonging to the Government, are chiefly of one story, and built of wood. The city has three gates: and is divided into two parts, the Commandant and Admiralty quarters, which are subdivided into four districts. Between the Peter's and Catherine canals is the old Italian palace, built by Prince Menschikoff, who took this island from the Swedes in 1703. It is at present occupied by the School for Pilots, a large establishment, where 300 pupils are educated for the naval service, and twenty for the merchant service. The Naval Hospital is a large and well-regulated institution, with accommodation for 2300 patients, and a separate building for officers of the navy. Among the buildings are the Admiralty, Exchange, Custom-house, barracks, a Protestant gymnasium, various schools, an invalid asylum for sixty females, the nobility's club, and the house of Peter the Great, where he resided for some time; but, with the exception of a few old oaks, which he is said to have planted with his own hand, there are no remains of the former garden.



STATUE OF PETER THE GREAT, AT CRONSTADT.

Of the churches we have engraved the Cathedral Sábor (Saviour), erected in the St. Andrew's quarter. Its spire and dome are covered with brass plates. The building, with tower and staff, in the centre of the accompanying View, and nearer the spectator, is a sort of time telegraph; reminding one of a similar building, answering a similar purpose, in Portsmouth Dockyard. The railing in the foreground is that of the balcony of the British Consul's residence, from which the Sketch was taken. There are also in Cronstadt other churches, a club for the nobility, a bazaar, barracks, schools, and other public buildings. The Hospital for the Military is capable of containing 2000 sick.

The Statue of Peter the Great, is in the Square of Cronstadt. The figure looks towards (his) the fleet. On the granite pedestal is the inscription, in Latin:—

Petro primo conditori Cronstate, 1841.

CRONSTADT,—THE HARBOUR.

H.M. STEAM-SHIP "TIGER."

LOSS OF H.M.S. "TIGER."

The *Russian Invalide* gives the following report from General Ostensacken, relative to this catastrophe, in a Supplement of the 10th ult.; but, of course, great allowance must be made for exaggeration, so far as details are concerned:—

I hasten to lay before your Highness [Prince Paskiewitsch] the fact and fact of the British steam-frigate *Tiger*, of 400-horse power. It ran aground, was set on fire, and blown up, as it was impossible to get it afloat and bring it into harbour, because two other steamers prevented the attempt. The following are the details: This morning, May 14, the frigate, which came in the direction from St Sebastopol got ashore near Kartazzi, about six versts (four miles and a quarter) from Odessa. The position field pieces (18 or 12 pounders) of No 3 Battery, 16th brigade, under Lieutenant Abakounoff arrived from the Lustdortcolony before the other two steamers could assist the *Tiger*, and, supported by two companies of the Dnieper reserve infantry regiment, and a platoon of Lancers of Count Nekrine's regiment, opened their fire with such precision that, after the vessel had received several shots, and its captain had lost his foot, she was forced to surrender. The enemy's shot flew harmlessly over the battery (evidently from the vessel lying on her beam), the cocours were hauled down, and the Lieutenant, who had taken the command, presented himself before me, and declared his crew prisoners of war. By my orders he sent his boats and crew ashore, and laid down his and their arms. They and their wounded, five in number, were sent to the quarantine. Meanwhile eight pieces of the light position battery No. 2 (twelve-pounders) and the horse battery No. 11, arrived from Odessa, with a battalion of the Sonzial reserve regiment, and the reserve battalion of the Ukraine light infantry, with two squadrons of Archduke Ferdinand's Lancers, reached the shore. The enemy's wounded were not yet removed before two of the enemy's steamers were observed through the fog. As no means were at hand to float the surrendered vessel and get her into port, and as more enemy's vessels might also arrive at any moment, I ordered the stranded ship to be set on fire with shot. The two steamers of the enemy came within gun range, and opened their fire upon our batteries. Colonel Granowitch maintained such a well directed fire during two hours, with twelve pieces, that the enemy's ships were compelled to retire out of range much damaged. Two men and three horses of the reserve battery were killed. Colonel Fensky and Lieutenant Smirnoff, of the 2nd Light Infantry and 10th Brigade, received contusions. We have made prisoners Captain Giffard, 24 officers (and warrant officers), with 201 seamen and marines. The *Tiger* was armed with sixteen Paixhans. At half-past seven p.m. she was completely burned.

With regard to the loss of the *Tiger*, at Odessa, and the capture of the crew, the following communication has been received by a Greek house in London. The paragraphs are translated from the original letter, and, either from caution or inclination on the part of the writers, are perfectly Russian in tone:—

The two steamers which appeared in our harbour the day before yesterday came to inquire for the commander of the *Tiger*.

They came with all the civility due, and as soon as they cast anchor hoisted the Imperial Russian flag. In the same spirit they fired muskets instead of guns, so as not to frighten the town.

They have asked to see the captain, but that is not allowed, as he and the others are in quarantine.

They have offered to give money and cigars to the prisoners, which has been allowed. They brought letters to them, and took letters from them, and they have given instructions to the Austrian Consul to hand them money when required.

Our Government treats them very kindly, and the prisoners wrote a letter to thank the Commander-in-Chief.

At the Conversazione of the Institution of Civil Engineers, on Tuesday last, was exhibited a fine model of the *Tiger*, which excited considerable interest throughout the evening.

THE BALTIC FLEET IN ELGSNABBEN BAY.

EVERY graphic record of our noble fleet in the Baltic will, doubtless, be welcomed as an interesting contribution towards what may be hereafter termed an illustrated history of the war. We have been favoured with the accompanying instance by Lieut. East, of H.M.S. *Hogue*, who sketched the scene from the highest point of Elgsnabben Island, in the Bay (on the coast of Sweden, about sixty miles from Stockholm).

The main portion of the fleet under the orders of Sir. C Napier, Commander-in-Chief, and comprising sixteen sail of the line (inclusive of the French screw steam-ship *Austerlitz*), together with five steamers, were detained until the afternoon of the 8th ult., owing to the boisterous weather which had prevailed for the previous fortnight. On the evening of the 3rd the signal, "Prepare to sail to-morrow at daybreak," was made; but so dense a fog came on as to render objects invisible at a distance of 300 yards, and this continued during the 4th, and up to the forenoon of the 5th, when it dispersed, and the fleet weighed under steam alone—the *Neptune*, *Monarch*, *Boscawen*, and *Cumberland* being in tow of the smaller steam-vessels, the *Prince Regent* and a small steamer remaining at anchor in Elgsnabben Bay. As the fleet was about to proceed to sea, the *Leopard*, 16, Captain Giffard, despatched on the 24th ult. on particular service, came into Elgsnabben Harbour, bearing intelligence of great importance.

A letter in the *Daily News*, dated Stockholm, May 10, states the general belief in that capital to be that the sudden departure of Sir Charles Napier was caused by the intelligence that that portion of the Russian fleet which during the winter had remained at Sveaborg, was endeavouring to get away to Cronstadt. Some persons asserted that twenty Russian vessels had already succeeded in escaping from Sveaborg, and that, in all probability, they would be able to reach Cronstadt. The fact of the British squadron having first proceeded towards San Island (Sandö), not far from the northern extremity of the island of Gothland, instead of sailing direct from Elgsnabben to the Gulf of Finland, excited much speculation.

During the fortnight the British squadron lay at Elgsnabben Bay, it was visited not only by the inhabitants of the neighbouring islands, Utö, Ornö, and Dalarö, but also of the somewhat distant coasts of Osterhaninge, Westerhaninge, and Osmo.

The two vessels that remained in Elgsnabben, after the departure of Sir Charles Napier, were the *Prince Regent* and the *Monarch*, which, to the very last, were visited by numbers of persons. The latter left the bay on the afternoon of the 7th, and the former on the next morning; numerous spectators in small boats, and on the neighbouring islands, giving the *Prince Regent* a friendly farewell. The noble bay in which in former times the rival fleets of the Scandinavian States and of Lubeck more than once assembled, is now deserted; and the only vestige—so to write—of the British fleet is young Freeland's grave in the fir-decked churchyard of Musko. (The funeral was engraved in the ILLUSTRATED LONDON NEWS of last Saturday.)

THE BALTIC FLEET AT ANCHOR, IN ELGSNABBEN BAY.

THE GOVERNMENT, &c., OF THE RUSSIAN EMPIRE.

(Continued from page 519.)

statement of all their intentions is required, together with a description of the route they intend to take, and a list of the places in which they intend to reside.

The nobility are the principal manufacturers of Russia, or rather owners of factories; for the whole control and management of them are confided to foreigners—principally Englishmen. The principal produce of these factories are hemp, flax, and tallow, which are shipped to different parts of the Continent, and to England. It is a matter for speculation whether the present war, cutting off, as it necessarily does this source of profit from the Boyards, will not become so unpopular among them as to be a source of personal danger to the Czar.

The political decline of the Boyards began in the time of Peter the Great, whose national reforms they thwarted by every means in their power. Perceiving that he could not curb this headstrong nobility, and finding that the axe and the sabre only tended to make things worse, the Czar determined to form a new order of nobility from among the mass of the people. For this purpose he issued a Ukase, declaring that civil and military officials should thenceforth be placed on the same footing with respect to rank as the ancient lords of the Empire. To this new aristocracy he gave the name of the Tchinn, or "Retitled," by which denomination they have ever since been distinguished.

THE TCHINN are estimated at 750,000, and are divided into fourteen classes. The first class is represented by one man—Marshal Paskiewitsch, Viceroy of Warsaw; the second is composed of all admirals, generals, governors of provinces, marshals of the court, and councillors of the Senate; the third class, of the vice-admirals, grand equerries, and procureurs of the Senate; the fourth class, of the chamberlains, rear-admirals, and major-generals; the fifth class comprises the post-captains, officers, clerks, and officials of the Imperial stable. The remainder are composed of the Czar's valets, servants, and the minor officials and superannuaries of the public offices. This aristocracy, after continued broils with the feudal lords, who at first considered their institution as a mere whim of the Czar, have at length gained the supremacy, and only wait a favourable opportunity—according to the accounts given of them by De Lagny and others—to upset the existing state of things, and seize the property of the Boyards, which they have long conveted.

The Tchinn, as well as the Boyards, have the privilege of trial in a court of law in all cases of offence, and are not, like the bulk of the people, under the immediate orders of the police. To prevent mistake, every member of the nobility is compelled to inscribe the number of his class upon his front door; and any civil functionary found molesting the inhabitants of any house so distinguished are liable to punishment. The inadvertence of the Czar Peter in so lavishly scattering the badges of nobility among the people, and the too great eagerness with which his successors have followed his example, are every day becoming more apparent. An influential body of needy *employés* has been puffed up into arrogance which, it is to be expected, will one day explode in revolution. The Tchinn hold in their hands the keys of life and death; before their secret tribunals the fate of the Czars has been more than once decided, the length of their lives prescribed, and the day of their death fixed. For nine entire years—from 1838 to 1847—did these secret societies meet to pronounce the doom of the Emperor Nicholas, and that, too, when his death was not urgent; and now, when he stands not only in the way of their ambition, but between them and their very bread, it is not likely that the Tchinn have forgotten their old tribunals.

THE SERFS.

The words *slave* and *negro* have been so often coupled together that they have almost become synonymous; and when the great question of slavery is mooted, the mind instinctively turns to the United States of America. But we ought to go to the north of the most civilised portion of the old world is a whole nation of slaves. The soil, together with the human beings that live thereon, is split up into hereditary estates, divided among some fifty or sixty thousand noble families. The Russian peasant has no property of his own: his wife, children, his furniture, his implements of husbandry, are his master's. Even his limbs are not his own, for all that he has belongs as much to his proprietor as the wool, offspring, and flesh of a sheep in England belongs to the farmer or the butcher. He is looked upon in all respects as a "chattel." His master may ill-use him as much as he pleases. There is a particular ukase which expressly forbids the serf from bringing up corn, plaints before a court of law against his owner, such offence being punishable with the utmost severity. The average value of a serf is 100 roubles. The slaves of Russia are bought and sold by private contract, and families can be disposed of in separate instalments, if need be. Serfs are often given as birthday presents, and cases have been known in which they have been put up as stakes at gambling tables.

Hundreds of serfs (says Captain Jesse) are taken from the east and central parts of Russia and sent to the Crimea, and there let out on hire for the benefit of their proprietors, as they have been to the contractors of the railways made in Russia, who agreed to pay, independently of the monthly stipend, seven hundred roubles a head for those who died about the value of a horse. Though in an indirect manner, I have known them sold in the streets and market-place of Kief. The men only are reckoned as souls if young and healthy, they usually sell for a thousand roubles a head; a woman, that is no soul, fetches only five hundred.

A serf may receive his liberty by rendering peculiar service to the State—such as denouncing conspirators or persons attempting the life of the Czar, and, once having received his freedom, he is nominally free for life. Nevertheless he can, at a moment's notice, be forced to enlist as a common soldier, and thereby enter another state of thraldom even worse than that from which he is emancipated. If a Boyard be unable to pay his debts, his peasants are compelled to do so to the last farthing of their means; and if a slave be killed by one of his fellows the owner of the murdered man receives compensation in money from the owner of the murderer—which money is generally raised from among those that witnessed the quarrel.

The peasant has no private interest in the cultivation of the soil. The opinion generally expressed that the indolence and ignorance of the peasantry are solely attributable to their state of serfdom, is supported by the fact that in Orenburg, where there are great numbers of emancipated slaves, not only agricultural, but every other industrial department of the public service, flourishes to an extent hitherto unprecedented in the annals of the country. M. Togoborski, in his "Etude sur les forces productives de la Russie," rejects the idea that slavery is the cause of the bad state of Russian agriculture, and observes that the emancipated serfs of the Czar, amounting to more than half the entire serf population, do not work a bit better than the rest. But Golovin at once defeats this argument by proving that the serfs of the Czar are not free, unless it be a proof of freedom to be compelled to pay 600 roubles for the bare privilege of becoming a citizen, a tax which will probably swallow up all their gains. "Properly speaking," observes Golovin, "there are only 72,000 free peasants in Russia."

The serfs have the privilege of working three days of the week on their own account on the payment of a certain tax. This tax is called "obrock" (sometimes spelt *obrok*), and is enforced by greedy agents, who have been known to squeeze the last copek from their tenants, in order that some pool may remain in their own hands. Nor do the extortions of the serf-owners end here. The serf cannot even marry without being subject to a heavy tax. He is, however, if too poor to pay prompt obrok, allowed the privilege of taking a wife for a lease of five years at fifty roubles a year, as one rents a house.

Some writers couple the nobles and serfs together in their accounts of the population, disregarding for the time the small intermediate commercial or middle classes. But the nobles and serfs—the highest and lowest classes in the empire, and, as one would suppose, the most distant from each other—are in reality in close approximation; and the case of a noble being summarily degraded to the rank of a serf, and of a peasant being raised to the rank of the Tchinn, is of so frequent an occurrence as to place many families of the Tchinn in near relationship to the most despised of the serfs. It is related of the Empress Catherine II. that in a sudden fit of enthusiasm, or, as her friends say, of condolence with the miseries of the serfs, she, with one dash of her pen erased the word "*serf*" from the Russian dictionary. It was, however, only the word which displeased her, for, as we read in the annals of her reign, not only did the serfs suffer more during her administration than in any other time, but the free peasants of "Little Russia" were by her command reduced to the most abject slavery.

The Russian serf, both in the towns and in the provinces, is a wretched and degraded being. Not only is no attention paid to his intellectual and moral culture, but education is prohibited him by the law. His frightful depravity is a cause of anxiety to no one, and his non-observance of the decencies of life is looked upon, not as a reason for furnishing him with instruction, but as a manifestation of the natural state of his mind, to attempt to purify which would be as ridiculous as to attempt to "wash a blackamoor white." The serf is rendered indolent by ill usage. All the good qualities that may have been inherent in his race have been blunted by long subjection to tyranny. His principal characteristic is apathy. He has no strong desire for anything, not even for liberty, which one would imagine to be the summit of a slave's ambition.

The number of serfs in Russia is estimated by Ivan Golovin at 24,000,000; but Kusenstern, who, from his well-known partiality to Russia, is not likely to exaggerate, gives that number to the Czar alone, and estimates the total serf-population at not less than 42,000,000. Some of these, and particularly those belonging to the Czar, are better treated than the rest, and enjoy certain privileges which render them, if not actually free, at least sufficiently so to enable them to provide a comfortable subsistence for themselves and families, and in some few instances to amass wealth. Next to the Czar, the principal serf proprietor is Count Cherémetieff, whom we have already mentioned as possessing 100,000. Many of these live in the towns, driving about in their carriages, and giving splendid banquets. But the knowledge that they are, after all, only slaves, is like "a worm i'the bud" of their prosperity; and cases are known of many wealthy serfs who would sacrifice half their fortune to purchase the name of "freeman." Count Cherémetieff, however, turns a deaf ear to such entreaties; and the richer the serf, the greater the desire of the boyard to retain him; for there is nothing which is so flattering to the pride of a great noble as the consciousness that these rich trademen hold their vaunted position only by his suffrage.

When Count Kherkoff (says Captain Jesse) gives large parties, he takes pleasure in making the wealthiest of his serfs put on his liveries and wait at table. One of them, a clever watchmaker, offered him a large sum for his emancipation, but his request was refused, and the Count's answer was, "No; pay me five hundred roubles a year, and I will not exercise my power, but I will never part with it."

THE ARMY.

The Russian Army is composed of four principal divisions: the Imperial Guard, the Army in Active Service, the Military Colonies, and the Cossacks. The Imperial Guard, as we learn from the "Almanach de Gotha," consists of 486,000 men, with 996 pieces of cannon; the Army in Active Service, 288,000; the Military Colonies, or regular troops stationed at the Caucasus, Finland, Orenburg, and Siberia, together with the battalions of the Line and the Guards of the Interior, about 198,000; and the Cossacks, viz., the Cossacks of the Don, of Azof, of the Danube, of the Black Sea, of the Caucasus, of the Ural, of Orenburg, of Siberia, of the frontiers of China, and of Astrakan, about 130,000, with 224 pieces of artillery. There are, besides these, the Reserves, divided into two regiments, and consisting of upwards of 200,000 men, and the Reserve Veterans and Invalids, amounting to upwards of 100,000.

These statistical estimates with respect to the Russian army are the very lowest that have been formed, and yield a total of upwards of a million of soldiers. Counting all the recent levies made by the Czar, the Russian soldiery must greatly exceed that number. The threat of the Emperor Nicholas, that if, in his war with Europe, one million of soldiers were not sufficient, he could raise two, or three, or even four millions, was an empty boast; for it is well known that he cannot even provide his regular troops with the common necessaries and decencies of life. Russian military statistics are of little value. On paper they have an imposing appearance: for there each cipher stands for a soldier; but, on the field, a person accustomed to the sight of English and French troops will behold, not soldiers, but motley mobs, half naked and half starved. The miserable condition of the Russian army is attributable to several causes, and, among others, to the universal system of corruption which pervades every part of the public service. The different grades of the army are almost exclusively filled up by needy members of the Tchinn. Their pay being scanty (a Colonel receiving £92 a year, and a Captain £12), they have recourse to wholesale and open plunder, which often brings them in as much as from three to four thousand pounds per annum. The funds for the maintenance of each regiment are placed in the possession of its commanding officers, who have thus no difficulty in carrying out their dishonest designs. Cases have been known of officers receiving and appropriating to themselves the pay of men who have died in battle, or disease, or who have never existed at all except on paper; of sending the horses of their regiments to grass, and retaining the forage money; and of stinting the troops of food and clothing, or buying unwholesome supplies at low prices, and pocketing the difference. Whole regiments have frequently fallen a prey to disease and death in consequence; and thus have the chances of war been turned against the Czar, and the victory of his opponents secured by his own Generals. Bad roads, unwholesome or scanty food, tattered and insufficient clothes all tell in time of war, and disease and starvation often cut down the the troops before they reach the scene of action.

It frequently happens that the men must be lashed with the knout before they will do their duty; and all the zeal they show when they are roused is only terror, at the best, and all their bravery is but cowardice of the darkest dye; for not the prizes of an honourable ambition, not the thought of freedom, and the desire of doing well, nerve their arms in the hour of need; but they face the foe from fear of the knout at their backs. These remarks do not apply, however, to the Imperial Guard, who are better drilled, better paid, and better accoutred than the other divisions of the Russian army, and commanded by officers sprung from the higher order of nobility, whom the Government compels to defray all the expenses of mounting the cavalry corps from their own private exchequers.

The pay of a Russian soldier is eight roubles a year. If he be married, he receives a trifling sum in addition, together with an additional half-pound of coarse wheat flour, and quarters in the barracks. The State likewise allows a portion of flour to each male child, but nothing whatever to the female children. The allowances set apart for each soldier are so insufficient, independently of the roguery practised upon them by their rapacious paymasters, that the soldiers, when not in active service, are constantly compelled to gain their livelihood by letting themselves out at so much per day to any one that is in want of hands. The Russian army is kept up by conscription, the duties of which devolve upon the feudal nobility, each of whom must furnish a certain number of soldiers from his estates. The age of liability to be drawn as a soldier is from twenty to twenty-five, in ordinary cases. Every estate of five hakens has a right to retain four of its liable peasants, on the payment by the Boyard of 1000 roubles in cash, or 100 roubles a year for fifteen years. The father of a family of two is liable to be called to arms, but the father of three or more children is exempt. No man is too vile to be a soldier, in Russia; drunkards, thieves, mendicants—all are enlisted indiscriminately, because no inquiries are made as to previous character and pursuits, so they be hale in body. Such are the men to whom the Czar looks for aid in the day of peril.

THE NAVY.

Russia had no navy before the time of Peter the Great; and, even at his death, what it had consisted only of a few light craft, unworthy the name of ships. Catherine II. followed out, to some extent, the example of her illustrious ancestor; but it is chiefly to the Emperor Nicholas that Russia owes her navy. The Russian navy consists of three fleets, called the Blue, the Red, and the White, which are respectively stationed at Sebastopol, Kronstadt, and Archangel. The fleet in the Baltic (according to the "Almanach de Gotha") is composed of 1 ship of 120 guns, 3 of 110, 15 of 84, 12 of 74, 30 of from 60 to 74, 20 steam-boats, and several corvettes and brigs. The fleet in the Black Sea is composed of 3 ships of the-line of 120 guns, 3 of 110, 7 of 74, 8 frigates of 60, 10 of 44, 20 steam-boats, and corvettes and brigs. This yields a total of 137 vessels, manned by 50,000 seamen; with 63 admirals, 72 captains of first rank, 80 of second, and 211 lieutenants. The Russian navy is estimated by M. de Lagny at 240 vessels, with 3000 guns, and 80,000 seamen. The following extract from an excellent article in *Fraser's Magazine* for May, 1854, throws considerable light on the real state of the Russian Navy:—

> The Baltic fleet—or, as the sailors of the Black Sea contemptuously call it, *la flotte de la mer douce*—is, to a very considerable extent, a paper institution. Its numerical force is theoretically fixed at twenty-seven sail of the line, nine frigates, nine steamers, nine brigs and corvettes, with a certain allowance of tugs and tenders. For Russian ships in obedience to some mysterious law like that which regulates the development of the flowering organs of endogenous plants arrange themselves according to multiples of the number three. What, then, must be the feelings of the Grand Duke Constantine, Lord High Admiral of All the Russias, when that eminent navigator reflects that the squadron at Helsingfors is not capable of exact ternary subdivision? We must at once confess our inability to understand this perpetual recurrence of the number three; but then there are many other things connected with the Muscovite navy which are equally incomprehensible. Why, *e.g.*, are ships commanded by a general? why do naval officers of a certain rank wear spurs? why does a ship firing ninety-eight shots at a mark 30 feet long by 20, only hit twelve times?

It must be stated that nearly all of the seamen are pressed from among the inhabitants of the very centre of the empire, who abhor the name of the sea, and are far the most utterly unfit for the service. Even the knout fails to make seamen of them. The Czar's much-vaunted naval preparatory schools have not yet provided him with an officer of any great ability, or one whom he could trust to fill any important post. His best admirals and sailors are Finlanders and others who have voluntarily entered his service.

The wages of the seamen is very low (about sixty roubles a year), so that they, like all other *employés*, have recourse to cheating the Government, and plundering the supplies, in order to increase their miserable allowance. The seamen, when in harbour, are, like the soldiers, often compelled to sustain themselves by doing the work of artisans, instead of attending to the business of their ships. This state of affairs is, of course, highly detrimental to the prosperity of the Russian navy.

As an instance of the general unfitness of Russian seamen for seaservice, Mr. Oliphant states:—

> It is hardly natural to expect that men whose maritime experience has, perhaps, never extended beyond the Bosphorus, should be as good sailors as those who have gone round the Horn once for every year of their lives. The seamen reared in such a nursery as our mercantile marine affords, must ever be a very different description of men from those reared in the dockyard of Sebastopol. It is said that when, upon a few occasions, the Russian fleet in the Black Sea encountered a gale of wind, the greater part of the officers and men were always sea-sick. It is certain that they have sometimes been unable to tell whereabout they were in their extensive cruising ground, and once between Sebastopol and Odessa, it is currently reported that the Admiral was utterly at a loss, till at the Flag Lieutenant, observing a village on shore, proposed to land and ask the way.

Another weighty argument to be put in the balance against the statement of Russian naval statistics, is the bad quality of the wood employed—principally unseasoned fir or soft oak—which seldom lasts longer than six or seven years, owing to the ravages of a worm indigenous to the southern waters, and the venality of the Russian shipwrights—more disastrous than the ravages of any worm—who "get up" naval craft in a slop style, although paid the highest prices for their work.

The Russian fleet, in the Baltic, is described as a miserable scarecrow, stationed at the mouths of rivers, and before forts, to terrify the enemy by its magnitude and showy appearance. But, like a real scarecrow, its chief merit is in remaining stationary. Weather-beaten tubs, floating hospitals, wrecks, and hulls crumbling "piecemeal" into the water, are all decked out in white canvas on a review day, and entered into the navy-list as men-of-war ready for active service.

"If," says Mr. Oliphant, "in estimating the strength of the Russian navy, we deduct the ships which, for all practical purposes, are unseaworthy, it will appear that the Black Sea fleet—that standing bugbear of the unfortunate Porte—will dwindle into a force more in proportion to its limited sphere of action."

THE CLERGY.

The Clergy are divided into two classes, viz, the Regular and the Secular, and are subject to three controling powers, exclusive of the Czar—the Synod, the Consistory, and the *Prastinie* or *Gouvernium*. The principal of these is the Synod, from whose body the Czar elects the Archbishops, Metropolitans, and Bishops. The members of the Consistory are chosen by the Bishop, who has the power to annul all their decisions. The Prastinie is composed of Archimandrites, Hegumens, and Igumens, and is governed by the Superior of the most important convent. In every town there is a Deputy of the Church, whose office it is to appear as counsel for ecclesiastics in courts of law.

The Russian clergy are reported by all travellers to be quite as corrupt as any other class of individuals in the empire. They exercise no real authority in the State, and command little respect either from the nobles or the people; for it needs no learning, no examination, no character for morality and uprightness to become a priest—"a good pair of lungs, a reverend beard, long hair, and a black gown, with a metal plate attached to the breast, are the only requisites for religious candidates!" The clergy, who in other countries are the mediators between God and man, and the fathers of the poor, are too often the perverters of the Bible, the oppressors of the oppressed, and the encouragers of drunkenness, and its attendant evil passions. This deplorable state of things is chiefly to be attributed to the desire of the Czar to keep the people in ignorance. It has long been the policy of the Government to have an ignorant and needy priesthood; for it is evident that the admission of wise, learned, and benevolent men into the Church, would be the commencement of the education and advancement of the people, and the consequent downfal of the ultra-despotic power which at present overawes them.

The principle of honour is not encouraged either by precept or example. The clergy are compelled by law to make known to the authorities all plots confided to them in the confessional; and it is to the dishonesty of these mercenary emissaries that the [illegible] owed

for much important information. The ordinary members of the priesthood are allowed to marry once, but the higher functionaries not at all. The clergy are not liable to the conscription, but they are subject to the knout like the rest of the people.

They are described by Galovin, a native writer, as being for the most part in utter destitution. "Their pecuniary situation (observes that writer) is the disgrace of the Russian Church. The priests have no salaries, and their parishes have to maintain them. The rural priests receive an allotment of land, which they cultivate themselves as well as they can. Very few landowners pay them a fixed sum. In the towns they collect what they can from the contributions of the pious, and the dues for the performance of the various holy offices—a state of things which, as may be readily imagined, gives rise to all sorts of mendicity, extortion, and petty cheating." Many of these priests cannot afford themselves shoes for every-day wear; and yet, judging from the immense revenues paid by the Church into the State exchequer, one would imagine that the clergy had a considerable portion of superfluous wealth. The unjust appropriation of Church dues for State emergencies is one of the principal causes of the poverty, and consequent depravity, of the clergy.

The priests draw a means of subsistence from the sale of certain holy pictures called "Bogs," of which they have a monopoly. These consist chiefly of representations of Jesus and the Virgin Mary, and are held forth as preventives against malaria, charms against evil spirits, &c. Some of these are considered to be more precious than others, on account of the miracles they are alleged to have performed, and are hired out for large sums. The pictures in most repute are, as we learn from M. de Laggny, "the Virgin with Three Hands," "The Virgin of Vladimir," and "The Bleeding Virgin," which pictures are believed to have been painted by the Holy Ghost himself. If the paint gets rubbed off the cheeks of one of these holy faces, the picture increases in value; for this is considered a sure sign that the saint is moved by the prayers of his devotees. The trade in relics is also very remunerative; the great toe of a dead person, an old rag, or a lock of hair, are as good as bank-notes in the hands of the clergy, who can at any time convert them into hard cash. There is a case on record relating to the discovery of an old tombstone, bearing the name of a "holy man," which the priests exhibited before the crowds of gaping, crank fanatics. The blind repaired thither to purchase grains of the stone-dust to throw into their afflicted eyes; and old women rolled about in the mud in front of the relic "that their devils might be cast out."

"Prayers for the Imperial Family," says Golovin, "occupy two-thirds of the time in the Russian Ritual; and though the statement may seem incredible, the priest, when he divides the bread, blesses the offering in seven portions: the first of these is in honour of the Imperial Family; Christ, the Virgin Mary, and the whole Hierarchy follow after. The idolatry of the Czar—and I do assert it unequivocably—is carried in Russia further than the worship of God!"

THE MESTCHANE; OR, MIDDLE CLASS.

The *mestchané* are the intermediate class between the nobles and the serfs, and are divided into two separate classes—the merchants and the tradesmen. The merchants, amongst whom are very few native Russians, are among the most enlightened body of men in the empire, and, by subscribing for the opening of hospitals and benevolent institutions, often do a great deal towards alleviating the miseries of the many. The tradesmen, or retail dealers, are compelled by law to reside in the towns, and are, like the serfs, subject to the conscription.

Generally speaking, the native Russians make but indifferent merchants—all the principal manufactures of Russia being of foreign origin, and under the supervision of foreigners. The prohibitive policy of the Government is alone the cause of the inferiority of Russia as regards her commerce; and what little external trade she has is principally in the hands of Englishmen, Frenchmen, Germans, and Armenians.

The only merchants (says Mr. Oliphant) who are able to engage directly in foreign commerce, are those belonging to the first or second guilds—the latter of which is limited entirely to the capitalists of the empire, and is a great advantage, is so high, and the capital required by Government, before it can be obtained, is so great, that comparatively few are enabled to embark in the extensive transactions involved by foreign trade. So effectually is this system calculated to prevent any addition to the Russian mercantile community, that, notwithstanding the Black Sea, trade so extensively and recently called into existence, there are only four native merchants in the first guild now than there were fifteen years ago; while, on the other hand, the number of peasants holding certificates, enabling them to trade within the empire, is increased by one hundred per cent. during that time, thus showing that the commercial relations of the country have improved by virtue of that foreign trade which has not benefited the merchants of a higher order. As the same time it is evident that it is highly prejudicial to the true interests of commerce, that it should be so jealously exercised by an ignorant and half-civilised peasantry, who are only allowed certificates by the year, and are still in the condition of serfs.

The inhabitants of the provinces are supplied with goods and provisions by means of fairs, which are held in all parts, and are chiefly frequented by traders and pedlars from the interior of Asia, and from China. Of these, the most celebrated is that of Nijni Novgorod, at the distance of about three days' journey from Moscow.

It would be hopeless (says Mr. Oliphant, with reference to the Fair of Nijni Novgorod) to attempt a description of the different merchants and goods, or to enumerate the variety of articles exposed for sale. The Bukharians, Persians, and Georgians inhabit one quarter, which is likely to prove the most interesting to the stranger. It is a convenient arrangement no less for a resident of the merchant, that the fair is divided into quarters as devoted to the sale of different merchandise. The Katanki Red, or Chinese division, is at once distinguishable by the rows of square leather boxes, which contain the tea. In the cutlers' quarter I was surprised to find so great a preponderance of Russian ware. * * * * Those articles of commerce to which most attention seemed directed, and which form the main features in the fair to the stranger's eye, were teas and furs from the East, and cotton goods from the West. England supplies the great quantity of dingo which is annually sold here, and used extensively as a dye throughout Russia. The Governor's house, to which is attached the police-office, is a large stuccoed edifice; the whole of the lower story is devoted to commercial purposes, and forms an Eastern-looking bazaar, quite in keeping with the shawls and carpets here tastefully arranged for sale. Besides tea from China, the barges down the Kama bring quantities of Siberian iron, furs, and skins, together with curious-looking wooden boxes, covered with lacquered tin, which seemed to be in great request, while smoked hams, dried fruits, Caucasian wines and fish, are among a few of the articles which come from the countries bordering on the Caspian. It was an endless source of interest to us Westerns to explore the Eastern quarter; whose no doubt our Western manufactures prove still more attractive to the ragged-looking Kharghees, or half-tamed Tartars. All distinctions of rank are forgotten in that more engrossing pursuit which attracts people so many thousands of miles, and through so many difficulties.

Among the scanty middle-classes of Russia we should not omit to mention the Germans and the Jews. There are many German colonies in the southern provinces who enjoy a degree of freedom that makes them prosperous, whether as merchants or cultivators of the soil. It is to be regretted that so intelligent a traveller as Mr. Oliphant was prevented by accidental circumstances from visiting these colonies, between Saratow and Sarepta, and favouring the world with the result of his experience concerning them. The chief Jewish colony is that of the Karaites, at Tchoufut Kalé. Mr. Oliphant says of it:—

As almost all the Karaites are engaged in trade or manufacture, and as they observe the most scrupulous honesty in their dealings, it has naturally followed that they are a prosperous and thriving community, while, as an exception had been made in favour of this portion of that interesting people whose unhappy destiny has been so wonderfully accomplished, probably the only settlement exclusively Jewish which still exists is the fortress of Tchoufut Kalé—a refuge which God seems to have provided for those only who worship Him purely in the manner of their fathers. The population of Tchoufut Kalé has, however, dwindled down to a very small remnant since trade has increased, and additional facilities have been afforded for settling in more convenient positions than upon the summit of one of the highest crags in the Crimea. The population of the resport of Eupatoria is composed mainly of Karaites, nearly two thousand of whom are now resident there, and some of them are wealthy merchants.

THE KNOUT.

The principal means by which the Czar governs his people is the knout. An invention more diabolical, or a mode of punishment more barbarous in its cruelty, was never heard of, or even imagined, among savages and cannibals.

The knout consists of a thong of leather, about five yards in length and an inch in breadth, having a wooden handle at one extremity, and verging in a point towards the other. The following description, from the "Knout and the Russians," will give the reader a good idea of what the knout really is —

Conceive, reader, a robust man, full of life and health. This man is condemned to receive fifty or a hundred blows of the knout. He is conducted, half naked, to the place chosen for this kind of execution. All that he has on is a pair of simple linen drawers round his extremities. His hands are bound together, with the palms laid flat against one another, and the cords are breaking his wrists; but no one pays the slightest attention to that. He is laid flat upon his belly, on a frame inclined diagonally, and at the extremities of which are fixed iron rings; his hands are fastened to one end of the frame, and his feet to the other; he is then stretched in such a manner that he cannot make a single movement, just as an eelskin is stretched in order to dry. This act of stretching the victim causes his bones to crack, and dislocates them—but what does that matter? In a very little time his bones will crack and be dislocated in a very different manner. At the distance of five-and-twenty paces stands another man: it is the executioner. He is dressed in black velvet trousers, stuffed into his boots, and a coloured cotton shirt, buttoning at the side. His sleeves are tucked up, so that nothing may thwart or embarrass him in his movements. With both hands he grasps the instrument of punishment—a knout. The signal is given: no one ever takes the trouble to read the sentence. The executioner advances a few steps, with his body bent, holding the knout in both hands, while the long thong drags behind him on the ground between his legs. On coming to about three or four paces from the prisoner, he raises, by a vigorous movement, the knout towards the top of his head, and then instantly draws it down with rapidity across his loins. The thong flies and whistles through the air, and, descending on the body of the victim, twines round it like a hoop of iron. In spite of his state of fatalism, the poor wretch bounds as if he were under the powerful grasp of galvanism. The executioner retraces his steps and repeats the operation as many times as there are blows to be inflicted. When the thong envelopes the body with its edges, the punishment—a most literally cut into strips, as if with a razor; but when it fails flat, then the bones crack. The flesh, in that case, is not cut, but crushed and ground, and the blood spurts out in all directions. The sufferer becomes livid and blue, like a body in a state of decomposition. He is removed to the hospital, where every care is taken of him, and is afterwards sent to Siberia, where he disappears for ever in the horrid mines there.

Such are the everyday experiences of Russia; such are the scenes to which the Czars inure their people, in order that they may know that they are slaves, and that their wretched bodies are the absolute property of the Emperor, to scourge and torture at his will.

There are other modes of punishment in Russia, of which it will be as well to make mention, such as impalement, and the rod—which last is inflicted by an entire regiment of soldiers, and commonly known by the name of running the gauntlet.

We cannot do better than quote the following instance of Russian "caning" from M. de Laggny's excellent book, and of which that writer was an eye-witness:—

The culprit was condemned to six thousand strokes of rods; and, twenty-four hours after, six thousand men, ranged in two parallel lines in a plain without the city, awaited, armed with small sticks of green wood, at out the size of the little finger, for the hour of execution. The condemned was conducted in a car, escorted by some men. No priest had attended him. He was bound, and dressed in a pair of drawers, wound round and below his hips, and fastened by a string. The rest of his body was naked, and only covered by a soldier's cloak, which they had thrown over his shoulders. They made him get out, and fastened his two hands tightly to the mouths of two muskets, crossed to the heights of the chests with which they were armed. In the left hand he had a rod resting on the barrel, and the points of the bayonet upon the breast or the criminal, a rolling of drums was heard; immediately all the officers entered their ranks, and two sub-officers came to take the unfortunate, who they constantly held in the same manner as a soldier who goes backwards holding the bayonet before him. Here, again, admire the barbarity—the refined intelligence of this people! The sentence was then read, and the blood gush. There is no pity. Each man must do his duty. The Muscovite soldier is a machine, who must have no feeling; and woe be to his own shoulders if he shows any hesitation! Every one must receive from twenty-five to one hundred blows at the will of the general who has the honour of commanding those 6000 executioners. The Russian Government is scrupulous in the smallest details; it lays stress on everything being carried into effect. But with such men you run no risk. Thus they act with regard to a man who is being executed as they would at a review.

The sufferer advances to the nine hundredth stroke of the rods. He has not uttered a cry or a single complaint—he convulses or rebounds along from time to time, announces his agony. The foam now begins to flow from his mouth, and the blood from his nose. After fourteen hundred strokes, the face, which for a long time had turned blue, becomes as one green. The eyes are haggard, they almost start from their sockets, from which flow large bloody tears, which wrinkle his face. He was panting for breath. The officer who had accompanied me quitted the rank for me, and I approached the body. The skin was literally ripped up; it had, properly speaking, disappeared. The flesh was chopped almost reduced to a hash. Here and there over the flanks like so many lumps other strips of flesh remained attached and glued to the bayonets of the executioners. The muscles were torn. No human tongue could describe this spectacle. The punishment had lasted one hour and a half, and had brought the condemned. They placed him in it, lying on his stomach; and, although he had quite lost consciousness, they continued the punishment until the Hungarian body surgeon ascertained the pulse no longer

SEBASTOPOL, AND ITS FORTIFI

COPIED, BY PERMISSION OF THE ADMIRALTY, FROM THE SKETCH TAKEN

which they are built is soft; and, according to the statement of Captain ne—whose work upon "Russia and the War" contains some very ecting information on the subject, and who had extensive op-tunities of examining them—the strength of the masonry is very sionable. The counterforts are filled with rubble, and several of keystones of the arches have certainly been shaken by the firing of ates. The Alexander fort has only one tier of guns in casemates, the per tier being *en barbette*; the work terminates in a circular tower, rampart of which is about six feet thick. The apertures or port-es of all the casemates are small, so that there is no possi-ty of training the guns to the right or the left. Admiral ig, who formerly commanded the Black Sea fleet, con-ars this of no consequence, as, from the great number of guns employed, upwards of twelve hundred, there is no point in or near the ha bour which does not lie under a cross fire of sixty pieces of the largest ar lery. The casemates are used as barracks, ten men occupying the space between each gun, and the general objection is that batteries on this principle are not capable of making a lengthened defence, as the smoke fills them rapidly, and so annoys the artillerymen that they can-not continue to work the guns. The Alexander battery is covered in the rear by the guns at the extremity of the wall of the town. This is the case with all the batteries; they give a mutual support to each other, which is the true spirit of fortification. Of course they are liable to attack from the land side, unless, as the public have been informed, the Russians are taking measures to throw up land defences. The Russians consider the harbour impregnable, but that remains to be proved.

THE ILLUSTRATION.

At length we are enabled, by permission of the Lords of the Admiralty, to present to our readers a general View of the Town and Fortress of Sebastopol, on the Black Sea; together with a Panoramic Sketch of the adjacent Coast, and its several points of defence; from the Sketches made by Lieut. Montagu O'Reilly, during the recent visit of the *Retribution* to Sebastopol. Her stay extended to but three hours and a half, during which time Mr. O'Reilly, with remarkable celerity, sketched the whole place, including all the forts, batteries, men-of-war, and town. A fair copy of this Sketch was sent to the Admiralty; and this important and interesting Illustration of the progress of the War our Artists have been permitted to copy. The Sketch is on a large scale, measuring about twenty feet in length.

24 POUNDER BRASS GUN, AND REMAINS OF TURKISH FRIGATE, AT SINOPE.—SKETCHED BY LIEUT. M. O'REILLY.

N S, O N T H E B L A C K S E A

ENANT MONTAGU O'REILLY, ON BOARD H.M.S. "RETRIBUTION."

The defences of Sebastopol are thus described:—Five line-of-battle s were moored head-and-stern across the harbour, so as to command entrance of the harbour, which is so narrow that only one line of tle ship can enter at a time, exposed to a cross-fire of 600 heavy guns ors entering the harbour; and, should this be accomplished, the allants would have to withstand a raking fire of five or six line-of-tle ships, three of three decks. By land it is very different: the e being surrounded by heights, which might easily be carried; and would place the town, all the heavy batteries, ships, and docks, at mercy of an enemy.

The town is surrounded by a wall, loopholed. Within seven miles astopol there are several deep inlets, where landing could be cted in a dingy, free of all guns — those of the port out of range; so that a sufficient force could be landed to overpower the enemy. (These capabilities are shown in detail in the Panoramic Views of the Coast, in the Number with which the present Supplement is published. The four Engravings, if placed in the order there shown, in a single line, from left to right, will represent the town and fortifications, with the adjacent coast.)

MEMORIALS OF SINOPE.

During the last visit of H.M.S. *Retribution* to Sinope, the accompanying relics of the attack by the Russian fleet, were Sketched by Lieutenant O'Reilly. First is a 24-pounder Brass Gun, found upon the rocks of Sinope Bay, whither it had been blown from the Turkish frigate in the distance. It should be added that the gun was found in the bent condition here represented.

The accompanying Illustration shows the entrance to a Fascine Battery, in Sinope Bay, containing six 24-pounder Turkish guns and a mortar. The portion represented was most severely handled by the Russian ships; under the Battery were two Turkish frigates, one o which blew up during the action. It may be as well to add a few words in explanation of what is termed a Fascine Battery. When artillery are required to act in exposed situations, any shelter that can be speedily erected is desirable; upon such occasions it is found that bags filled with sand or earth, when heaped together, make a good breastwork; in the present instance faggots were employed, and supported by a double row of piles driven into the ground.

FASCINE BATTERY, AND TURKISH ORDNANCE, AT SINOPE.—SKETCHED BY LIEUT. M. O'REILLY

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

A large consignment of live quails has just been received. The importation consisted of 6000 quails, in good condition. They were brought from Alexandria (Egypt), and were landed at Liverpool, from whence the birds were transferred by rail to London.

Workmen have lately been employed at the silver works of Orzbram, Bohemia, in casting a lion in massive silver, to be placed on the summit of a triumphal arch on the occasion of the Emperor of Austria's visit to Prague.

The electric telegraph is now in operation from Calcutta to Sipree, a distance of 1000 miles; and a summary of the English news received by the Overland Mail of the 24th February, passed over the lines.

The *Kingston*, emigrant-ship, about to sail from Southampton, has been fitted up with baths, and an oven for baking bread, with which the emigrants will be supplied twice a week.

The Queen of Spain has sent the Grand Cross of Isabel la Catolica to Omer Pacha and Mehemet Ali Pacha.

The Salisbury magistrates have decided that vehicles conveying yeomanry baggage are not exempt from toll, and that only regular troops can claim that immunity.

The celebrated plain of Marengo is about to be sold, together with the splendid building erected on the spot by the proprietor, including the coi ection of relics.

The first ripe strawberries grown in the open air, this season, were exhibited at Edinburgh, on Saturday last. This is three weeks earlier than last year, and six days earlier than any former year for the last twenty.

A medal has been struck in Paris to commemorate the triple alliance. The motto is: "Catholicism, Protestantism, Islamism—God protects them."

A few days ago the whole of the Custom-house establishment at Great Grimsby, was peremptorily suspended by order of the Commissioners of Customs in London.

The Latter-day Saints in Utah now number from 40,000 to 50,000; all creeds are tolerated in the territory, and the franchise is common to all.

The wreck of the *Taylour* was sold at Liverpool, the other day, by auction, for £480. The ship originally cost £20,000.

Queen Christina, of Spain, who was dangerously ill, of measles, is said to be convalescent.

Orders have been received at Southampton to telegraph the arrival of the King of Portugal to her Majesty as soon as he reaches that port.

Colonel Monti, who fought on the side of the patriots in Italy and Hungary, in 1848 and 1849, has just died at Turin, in the prime of life.

Water is now conveyed to Genoa in cast-iron water-pipes, of the immense length of fourteen miles.

The Duke of Somerset is said to have purchased "a vast and ancient edifice, on the shore of one of the most picturesque bays of the Mediterranean." The château is to be repaired, so as to form "a magnificent residence."

The laying of the first stone of the church to be erected in memory of the Queen of the Belgians, took place at Lacken, on Saturday last. The King and the whole family were present.

The iron trade is said to be in a very excited state, on account of the scarcity of pig iron.

M. J. Delus, of Bremen, having ascended Mount Vesuvius with a party of friends lately, went too near the brink of the crater; and, the ground having given way, he fell in, and was killed.

The imports of wool into Liverpool last year, from all parts of the world, including coastwise, were 120,000 bales, or 14,000 tons.

The cattle and provision markets in Ireland are still advancing, and animal food has reached a price which almost places it beyond the reach of the labouring classes and persons of small income.

Two weeks ago Blidah, a town in Algeria, was nearly destroyed by an earthquake; several houses were knocked down and large oak-trees rooted up.

A practical miner has suggested a mode of using to advantage, for illuminating the mines, the gas generated in the mine itself, and which, at present, is productive of so much danger and death.

The United States post-office department has engagements with nearly 6000 contractors for conveying mails by coaches, steam-boats, and railways; and the annual transportation of mails in that country is 61,826,240 miles—the greatest distance of the Earth from the Sun.

Lord Torrington has given notice of his intention to present a petition to the House of Lords, from the merchants and planters of Ceylon, in which they pray for the appointment of a Committee to inquire into and report upon the question of coffee.

The Sunday movement, as it is called, gains ground in France. The notaries of Douai have decided that their offices shall be closed on Sundays. The proprietors of some of the principal shops at Châtillon-sur-Seine have also decided on not opening on the Sabbath.

The colony of British Guiana offers £1000 to the first introducer of machinery which will prepare 100 tons of clean plaintain fibre for market or the manufacture of flax.

The Scottish Society of Antiquaries has appointed a Committee to make arrangements for a National Exhibition of Scottish Portraits, in Edinburgh, in 1855.

The Egyptian Railroad is now in good working order, and answers exceedingly well. It is chiefly used when European or Indian passengers arrive in Egypt. English engine-drivers are employed on it. The speed is about twenty miles an hour.

A violent tornado visited Rungpoor, in Bengal, on the 10th of April, depopulating villages, and carrying before it houses, cattle, and everything that interrupted its course.

The smaller the population in Ireland, the larger the quantity of whisky consumed. During the year ending April 5th, 1853, the quantity taken was 9,920,000 gallons; this year, 10,360,000 gallons.

The directors of the Lancashire and Yorkshire Railway have given permission to all their servants, with their wives and families, to travel in any part of their line, at any time, for half the usual fares.

The Ceylon gold-diggings have resulted in no discovery of any importance. The few diggers that have been laid up with fever.

In a garden at Barton, Lincolnshire, a redcap has built its nest within an inverted flower-pot, which was used as a shade for a plant. The nest is large, and contains nine eggs, the bird entering by the hole at the top.

The Great Western Railway of France was inaugurated at Le Mans on Sunday last.

The English steamer which arrived in Cork on Sunday landed thirty paupers, transmitted to Ireland under the provisions of the Law of Settlement.

An electric telegraph from Melbourne Bay to the Custom-house, a distance of about eight miles, had commenced working on the 7th of March, and the extension of the line to Geelong is said to have been determined upon.

The sums insured in England on farming stock, and exempt from duty, in the year 1853, amounted to £33,038,377.

The rank of Infante of Spain has been conferred, by Royal decree, on the young Duke of Parma, on whose father, lately murdered, it had been conferred in the same manner.

An Northamptonshire young lad named George Walker, has become insane in consequence of having been operated upon repeatedly by mesmeric lecturers in that town.

The declared value of our exports last year was £98,933,781; an increase of more than £20,000,000 over those of 1852.

The Spanish Government steamer *Francisco de Asis* left Cadiz on the 18th ult., for the eastward, with the ex-Queen of the French on board.

The Worcester Festival Committee having written to Jenny Lind, with a view to secure her services for September next, she says she is sorry her plans for summer are of such a nature as will not allow her to accept the "tempting offer."

The *Espana*, of Madrid, announces that the police have authorised the public representation of combats between wild animals at Aranjuez. There is to be a fight between a hyena and dogs, and another between a bull, a leopard, and a panther.

Genoa letters state that a domiciliary visitation has been made at the residence of Mrs. Mears, an English lady, who is said to be implicated in the revolutionary attempt at Spezzia.

In the course of a "thunder squall" at New York, on the 15th May, the lightning entered an electric telegraph-office, and set fire to a file of messages hanging near the operator's head.

Tabourers on the line of the Manchester, Sheffield, and Lincolnshire Railway, have turned out for an advance of wages.

Upwards of a million Irish men, women, and children have landed at Liverpool within the last four years.

The Customs duties received at the port of Dublin during the past week were £100 over the corresponding week last year; being £17,900 against £16,900.

The directors of the German railways are at present concerting together to give greater speed to their trains, and particularly to those known by the name of express.

CHESS.

TO CORRESPONDENTS.

F, Stamford.—A new Chess-club has just been established at Barton-on-Trent, under the auspices of the Rev. C. Hanken and Mr H. Turton the former a most distinguished amateur of the game, and the latter, one of the best Chess Problem composers of the day. For particulars address either of these gentlemen.

EDEN GO-BRACE.—It is rumoured that the 3rd London Chess club is in process of re-organisation, under very promising parentage; but, we presume the arrangements are not yet composed, or we should have been favoured with information on the subject.

PHILO-CHESS.—1. Consult Ducange, "Glossarium ad Scriptores," &c., edition 1737. 2. Ozanam, "Recreations Mathématiques et Physiques," edition 1790.

J. P.—Your Problem shall be examined. The Solution of 535 is correct.

E. B. C. of Princeton.—A communication despatched a few days since, it is feared, has miscarried. Let us hear from you again at your earliest convenience.

MERGO.—No. The game is drawn.

OTTER.—We have not seen, and, besides, the times are not propitious.

RECTOR.—*The Chess Players' Chronicle* gives a monthly list of the Chess clubs in the United Kingdom, with their places and days of meeting. Cheek's club is in process of re-organisation, and we presume there is a well known work on this game by Staunton.

A READER AT THE MUSEUM.—We don't vote or at your complaining. The deficiency of works on Chess in the library of the British Museum has long been a crying reproach to the authorities of the printed book department of the institution. With the exception of a "Bibliotheca," purchased a short time ago, the collection has not been enriched by a single copy of any book on mediæval lore for the last twenty years.

L. L. A., D. W., Bury, Lancs.—In Problem No. 535, Mate cannot be given in the way you suggest. See our Solution in the last Number. In future, Correspondents must be good enough to understand that when no notice is taken of their Solutions, it is because they are incorrect. Half our Chess columns would be taken up weekly, were we to record all the failures sent us.

A BEGINNER AT CHESS.—A player having advanced a Pawn to his 8th sq., can claim a Queen, even though his original one is on the board.

TYRO.—Address your letters simply "to the Editor." The odds of "The Exchange" are not so much advantage as the Pawn and move.

W. N. F.—In the "Book of Games" contains a "Treatise on Draughts" and, besides the two books we mention there is a well known work on this game by Sturges.

G. H. L. *Chess-player's Chronicle* is published on the 1st day of every month by Kent and Co., 23, Paternoster-row; and can be procured through any bookseller in the kingdom.

CHESS.—R. Bell is right, and the solution has been entered.

A. C. of Stow.—Well. You have not succeeded with Problem 535. 2. The notation you propose is sufficiently simple for the country, but has now quite gone out of vogue.

H. B. H.—Your solution of No. 536 is not "Black to play" in last week's paper. In the position to Mr. Bridport's correct stratagem No. 537, White to move should be *B to K 8th*. Black's first move, *K t B 6th*. The remaining moves are tolerably obvious.

AMATEUR, Newbury.—Many thanks, as you suggest, he would be mated by the Knight's move.

HERMES.—You had better address your inquiries to the author, care of the publisher. It is quite impossible for us to undertake to answer them.

G. H., Bath.—We strongly suspect of what you call "Problem Chess-men," and advise you never to use them. I you wish to attach as stakes to the positions.

J. M.—1. The term "double Pawn" is not a misnomer, though it is in Italian; writers prefer "Pedone doppiato" to "Pedone." 2. Attack the Piece of the adversary. The rule given in Pendleton's "Chess" is a little too much for us; we should say, "attack the most valuable piece."

BY BERANGER.—We really cannot say. To ensure attention the same week you must send before 8 A.M.

G. MCA.—No. It is clever and ingenious. No. 2 is very moderate. The Diagrams are almost unintelligible.

ORREA, P. T. M., and Others.—The conclusion of Herr Capera's Enigma are—White to play, and mate in three moves.

AN OCCASIONAL CHESS PLAYER.—If your King is checked by the newly-made Rook, and you cannot capture it, or move your King, he is of course dismounted.

J. J., of Penrhyth.—By in Mr. Bigland a capital stratagem No. 534. Black play, for his first move, P to K 8th (Q), White cannot move K to K 5th (ch). R K to B 4th. 3. R to B 7th—Mate.

H. J.—In the diagram of Mr. Brandreth's clever little Problem, No. 536 there are two typographical errors. The Pawn at Black's Q B 5th should be a Black *Bishop*, and that at Black's Q R 4th should be a Q B 4th. We have repeated the position correctly among our Chess enigmas.

R. M. S.—Nine-tenths of the mistakes in printing Chess Problems arise from the objectionable practice of using what are called "suppose men," or from authors attempting to represent the figures of the Pieces, instead of describing them. The best mode in making a diagram of a chess position is to imitate the mode by the initial letters, as—W. S., for White King; B K for Black Rook, &c.

SOLUTION OF PROBLEM No. 535, by Mills, Mrs. Pilkeddy, Stricks, Mrs. Dove, Charley Rose, Peregrine, Omega, S. L. M., Sophrosyne, Philo-Chess, Armand, Johnson, M. P., Sturges, W. Grimshaw, and others.

SOLUTION OF ENIGMAS, by Jerome, Miles, Peregrine, Salaberry, Fair, Omega, Plato, M.P., S. T. W., are correct. All others are wrong.

PROBLEM No. 536.

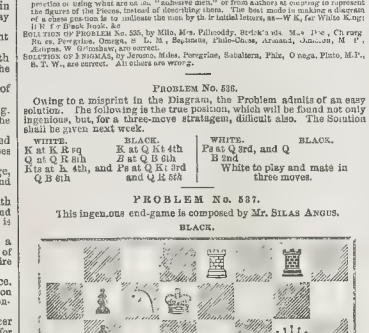
Owing to a misprint in the Diagram, the Problem admits of an easy solution. The following is the true position, which will be found not only ingenious, but, for a three-move stratagem, difficult also. The Solution shall be given next week.

WHITE.	BLACK.	WHITE.	BLACK.
K at K R sq	K at Q Kt 4th	P at Q Rd, and Q	
Q at Q R 6th	*B* at Q B 6th	B and	
Kt at h. 4th, and	P's at Q Kt 3rd	White to play and mate in	
Q B 6th	and Q R 5th	three moves.	

PROBLEM No. 537.

This ingenious end-game is composed by Mr. SILAS ANGUS.

BLACK.



WHITE.

White to play, and mate in five moves.

A stoutly-fought Game between Mr. S—F and Mr. STERN.

(French Opening.)

WHITE (Mr. S—f.)	BLACK (Mr. Stern.)	WHITE (Mr. S—f.)	BLACK (Mr. Stern.)
1. P to K 4th	P to K 3rd	25. Kt to Q B 3rd	K R to Q B 2nd
2. P to Q 4th	P to Q B 4th	26. P to Q Kt 3rd	Q to R Kt 3rd
3. P to h. B 4th	P takes Q P	27. R to Q 3rd	Q to K sq
4. Q takes P	Q Kt to Q B 3rd	28. P to Kt 4th	Q to Q B 3rd
5. Q to her sq	Q Kt to K 2nd	29. Kt to Kt sq	P to K R 3rd
6. Q B to K 3rd	P to K B 4th	30. P to K B 5th	P takes K B P
7. P to K 5th	P to Q Kt 3rd	31. P takes P	K to K B 2nd
8. K Kt to K B 3rd	K R to K 2nd	32. Q to K h. 4th	K to R sq
9. Q Kt to Q B 3rd	K Kt to his 5th	33. Kt to Q 6th	Q to K R 5th (ch)
10. Q B to Q 4th	Kt takes B	34. K to Q R 2nd	Q R to K B sq
11. Kt takes Kt	Q B to B 4th	35. R to K 7th	Q to h. K 7th
12. Q to Q 2nd	Q B to Q Kt 2nd	36. Q to Q 4th	K R to K 2nd
13. Castles	Castles	37. R to Q 8th	K to K Kt sq
14. P to K R 3rd	Q to K R 5th	38. P to K B 6th	Q to K R 4th
15. K R P takes Kt (a)	Q takes R	39. Kt to K 4th	Q to K B 2nd (ch)
16. K Kt P takes P (b)	B takes Kt	40. Q to Q Kt 3rd	Q to K t 3rd
17. Q takes B	Q to K 5th	41. K to Q Kt 2nd	K to K B 3rd
18. P to K Kt 3rd	R takes K B P	42. Kt to K 6th (d)	P takes Kt P
19. Q takes Q P	Q R to K B 6th	43. Kt takes P	Q to K Kt 2nd
20. B to K 2nd (c)	B to h. B	44. Kt takes K R	Q takes Q (ch)
21. Kt takes B	K R to K B 2nd	45. R takes Q	
22. Q to Q 4th	Q R to Q B sq	And Black abandoned the field.	

(a) Very well conceived. White, however, does not make quite so much as he might have done of the attack this sacrifice afforded him.

(b) Much better to have taken the Pawn with his Kt. since, if Black took again with the Pawn he must evidently have lost his Queen.

(c) Here, again Mr. S—f plays below his mark. B to Q B 4th would have been greatly superior to B to K 2nd.

(d) A sound precautionary move, and not a lost time, as young players would think it to be.

CHESS ENIGMAS.

No. 873.—By Herr F. CAPRAZ.

White: K at Q B 3rd, R at K R 2nd, B at K 7th, Kt at K Kt 5th; Ps at K Kt 3rd, K B 4th and 5th, K 6th, and Q B 7th.
Black: K at K B 4th, P at K B 2nd.
White to play, and mate in three moves.

No. 874.—By J. PHENIX.

White: K at K Kt 6th, B at K Kt 2nd, Kts at K R 5th and Q Kt 5th; Ps at K Kt 3rd, K R 3th, and Q Kt 6th.
Black: K at K R 3rd; Ps at K R 2nd, K Kt 5th, K B 4th, and Q Kt 2nd.
White to play and mate in four moves.

THE SUPPLY OF MUSKETRY AND SMALL-ARMS FOR THE BRITISH ARMY.

The Select Committee appointed to consider the cheapest, most expeditious, and most efficient mode of providing small-arms for her Majesty's Service, have published their Report. The Committee first directed their inquiries to the complaints of the Board of Ordnance, in regard to the difficulty of procuring machinery; next, they obtained all the information which they could collect as to the plan of a large Government factory for the production of muskets; and, lastly, they heard from the contractors, and from other persons connected with the gun trade, the statements and suggestions which they had to offer in reference to the present system, and to the best mode of securing a cheap, expeditious, and efficient supply of small-arms hereafter.

Lord Raglan, the Master-General, stated that he was charged with the responsibility of providing a sufficient supply of small-arms for the defence of the country, and that he was not satisfied with the present mode in which that supply was obtained. He added, that his objection did not apply to the details of the system only, but that he considered it unsafe for the country to go on without substituting for it arrangements by which the supply of small-arms should be independent of contractors. His opinion with regard to the proposed Government factory was founded on the information given to him by Mr. Anderson, and the report of a committee of officers assembled to consider this matter. Sir T. Hastings, a member of the Board of Ordnance, and Comptroller of Stores, gave evidence to the same effect. He referred to the experience of the last three years as a convincing proof of the impossibility of obtaining a sufficient supply of muskets under the present system. In May, 1851, the Board of Ordnance took steps to procure 25,000 rifled muskets. The contracts were entered into in February, 1852, and the muskets were not delivered until November, 1853. Again, in April, 1853, contracts were entered into for 2000 artillery carbines, and of these 550 only have been delivered. In Spain in August, 1853, a rifled musket of a new pattern was decided upon; 20,000 barrels were ordered, but the offers to contract were so unsatisfactory that they had again to be advertised for. The only tenders, however, were from the same parties, and the great was the delay that the Board had only been able to enter into a contract for setting up, to be completed in September, 1854. Sir T. Hastings read many letters from the contractors assigning various reasons for these delays—"Combinations and strikes amongst the workmen," "Difficulty in procuring coal," "Illness of a skilled artisan," "Accident to machinery," &c., were adduced as causes of delay, and excuses for failure in the fulfilment of the contracts. Sir T. Hastings informed the Committee that a large supply of muskets of the new pattern were now required to be provided as speedily as possible, namely:—

For the Line	150,000
For the Artillery	14,000
For the Militia	100,000 at least
Pensioners	16,000
Coast Guard	14,000
Marines	12,000
Navy	30,000
Channel Islands Militia	6,000
Colonial Corps	6,000
	347,000

In addition to this number the highest military authorities considered that there should be in store for the home service 450,000 stand of arms; whilst the number required in the Colonies amounted to 150,000 more. The total number would, therefore, be upwards of 900,000. When this number had been provided, a supply of 30,000 muskets in each year would, it was believed, suffice to replace those worn out in the service. The matter is considered condemnable at the end of twelve years. For the speedy and economical supply of this large amount of muskets the Board of Ordnance proposed to take the whole manufacture into their own hands, and they accordingly directed plans to be prepared for an establishment capable of producing 600 muskets a day.

The Committee, in endeavouring to ascertain the grounds upon which the Board of Ordnance had arrived at this conclusion, found that Lord Raglan and Sir T. Hastings stated that they had been guided in their opinion partly by the report of the Commissioner who, during the year 1853, visited the manufactories of the United States, and partly from communications with persons conversant with machinery. The advantages of producing muskets by machinery were said to be—cheapness in the manufacture, an exact similarity in the several parts, so that they may be readily interchanged and replaced; and, above all, the facility of rapidly producing muskets, and of increasing or reducing the supply according to the requirement of the time. Sir T. Hastings expressed his belief that these advantages were secured to the United States by the system there adopted, for they possess, he says, two factories, each capable of producing 30,000 muskets a year. He also referred the Committee to the establishment of Colonel Colt. Mr. Anderson, the civil engineer in the Royal Arsenal at Woolwich, informed the Committee that he had directed his attention during some months to the manufacture of muskets by machinery, and, although he considered that there was as yet little machinery in England specially adapted to this purpose, there was abundance of talent to produce such machinery if required. Mr. Anderson admitted that he was not practically acquainted with the manufacture of muskets, but, as a mechanician, he thought that many parts of the rifled musket now adopted might be much improved. He was also of opinion that a more definite system of producing and boring barrels might be devised, and that an improvement might be introduced in the forging process of the bayonet.

The attention of the Committee having been directed to the American musket, they were desirous of seeing one of the muskets which had been made by machinery, in order that they might compare it with the workmanship of the rifle musket approved here by the highest military authorities. The Board of Ordnance could not comply with this request, and admitted that they had never themselves seen the musket to which they referred. The Committee examined Mr. Whitworth, the eminent engineer and manufacturer of machinery, who had been during last year commissioned by the Government to visit the manufactories of the United States, and whose report has been lately presented to Parliament. Mr. Whitworth said he had not been specially directed to inspect the manufactories of fire-arms, and had not therefore given the close attention to the subject which he would have done if he had foreseen the present inquiry. Mr. Whitworth's evidence was to the effect that at Springfield, the Government establishment of the United States, there was an ingenious system of machinery for the manufacture of gun-locks. A gun-lock was completed in his presence within the space of twenty-three minutes, and this operation was performed entirely by machinery, with the exception of some polishing with sand-paper, a labour which was performed by hand, but which did not occupy more than two minutes. Mr. Whitworth does not suppose that they could work at this rate constantly, but thinks it would be safe to take double as the average time for completing a gun stock. As regards working in iron, Mr. Whitworth did not consider the American system to be the manufacturers of this country. He did not examine musket in America minutely. It was his opinion, that with regard to an American musket, taking a number of the different parts of it, there was greater identity than in the rifles manufactured in this country, because so much more attention was paid to the machinery, and also to the persons attending that machinery; but he thought that the parts of one individual musket were not so good in America as the rule which he had seen in England. Mr. Whitworth would not recommend the establishment in this country of a Government factory on a scale equal to producing 600 muskets a day, but he would recommend the Government to have an establishment as perfect as could be made, to produce a limited number, and to set an example to other gunmakers. Mr. Wallis, the head-master of the Government School of Art at Birmingham, had also visited the United States as a Commissioner. He said that the fit of the other parts of the musket made at springfield, which he saw, in his opinion, perfect, as he saw the lock, the barrel, and the furniture put into a gun stock, each part being fetched indiscriminately from a heap, and he saw no choice made in the portion to be fitted; but he has no practical acquaintance with the manufacture of fire-arms; and his knowledge of machinery had been acquired from residence in manufacturing towns, and not from any superintendence of a factory or business necessarily connected with machinery. The Committee also examined Colonel Colt; and several members of the Committee visited his establishment, to which their attention had been especially directed. From his evidence, it appears that the Government of the United States do not provide their muskets solely by a Government factory, but obtain a large portion by contract from private manufacturers. As regards the cheapness which may be expected to result from an increased employment of machinery in the production of rifled muskets, Colonel Colt said that many parts of the new musket would

necessitate the employment of complicated and expensive machines: he thought the arm might be in some respects simplified, and the cost of its production thereby reduced, without detracting from its efficiency The price of the musket must depend in great measure upon the quant ty to be produced according to a given pattern. If the Government were to advance £100,000 for machinery, the manufacture must be at first nicw and the musket more costly. Colonel Colt would not like to deliver any in the first year, but in the course of ten years he thought he should be able to produce a million muskets, at a price not exceeding 30s. each. If only a smaller number were required, the cost of the musket would be increased. Mr. Nasmyth, the well-known inventor of the steam-hammer, considered the systematic introduction of machinery into the gun trade to be feasible and highly desirable. About four years ago he supplied the Russian Government with some machinery for producing parts of a musket; he believes that if proper steps were taken, a factory might be established for £150,000, which would be ready to commence working in eighteen months from the present time. He considers that in the private, the masters are in a state of dependence upon the skilled workmen, from which they can only be emancipated by the substitution of machinery for hand labour. Mr. Nasmyth had, however, not seen a musket produced entirely by machinery.

The Committee having heard all that could be urged in favour of a GOVERNMENT manufactory for muskets, came to the conclusion that they had not received evidence sufficient to satisfy them that a Government factory would afford the cheapest, most expeditious, and most efficient mode of providing muskets. They, therefore, recommended that the system of contracting for the supply of small-arms should not be discontinued without further proof that a sufficient supply cannot be obtained under it. The Committee added, that the complaint of the contractors, that the orders of the Government for small-arms had not been continuous, raised a question of great importance. "There is no doubt, they say, that a large demand for small-arms, spread over a number of years, would attract to the gun trade a supply of hands sufficient to meet the demand. Even in the first year considerable additional supplies might by this means be attained, and in each successive year the increase would be augmented. On the other hand, it has been observed that it would not be judicious on the part of the Board of Ordnance to employ themselves to large and continuous orders, for in this age of rapid invention, such a course might be attended with very inconvenient consequences. For instance, the pattern of 1842 has been substituted for that of 1841; therefore, if large orders for the pattern of 1851 existed, they would be orders for a now obsolete arm. Some new pattern may soon supply the place of that which is now ordered. The contractors, however, state that the continuous employment which they desire need not depend upon the identity of the pattern."

The Committee does not appear to have devoted its attention to ascertaining whether the Birmingham manufacturers were able during the last war to meet the great demand for muskets that was made upon them. With the view of supplying this deficiency, we have collected some particulars which will be of interest at the present moment.

In 1793 there were no establishments large enough to take the contracts of the Government, and the Board of Ordnance despatched Lieutenant-Colonel Miller, an artillery officer, to Germany, to purchase muskets. In this service he was engaged for nearly two years, and purchased nearly a quarter of a million of small-arms. It was at this time, and for some years subsequently, the practice of the Ordnance department, when the Government needed a supply of arms, to engage with one or more individuals for the number required. These contractors again contracted with the trade, the Board of Ordnance sending down "viewers," or inspectors, from the Tower of London, to reside in the individuals employed in the manufacture of the barrels and the locks, and with the gunmaker to set them up complete. From 1793 to 1798 the Irish Ordnance Department made large demands upon Birmingham for fire-arms, upon the Militia, Fencibles, Yeomanry, &c., required for the suppression of the Rebellion. During the same period the Volunteers in England and Scotland, who purchased their own fire-arms, gave orders which increased to a considerable extent the activity of the manufacture, both in Birmingham and London. But, notwithstanding the number of guns which were supplied during these years to the Government, in 1803, when war was again declared, found itself with an insufficiency. For an army of 177,000 men it had but 133,000 firelocks. It therefore obliged once more to have recourse to Germany and purchased 233,000 firelocks, for about £700,000. "The state of destitution," says the writer of a scarce pamphlet, printed at Birmingham for private circulation, and a copy of which is before us, "in which the arsenals of our country were at the period of the war in 1793, and afterwards in 1803, appears to show a remissness on the part of the Board of Ordnance in not having an adequate supply of small-arms, and more particularly at the latter of those periods. For, notwithstanding the increase of our magazines at the Peace of Amiens, the Board of Ordnance then ceased giving out orders for any further supply of small-arms. Had it still kept the manufacturers employed during the interval of peace, they could have made the number of arms which the Government was compelled to purchase on the Continent, of a superior quality and uniform pattern, and at about one-half of the price." Notwithstanding the wants of the Government, the Board of Ordnance did not give any extensive orders in Birmingham until March, 1804, and these orders were at first executed with considerable difficulty, in consequence of the scarcity of hands. The manufacturers, at the peace, discharged a great number of their workmen, who became absorbed by the other trades of the town; but by degrees the greater portion of them, allured by the high wages to be obtained, returned to their old trade and from 1804 to 1815; the gun manufacture flourished in Birmingham to an extent never before or afterwards attained From March, 1804, to December 31, 1809, there were made at Birmingham, for the Government, independently of fowling-pieces, and guns for the home, colonial, and foreign trade, 1,066,443 barrels, and 867,818 locks. During the thirteen years of war there were fabricated in the private establishments in Birmingham and London, and at a small manufactory set up by the Government at Lewisham, 2,673 366 stand of arms. Of this number there remained in store, or in use in the army and navy after the pacification of Waterloo, 1,839,256; leaving 1,804,110 lost by the chances of war, or remaining in the hands of the allies. From 1803 to 1815 inclusive, Great Britain furnished to her allies and to her own army, navy, militia, and volunteers, upwards of three millions and a quarter of small-arms of various kinds, as appears from the following Table :—

Arms furnished to the allies (including muskets, carbines, pistols, &c.)					
					2,111,613
Ditto	regular troops	..	..	..	511,983
Ditto	regular militia	..	..	..	54,415
Ditto	local militia	..	..	..	101 651
Ditto	volunteers	..	..	..	47,585
Ditto	navy	..	..	..	21,265
	Total	..	..	..	2,227,715

Birmingham produced more than two-thirds of these guns in their complete state, and nearly the whole of the gun-barrels.

The following Table shows the number of Barrels for every description of Fire-arms produced in each year at Birmingham, from 1804 to 1815 inclusive:—

Years.	Muskets.	Rifles.	Carbines.	Pistols.	Total in each year.
1804	60,211	62	....	....	80,186
1805	109,908	2,988	3,120	1,158	118,049
1806	114,332	13,106	4,418	2,276	134,022
1807	155,869	4,874	6,536	8,842	174,190
1808	192,375	6,444	5,240	21 4	227,159
1809	265,031	1,433	5,571	16 618	288 6 1
1810	299,382	1s.	11.	6 415	305,241
1811	316,760	1,381	172	3,611	321,4 5
1812	409,861	2,261	7,894	16,847	436,263
1813	412,913	466	24,378	51,078	488,836
1814	269,212	61	6,566	36,313	312,185
1815	98,688	....	442	4,117	103,248
Total	2,773,346	32,552	74,582	155,755	3,087,644

The following is the number of locks it produced within the same time:—

Years.	Muskets.	Rifles.	Carbines.	Pistols.	Total in each year.
1804	81,021	20	....	....	81,041
1805	91,148	4,721	4,006	....	99,87
1806	102,047	11,280	....	....	114,027
1807	119,389	8,047	1,430	5,071	134,937
1808	175,589	5,947	1,899	9,440	192,875
1809	223,345	2,412	203	8,813	234,773
1810	280,839	1,288	24	10,080	301,931
1811	338,143	2,690	179	9,663	345,654
1812	419,254	134	9,555	24,291	443,244
1813	371,694	99	23,805	62,018	457,616
1814	247 396	....	3,610	20,091	271,188
1815	98,884	....	238	....	99,052
Total	2,616,229	37,338	45,101	15,04 4	2,879,203

The next Table shows the total number of complete Arms manufactured and set up in Birmingham during the war:—

Years	Muskets.	Rifles.	Carbines.	Pistols.	Total in each Year.
1804	26,506	85	....	....	26 691
1805	50,789	889	....	200	51,878
1806	60,756	1,597	....	1,800	63,253
1807	58,873	1,788	....	1,800	61,011
1808	87,386	2,299	....	2,759	92,891
1809	148 699	557	....	2,317	151,374
1810	185 596	1,103	....	3,060	189,795
1811	319,873	1,224	....	5,074	326 871
1812	274,026	1,325	4,123	9 067	288 740
1813	279,681	497	17,934	22,231	320 643
1814	168 949	729	8 695	6,784	184,149
1815	68,800	737	8,126	982	78 615
Total	1,672,610	14,635	38 778	55,474	1 743 382

In the year 1804, the Government, with the view, as alleged, of checking the large prices demanded by the Birmingham gun manufacturers, and of increasing the supply, resolved to establish a gun manufactory of its own. The subject was not brought under the notice of Parliament until 1806, when the sum of £15,000 was voted for the erection of suitable buildings for the fabrication of locks and barrels, at Lewisham, near Blackheath. The further sum of £7000 was granted in the following year. Operations were not actually commenced until 1808. It was both predicted and wished by the Birmingham people, that Government would fail in its experiment: and they loudly complained of the unfairness of the competition. They alleged that the Government enticed away their best workmen; and asserted that, instead of manufacturing at a cheaper rate, it would ultimately be found that private trades could have supplied with sufficient promptitude, all the arms required, and at a cost considerably under what the nation would have to pay in turning gunmaker for itself. The result verified the prediction. Up to the 1st July, 1810, the Lewisham gun-factory had cost upwards of £66,000, and the Government was only in a position to turn out 25,000 barrels, and 15,000 locks in a year; while Birmingham, at a much cheaper rate, was turning out upwards of 200,000 barrels, 300,000 locks, and 186,000 stand of arms in a year. The Government had also an establishment at the Tower; but its operations were confined to the rough stocking and setting up of arms, with the materials supplied from Birmingham and Lewisham, and by different private manufacturers under contract with the Board of Ordnance. In consequence of the complaints of the Birmingham and London gunmakers, a commission of military inquiry was instituted to inquire into the working of both these establishments The commission, after a long inquiry, decided in favour of the works pursued at the Tower, and against those of Lewisham. The commission recommended that the Ordnance department should confine itself to the setting up of guns, and that it should cease manufacturing both locks and barrels. The Board of Ordnance, however, resolved, notwithstanding the report of the commission, to continue its experiment; and, in 1813, obtained the authority of Parliament for the erection of a second gun-barrel and look factory at Enfield, in Middlesex. This new manufactory was not completed until 1815, when the war was at an end.

LANDING OF THE ROYAL HORSE ARTILLERY IN THE BOSPHORUS.

THE large Illustration upon the next page is a scene of real life, which we are enabled to present to our readers by aid of the pencil of an Artillery officer. It is a memorable incident, having occurred during the first landing of the Royal Horse Artillery in the Bosphorus, on the 3rd ult. In the accompanying View, the nearest ship is the *Mercia*, No. 2 transport, having on board the left division of Captain Leving's troop of Royal Horse Artillery. Behind this ship is No. 21 transport, with Captain Levinge and one subaltern on board, with the right division of the troop. In the distance is the view of the Bosphorus, taken from the landing place; on the right, at the foot of the hills, is the barrack Kouleli, given over by the Turkish Government for the use of the Royal Artillery; it is a roomy building, with stable accommodation for a very large number of horses, and the correspouding number of men for a cavalry regiment. The view from this point, looking westward towards Scutari, or eastward towards the Black Sea, is very beautiful. In the extreme distance, disappearing round the left point of the Bosphorus, is the *Terrible*, on her return to the Black Sea, after having brought despatches from the fleet of the bombardment of Odessa, and repaired some slight damage which she received from the fire of the Russian guns.

THE BOMBARDMENT OF ODESSA.

The following extract from a letter of an officer of one of the vessels engaged at the Bombardment of Odessa appears in the *Dublin Evening Mail*:—

I have, thank God, been spared to give you an account of our first affray with the Russians, which took place last Saturday (April 22), at Odessa, when we destroyed the Imperial port, shipping, and property to a large amount.

The *Vauban*, French steamer, was obliged to leave the scene of action, having been set on fire by a red hot shot, which penetrated the outer planking, and rolled down between it and the inner lining, towards the bottom of the vessel. Having burnt its way through inside, it was soon removed, and all put to rights again; but they were rather apprehensive of the ship blowing up, from its proximity to the magazine, which they cleared away directly.

The only loss of life on our side occurred on board the *Terrible*. A shot which came through the side caused splinters, which killed one man and wounded four others. This shot took an extraordinary course; having passed obliquely through the side, it came in contact with the "combing" of a hatchway in the centre of the deck, bounded back at an acute angle to the same side, struck a gun, glanced from it into the port, and finally went overboard. At first, most of the enemy's shot and shell fell short, but after a little they got their guns to bear beautifully upon us, and were giving it to us thick and warm, when, by steaming astern, we dropped our anchor, and spelled their range. It was a dreadful but glorious sight to see their magazine blow up—such cheering took place from our jolly tars. After we had silenced the batteries, and set the shipping on fire, our rocket-boats were pulling in to us to give them something more, when the Russians opened fire on them from other places; on which account we were obliged to blaze away again, and remained till the signal of recall was hoisted by the Admiral, whose ship, together with all the liners, was anchored just at a nice distance to witness the day's proceedings.

As we passed the *Queen* and *London*, they manned the rigging, and gave the old *Terrible* three hearty cheers.

Some of the lockers-on said we fir d splendidly; however that may be, we suffered far more than any of the ships engaged, which is attributed to our having been 200 yards closer in. At all events, our position was more favourable for the direction of the captain's fire. Our gunner has just told me that, *we* (*Terrible*), on Saturday, fired no less than 873 rounds of shot and shell, besides 51 rockets. We are now *en route* to Constantinople, as fast as we can steam, with intelligence of the Odessa affair.

CONSTANTINOPLE, April 28.—We have been quite lions here since our arrival from Odessa. No end to people coming on board to view a wounded ship—among them, many of the Guards. List of casualties in the *Terrible* during action:—One man killed, and four wounded. The shot struck in the hull in eleven places; stock of small bower-anchor shot off; two links of short cable shot away; both paddle-box boats shot through; also paddle-boxes; fore gangway ladder and paddle-bridge ladder shot away; two mariner spars and two paddle-box boats' oars shot away; stanchions and crutch of port quarter boats' davits shot away; starboard paddle-wheel and break damaged; starboard forecastle hammock-cloth, berthing, and two hammocks knocked overboard, and number of ropes shot away.

By the last mail from Constantinople several letters have been received in the Pyne, from Shields captains who have escaped from Odessa; and, as these letters were written for the information of their own family circles, and with no idea that they would come under the observation of any one connected with the press, they have especial interest. These simple and homely narratives contradict in every particular the despatches of the Russian General, Osten-Sacken, with regard to the bombardment of Odessa. Mr. John Tate, master of the barque *Princess*, reached Odessa with his vessel on the 3rd of April, seeking a cargo; and, four days after, as he was standing on the Mole, overheard the parley between the boats crew of his countryman and to the war steamer *Furious* and the Russian authorities. His account of the transaction corroborates Captain Jones's report on every point, and he states that the steamer's boat was returning to the ship, and within fifty yards of her, when the Russians opened one of their batteries, and fired seven shots at her. About four days after this transaction, three English war-steamers entered the roads, and captured eight laden Russian merchantmen. This circumstance greatly exasperated the Russian authorities, and they put a guard of eight soldiers aboard of each English and French vessel in the harbour. The steamers, however, having taken their departure during the night, the guards were removed from the vessels next day. On the 20th, in the grey of the morning, Mr. Tate descried a fleet of large vessels approaching the harbour; and, suspecting that they were the Allied fleets, he quietly went ashore and got water and provisions aboard his ship. His vessel was in ballast, a good sailer, and the wind was fair for a run out of the harbour. Mr. Tate, therefore, took advantage of the confusion in the port consequent upon the appearance of the fleets, got in his anchor, and made a dash for the sea. The Russians observed his movements when too late, and gave chase to him with a boat filled with soldiers; but the armed *Princess* outsailed them, and in half an hour Captain Tate was under the protection of a large English war-steamer that came in towards the land to meet him. He was requested to bring in in the roads, and put himself under the protection of the fleet, and then to go aboard of the English Admiral's ship. Mr. Tate was cordially received by Admiral Dundas and Admiral Lyons. He is a very intelligent young man, and was able to give some valuable information with regard to the forts, batteries, the position of the powder magazine, and the number of mounted shot-fire. He was also able to mark out the position of the French and English vessels in the harbour, and tell where a Russian war-steamer was laying. Mr. Tate having anchored his vessel in a secure position, witnessed the subsequent proceedings. He says that on the 21st a boat put off from the fleet in command of an English Lieutenant. She pulled in towards the shore with the Russian flag flying. They were met by a boat manned with Russian officials, and the following is Mr. Tate's version of the parley. The Russians asked the Lieutenant what was wanted. He replied that the Admirals requested that all the French and English merchant vessels be given up, and in exchange the fleet would liberate fifty Russian seamen who had been captured. The answer of the Russians was that the authorities considered all the English and French vessels, in the harbour, lawful prizes, and the subjects of those countries prisoners. "Then," shouted the Lieutenant, "if the demand is not complied with by sunset, make ready for your breakfast to-morrow morning!" the bombardment, as observed from the roads, Mr. Tate states had a fearfully grand appearance, more especially when the powder magazine blew up. During the fighting eight English merchantmen and two Frenchmen escaped from the harbour. The ruins of the buildings destroyed by the fleet burned for four days. The merchant vessels that escaped were conveyed across the Black Sea by war vessels.

The following is from a letter from Admiral Dundas, dated off Odessa:—

I own I feel annoyed at the remarks of a portion of the press at my lying all the winter at Therapia. If I had not done so, and had cruised for two months (a peace time), and had exposed my ships by such a foolish plan, what a state they would have been in, instead, as they are now are, in the finest condition imaginable! We arrived at Varna without a want, and found an Aide-de Camp from Omer Pacha, expressing a wish that only a few should come near him; and there I was all ready, and in conjunc ion with the French fleet (eighteen as I of the line) and a dozen s.eamers. We are on the best possible terms with the French, and the utmost cordiality exists between us. Would you believe that the report of the Russian fleet having left Sebastopol and landed troops on the Danube, was all a fa'sehood, and dest.tute of truth? I had stationed frigates cruising all round the Black Sea, watching their movements; not one ship has ever left port since we entered it. A few days ago we gave Odessa a little of our shot and shell. It was well done by the steamers—five English and four French, with 9 ".. Sterboats I spared the town; and in a few hours we could have knocked both it and the mole, where the neutral ships were, into one mass of fire The pier, the mole, and the magazine were all destroyed. I did, in conjunction with my French colleague, what we considered our duty after the flag of truce had been fired on. Our guns carry beautifully.

We recapitulate the attack, as represented by our Artist. The steamers entered in two divisions. The first consisted of the *Sanson*, *Mercure*, *Descartes*, and *Mogador*. The *Sanson* fired the first shot at the Imperial Mole, and the fire was instantly returned. The movement, as witnessed from the large ships, about three miles and a half off, was a most curious sight. When within about 2000 yards each steamer delivered the fire of her enormous guns, then veered round in a circle of about half a mile in diameter, each taking up the fire in succession. Thus they kept wheeling and twisting about like so many waltzers, without ever touching or getting into scrapes. The guns in the mole answered promptly, and in the course of an hour the *Vauban* and the two sailing frigates, on fire from red hot shot, and riddled in several places. Happily, the fire was got under, and she returned to her post.

Mr. Oliphant, in his "Russian Shores of the Black Sea," describes Odessa as a more agreeable town than any other in the dominions of the Czar, which he had visited, but he was unable to go to so extravagant a length, in admiration of it, as his fellow passengers, on board the steamer, went:—

Hitherto my life had been rendered miserable by repeated allusions to the "Russian Florence." Some infatuated Odessans on board the steamer impressed upon me for two days and nights that nothing I had seen at Moscow or St. Petersburg could give me any conception of the glories of Odessa, which, according to them, combined in itself the charms of all the capitals in Europe. The statues and the opera were Italian; the Boulevards and the shops, French; the subterranean cafés English principles; and the hotels unequalled in Europe—the whole forming attractions which may surpass my most sanguine anticipations

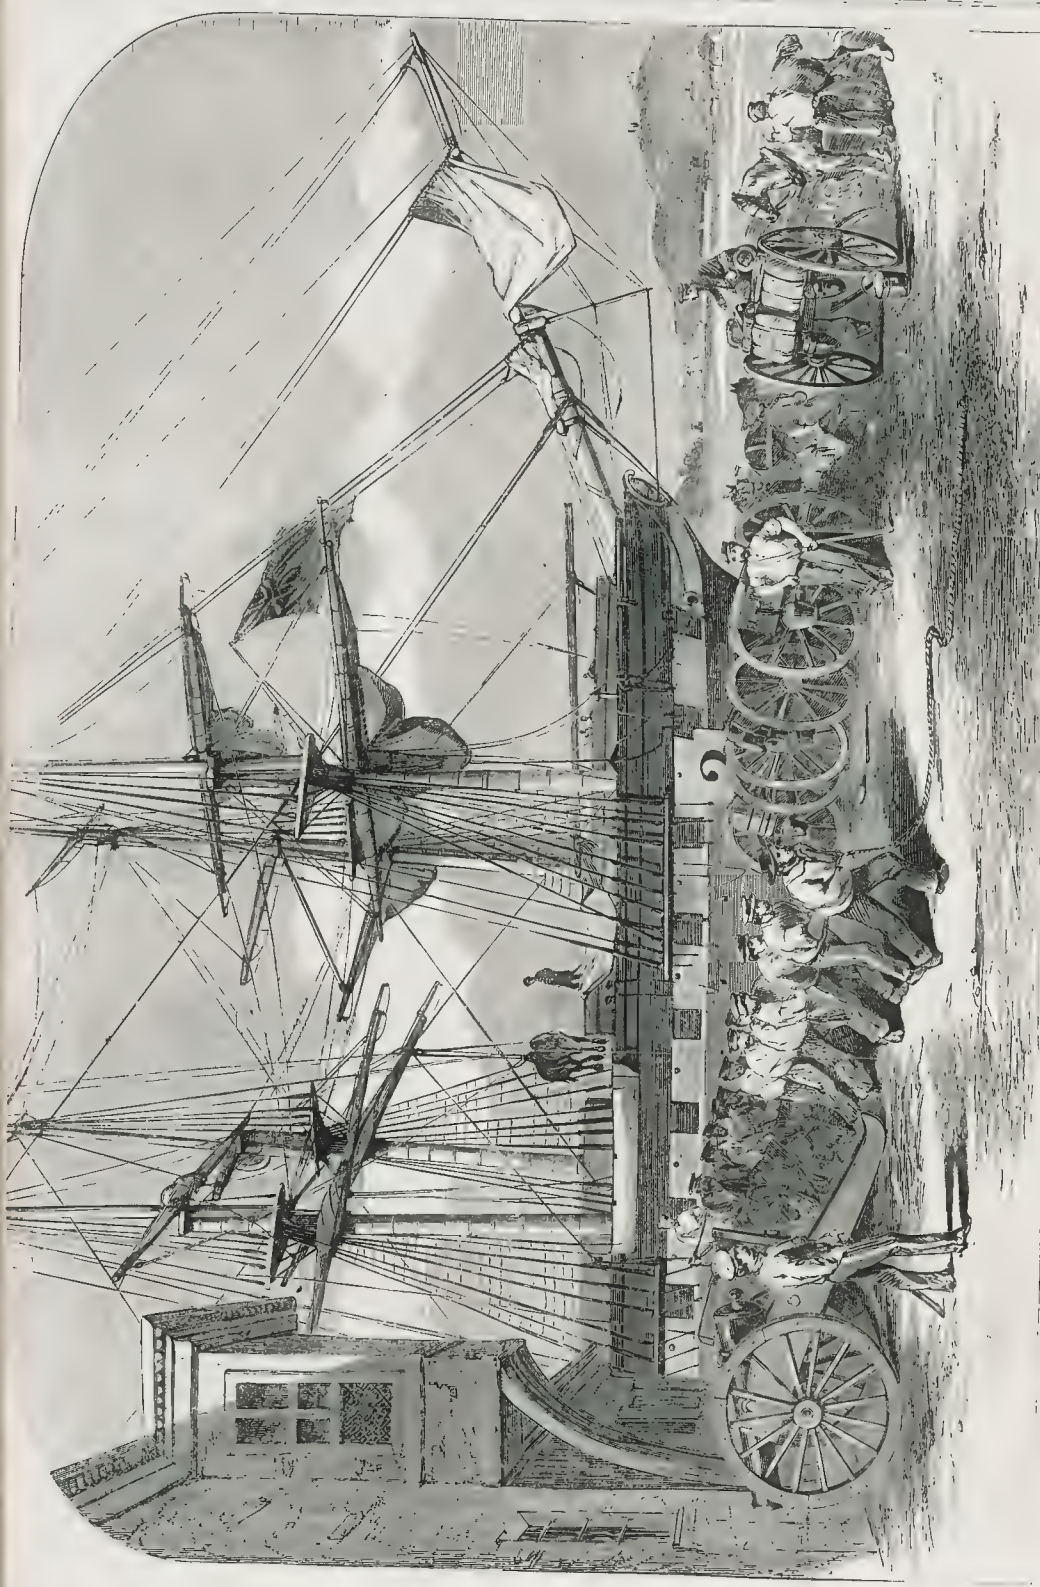
It struck me as somewhat singular, as I was leaving the wharf, upon asking what means existed of leaving this enchanting spot, that we should find it necessary to buy a carriage and post, as no diligence had as yet been established. I was informed, however, that only town in Europe running upwards of a hundred thousand inhabitants, which cannot boast of some public means of conveyance other than a post telèga, which is infinitely more barbarous than a Connemara waggon, and only meant for the conveyance of feld-jägers and despatches.

It was evident that these benighted inhabitants of Odessa prized their city in extravagance of the most unbounded. It could not be strange to them that a pair of sheets should be charged a rubie extra in the best hotels, since they seldom or ever made use of them at home; while it was not to be wondered at that jugs and basins should seem a needless luxury to those who followed the mode of washing adopted on board the Russian steamer, which consisted in each man's tucking a little water into his friend's pannikin, and then washing his own face in what was left when the others were split. Our exertions to obtain a basin on board evidently caused us to be looked upon as bad travellers, who did not conform to the manners of the country.

The change from the climate, inhabitants, and customs of the East, to those of the bleak North, was very marked on our arrival at Odessa. We were again surrounded by substantial houses and covered with a sharp wind that howled over the desolate steppe. Here were no lofty peaks to shelter us, nor summer sun to warm us; winter seemed fairly to have set in the day we arrived, with the view of chasing us out of Russia. However, we could not go until we had been advertised a certain number of days in the papers, for the benefit of imaginary creditors. Fortunately the police given notice of our intended departure before we arrived whereby the length of our stay was considerably diminished. Meantime we found plenty to amuse us in the greatest mercantile emporium in Russia.

It must be admitted that Odessa is very cosmopolitan in its character. Almost every country in Europe has its representative here, and the principal streets are filled with people of every variety of costume. Indeed, Odessa has an air of business and activity about it quite foreign to Russian towns generally; and this is doubtless owing to its rapid growth and mixed population. There is a great deal more liberty enjoyed by the inhabitants than by those of any other town in the empire; and I was struck by the unwonted freedom of smoking and conversation which prevailed among those with whom I mixed. The evident effort made to be as little Russian as possible, is a significant comment upon the inconsistency of the inhabitants, who, while they maintain the superior excellence of everything civilised, seem chiefly desirous of sinking their nationality, and, with that facility of imitation peculiar to Russian character, seek to assimilate themselves as much as possible to other European nations. It follows, therefore, that, apart from the novelty with which this city is invested by its commercial character, in a country affording no encouragement to trade, there is little to interest in its broad glaring streets, where clouds of white dust overwhelm the passengers, and rows of stumpy trees are reduced almost to the same colour as the tall houses behind them

Although there is no macadamised road leading in any one direction



FIRST LANDING OF THE ROYAL HORSE ARTILLERY IN THE OSPHORUS.—(SEE PRECEDING PAGE.)

THE BOMBARDMENT OF ODESSA—FROM A DRAWING BY W. HALL—(SEE P. 537.)

ent of Odessa, yet even the magnificent rivers, which afford such evident means of communication with the interior, are not taken advantage of. The Pruth, the Dniester, the Dnieper, and the Bug, are all either navigable or might easily be made so. At present little else but wood-rafts float down their broad waters. No private company has enterprise, or rather hardihood enough, to attempt an undertaking which the Government might at any moment ruin; and even now, almost all speculations in Russia are carried on by rash foreigners, who have not lived long enough in the country to know better. I think, therefore, it will be some time before a railway is completed to Moscow, though Government now offers a guarantee of four per cent. It will be a singular anomaly if a railway shall connect Moscow and Odessa in the absence of any macadamised road between the two, and one none the less striking, because only to be found elsewhere in America.

THE CAUCASUS AND THE SEAT OF WAR IN ASIA.

WITH our impression of this day we present our readers with a Map of the eastern shore of the Black Sea, and of the western coast of the Caspian, including the territory enclosed between those two geographical boundaries. This Map, in conjunction with the one we printed on the 14th of last January, gives a complete view of the Seat of War in the Euxine, the Caucasus, and in Asia; and it is our present purpose to describe, historically and politically, the principal localities in and around which the Allied fleets, the Turkish armies, and the mountaineers of Schamyl, will have to contend against the Russian colossus.

The mountainous range of the Caucasus, forming a natural barrier between Europe and Asia, extends from the Black to the Caspian Sea in a diagonal line: the length from Anapa to Baku being 690 miles; but the average breadth is only thirty leagues, if the inferior Caucasus, or Ararat, is not included. This region is celebrated in the fables and traditions of antiquity, as well as in the annals of authentic history. Here Zoroaster placed the abode of Ahrimanes, and here the vulture gnawed the liver of the enchained Prometheus. Jason and the Argonauts sailed up the river Phasis, now called the Rion, in search of the Aries Chrysoellus, the Ram with the Golden Fleece. Here dwelt the warlike Amazons, and here reigned the Great Mithridates. According to the Sacred Writings, the ark rested on Mount Ararat; and local tradition affirms that the cradle of Christ is deposited on the summit of Mount Kasbek, above the tent of Abraham, which is itself suspended in the air.

Circassia, the northernmost and most extensive division of the Caucasus, is inhabited by a race distinguished by the name of Atteghei, which signifies a people dwelling in a country which lies between two seas. Some antiquarians trace the Atteghei tribes to the Koumanian Tartars, others to a colony of wandering Arabs. It is now ascertained, says Mr. Spencer, that the Polouzians or Koumanians were nothing more than subjects of Circassian Princes, whose names alone have been recorded in history. "Their territory, Kabiri (Kabardah), according to a singularly curious manuscript map found in the Imperial library at Vienna, joined the country of the Koumanians, over whom, in all probability, the Kabardian Princes exercised some sort of nominal sovereignty." A travelling Monk, named Ruysbrok, who journeyed over the vast steppes of Western Tartary, in the thirteenth century, says:—"This whole plain was, previously to the irruption of the Mongol Tartars, inhabited by the Koumanians, who called themselves Kaptchat Tartars, and were descended from a great chief of that name, and traced their origin to Ishmael. The Byzantines always spoke of the people of the Western Caucasus as Zychians, the Greek word for Circassians, and describe their territory as extending from Pitsounda, the ancient Pythus, along the shores of the Euxine to the mouth of the river Kouban, being the precise territory they now occupy, and to which Russia has laid claim by virtue of the treaty of Adrianople.

Various names have been given to the Caucasian mountains by different nations. The Chaldeans called them Tawr-An; the Persians, Seddi-Iskender, signifying the rampart of Alexander—for, according to Persian tradition, it was here that the great Macedonian received his first check; the Georgians call them Kof-Kaf; the Turks, Kof-Dagh: and the majority of the Circassian tribes, Aour. The highest peak of the Caucasian Alps still retains among them its original name of Acua-Dagh, which means mountains of snow. The highest summits of the mountain range are the Elbeorus or Spat, which rises 16,830 feet above the level of the sea, and the Kasbek, also called the Mquivari, whose elevation is 14,400 feet.

Russian Princes expelled the successors of Mithridates from the kingdom of the Bosphorus, and Sviatoslaf founded Tmutarakan, supposed to be the same as the modern Taman, on which the ancient Phanagoria was built. But the Russians were driven out by the Polouzians, to whom we have already referred, about the beginning of the eleventh century; nor did they again appear in the Caucasus till the sixteenth century, when they approached by the Volga. We may date the real and permanent advances of Russia on the Caucasus from the reign of Peter the Great, his conquest of Azof on the Palus Mæotis, and his victories against the Persians on the Caspian, from whom he took Shirvan, Gulian, Mazanderan, Asterabad, Daghestan, and the important city of Derbent; for, although the Empress Anne was compelled to restore these provinces to Nadir-Shah, Russia determined to recover what she had once possessed. Anne, however, founded Kisliar on an arm of the Terek, which became the boundary of the Russian possessions in the Caucasus during her reign. Catharine II. annexed the two Kabardahs, and there built Mosdok, and the towns of Georgievsk, Staropol, and Ekaterenograd. Heraclius, Czar of Georgia, placed his country under the Protectorate of Paul I.; and in 1802 Alexander declared it a Russian province. Abhasia next passed under Muscovite rule; and Paskiewitsch conquered Erivan and Nachetchivan from the Persians. However, under the native leaders—Kasi-Moullah, Hamsad Bey, and the celebrated Schamyl, Circassia has obstinately resisted, and still resists, the denomination of the Czar, and, with the aid of England and France, will establish its independence.

It is necessary here to recite the fourth article of the treaty of Adrianople (1829), which is thus worded:—

> Georgia, Imeritia, Gouriel, and several other provinces of the Caucasus having been for many years and in perpetuity united to the empire of Russia, and that Empire having besides, by the treaty concluded with Persia at Tourkmantchai, on the 10th February, 1828, acquired the Khanats of Erivan and Nachetchivan, the two high contracting parties have recognised the necessity of establishing between their respective states, on the whole of that line, a well-determined frontier, capable of preventing all future discussion; they have equally taken into consideration the proper means to oppose insurmountable obstacles to the incursions and depredations which the neighbouring nations or tribes have hitherto committed, and which have often compromised the relations of friendship and good feeling between the two empires: consequently, it has been agreed upon to consider hereforward as the frontier between the territories of the Imperial Courts of Russia and those of the Ottoman Porte in Asia, the line which, following the present limit of Gouriel from the Black Sea, ascends as far as the borders of Imeritia; and from thence, in the straightest direction, as far as the point where the frontiers of Akhalzick and of Kars meet those of Georgia, leaving, in this manner, to the north of, and within this line, the town of Akhalzick and the port of Khalvalick, at a distance of not less than two hours." All the countries situate to the south and west of this line of demarkation towards the Pachalic of Akhalzick, shall remain in perpetuity under the dominion of the Sublime Porte; while those which are situated to the north and east of the said line towards Georgia, Imeritia, and Gouriel, as well as all the littoral of the Black Sea from the mouth of the Kouban as far as the Port St. Nicolas, inclusively, shall remain under the dominion of the Emperor of Russia.

This littoral of the Black Sea extends about two hundred leagues, and we will now notice some of the principal positions on this line of coast. Anapa, as will be seen by reference to the map, is the first Russian settlement in Circassia, and is situated at the base of a mountain which terminates the lesser chain of the Caucasus, from whence the vast plains of the river Kouban extend north and east. Anapa formerly belonged to the Circassians, who, in 1784, allowed the Turks to build a fortress upon it. Six years afterwards, having been held by the Turks, it repulsed General Bibikoff. In 1791 General Goudovitch barried it by assault. In 1807 both the town and fortress were captured by a Russian squadron, commanded by Admiral Pastchekin. Finally, in 1828, after a murderous siege of three months, it surrendered to Prince Menschikoff and Admiral Greig. Soudjouk Kale] is thirty miles south-east of Anapa, and the bay affords safe anchorage. Gelendik is sixteen miles distant from Soudjouk Kale. Redout Kale is a bad sea-port, which, prior to Russian occupation in 1827, was the great dépôt for English manufactures on their way to Persia and Georgia; but the English establishments, since 1827, have been transferred to Trebizond. The Russians have attempted to establish a rival port at Poti at the mouth of the Rion.

When the treaty of Adrianople was communicated to the chieftains of the Caucasus, they assembled together and drew up a declaration of their national independence, which they add ressed to the Sovereigns of Europe and Asia, but, unfortunately, it received no official attention. This document, deeply interesting, and the more so at the present crisis, is much too long for insertion in our columns; but we shall give its substance, and some of its stirring passages. It commences by denying any subjection to Russia, and affirms that the Sultan of Turkey were no more than their spiritual chiefs; that they had, indeed, frequently deserted and betrayed them, and that their pretension to sign away by treaty any portion of the Caucasus was a usurpation and an insult:—

> We know (says the declaration) that Russia is not the only power in the world. We know that there are other powers greater than Russia, who are not friends to the Russians, but rather their enemies, and who are not enemies of the Sultan, but his friends. We know that England and France are the first among the nations of the earth, and were great and powerful when the Russians came in little boats, and got from us permission to catch fish in the Sea of Azof. We thought that England and France would take no interest in a simple and poor people like us, but we did not doubt that such wise nations knew that we were not Russians; and though we know little, and have no artillery, generals, discipline, ships, or riches, that we are an honest people, and peaceable when let alone, but that we hate the Russians with good cause, and almost always beat them. It is, therefore, with the profoundest humiliation that we have learned that our country is marked on all the maps printed in Europe as a portion of Russia—that treaties of which we know nothing should have been signed between Turkey and Russia, pretending to hand over to the Russians those warriors that make Russia tremble, and these mountains where her footsteps have never come that Russia tells in the west that the Circassians are her slaves, or wild bandits, or savages, whom no kindness can soften and no laws restrain. We solemnly protest, in the face of Heaven, against such womanish arts and falsehood. We answer words with deeds, but it is truth against falsehood. For forty years we have protested triumphantly against accusations with our arms. This ink, as well as the blood we have shed, declares our independence; and these are the seals of men who have known no superior, save the decision of their country—men who understand no subtle arguments, but who know how to use their weapons whenever the Russians come within their reach.

The document then appeals to England for protection, expressing a hope that she will not "open her ear to the wiles of the Russian, while she closes it to the prayers of the Circassian." It explains the political and social condition of the country, and dwells upon the disadvantage of not possessing a common chief having central authority over all the tribes, their disunion being the source of weakness. It then refers to the cruelty and perfidy of Russia, its merciless firing of whole villages, its stealing of children, the calumnies it circulates against the honour of the Circassians, and the mean arts by which it purchases the secret services of the treacherous agents of the Porte. It declares that thousands of Russian prisoners in the Caucasus prefer the barbarism of the mountains to the civilisation of their own country; and concludes with the following paragraph:—

> It is by arms, not by words, that a country can be conquered. If Russia conquers us, it will not be by arms, but by cutting off our communications, and making use of Turkey and Persia as if they were already hers; by rendering the sea impassable, as if it were her own; by blockading our coast; by destroying not only our vessels, but those of other States which approach us; by depriving us of a market for our produce; by preventing us from obtaining salt, gunpowder, and other necessaries of war; by depriving us of hope. But we are independent—we are at war—we are victors. The representative of the Emperor who numbers us in Europe as his slaves, who marks this country as his on the map, has lately opened communications with the Circassians; not to offer pardon for rebellion, but to bargain for the retreat of 20 000 men enveloped by our people, and to make arrangements for exchange of prisoners.

This appeal being utterly disregarded by the statesmen of Europe, the Emperor Nicholas determined to bid defiance to England; and, under the pretext of having blockaded the littoral of the Black Sea, claimed by him under the treaty of Adrianople, seized the merchant ship *Vixen*, laden with salt and bound for Circassia, and confiscated it on the 26th of November, 1836. We have already shown that Turkey had no legal power to surrender a line of coast which she never possessed: moreover, there was no *de facto* possession by Russia—no less than thirty-six British subjects having offered testimony or made affidavit to the contrary. The Russians did, indeed, take possession of the eastern side of the Bay of Soudjouk Kale, where the *Vixen* was captured—the entire bay being nearly eight miles in circumference—and commenced throwing up intrenchments, and erecting huts and palisades for the use and protection of the military, on the bank of a small river called the Doba; but Mr. Spenser, who visited the country in September, 1836, declares that the natives had expelled the Russians and destroyed their intrenchments at that date; while the crew of the *Vixen* also deposed that they found the bay completely deserted by the Russians, there being neither a civil or milit ary functionary belonging to that people nearer than the forts of Anapa and Gheiendic. But on this subject a very curious fact remains to be related, showing the falsehood of the Russian Government, and the credulity of our own. Lord Durham, then our Ambassador at the Court of St. Petersburg, addressed a letter to Lord Palmerston, then Secretary for Foreign Affairs, dated the 13th of May, 1837. It runs thus:—"With respect to the military *de facto* occupation of Soudjouk Kale, I have to state to your Lordship that there is a fortress in the bay which bears the name of the Empress Alexandrinsky, and that it has always been occupied by a Russian garrison." *Always* is a vague term: was that the case before or after the treaty of Adrianople? But what is the fact? The fortress which bears the name of the Empress Alexandrinsky is situated on the Caspian, which Lord Durham confounded with the Black Sea; and it is a well-known fact that no fortress whatever existed at Soudjouk Kale since the Circassians expelled the Turks, in 1816, from that place, and razed the buildings to the ground, till the capture of the *Vixen*.

Referring again to the map, we observe that the river Kouban separates the Western Caucasus from the country of the Cossacks of the Black Sea. From the mouth of that river, which enters the Euxine close to Taman, by one of its branches, while two other branches empty themselves into the Sea of Azof, to the mouth of the river Terek, which falls, near Kisliar, into the Caspian, there is a continuous line of Russian forts, among the principal of which are Ekaterinodar and Stavropol, which last was raised to the rank of a town in 1785. Along the eastern flank of this range runs another chain of forts connecting the northern line with the Terek—among the strongest of which are Alexandruk and Georgievsk. Mosdok is the central point, and Kislar the extremity, on the islands of the Terek, where that river reaches the Caspian. Another line of forts along the Caspian runs from Kislar to Baku, passing through Derbent. The Pass of Derbent was called by the ancients the Pylæ Albaniæ and the Via Caspia. It bears also the name of the Demir Capu, or iron gates. A military road runs from Mosdok to Tiflis, through the famous Pass of Dariel, which is the key of the Eastern Caucasus. It was frequently attacked by the Persians, but without success; and it became a proverb in Persia, "When a King is too happy, let him attack Caucasus." Nadir Shah attacked the pass in 1741 with 40,000 troops; but that famous conqueror was defeated by the Lesghians. It was at that date the Lesghians placed themselves under the supremacy of Russia, as a protection against the Persians. In this pass stands the fortress of Vladikaukas, otherwise spelt Vladikavkaz. Its name is a compound word, derived from the Russian verb, Vladet, to govern or command; and Kavkaz the Russian name for the Caucasus. It is supposed to be the key of the Pylæ Sarmaticæ, the Portæ Caucasiæ, or Portæ Iberica of the ancients, through which the Medes, or rather their descendants, the Sarmatians, and other nations, passed into the plains of the north, and gave origin to a variety of peoples. This pass is now known as the Defile of the Terek. To the westward of the road of the Vladikaukas is the country of the Ossetinians, who have submitted to the Russians. On the eastern side of the Isthmus lies Daghestan, between the high ridge of mountains and the Caspian; and the district westward of Daghestan is inhabited by the Lesghians, their territory extending far into the mountains. The Abhasians principally dwell on the western side of the Caucasian hills, or that side of the chain which faces the Black Sea.

The defence of the line of the Kouban river is entrusted to the Tchernomorskis Cossacks, otherwise called the Cossacks of the Black Sea. These are the descendants of Zaporoghian Cossacks, so called from *sa*, beyond, and *poroghe*, a cataract, because they formerly dwelt beyond the cataracts of the Dneiper. In 1775 Catharine II., alleging that they were guilty of high treason, banished them to the district of Bielgerod. In 1787 they were pardoned, and formed into regiments by Prince Potemkin, and by him called the "Faithful Cossacks of the Black Sea," in the hope they would prove so in future. They rendered signal service in the Turkish wars; and, when peace was established, the Empress gave them the country conquered from the Kouban Tartars. Thither they were transplanted in 1792, and charged with the defence of their territory, which stretches on the south from the mouth of the river Laba to the embouchure of the Kouban in the Black Sea. Towards the north and east it is limited by the river Yea, which separates it from the government of Ekaterinoslaf and the country of the Cossacks of the Don. On the west it is bounded by the Black Sea, the Sea of Azof, and the Strait of Euikale, or Strait of Kertch, anciently called the Cimmerian Bosphorus, and marked on our map. Kertch is the ancient Pantieapæum, the capital of Mithridates. The country of these Cossacks contains one thousand square miles, and their military duty terminates at Redutskoi-Karantin, where the defence of the Caucasian line is taken up by the Grebenski Cossacks, who descend from the Cossacks of the Don, and at an early period demilitated themselves on the banks of the Terek. In one of the campaigns of the Czar Ivan I. against the Tartars of the Caucasus, a body of these Cossacks formed the advanced line of the army, and scaled a mountain which resembled a comb, on account of sharp small spurs which sloped down from its summit and projected horizontally. In the Russian language, Greben signifies a comb, and to commemorate this gallant exploit the Czar bestowed on these Cossacks the title and name of Grebenski, which they have ever since borne.

By the various lines of forts and other military defences referred to, the Western Caucasus is completely girded round by the Russians, and while their vessels commanded the Black Sea they shut out from the mountaineers both powder and salt, to them invaluables. In spite of these disadvantages, native independence has been preserved, nor have the Russians achieved more than commanding the sea shore by forts. In the interior of the Western Caucasus they have made no progress. In Daghestan they only rule by military power, and an annual sacrifice of the lives of 20,000 soldiers. Mansur Bey, Khasi Moullah, and Schamyl (who is a Lesghian by birth, born in 1797) have in succession defied the armies of the Czar; and now that the last-named hero is to receive the support of France and England, we confidently expect that all the tribes will rally under his banner, expel their envenomed enemy from their heroic land, march into the Crimea, and, attaching Sebastapol on the land side while it is bombarded by the fleets, capture that fortress, and annihilate Russian supremacy in the Black Sea.

Again referring the reader to the map, and directing his attention to the Caspian and the south-western divisions, we must allude to the successful efforts of Russia on what used to be Persian territory. By the treaty of Goolistan, in Karabagh, concluded between Persia and Russia in 1814, the former engaged not to maintain ships of war on the Caspian, and ceded to the Czar all her acquisitions south of the Caucasus, nominatively Georgia, Imeritia, Mingrelia, Derbend, Bakou, and all Persian Daghestan, Shirvan, Shekkee, Ganja, Karabaugh, and parts of Moghan and Talish. In 1828, by the treaty of Turcomanchai, Russia still further acquired territory, for Persia was compelled to cede the opulent provinces of Erivan and Nukhchivan, including the fortresses of Erivan and Abassabad—this last place establishing the Russians on the Araxes or Arras. But Russia obtained more, for she retained Talish and Moghan, thus securing a footing beyond the Arras, from which she menaces the most valuable parts of Persia. The author of "Progress and Present Position of Russia in the East" (generally supposed to be our former Minister at the Court of Teheran, Sir John MacNeill) has observed, on these transactions:—

> Russia thus occupies positions beyond the Araxes, in Persia, and beyond the Danube, in Turkey; has claims for indemnities on both; has the exclusive possession of the Caspian, and the command of the Black Sea—controls the mouths of the Kur, on the one, and of the Danube on the other; and desires to be the protector of the Sultan, and to guarantee the throne to the heir of the shah, for the obvious or avowed purpose of subjugating both empires. While the position occupied by Russia in European Turkey menaces Constantinople and the Dardanelles, the attitude she has assumed in Asiatic Turkey menaces Armenia. She has acquired possession of the mountain passes that separate that province from Georgia, and of the fortresses that defended the Turkish frontier. By every movement she threatens to interrupt the only line of communication by which British manufactures, to the value of one million and a half sterling, are yearly carried through Turkey into Persia. She has already advanced to within nine miles of this road, and to about ninety from Trebizond, the port from which it leads. The course which she would pursue, were either under her control, may be inferred from her commercial system generally, from the fact that she is our rival in the market of Persia, and that she has put a stop to the transit trade through Georgia, because it interfered with her exclusive commerce on the Caspian. Yet the Persian trade is but a small portion of what would be lost to England were Russia in possession of the Dardanelles.

Territorial absorption is the notorious policy of the Czars; but when their empire is termed a colossus, however grandiose the term, it is vague. Let us then be definite. The acquisitions of Russia from Sweden are greater than what remains of that kingdom. The acquisitions from Poland are nearly equal to the Austrian Empire. Her acquisitions from Turkey, in Europe, are of greater extent than the Prussian dominions, exclusive of the Rhenish provinces. Her acquisitions from Turkey, in Asia, are nearly equal in dimensions to the whole of the smaller States of Germany. Her acquisitions from Persia are equal in extent to England. Her acquisitions in Tartary are not less in area than Turkey in Europe, Greece, Italy, and Spain. The acquisitions she has made within the last sixty-four years are equal in extent and importance to the whole Empire she had in Europe before that time. These encroachments are the condemnation of the past policy of the Statesmen of Western Europe. When the partition of Poland was effected, Louis XV. exclaimed, "Could I have foreseen what has happened, I would have sold my last carriage to prevent it." Let us hope that atonement will now be made for past errors; that Finland will be restored to Sweden, the Crimea to Turkey, the Caucasus rendered independent, and Persia be reinstated in her ancient territory. The motive to the present war, and its justification, is the maintenance of the balance of power, for which the sole guarantee in the future is the re-construction of the political map of Europe and Asia.

* An hour is equivalent to three miles

NEW BOOKS, &c.

Just published, Sixteenth Edition, fcap., price 3s. 6d.,

HINTS on EARLY EDUCATION and NURSERY DISCIPLINE.
London: T. HATCHARD, 187, Piccadilly.

Ninth Edition, 12mo, price 5s.

A PRACTICAL VIEW of CHRISTIAN EDUCATION in its EARLY STAGES. To which is added, A Letter to a Son, soon after the Close of his Education, on the sin of not conforming to the world. By THOMAS BABINGTON, Esq.
London: T. HATCHARD, 187, Piccadilly.

Second Edition, revised, 18mo, cloth, 2s. 6d.,

SELF-EDUCATION and the FORMATION of CHARACTER. Addressed to the Young. By MRS. HOPE.
Mrs. Hope's work shows that she has studied the best writers on Education, and her views are distinctly in advance of the age. Parents and teachers will gain many useful hints from its perusal."—Record.

Now ready at all the Libraries,
SAM SLICK'S NEW WORK.
THE AMERICANS AT HOME
Or, Byways, Backwoods, and Prairies
Edited by the Author of "Sam Slick the Clockmaker," &c.
"The forte of the Englishman as a narrator of stories, and an analyst of men and manners, is thoroughly developed in this work. Sam Slick will add to his fame with shrewdness of observation, as he writes."—Sun. "Sam Slick is himself again. He is the same racy, original humorist, full of fun and knowledge of men and manners, as he was in the days when he first made his appearance in the pages of North America, as recorded from many years' experience as clerk and backgammon-possessing as ever. As the sheet-anchor of a circulating library, they are unrivalled."—Dispatch.
EDWARD WILLOUGHBY: A New Novel. By the Author of "The Daisy Chain, or Life," &c. 3 vols.
"Full of spirit and force [illegible] for writing which would do no discredit to a better class of Miss Austin."—Weekly Chronicle.
"All who wish to mingle with the best society will find the materials supplied, in this delightful story, and Q's should consult this little volume."—Gentleman's Magazine.
GRANT and GRIFFITH, Corner of St. Paul's Churchyard.

This day published, sent free by post for eight postage stamps,
DEAFNESS: Mode of Self-cure for Country Patients, by new and painless treatment: deafness of any kind relieved in one hour; cured in a few hours, without resort to those unpleasant noises in the ears. Dr. HERBERT MANFRED, Surgeon Aurist, Member of the Edinburgh Royal College of Surgeons.

Just published, price 2s.,
WORTH NOTICE.—The DICTIONARY AT PENCE, with upwards of 7000 words not found in the dictionary, embodying the whole of the verbs, which perplex all writers. No person that writes a letter should be without a work.
Published by JACKSON, 91, Paternoster-row.

This day, octavo, 8s. 6d.,
THE SANITARY CONDITION of the CITY of LONDON, from 1848 to 1853. By JOHN SIMON, F.R.S., Surgeon to St. Thomas's Hospital, Officer of Health to the City.
London: JOHN W. PARKER and SON, 377, West Strand.

CIRCASSIANS.

THE CIRCASSIANS.

We present, in two Engravings of Circassian life, an idea of the bearing and aspect, in their homes and out of door- of a race, perhaps, as interesting and remarkable as any that ever existed. There are many facts which justify this remark. In the first place, they are one of the most ancient nations in the world; their history is so prolonged, that, with the exception of China, of Egypt, and of Persia, the history of every other country which is at present independent, is a record of yesterday in comparison; but, if in this particular they have but one or two rivals on earth, there is a much more striking peculiarity in which they defy all parallel—and that is, that at no epoch have they ever yet lived in subjection to a foreign dominion. They have often been defeated in battles—often been driven into the mountains—often been overrun and overwhelmed; b it has never happened, that, even for the short term of more than one generation, they obeyed any but their own laws, or bowed under the sceptre of a stranger. Great disasters have befallen them. More than 300 years before Christ, the Macedonian arms had, for instance, swept like a storm over a part of their country; but even this yoke they escaped, because, as Pliny rather archly says, Alexander "was obliged to leave Hyrcania in haste." Much later, but still sixty or seventy years before the Christian era, they sustained another memorable overthrow, having sent all their available forces to help Mithridates against the Romans. The carnage which they suffered at the hands of Pompey is one of the most terrible and complete on record. When, however, their condition might be deemed most remarkable was during the short universal Asiatic rule of Tamerlane. We need not remind our readers in what concerns Russia, although the odds are so enormously against a handful of mountaineers, and in favour of the discipline, the numbers, and the resources of an immense military empire, that, despite the pertinacity of the efforts expended, the Circassian tribes are still at a great distance from being reduced to the condition of the Poles. They are still living under their own chiefs, with their own customs and with their own laws. It is not, therefore, merely because this race trace back so far their national history that they interest us; but because they are the only people on the face of the globe who can trace back so far an *independent* national history. Few in number, yet their region is so important, and their character is so striking, that they are well known to the ancients; and abundant mention of them, under their old name, occurs in Herodotus, in Verrius Flaccus, in Pomponius Mela, in Strabo, in Plutarch, and in other great writers. In fine, their annals are the brave record of a liberty maintained for at least 2300 years, often in the face of the mightiest potentates in human remembrance, and no now to be readily surrendered to an arrogant Russian tyrant.

But, without the excitement of these noble recollections, were the Caucasian tribes as new as the New Zealanders, they would deserve great attention. Our Engraving speaks for itself. They are mani-

A CIRCASSIAN FAMILY.

festly the true aristocrats of nature. The erect figure, the thoughtful brow, the regular, earnest, firm, and noble countenance, the martial port, the fine and muscular limbs, the well-opened chest, the breadth of the shoulders, the straightness of the back, the sculpturesque setting of the head upon the fine throat, all evidently betoken one of the most thoroughbred of the human families or septs. A first glance at the costume of the men conveys we know not what of some vague recollection of the Crusaders. And, indeed, the chain-mail enforces or heightens that whimsical middle-age resemblance. There is a strange union of ancient and of modern weapons and arms. The Circassians have adopted pistol and gun, without relinquishing the spear and the bow and arrow; and they do execution with both. In truth, nothing but an easy and abundant supply of percussion fire-arms would make it worth while to abandon altogether in that region the cheap and formidable instruments of the javelin-man and the archer. The Russians, when they subdued the Don Cossacks and the Astraks, and had begun to push aggression into the Caucasus, captured and cajoled a sufficient number of the real Georgians, to form a regiment with the addition of some of the conterminous tribes. Of course, the costume of these was modelled on the true type; and the corps in question forms one of the most striking and wildly picturesque features in the annual review of May at St. Petersburg. They carry the bow on horseback; and the quiver is supposed to be furnished in that apparatus on the breast which the reader will perceive in our Engraving. Either eight very short arrows, or a row of cartridges, could be stowed thus.

Although the country is so mountainous—one of the peaks of the Caucasus being much higher than Mont Blanc—reaching, in fact, to an altitude of 18,000 feet above the sea), yet there is an admirable breed of horses, and the Circassians are breeders of taste. Nevertheless, it is not as cavalry that the inhabitants are principally formidable to an invader, but as guerilla-fighters, whose superiors the world never saw—not even a Switzerland or an Scotland, in the fastnesses of the Tyrol, or in the Sierras of Spain.

Of the female type among the Circassians our Engravings furnish two or three specimens. The beauty of these women is of course well known—their too common destination is not worthy of the gallant and superior people. We have little to add respecting the accessories of the two sexes. We have delineated the sheepskin, here, as in so many other regions of Asia and of Eastern Europe, an essential part of the male costume. In mid-winter the wool is worn outwards—in wet and cold, the skin.

Within doors we see a lou-choke in a moment of ease and repose. Two men—a chief and an attendant—are about to depart not unnecessarily for the chase, for a Circassian never stirs abroad without his arms. The child lets his mother know that he would like to accompany his father. Others are regaling themselves. What tea smoker has on the stool before him is coffee, the strongest stimulant that is popular (for opium is the drug of a lost class) in the temperate East. The wooden jug on the floor contains water; and there is a wooden cup at hand.

The ancient names of the Circassian tribes were innumerable; but by far the most prominent classes in that region were the Iberians (the real and proper Iberians, not the Spaniards, as usually "Iberian" from the name Ebro), and the Albanians. These are the real and primitive Albanians. The first occupied the south-west part of the country, between the Black Sea and the Caspian; and the latter the eastern part, which is now Daghestan, with Derbend for its capital. The Russians, we need not say, have forced their passage right through both the "Caucasian gates and the "Albanian gates" (*Caucasiæ portæ*), and have marched as conquerors, long since, to Idis, and further still, to the lake and city of Erivan, in the Persian province of Azerbijan. And the present Viceroy and Governor-General of Poland, Prince Paskewitsch, who commanded the latter expedition, derives his proudest title from that ancient Persian place. He is Prince of Erivan, "Erivanski." But, with regard to the intermediate region, Schamyl, not Nicholas, is still the veritable master. Russian camps and forts in the Caucasus are "sword thrusts in the water." And the present rupture of Russia with Turkey, and with Europe, will be of immense importance to the brave Circassians, who are now furnished with proper supplies. The Tartar barbarian has been able to go to Colchis; but he will not be able to stay there. His communications with the outward base of operations are destroyed effectively—destroyed, we trust, for ever.

LITERARY MISCELLANIES.—No. XIII.

A PLEA FOR THE DONKEY.

MOST people have more or less contempt for Donkeys. "He's a mere Donkey!" is a common phrase; "An Ass of a fellow!" is another; "That chap ought to wear Donkey's ears!" is a third. I intend to put the ladies and gentlemen who use these phrases a little through their facings, and prove that there is neither rhyme nor reason in using the term asinine as identical with stupidity. Most of these people, indeed, have never given any head to the matter, but fixed their admiration on horses: "prancing steeds—dear, beautiful, sleek creatures, toss'n up their noble heads, and flying like the wind. Talk to us of Donkeys—poor, pitiful, ugly, miserable, little drudges—half starved—cuffed and owned by blackguards of costermongers, and as stupid as stupid can be."

Stop a little, and let us consider. The Donkey, it is admitted, is not so big as the horse; but the horse is not so big as the camel. Is the horse the worse for that? You answer, no. Well, is the Donkey the worse of the horse for being smaller? You must equally say no. Next, as to intelligence—which is most intelligent, the sharp-eyed terrier or the heavy and fierce bull-dog. Judge an animal by his intelligence and his capability for doing the work for which he is adapted, and you have the best test.

Now, let us try the horse and the Donkey by it. The Donkey is stronger in proportion than the horse: he can carry a greater load—he has more endurance—he can go a longer journey without giving in, than the horse—he can get on upon coarser food and a harder bed than the horse. It is calculated that if a man and a horse start on a journey together—each to go at his natural pace—the man will pass the horse on the third or fourth day, according to the vigour and endurance of either. Now, put a man on the horse and a boy on the Donkey and my life for yours, the same will be the result. The horse, after two days' travel, must have a day's rest. This is not necessary with the Donkey; he is more enduring; he has his night's sleep, and he goes on fresh for the third day, leaving his friend, the equine animal, being carefully groomed in the stable.

The finest horses tire themselves the soonest. The high pacing coursers, who almost strike their noses with their knees, are the soonest the food for the hounds, while nobody ever saw the Donkey attempt to damage his nasal organ with his knees. On the contrary, he starts off in a smart, neat, compact little trot, and can amble and even gallop if he pleases. The trot, however, is the Donkey's most enduring pace: on he goes, pit-a-pat, pit-a-pat—a little in-kneed in some specimens, but not worse trotters for that. Besides, the Donkey is a healthier and a hardier creature than the horse. I never heard of a Donkey having a cold in his head; but I have known horses with distressing coughs. I have seen horses dressed from head to foot in sanitary trappings, with their eyes looking out of holes like hobgoblins; but I never saw a Donkey wearing any apparel but his pannels. Another advantage of a Donkey is his patience—his patience of the load and of the blow. Lash a spirited horse, and he rears, snorts, perhaps attempts to bite the leg, or fling himself back on his tormentor, while he gains nothing by his turbulence save more flogging, or a gallop till he is utterly worn out, an ultimate submittance. Now the Donkey, when ill-treated, does not rear save his punishment by needless resistance. He hangs down his head, and, reasoning with himself, that his owner is his master, in the sense of common sense, comes off better than the horse. But the one is the spirited and noble beast, and the other is low. No, it may be answered, the first is foolish, and the second is wise. The one gets more stripes than the other, and the end, in both cases, is the same.

Now is a Donkey uglier than a horse? No; I insist that he is the more picturesque creature of the two. He is rugged in his coat, his mane hangs disorderly on his neck—so much the better. He is more in the state of nature. The pampered horse looks as if his coat had been rubbed with pomatum, and his mane operated upon by a *perruquier*. Which is the more picturesque; and, as picturesque—the more agreeable to look at? As a proof of this, it is a remarkable fact that all picturesque and nomade races have employed Donkeys in preference to horses—and that from the first existence of mammalia upon earth. The Zingarees of Spain use Asses; the Musketeers do not, but they are not nomade; they are trading, and sleep in posadas, while the gipsies of the land encamp in tents—a picturesque race, and their Donkeys as picturesque and as rough as themselves, for though, as we have said, the horse may be more stately and graceful—the mule more elegant in his trained amble—the Donkey, with its slim legs and neat compact trot, and its rough pile, is more picturesque than either of the other two. In regard to the western gipsies, I fear me that they are, in some degree, degenerating down into using horses; but the true scions of the Spanish and Bohemian gipsies will stick to the asses.

The Donkey is, indeed, essentially of the country. What is more beautiful than to see the travelling merchant, who supplies the petty hamlet and the labourer's hut with commodities from the town, camped in a grassy nook of a green English lane—the hawthorn edges towered over on either side by the lofty elms; the cart with its store of varied goods and chattels piled up in its broad shallow tray, and hanging from all convenient points of the vehicle; the one train, with its rope and leather traces on the ground; and the proprietor—a swarthy fellow, in a velveteen shooting coat, a long waistcoat, and a broad straw hat—is arranging his wares, and his two plump Donkeys are cropping out of bags slung round their necks beside him. Many a picture has been executed of such a scene—or of the gipsy encampments with their fires, and tents, pots, and their tents, and the Donkeys touching the leaves, but in vain, by their example, to lend in companies. Our painters, indeed, are fond of laying their heads together, although what the subjects which these senates discuss has not, as yet, been ascertained by any philosopher while the horses never give them an opportunity. Indeed, in point of phrenological development, the Donkey—always admitting the difference of size—is superior to the horse: the forehead of both being about equal in breadth—but the horses possessing a hollow behind above the eye, which detracts from the actual breadth of their brows. Besides, it is known that when a Donkey is associated with horses, he invariably takes the lead, and conducts the bigger animals from the stable to the pastures and from the pastures to the stable.

Though no doubt capable of struggling on through hard work, performed amid the toil and moil of clashing vans and heavy horses, coming under coal-sacks, or even the degradation of soot-sacks, yet I love to see the Donkey in its more primeval, or even suburban, aspects, where it carries young masters and misses along both the dusty roads or the bushy heaths, as the will and taste of the lurer may dictate. But be merciful, Master Smith, and be gentle, Miss Smith, and guide the hoofs which bear you to the pleasant trending on the heath amid the bushes, and beneath the shade of the spread trees. I saw a Donkey the other day upon the west—instead of hanging down its head it held it aloft, and on its forehead was a brass star. Its mane was smoother than the average, indicating the oft-applied comb; its coat, in its regularity of lay, announced a similar process; besides, its sides were plump—not a rib was to be seen; its harness was ornamented by brass ornaments, brightly scoured; its conductress was a maiden of tidy appearance, and the cargo of its cart was flowers. But that was an exceptional Donkey—exceptionally favoured. The general tool of the Donkey, when we find it in the country, is, as we have already sketched it, conveying the goods of rural traffickers, or accompanying the gang of gipsies. Sometimes the farmer presses it into his market service; and, driven by his portly lady, Dapple trots briskly along with a lading of vegetables, lots of dairy produce, poultry, and eggs. In watering-places, whether sea-side or mineral, Donkeys abound, and are in their element. In the former you see them trotting under the white cliff, leaving the imprint of their small hoofs on the firm sand, bearing children rosy with sea-breezes, and braced with salt-water, under the guardianship of sea-side costumed parents—one arrayed in a light shooting-coat, broad straw hat, flowing white trousers, yellow slippers, and a telescope slung in a case round his shoulder; the other, in a little straw *chapeau*, and a general marine *negligée*—suited for sand, shingle, and clambering amid the rocks. At mineral spas Donkeys may be frequently seen waiting for hire round the pump-room, and performing their usual functions, as the animated conveyances, mostly of children, but occasionally of a party of sporting young ladies; or drawing peacefully along some yellow-faced old nabob, who prefers the easy pace of the Donkey, with a walking attendant, to the more restive paces of a frisky pony, which would too rudely shake up his bilious old corporation.

Occasionally you find the Donkey attached—as a sort of appanage—to the general establishment of the horses of a great house. Sir Walter Scott, in his Diary, narrates that at Abbotsford—if we mistake not—they had two female asses, for the double purpose of giving milk to the family, and pulling the vehicle in which Lady Scott and the young ladies took the drives round the grounds. These animals—which were "winkedly" as Scott says, nick-named by the girls, "Hannah Moore" and "Lady Morgan"—were kept in a paddock, and even if they were at its furthest end from the house, when Sir Walter, or indeed any member of the family with whom they were familiar—appeared, both Donkeys, sending forth joyful neighs, galloped up and laid their muzzles upon the pales, rubbing their rough heads against the kindly hands presented to them.

Supplying families with milk leads us to a slight sketch of another subject of a more melancholy cast. Has the reader ever seen a sleek female Donkey being conducted to the stately portals of a great house? and has he marked her being milked there, and noticed at a drawing-room window—watching the process—the slender form of a young girl, with hectic cheeks and gleaming eyes, and a deadly pale forehead, evidently, from the motion of her lips and her chest, the prey to that fearful plague—consumption? Presently, the Donkey's reeking milk is carried into the mansion, and the young patient disappears from the window. She takes the milk as a medicine: the Donkey is her unconscious doctor. Now, is the milk of any other animal used in the same way? No doubt, to the tribes of the Calmucks and the Scythians, mare's milk is a copious article of diet. But it is only the lacteal fluid of the ass that has obtained the celebrity of being, if not a curative, at least a palliative, of the wearing cough before which fade so many of the fairest of our younger population. What result naturally follows? Why, that there is some more subtle and curative influence in the milk of the female Ass than in that of any other known animal.

There are a number of other particulars which we could mention about the Ass—the Biblical reputation which it possesses, and to which tradition assigns the dark stripe down its back, but, turning to more mundane topics, we may refer for a moment to the immortal Dapple, and admire how Dapple always kept out of the scrape when Rosinante's shoulders were basted; and how, while the sails of the windmill were rolling Rosinante over and over, Dapple was quietly cropping the thistles of La Mancha. Who, again, does not lament that in the wilds of the Sierra Morena, when Sancho had gone peaceably to bed on the back of Dapple, the rascally Gines de Passamonte clances to come by, and cunningly subtracts the most immortal of all Asses from under its master's seat, leaving him upon the tressels of his dearly-beloved, supported by four rascally sticks. True, amends are made; and who does not rejoice when Sancho, trudging along in the train of the Princess Micomicona, and in the midst of a goodly company, suddenly espies no less a personage than the redoubted Gines di Passamente, mounted upon the still more redoubted Dapple, who, perceiving the rightful owner supported by such a formidable party, leaps off the back of the outraged Dapple, and scours off with all the speed the greatest scoundrel in Spain could muster, while Sancho and Dapple shed mutual tears of joy upon each other.

A. B. R.

PAUVRE PETITE CATARINA,

THE LITTLE WANDERING SINGER.

BY GRACE GREENWOOD.

By thine eyes, where sorrow striveth
With the sunshine of the South;
By the heart's ungathered sweetness,
Reddening round thy tender mouth;

By thy slight form's mournful drooping;
By its soft, unconscious grace;
By the vague, unchildish trouble
Shadowing o'er thy morning face,—

Do we read a want unanswered,
Asked in, searching everywhere—
All a hungered heart's wild yearning
For the mother-love and care.

Days there were—by baby beauty
Knew no dream—no grief-eclipse;
When Joy fondled thee—Love only
Kissed its impress on thy lips.

But vain seeking, weary waiting,
Sober all that beauty now;
And untempered suns have duskly
Coloured o'er fair cheek and brow.

Riseth to thy lonely dreaming,
O'er a weary home-ess waste,
Vision of some lordly castle,
Or gay palace, fitly graced?

Light and glow and pictured splendors—
Forms of knight and noble maid,
Dancing o'er the shining marbles,
Sating in the jasmin shade?

Golden fruitage of the orange,
Orbed sunshine—luscious bloom
Of the crimson-cleft pomegranate—
Rose-illumined cypress gloom?

Quivering flash of gorgeous plumage—
Wave of flags where waters run—
Silver gleam of plashing fountains,
Making rainbows in the sun?

Singles out thy heart some figure,
Peerless in its gentle grace?
For one instant shines before thee,
Clear and sweet, the mother-face?

Is the father-look upon thee?
Does he rock thee on his breast,
Smoothing down thy baby-ringlets,
Hushing every sigh to rest?

No! that vague and wistful sadness,
Yearning from thy patient eyes,
Tells of blanks in memory's tablets,
Tells of baffling mysteries.

Dreams thou'st called those loving faces,
Scarcely questioning whence they came;
Faint and far the old home voices—
Half forgot the baby-name.

In thy ways, poor wandering singer,
Thou may'st e'en have paused and sung
At the home door, while unto thee
Kindred hands have careless flung.

Only silver for thy singing—
Yet some maternal strain, perchance,
May have reached thy lady-mother,
And pierced her heart amid the dance.

* * * * *

Gone, the changing scenes of fancy;
And again my glances fall
Only on a simple picture
Hung against my chamber wall.

'Tis a young Italian singer,
Leaning on her tambourine;
Musing in the purple twilight,
With a sad, unchildlike mien.

"Pauvre petite Catarina!"
Says the painter—and no more;
But my heart, dreamed out her story,
And still loves to con it o'er.

Often do I vainly question—
Have her tired feet ceased to roam?
Hath her sweet voice lost its sadness—
Singing in her new-found home?

Can she on her mother's bosom,
Love's divinest birth-right claim?
Learns she in beloved voices
Once again the baby-name?

Is her heart-thirst quenched in kisses?
Hath her little sun-burnt face
Caught from joy and sweet contentment
Yet a rarer, truer grace?

Thus before thy gifted, beloved,
Fancies wild and yearning wake
In my heart; but most I love it,
I confess, in its present state.

Philadelphia, U. S., February 3, 1854.

TRUTHS FROM FARMERS.

THE master of a Ragged School, who had exhausted all the stereotyped plans of reward and punishment, without being able to make his vagabond pupils keep their faces clean, at length succeeded by a very simple expedient: he put a looking-glass in the passage by which they entered the school-room, just over where the little used soap, basin, and jack-towel had long been displayed in vain.

The dirt, previously unconsciously worn by more than half the ragged ones, disappeared with marvellous celerity, and very soon the habit of cleanliness was established. There was nothing in the mechanical or chemical qualities of a shilling shaving-glass to make long-accustomed dirt peel off ragamuffin faces, but it told the truth, and the truth set the young dirt-pie makers a scrubbing. In the same way the sea captain, who had taken to use a barometer, after having studied the law of storms, shortened sail, and made all snug while the sky was clear, because the barometer suddenly fell, and saved his ship in the midst of the same hurricane that sent unwarned captains' ships to the bottom. The barometer was no magic antidote, but it warned the wise captain to look out for squalls

So, too, the mere art of book-keeping, however beautiful in theory and exact in practice, will not make a trader's fortune, or even save him from ruin: but in its results, by its severe truth-telling qualities, it has prevented thousands of traders from cheating themselves, and thus at once warned them from bankruptcy and led them to fortune. In every pursuit one important element of success is to leave as little as possible to guess-work.

What the mirror is to those who would be clean-faced—what the barometer and the compass are to the mariner—what correct accounts to the trader—statistics are to a nation. That and no more. They serve the double purpose of encouragement and warning, they guard equally against undue depression and elevation.

The old Millers of the "Three Black Crows" and of the "Barnfull of Gin" illustrate the manner in which rumour deals with public questions in which figures are concerned. How many Irish orators were robbed of their material of their eloquence by the figures of the last Census and the statistics of Irish agriculture!

For some years past the science and the practice of statistics have made steady progress in England, although, in the collection of figure facts, we are still far behind the Prussians, and other of the more educated German States.

The taste for statistical facts gathers strength from the wide extension of our commerce, and the rapidity with which news is transmitted between the most distant regions. An ordinary newspaper now contain a mass of materials for statistics—the price of produce in markets all over the world, in the pound of corn before the Corn Laws, the principal markets, not only of England, but of Europe; and even in the quotations of the betting ring on the next great race of the year, from the resorts of turfmen in London, Manchester, Newmarket, and Doncaster—which proves immensely the demand there is for a kind of information of perfectly modern origin

It is under these circumstances of preparation that a very general demand has arisen among the non-agricultural, and the more intelligent of the agricultural community, for the establishment of a system of agricultural statistics. We regret the necessity of using this hard word to signify nothing more than a correct return of the annual *produce* and *resources of agriculture*; for nothing alarms a farmer so much as a hard word with a Greek or Latin derivation. Long lectures have been by degrees consumed to the preliminary forms of statistical collection; they are [illegible] the imposing and exporting. They see once a year, at least, the assessed taxgatherer, and answer his questions, as to horses, carriages, men-servants, dog-dogs, and hair powder: farmers don't pay assessed taxes. They fill up income-tax papers full of small-trivial inquiries: farmers make a mere return of their rent. They have no official inquiries as to extension [illegible] owners, or lodging-house-keepers: in various capacities, they are [illegible] with the numerous cross-questionings as to [illegible] examination, banishment, medical attendance, [illegible] [illegible] [illegible] of [illegible] of property, and the [illegible] of registrations, an Englishman is pursued from his cradle to his grave. Farmers [illegible] [illegible] ing, live out of the world, don't [illegible] [illegible] [illegible]

LITERATURE.

HISTORY OF THE FRENCH PROTESTANT REFUGEES, from the Revocation of the Edict of Nantes to the Present Time. By CHARLES WEISS, Professeur d'Histoire at the Lycée Bonaparte. Translated, with the assistance of the Author, by Frederick Hardman. Blackwood and Sons

The doctrines of the Reformation were introduced into France at the commencement of the sixteenth century, during the reign of Francis I. In 1519, two years after Luther had openly denied the infallibility of the Church of Rome, the Faculty of Theology of Paris denounced the new opinions; and, in 1521, the Sorbonne published their famous condemnation of the Lutheran heresy. John Calvin, the great apostle of the French Reformers, a native of Noyon, in Picardy, where he was born on the 10th July, 1509, acquired a wonderful popularity after the publication of his "Christian Institutions," which, in 1536 he boldly dedicated to Francis I. This work became a standard of faith and discipline, and gave fixedness and unity to the preachers of the Reformed doctrine. The Faculty of Theology at Paris drew up an answer to that book, in which they minutely detailed the Catholic systems of Orthodoxy, and the two parties joined issue on their respective documents: Calvin triumphed, and France, urged by the priests, gave herself up to a long extermination of the heresy by the sword. Dating from the Conspiracy of Amboise, in 1560 to the Peace of Vervins, signed on the 2nd May, 1598, the religious wars of France had continued during thirty-six years, spread ruin through the country, and deluged its best blood, splintering the moral character of its people. This is the grand epoch of the Guises and the Châtillons, the leaders of the respective parties; of the massacre of St. Bartholomew, and of the celebrated Henry IV. At the termination of these wars, the famous Edict of Nantes was promulgated, which has certainly received more laudation than it deserved, for it was rather an Act of Toleration than a Charter of Liberty. Amiable, frank, and chivalrous, Henry IV. was deficient in firmness and sincerity, and is not unjustly accused of having had a religious opinion and but a feeble hold on his heart, when he joyously said to his more intimate friends before his real or pretended conversion, "Paris is well worth a mass." That he was despotic may be inferred from the fact that he opposed the decree of the Parliament by their own authority, and in spite of justice. How much can we admire a Prince who ostentatiously boasted that he was "every peasant had a fowl daily for dinner, and yet signed the atrocious law which condemned a peasant to the whip and the galleys for killing or snaring a rabbit! It has been urged in his defence that in framing the Edict of Nantes he gave to the Calvinists all the religious liberty he was able to concede; but this posthumous justification is not admitted by his contemporaries

The volume before us, as the title imports, narrates the history of the French Protestant Refugees who sought new homes in foreign countries, after Louis XIV had revoked the Edict of Nantes; but three introductory chapters precede the main subject, and to these we will first turn our attention. Louis XIII. and Louis XIV. himself solemnly confirmed the Edict. During the minority of the former, "the Regent, Mary of Medicis, declared, in the name of the King, that he recognised that the observance of this edict had established an assured peace *among his subjects*." For which reason, they make the King "and no other, understand that this edict be perpetual and irrevocable; consequently needs not be confirmed by a new declaration, nevertheless, in order that our above-named subjects may be assured of our good will, we make known, pronounce, and declare that the said Edict of Nantes, and all its rescripts and articles, shall be inviolably kept." Louis XIII. confirmed this declaration when he became of age, and Louis XIV. himself, during his minority. When it was shortly afterwards proposed to the Assembly of the Clergy of the Notables, that the first act of his coronation oath, should expel from his dominions all *heretics denounced by the Church*, Louis XIII made a declaration, which, says M. Weiss, "is one of the finest documents of that French policy which is to the following terms, "protesting his intention of preserving the edict inviolate, he declared that he experienced very great displeasure at the contention which among the Catholic deputies of the Chamber of Nobility, and the Clergy, to bring about the abolition of the edict, and afterwards declared that they desired the observance of the peace established." But what was most remarkable in this act of Louis XIII was, that he could not, without violence in religious matters, "by a stroke of the pen, cut off the number of those who had quitted the Church, and compel them into the path that would have led them."

Louis XIV., during the first years of his reign, confirmed, to the Protestants, and Madame de Maintenon, the edict of his father and predecessor. M. Weiss quotes one of her letters, addressed to the Princess Palatine, in 1677, which discusses the King's sentiments, and the means to be employed to restore the Huguenots to the Church. Our extracts from this letter, which we regret, for as our author justly observes "it is a precious memorial of Louis XIV.'s true sentiments at that time," She tells her brother to have compassion on people who are "born in error, and who have not examined with care the foundations of their faith," and reminds him that "God has given to kings the power of bringing back to the truth the number of those who had quitted it, but not that of compelling

EDUCATION CENSUS.

ENGLAND AND WALES.

We have now the Report of the Census Commissioners on Education. The delay in producing it is partly accounted for by the return having been incomplete, and by the Commissioners having opened a correspondence with their officers to get information concerning several thousand schools, not included in the returns. A whole year elapsed before the correspondence closed, and then it required a considerable time to reduce the multiplied and complex materials into order. 86 returns were received from 44,836 day schools (15,411 public and 29,425 private); from 20,197 Sunday schools; from 1545 evening schools for adults; and from 1057 Literary, Scientific, and Mechanics' Institutions." From 1026 other day schools (107 public and 1089 private), and 457 other Sunday schools, no returns were procured. Assuming that such of these last-named schools contained, upon an average, as many scholars, as each of the schools which made returns, the following is the general result:—

	Day Schools.			Sunday Schools	Evening Schools for Adults
	Total.	Public	Private.		
School's	46,012	15,518	30,324	23,514	1,545
Scholars ..	2,144,378	1,422 982	721,396	2,407,642	39,783

The total number of males in day schools is estimated to be 1,157,685, and of females 986 693; of which there are in public schools, 801,146 males and 621,836 females; and in private schools, 356,522 males and 364,857 females. The male scholars in Sunday schools are estimated to be 1 [illegible]3,783, and the female 1,213,859.

SCHOOLS AND SCHOLARS AT DIFFERENT PERIODS. We must remind the reader, that some of the latter end of [illegible] popular education has engaged the energies of many of the most philanthropic men of the age. Till 1833, the object was promoted exclusively by private exertions. Then the Government began to devote to it a portion of taxation, and from that time till 1850 appears about $1,000, 00. The result of this activity, is thus explained:—

It appears as to Day-schools that while in 1818 there was a scholar for every 17.26 persons, and in 1833 a scholar for every 11 26 persons; and as to Sunday-schools, it appears that while in 1818 there was one Sunday-scholar for every 24.40 persons, and in 1833 one scholar to every 9 28 persons, in 1851 there was one scholar to every 7 45 persons. The increase between 1818 and 1851 was, of day-scholars, 213 per cent., and of Sunday-scholars 404 per cent; while the increase of population was but 54 per cent.

The following Table shows the figures for each of the three periods:—

Periods.	Population at each Period.	Number of Scholars in Day-Schools		Proportion of Scholars to Population in Day-Schools	
		Who are also Sunday-Scholars	Day-Scholars only	Who are also Sunday-Scholars	Day-Scholars only
				One in	One in
1818	11,549,683	674,883	477,235	17.25	24 10
1833	14,386,448	1,276,347	1,048,890	11 27	9 28
1851	17,927,609	2,144,378	2,407,642	8.36	7 45

We will now subjoin a Table to show how many of our present schools had their origin before the beginning of this century, and how many since.—

Date.	Number of existing Schools established at each period.		
	Total	Public	Private.
Before 1801	3 3.3	2,879	457
1801 — 1811	1 0 2	559	443
1811 — 1821	2,207	1,140	1,067
1821 — 1831	4,484	1,958	2,527
1831 — 1841	7,467	3,035	4,432
1841 — 1851	22,414	5,484	16,930
Date not specified ..	4,267	1,169	3,098
Total	45,049	15,516	30,524

PROPORTION OF CHILDREN AT SCHOOL.—This rate of progress is satisfactory. It is generally assumed that the provision for education is sufficient if 1 in 8 of the population can attend school. On the population returned by the Census, 17,927 609 for England and Wales, this proportion gives 2,240 951 scholars as the number who should then have been receiving instruction; and the number was 2,144,378 independent of Sunday scholars, or 1 in 8.36, it is plain that the means of education in England and Wales are not so deficient as they are generally represented. Probably, however, a few youths more than can find schooling, like a few quarters of corn at a market, more than is required, gives, as it were, a bad character to the whole, and degrades the market, or the morality, in proportion far more than commensurate to the arithmetical surplus. From the information ga hered by the Census, as to the ages and occupations of the people, Mr. Mann is of opinion that about 4,8.8 696 persons between the ages of three and fifteen, in England and Wales, ought to be at school. Deducting from this number 1,100,000 as so engaged in occupations as to be unable to attend, 5 per cent. for those who are ill, and 200,000 for those educated at home—he says 3,668,26. children should be at school. Further deductions, however, are to be made for the age at which parents will choose to allow their children to remain at school—only rarely to so late an age as fifteen years—and will consent to send them—as the rule, not before they are five years old; and making allowances for these, the conclusion is that 3,000,000 children should be at school (8,015,462). Assuming this to be the standard, our means of education are yet very deficient, and the number of children who attend day-schools, is 800,000 less than ought to attend, or almost a third.

We doubt, however, whether the age of fifteen be not much too high to expect children to remain at school. In practice boys go to work when they are twelve years old, or at an earlier age, and the practice is better than the theory. When the mind and the limbs are growing and plastic, both are easily fashioned to perform what is to be the actual business of the mature and rigid man. At fifteen the mind and the body have both acquired peculiar habits that may not be suitable for the business the man will have to live by. Except, perhaps, for a few occupations, such as those of the counting-house and a part of factory labour, school life is not, and cannot be, a fitting preparation for business. How can school give a boy the habits and taste suitable to a sailor? The age of fifteen places the limit of remaining at school too high. We prefer, therefore, the general estimate of that of Mr. Mann; and conclude that the national means of education are, on the whole now very little, if at all, deficient, were they properly and equally distributed.

WHAT IS TAUGHT.—The following is an account of what the children are generally taught.

In the 44,836 school establishments of England and Wales, from which returns were received, it appears that boys were taught (alone or along with girls) in 41,035 (14,295 public and 26,040 private), while girls were taught (alone or along with boys) in 40,416 (14,084 public, and 26,332 private). The number in which instruction was given in each of the eleven subjects, as to which inquiry was preferred, is given in the following Table:—

Subjects of Instruction.	Boys' Schools				Girls' Schools			
	Number of Schools in which instruction is given upon each subject.		Percentage in which instruction is given upon each subject.		Number of Schools in which instruction is given upon each subject.		Percentage in which instruction is given upon each subject.

* The term "school" is used to denote a distinct establishment. Thus, a school for both boys and girls, if under one general management and confined in one range of buildings, is regarded as any one school, although the [illegible] may be separated in separate compartments of the building, under separate superintendence.

The number of scholars instructed in particular branches of learning, so far as concerns 1 8.8,024 children out of the 2 144 378 [illegible], or 1 240 093 connected with public schools (698,167 males and 540,926 females), and 30 577 81 connected with private schools (383 445 males and 358,483 females), is—

Subjects of Instruction.	Boys		Girls.			
	Number of Scholars learning instruction upon each subject.	Percentage of the whole Number of Scholars.	Number of Scholars in each subject, as returned in Instruction upon each subject.	Percentage of the whole Number of Scholars.		
	Public Schools.	Private Schools.	Public Schools.	Private Schools.	Public Schools.	Private Schools.

The education of females at school is less general than that of males. Of the 2,144,378 scholars, there were 1,157,685 scholars, or 132 per cent; and out of 2,146 384 females, there were only 986,693 scholars, or 108 per cent. A larger proportion of boys than of girls continue late at school. The following Table shows the comparative proportion of Education in different Counties:—

County.	[illegible]	County	[illegible]	County	[illegible]
Bedford	10 4	Kent	13 9	Suffolk	12 3

SCHOOLS CLASSIFIED.—We have stated above the total number of schools and scholars; and must now quote a Table in which these schools are classified:—

Classes of Public Schools.	Number of Schools	Number of Scholars.		
		Total.	Males	Females
Class I.—Supported by Gene al or Local Taxation	610	48,826	28,708	20,118
Class II. Supported by Endowments	3,126	206,379	138 498	67,781
Class III.—Supported by Rel[illegible]	10,595	1,048,851	569 209	479 [illegible]
Class IV. —Other Public Schools ..	1,081	[illegible]	[illegible]	[illegible]
Total of Public School's ..	[illegible]	[illegible]	736 [illegible]	[illegible]

PUBLIC AND ENDOWED SCHOOLS.—Of the first class, thirty five are military and fourteen naval schools; one is a school supported by the Woods and Forests; and three are corporation schools. 523 are workhouse schools; and thirty-four prison schools. 28,703 males and 20 118 females are taught. From 107 public schools no returns were obtained and they are not included Of the schools supported by endowment, 866 are collegiate and grammar schools, and 2559 are "other endowed schools." Besides these, forty schools primarily supported by religious bodies, are endowed, and 27 schools are endowed by public subscription; making, in fact, the total of other endowed schools, or schools receiving any amount of endowment, 4021, which teach 171,479 scholars. The total sum of all schools supported by endowment is stated to be £288 986, which is very much below the usual estimate of £500 000 devoted to this purpose Between 1751 and 1801 there were endowed 879 schools, and between 1801 and 1851, 883. The date of the most ancient endowed school is A.D 1216, and then follows 1268, 1284, 1360, and so on.

SCHOOLS SUPPORTED BY RELIGIOUS BODIES — These have been rapidly augmented. The schools of Class III. amounting 10,595 came into existence in the following periods:—

	No. of Schools.
Before 1801	766
1801- 1811	416
1811—1821	879
1821—1831	1,021
1831—1841	2,417
1841—1851	4 604
Not stated	498

Within the last fourteen years, therefore, 4604 schools have been built, supposed to be capable of containing 460,000 scholars, which is a striking testimony to the zeal for education displayed in our age. Of the expense, it is said —

"The total income, for the year 1850, of the 5761 schools, from which sufficiently authentic statements were received was £598,937. The number of scholars in these schools being 634,184, this makes the average annual expense of each to be 14s. 6d. If it can be assumed that the income of the remaining 4834 schools was the same per scholar as that of the above 5761, the total annual income of the whole 10,595 schools in Class III. having 1 048 851 scholars, will be £760,218; and if the 2113 schools belonging to religious bodie:—which have been placed amongst "Endowed Schools" in Class II.—be taken into account, the total income will be £905,188 for 1,158,736 scholars; as follows:

Sources of Income.	Schools in Class III.		Total of Schools supported in any degree by Religious Bodies.	
	Aggregate Income.	Average Amount per Scholar	Aggregate Income.	Average Amount per Scholar
	£	£ s. d.	£	£ s. d.
From Permanent Endowment ..	25,779	0 0 6	192,687	1 0 7
,, Voluntary Contributions	376,340	0 7 2	4 5,9[illegible]	0 6 8
,, Grants from Government	42,064	0 0 10	43,[illegible]	0 0 9
,, Payments by Scholars ..	299,185	0 4 11	2[illegible]	0 5 0
,, Other Sources	56,900	0 1 1	[illegible]	0 0 2
Total	760,218	0 14 6	960,188	0 16 2

For 3232 of the schools of religious bodies there are 44 167 teachers (22,176 males and 21,991 females), thus composed, viz, 14,558 general teachers (5902 masters and 8656 mistresses), 8312 paid monitors and pupil teachers (4418 males and 3894 females), and 20,597 unpaid teachers (11,856 males and 9141 females). These teachers instruct 876 926 scholars (486 112 males and 391 126 females). It is assumed that the proportions of teachers to scholars is the same in the remaining 2[illegible] schools as in the above 3232, the total number of teachers, and of each kind, in the schools of religious bodies, contained in Class III., will be—

	Total.	Males.	Females.
Masters and Mistresses ..	17,922	5,91[illegible]	10,[illegible]
Paid Monitors and Pupil-Teachers ..	10,073	5,76[illegible]	4,[illegible]
Unpaid Teachers	25,[illegible]	13 342	11 [illegible]
Total	53 [illegible]	26 07[illegible]	27,[illegible]

From what can be gathered, from the fact[illegible] named for the two counties of Lancashire and Lincolnshire, the accom[illegible] general being imperfect, it appears that the average attendance of [illegible] is £55, and of mistresses, £31.

THE EXTENT OF SCHOOL ACCOMMODATION provided by different religious bodies is seen by the following Table:—

Religious Denominations	Number of Schools and Sittings [illegible] in connexion therewith. Scholars [illegible] any Amount from Religious Bodies.	
	Schools.	Scholars
London Sa[illegible]

Jews	15	2,251
Not connected with any particular denomination	511	52,57
Others	4	1,064
Total	13,[illegible]	[illegible],[illegible],[illegible]

Of course, at all these schools "common things" are taught, and it is [illegible] from the statements already given, that in the public girls' schools, about 45 per cent of the more useful manual occupations are taught; while, of the public boys' schools, only 4½ per cent of the whole are those only, at one taught. But the only [illegible] one of the males [illegible] more out of doors than the occupations of females, the latter can better than the former be taught in schools.

SPECIAL Schools, or other Public Schools, are classified and enumerated as follows:—

Description of Schools.	No. of Scholars		Description of Schools.	No. of Scholars	
	Males	Females		Males	Females
Ragged Schools (exclusive of those of the Religious Bodies)	1[illegible]	[illegible]	Foundry School	1	55
Orphan Schools	[illegible]	[illegible]	Model Lodging Houses ..	[illegible]	[illegible]

Chemical Works	4	44[illegible]	Schools of no specific character	[illegible]	[illegible]
			Total	[illegible]	[illegible]

Ragged schools, factory schools, and schools of an [illegible] character, altogether accommodate nearly 100,000 out of the 1,[illegible],221 scholars.

EVENING SCHOOLS FOR ADULTS are a useful novelty. Returns were obtained from 1545, which are frequented by 27,839 male and by 11,954 female scholars. Two are free, at the others the payments are from less than 2d. to upwards of 5d. per week. The comparisons of the schools, and the subjects taught, are comprised in the two following Tables:—

Occupations of Scholars.	Number of Scholars	Occupations of Scholars.	Number of Scholars.

We must add that there are in England and Wales 1[illegible] literary, scientific, and mechanics' institutions, of which seventy-seven are in Middlesex, and 155 in the West Riding of Yorkshire The Sunday-schools amount to 23,[illegible]; with 2,407,642 scholars, fought by 318,[illegible] teachers.

SCOTLAND.

Of Scotland the Report states:—"The total number of scholars in day schools reporting which information has been forwarded was 2[illegible],817 This gives a proportion to the population of Scotland (2,[illegible],742) of 12.76 per cent, or 1 scholar to every 7 [illegible] inhabitants. Making [illegible] a fair allowance for deficient returns, it seems probable that about 11 per cent (or 1 in 7) of the people of Scotland are at school, the number returned as scholars was 426,556. The following Table presents a comparison of the figures gathered from both sources of intelligence:—

Counties	Number of Scholars according to the Educational Census.	Number of Scholars according to the Population Tables.	Counties.	Number of Scholars. According to the Educational Census.	According to the Population Tables.
Aberdeen	39,27[illegible]	49,[illegible]	Kirkcudbright	[illegible]	7 425

Inverness	[illegible]	[illegible]			
Kincardine	[illegible]	[illegible]	Total	[illegible]	[illegible]
Kinross	[illegible]	[illegible]			

In England the number of Sunday scholars to the population is 13.4 per cent; in Scotland not above 10.1 per cent.

EVENING SCHOOLS FOR ADULTS—returns from 438 of which were obtained—are attended by 15,371 scholars, 9500 being males, and 5871 females. The payments vary from less than 1d. per week to 4d. and upwards; but in the largest number the payments are between 2d. and 4d. Of such schools there are 11 in Aberdeen, 61 in the county of Edinburgh, 25 in Forfar, 37 in Renfrew, and 173 in Lanark. In the counties of Elgin, Inverness, Nairn, Orkney and Shetland, and Wigtown, there are none of these schools; but they are found in all the rest of the counties. The occupations of the persons attending these schools are thus stated:—

Agricultural Labourers	561	Sawyers	2
Miners	249	Architects and Engineers ..	59
Lead Miners	34	Shoekeepers	59
Coal Miners	185	Warehousemen	278
Coal and Lime Stone Miners ..	29	Mercantile	39
Coal and Iron Operatives ..	343	Clerks	156
Ironmongers	1	Tradesmen's Apprentices ..	14
Employed on Public Works ..	10	Butchers	3
Artisans (not otherwise defined)	4,396	Gardeners	18
Factory Operatives	2,497	Seamen	41
Woollen Manufacture	52	Fishermen	31
Weavers	249	Soldiers	53
Bankers	287	Police Officers	5
Block Machine Printers	13	Domestic Servants	553
Tambourers	34	Labourers (not otherwise de-	
Shoemakers and Curriers ..	30	fined)	6
Paper Makers	50	Not stated	4,774
Dressmakers	24		
Seamstresses	2	Total	15,071

There are 221 literary, mechanics', and other similar institutions, of which a list is supplied that will be extremely useful for reference.

ISLANDS IN THE BRITISH SEAS.—The present volume also supplies us with the following account of the number of Scholars and Schools in the Islands in the British Seas:—

Description of Schools.	Isle of Man				Jersey				Guernsey and other Islands

Supported by

In the Isle of Man there is 1 scholar to every 8½ inhabitants; in Jersey, 1 scholar to every 11½ inhabitants; and in Guernsey, 1 scholar to every 7½ inhabitants. The two latter have rather a high reputation for their schools; and in them, property being minutely divided and easy of transfer, the inhabitants are remarkable for their enterprise and skill. In Jersey a number of fine vessels are continually being built; and, until the late improvements in naval architecture, few vessels surpassed the Jersey craft.

RELIGIOUS WORSHIP.

ISLANDS IN THE BRITISH SEAS.

ISLE OF MAN—Population, 52,387.

Has 133 places of worship—29 Church of England; 86 Wesleyan; 2 Presbyterian; 1 Independent; 4 Roman Catholic. Number of sittings 32,985, of which 13,770 are free; of attendants at worship on Census Sunday, 10,612 morning; 7512 afternoon; and 11,892 evening.

ISLAND OF JERSEY—Population, 57,020.

Has 67 places of worship—20 Church of England; 1 Free Presbyterian; 9 Independent; 1 Unitarian; 24 Wesleyan; 1 Primitive Methodist; 1 Christian; 1 Chris ian Church; 2 Roman Catholic; 1 Latter-day Saints. Number of Sittings 25,192, of which 6864 are free; of attendants at worship on Census Sunday, 12,457 morning; 9356 afternoon; 10,809 evening.

ISLAND OF GUERNSEY, AND ADJACENT ISLES—Population, 23,719.

Has 64 places of worship—16 Church of England; 7 Independent; 6 Baptist; 1 Society of Friends; 26 Wesleyan; 2 Brethren; 1 Bethel Union; 1 Church of Christ; 1 Various; 2 Roman Catholic; 1 Latter-day Saints. Number of Sittings 22,227, of which 10,070 are free; of attendants at worship on Census Sunday, 8480 morning; 9459 afternoon; 10,131 evening. It must be remarked that the returns for the Islands are incomplete.

SCOTLAND.

The enumeration of persons attending Public Worship, being voluntary, was more imperfect in Scotland than in England, and the want of local registrars prevented its being made tolerably complete by subsequent inquiries. The following is the

SUMMARY OF THE WHOLE OF SCOTLAND—Population, 2,888,742.

Religious Denominations.	Number of Places of Worship.	Number of Sittings.†		Number of Attendants at Public Worship on Sunday, March 30, 1851

Besides the places of worship embraced by the actual enumeration, and included in this return, there are 481 other places of worship from which no returns were made. Mr. Mann, assumes, however, "an aggregate of 3326 places of worship, and 1,244,600 sittings; the proportion of sittings to population being 58.5 per cent. The number of attendants on the Census Sunday was—morning, 943,951; afternoon, 819,863; evening, 188,874: the proportion to the population being—morning, 32.7 per cent; afternoon, 21.4 per cent; evening, 6.5 per cent. The corresponding proportion for England and Wales were—morning, 26.9 per cent; afternoon, 17.7 per cent; evening, 17.1 per cent." This tabular view condenses much information in a small compass:—

Religious Denominations.	No. of Places of Worship.	No. of Sittings.	Number of Attendants at Public Worship on Sunday, March 30, 1851.				Proportion per Cent of Attendance to Population.				Proportion per Cent of Attendance to Sittings

* From the lists forwarded to the Census office, it appears that there were 481 other places of worship existing at the time of the Census, but from which no returns were procured.

† The returns afford no information as to the number of *sittings* in 285 of the above-mentioned 2914 places of worship. Of these, 87 belonged to the Established Church, 5 to the Reformed Presbyterian Church, 2 to the Original Secession Church, 17 to the United Presbyterian Church, 67 to the Free Church, 12 to the Episcopal Church, 30 to the Independents, 23 to the Baptists, 2 to the Society of Friends, 1 to the Unitarians, 5 to the Wesleyan Original Connection, 1 to the Wesleyan Reformers, 1 to the Glassites, 7 to the Evangelical Union, 13 to Isolated Congregations, 13 to Roman Catholics, 1 to the Catholic and Apostolic Church, and 11 to the Latter Day Saints.

‡ The number of *attendants* was not stated in the case of 242 of the above-mentioned 2914 places of worship. Of these, 134 belonged to the Established Church; 6 to the Reformed Presbyterians, 1 to the Original Secession, 8 to the United Presbyterians, 47 to the Free Church; 7 to the Episcopal Church, 7 to the Independents, 7 to the Baptists, 1 to the Unitarians, 4 to the Wesleyan Original Connection, 3 to Isolated Congregations, 15 to the Roman Catholics, and one to the Latter Day Saints.

In Scotland, as in England and Wales, the Church accommodation is unequally distributed in proportion to the population. Thus, while the average of sittings to population is 58 5 per cent, they are below this proportion, or only about 47 per cent in Aberdeen; 33 per cent in Airdrie; 26 per cent in Arbroath; 44 per cent in Ayr; 45 per cent in Dundee; 42 per cent in Edinburgh and Leith; and 30 per cent in Glasgow, &c. They are above this proportion—in Brechin 80 per cent; in Elgin 82 per cent; in Rothesay 88 per cent. The religious zeal of the people, though great, has not been able in Scotland, any more than in England, to keep pace with the increase of population in the large towns. Of the counties of Scotland, Lanark seems the worst provided with church accommodation—8 per cent of its inhabitants; and Bute the best—84 per cent. Yet it is obvious, from the contiguity of the clergy and the people in the former, and their great separation in the latter, that we should reason erroneously did we infer that a less religious spirit, or less theological information, prevailed amongst the population of Lanark than the population of Bute.

Of the 2914 churches returned, 624 were in existence before 1801, and the remainder were built in the following years:—Between 1801 and 1811, 127; between 1811 and 1821, 197; between 1821 and 1831, 246; between 1831 and 1841, 816; and between 1841 and 1851, 1032. Of 442, the date of the erection is not mentioned. Since the great separation of the Free Church from the Established Church, no less than 710 churches have been built by the former. Prior to 1801, the Wesleyans of all kinds had only 10 chapels in Scotland; now they have 72. There are two other sects now rather numerous—the Evangelical Union, with 27 chapels; and the Christian Disciples, with 14; which, prior to 1801, seem hardly to have been heard of, as the former had then only two chapels, and the latter only one.

ADDITIONS TO CENSUS LISTS PUBLISHED WITH "THE ILLUSTRATED LONDON NEWS," APRIL 22.

The different form in which the last Census Returns were published, from any previous returns, and their very complicated nature, occasioned some omissions and errors in our Lists. The additions and corrections we now publish will, we hope, make them complete and correct.

TO CENSUS CORRESPONDENTS.

MR. W. SCALES.—Flaxtow is included in West Ham; March, in Doddington.

A SCOTSMAN. Lynn appears as King's Lynn.

MR. JOHN BRADLEY.—There is no Newland in the Census in the E R of Yorkshire—Newland, in the W R, a hamlet, is included in Drax; Brough, in Elloughton; Skerne, in Nor & S, in Swine; Swanland, in North Ferriby; and Anlaby, in Kirk Ella. Brackley, Northampton, a district, appears as St. James Brackley and St. Peter Brackley. Bishop Auckland appears as Auckland St. Andrew; Dereham appears as East Dereham; Pershore, as St. Andrew Pershore.

MR. KNIGHT.—If you saw the number of districts, parishes, townships, &c., included in some boroughs, you would be sensible of the impracticability of giving in such a work as ours all the parishes within the boundaries of boroughs. There are in Dorchester and Shaftesbury three or four parishes with the names of Saints—which of them were we to give as exclusively constituting Dorchester or Shaftesbury?

A SALOPIAN.—There is no separate return in the Census for either of the places you mention.

MR. W. H. COTTON.—Faringdon, Berks, appears in our list and in the Census as Great Faringdon.

MR. J. WESTBAKE.—Every one of the more than 100 places you refer to is either in our list, under some other name, or it is some part of a parish, and returned in that parish, or there is no separate return of it in the present Census. We except four places, the omission of which is rectified. Other Subscribers will perceive from this example that many supposed errors arise from the plan of enumeration of the Commissioners in 1851 having been different from that of 1841.

MR. BENJ. WILSON.—Bramley township is a part of Leeds.

W. D. F.—Some of your names have enabled us to correct an error or two, but the bulk of them are either in our list or they have no separate existence in the Census of 1851.

MR. WILLIAM ANDERSON. —Wymondham town contains only 2970 persons.

MR. GEORGE MERCALFE, JUN.—The only separate returns in the Census for Pately Bridge are first as a district, with 7579 persons, and secondly as a sub-district, with 2027 persons. The figures you have sent, belong, in the returns, to the township of High and Low Laithe, which is said to include the town of Pately Bridge, of which no separate return is given. The township mentioned is included in the Census returns in the parish of Ripon. You mistake the number of males; and the figures are—High and Low Bishopside, population in 1841, 1537; in 1851, 1862 Males, 905.

MR. J. J. N. ALLEN.—East Chiltington (Sussex) is returned as a hamlet forming a part of Westmeston parish, and is not intended to be included separately in our Lists.

MR. J. H. HOSEBURN.—The figures in the Map are those of the population of the Municipal Boroughs referred to. The figures in the Lists are those of the population of the Towns as popularly known. That many towns are returned officially, with different amounts of population, is only one part of the general complication of the Official Returns.

We must beg all our Correspondents to remember that, besides the prefixes of Great and Little, North and South, &c., which determine the situation of places, many have two names. Thus, Allenton appears as Alwinton: it is known by both names, and the Commissioners have used the latter. Chapel, Essex, is also known as Pontesbright, and was so returned in the former Census; in the present it appears as Chapel. Similar examples are very numerous. If our readers do not find a place which bears two names under one, they must look under the other. There is, we are only too well aware, endless confusion in all the multiplied topographical arrangements of the empire, and the national nomenclature requires a Linnæus or a Jussieu to reduce it into order.

CENSUS ERRATA.

Page 3, Column 3 of figures.—Bridport.—For 4787, substitute 7126.

„ 3, Col. 4. Read Sockburn, 1841, 7816, instead of 1816.

„ 4, Col. 3, names.—Clawson.—Substitute for the figures given, 833, 869 443.

„ 4, Col. 4.—Colyton.—Substitute 2451, 2504, 1225, for the present figures.

„ 6, Col. 1.—Frustfield, Wilts, dele. The figures opposite to this name belong to Fryern Barnet, and each of the row of figures which follows down to Fatford Amno, Y N R, included, eight names, belongs to the place below it. Dele the figures opposite Fatford Amno.

„ 7, Col. 4 of names. Transpose the figures of Keswick, Norfolk, and Keswick, Cumberland

29, Col. 1.—Unrepresented Towns.—Add Leighton Buzzard, population 6874.

THE ILLUSTRATED LONDON NEWS

No. 687.—VOL. XXIV.] SATURDAY, JUNE 10, 1854. [WITH A SUPPLEMENT, SIXPENCE.

THE AMUSEMENTS OF THE PEOPLE.

THE imposing ceremonial of which the second Crystal Palace is this day to be the scene, naturally suggests reflections as to the uses of the magnificent establishment so solemnly inaugurated. Although a private undertaking, Royalty has not scorned to lend its name and presence to grace the opening celebration of the day; nor have the high functionaries of religion deemed it inconsistent with their duties or position to consecrate to its uses by prayer and praise an establishment which has for its objects to cultivate the tastes, improve the understanding, and administer to the healthful recreation of the people. The first Crystal Palace and the Great Exhibition of the Industry of All Nations marked an era in the material progress of the nation. The second Crystal Palace—with its treasures of art and science, with its antique courts and modern gardens, and with its almost incalculable inducements for the study of the works both of man and of nature—will mark an era equally important in the moral history of the British people. A consequence, extension, and development of the great idea which produced the Exhibition of 1851, the Palace and Park of Sydenham are destined, we may not unreasonably expect, to exercise a more permanent influence upon the character of our age—to elevate the sources of enjoyment among all classes; to administer to the refined tastes of the wealthy, in a manner more complete and satisfactory than the wealthiest could ever devise or procure for themselves; and to afford to the humble earners of their daily bread, means of instruction and amusement, so many, so various, and so excellent, as almost to realise the wonders of romance, and to make the fabulous treasures of the palaces of Eastern Caliphs appear mean and vulgar by comparison.

In many countries the amusements of the people are an object of national concern. In our free country, where the course of legislation for the last forty years has been a simple undoing of the mischief done by the over-legislation of past times, lawmakers have refused to give due attention to the moral and intellectual wants of the people. Law in this country has not insisted that the people should either be educated or amused. It has, for the most part, left their intellectual culture and their recreation to voluntary agencies. The consequences have not been altogether satisfactory in either respect. The upper and middle classes have, it is true, been no sufferers, for voluntary agencies are more than sufficient to accomplish the purpose, wherever there are pecuniary means to attract and purchase what is required. Supply follows demand as surely in such cases as it does in the more tangible articles of commerce. But, upon the needy or the destitute classes, the result of the no-system, by which the Government ignores the intellectual wants of the people, has been to some extent unfortunate. As regards Education, the Government has merely shut its eyes and ears, having had but small inducement to open either amid the fierce and irreconcilable hostilities of jarring sects; but, as regards Recreation, it has done worse than refuse to listen—it has impeded and discouraged every effort made to provide healthy out-of-door amusements for the labouring classes. The consequence has been, that the phrase of "merry England," once true of the habits of the working and rural population, has become a dim tradition of the past—carrying us back to the days of Elizabeth, but having no foundation in latter times; and that the modern Englishmen who gain their bread by hard labour in field or factory have been driven for amusement into the beer-shop and the gin-palace. Harsh law has brutalised but too many of them; and the very debasement which has thus been produced has been invariably brought forward as an argument to oppose any attempt to provide them with innocent and healthful Recreation. To bring multitudes of people together in search of pastime has been to raise the bugbears of Drunkenness and Debauchery before the mental vision of those by whose Puritanism and Fanaticism every source of enjoyment has been as jealously shut from the people, as if laughter were a crime, or refined and exhilirating amusements of any kind were luxuries not to be thought of by those who had no money in the bank, and who could not give security to society for their good behaviour, if allowed to meet and to be delighted.

But voluntary agency has at length undertaken a portion of the duty which, in ancient times, was considered the privilege of the State. The Crystal Palace, at Sydenham, with its beautiful grounds—its superb situation, upon a hill, overlooking the rich woodlands of Kent, and one of the loveliest districts of country in the world—its close proximity to the metropolis—its well-ordered attractions in all the arts that administer to the cultivation of the understanding and the taste—the judicious admixture of the beauties of antique architecture and sculpture with the triumphs of modern art—and the still more happy blending with all these, not only of the wonders of the vegetable and floral kingdom, but of those geological, zoological, and ethnological marvels, which it is the privilege of this age, and the glory of the scientific men of this country, to have brought to light or methodised;—all these things will give a new and higher character to the amusements of the British people. Were it simply for the beneficial effects which may be anticipated to ensue from this attempt at refining the pleasures of the multitude, we might well be thankful to the far-seeing enterprise of the Directors of the Crystal Palace Company. But—great though such a result may be—it is not the only one that will follow, if the Palace and its treasures prove but half as attractive as they deserve to be, both to those who have time and money at command, and to those who have little of either. With objects including all those which made the Great Exhibition of 1851 the envy and the example of civilised nations, the Sydenham Crystal Palace will transcend that

OTHO, KING OF GREECE, AND HIS QUEEN, AND SUITE, AT ATHENS.—(SEE NEXT PAGE.)

of Hyde-park, in treating Art upon its own merits, and not merely in its connection with Industry and Manufactures. It will educate the people in the knowledge and appreciation of the Beautiful. It will aid in the accomplishment of a task which the State has scorned, and which private enterprise never before sought to effect. It will create a taste for the elegancies and refinements of life in the deepest strata of society; and the results of which will exhibit themselves hereafter in an infinitude of modes, of which we can at present form no estimate. A too exclusive attention to money-making, and a too intense forgetfulness of the public amenities, in the commercial worship of that great idol—Self—will be corrected by that love of Art and Nature, which familiarity with the treasures of the Crystal Palace will, after a time, induce among the trading and labouring classes. Had Art been cultivated as much amongst us for the last two centuries as it has been among the French, it is probable, notwithstanding the wide commercial uses of the Thames, that it might have been preserved in its purity to the public; and that a row of stately terraces and trees might have lined its northern and southern banks in all the extent of the metropolis, and afforded sites for statues and other monuments worthy of the liberality and intelligence of the people. We might long ago have possessed a National Gallery—not a positive disgrace to us; and Trafalgar-square, said by high authority to be one of the finest sites in Europe, might have been covered with noble monuments of architectural genius, instead of being, as it is at present, an eyesore to every person of taste and education who passes through it. We might have had public statues, unlike those which Sir William Molesworth has taken under his guardianship, and which might have elicited the admiration, instead of the contemptuous wonder or pity, of foreign visitors. London, in its whole extent, might have been the most beautiful, as it is the wealthiest, capital in the world. Ten thousand other influences might have been exerted in every direction in humanising the people, and encouraging among them a love of Art, and of intellectual refinement. By such means they would have been imperceptibly, but surely, weaned from the coarse and brutal indulgences which have been but too popular, both in town and country; and into which they have been in a manner forced by meddlesome legislation, in the form of dancing licenses and music licenses, and many other interferences with their harmless enjoyment. But, if the New Crystal Palace be as successful in its appeals to the higher faculties and emotions of the public as its predecessor, the Great Exhibition, proved to be, we may anticipate that the next generation of Englishmen will reap many advantages which have been denied to the men of the present day. In the meantime the people will enjoy a place of recreation to which the world can, as yet, offer no parallel.

GREECE.—FRENCH OCCUPATION.—OTHO AND HIS QUEEN.

AFTER the seizure of the Greek ships on the 26th ult., and the landing of 3000 troops of the expeditionary corps of General Forey, King Otho promised neutrality, and charged one of his former Ministers to go with explanations to Constantinople. At the same time a new Cabinet, composed of M. Mavrocordato, as President of the Council, and of General Kollergi, M. Palamides, M. Argyropulo, M. Calligas, and M. Isiko, was formed. M. Canaris, whose name also figured in the Ministerial list, declined accepting the functions which were offered to him In consequence of these arrangements, it was expected that the new Cabinet would recall the leaders of the insurgents, change the members of the household of King Otho, dismiss the functionaries who have been implicated, and ask the French to abandon the idea of occupying with troops Athens and Syra. In the meantime it is understood that the mass of the division of General Forey will proceed to Varna At the departure of the *Primauguet*, on the 28th, Athens was tranquil, and the population had "pronounced" against Russia The Queen of Greece is said to have exhibited the greatest distress of mind at the French occupation; and it was thought her departure would take place very shortly. The French were apparently not expected so soon: as the King and Queen were driving together at the Piræus a few hours before their arrival, quite unconscious of the rapidly approaching and overpowering force The latest news relating to the Royal pair says: "The Queen has had a very serious nervous attack, and the King is far from being at his ease"

We have engraved upon the preceding page a spirited Sketch of King Otho and the Queen riding past the base of the Acropolis, accompanied by the Royal cortège, and presenting, altogether, a very melodramatic appearance.

A telegraphic despatch has been received from Athens, May 29, which states that the insurgents had defeated the Turks, with great loss, at Chaggi Petras; but no reliance can be placed on it.

NAVAL AND MILITARY INTELLIGENCE.

THE WAR MINISTER.—Lord John Russell having declined to to accept the Colonial Department, Sir George Grey is to be the new Secretary for the Colonies, in the room of the Duke of Newcastle, who, as we stated on Thursday, will hold the appointment of Secretary of State for the Affairs of War.—*Morning Post.*

THE White Sea squadron, under the command of Captain Ommanney, consisting of the *Eurydice*, 26, Captain Ommanney; *Miranda*, 18, screw, Captain Lyons; and *Pirate*, 17, Commander F. B. P. Seymour, arrived at Lerwick, Shetland Islands, on the 26th ult., and left on the 26th for the North Cape.

THE Lords of the Admiralty have given notice at Lloyd's that the entrance to be conveyed to Constantinople has been completed to their tons The heaviest gun weighs 130 cwt. Notice has also been given that a vessel is required to convey 220 tons of coke for the use of her Majesty's steam navy to Malta.

AN ARMY TELEGRAPH.—An electric telegraph apparatus, to be employed on the field of battle, for the purposes of forwarding communications of the operations of the army from one portion to the other, is now nearly completed at the Royal Arsenal, Woolwich, and will be shortly dispatched to the seat of war. Each portion is fitted in a light four-wheeled waggon, which holds sufficient wire for a length of twelve miles.

CHURCH, UNIVERSITIES, &c.

THE Hon. and Rev. Horatio Powys, it is said, is to be the new Bishop of Sodor and Man.

PREFERMENTS AND APPOINTMENTS.—*Archdeaconries*: The Rev. T. C. B. Storch, to Geelong, Melbourne: Rev. R. Wickham, to St. Asaph. *Subdeanery*: The Rev. R. Barton, to Christ Church, Dublin. *Lectures*: The Rev. H. Atkinson, to Edermine, Wexford; Hon. and Rev. G. T. O. Bridgeman, to Bymhill, Shropshire; Rev. R. Chapman, to Normanton, near Grantham; Rev. H. B. Farmer, to Rathsaran; Rev. O. Goodrich, to Humber, near Leominster; Rev. J. B. Smith, to Selby, Lincolnshire; Rev. J. St. George Williamson, to Thomastown, Kildare. *Vicarages*: The Rev. C. Campbell, to St George's, Wolverhampton; Rev. J. Davies, to Mold, Flintshire; Rev. J. Murray, to Wroxton, with Balscott annexed, Oxfordshire; Rev. J. G. Smyth, to North and South Elkington, Lincolnshire; Rev T. H. C. Wright, Wolferton, near Clifton-on-leme. *Incumbencies*: The Rev. W. Battersby, to the Chapel of Ease, Derry; Rev. M. W. Currie, to Saltwood, Kent; Rev. E. Du Boisson, to Brenton, Herefordshire; Rev. J. C. Head, to O'Brien's-bridge; Rev. W. F. Mackesy, to Langcliffe, Yorkshire; Rev. G. Morgan, to St. Paul's Church, Poole. *Perpetual Curacy*: The Rev. J. Lloyd, to Llanstephan, Radnor.

A Testimonial of regard and esteem has been presented to the Rev. G. V. Reed, curate of Tingewick, by his parishioners.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

On the 1st of June the last reception of the Legislative Body by the Emperor, took place at St. Cloud. At a grand dinner which preceded this reception were present Lord and Lady Cowley, Lord and Lady Londesdery, General Gémeau, M. Dusloz, &c. The dinner not taking place till eight o'clock, the Deputies, and several of the Ministers, who arrived early, were compelled to wait a considerable time before the Emperor and Empress, followed by those who had dined at the Palace, made their appearance in the Grand Gallery. It was remarked that Lord Cowley was the only member of the *corps diplomatique* present.

You have, probably, heard of the arrest of the Sergeant Bolchot, on an accusation of joining in, or rather leading, an attempt to establish a revolutionary movement. A rumour—which seems, however, to have but little foundation—asserts that, on his being seized, a paper containing his nomination to the post of Generalissimo of the Army was found upon him. Other arrests relating to the same affair have also been made.

It appears that the release of the young composer, M. Léon Regnier, from the hold of the Conscription is due to the intervention of the Empress, who from the first was strongly interested in the affair.

One of the most ancient buildings in Paris, and one of the most curious and interesting in an historical point of view, the prison of the Abbaye, has just been demolished. The ground on which it stood is not to be built upon, but is to serve for the extension of the Place de l'Abbaye and the Rue Ste. Marguerite.

Five hundred mules have just been purchased by the Government, to be dispatched to the East, for the purpose of transporting the wounded. The animals are furnished with a newly-invented sort of litter, or palle of containing each two men, as comfortably and commodiously as in a bed.

L'Ami de la Religion and *L'Univers*, two of the principal organs of Catholicism, have been carrying on a sharp controversy on the subject of the English Roman Catholic Church. The former accuses the new episcopacy with having adopted too exacting and arrogant a tone; and to have, by its violence and tendency to absolutism, injured the interests of the religion it intended to support. Cardinal Wiseman, taking to himself—not without justice—the attack, replies in the *Univers*; whereupon the two spokesmen of a faith whose starting-point is unity, go to battle with right good-will, and deal each other as hearty verbal kicks and cuffs as other twin brothers are wont to do when some cause of difference of opinion makes them forget their unity.

The third volume of M. Véron's "Memoires d'un Bourgeois de Paris," has just made its appearance. With the exception of the first chapters which treat of the Revolution of July, and follow Charles X. up to the period of his death, this volume is much more of a literary and biographical, than of a political, tendency. This number, like its predecessor, contains much curious and interesting matter, and reveals a number of facts and anecdotes hitherto unknown to the public. The history of his management of the Opera, of the first representations and success of "Robert le Diable," accompanied by the letters of Meyerbeer on the subject, and a number of clever and most amusing literary and dramatic portraits, and incidents, cannot fail to have a lively interest for the general class of French readers, and a certain attraction even for English one.

The excessive cold and wetness of the weather continues to throw a gloom over everything here, and, still worse, causes much illness, more especially inflammations of the chest, typhus, and cholerine. Since the commencement of the winter, little or no interruption has occurred in the sickness which has reigned here. Not long since, in one of the least-frequented streets leading to the cemetery of Montmartre, not less than four-and-twenty funerals have been counted passing through in one day.

On Sunday took place, at Versailles, the last races of the *Société d'Encouragement*. Notwithstanding the badness of the weather, they were tolerably well attended. Five races, the last a steeplechase, were run on the occasion.

On Sunday, also, took place the inauguration of the new branch of the Eastern Company's Railway between Epernay and Rheims. The first train starting from Paris arrived at Epernay with great rapidity. The Cardinal Archbishop of Rheims received the *convoi d'inauguration* on its arrival at the station; and, having blessed the engines, proceeded —followed by his clergy, the numerous guests, and the inhabitants of Rheims and its environs—to the cathedral, where a "Te Deum" was performed.

A new ballet, composed by M. Théophile Gautier and Madame Cerito has a brilliant and merited success. The *Contessina Gemma* (Cerito) loves the famous Neapolitan painter *Massimo*; the *Comte Gabrielli* adores the *Contessina Gemma*; he magnetises her. In her mesmeric state, she returns his adoration—in her normal condition, she continues constant to *Massimo*; hence, as may be supposed, ensues a succession of *contretemps* and difficulties, more entertaining in a ballet than they would be in the bosom of a domestic family. Of course, however, the magnetising noble is defeated, the lovers made happy, and the audience highly pleased with the entertainment. The music, by the Marquis de Santa Croce, is brilliant and effective, and adds to the success of the whole.

UNITED STATES.

The *Canada*, which sailed from New York on the 23rd ult. arrived at Liverpool on Sunday. The House of Representatives had passed the Nebraska Bill, by a majority of nine votes; it was read a third time on the 23rd.

According to the *New York Herald*, the Secretary of the Navy, probably in consideration of the unsettled state of the relations with Spain, had issued an order directing that all vessels of war on the point of departure should be delayed.

The Senate had adopted a resolution offered by Mr. Clayton, to the following effect:—"That the Committee on Foreign Relations be instructed to inquire into the expediency of providing by law for such restrictions upon the power of American Consuls residing in the Spanish West India Islands as will prevent the abuse of the American flag in protecting persons engaged in the African Slave-trade."

The Earl of Elgin had arrived at Washington. His visit, according to the American journals, is connected with the negotiations respecting the fisheries.

The *Atlantic*, which sailed from New York on the 27th ult., arrived at Liverpool on Wednesday evening. The aspect of affairs with regard to Cuba was more pacific. It was expected that two special Envoys would be dispatched to Madrid to endeavour to settle the disputes.

THE OVERLAND MAIL.

The steamer *Calcutta* arrived at Trieste on the 7th, at half-past ten a.m., in 102 hours. The Indian mails had been at Alexandria from the 30th ult., with advices from Calcutta to May 1; Bombay, May 10; Shanghai, April 14. Affairs in Burmah are satisfactory. The Imperialists are said to have been driven from Shanghai "by the Europeans, assisted by the rebel army."

LUMLEY v. GYE.—On Thursday week the Wagner case came again before the Court of Queen's Bench: the Attorney-General appearing for Mr. Gye against a rule which had been obtained by Sir F. Thesiger, calling upon him to show cause why the verdict in his favour should not be set aside, and a new trial granted. After hearing the Attorney-General, the proceedings were adjourned until Monday; when Sir F. Thesiger endeavoured to show that a new trial ought to be granted, because there had been an improper admission of evidence, and because the evidence adduced did not justify the finding of the Jury. Sir F. Kelly, Mr. Huggins, Mr. Cowling, and Mr. Huddlestone having been heard on the same side, Mr. Justice Erle, Mr. Justice Crompton, and Lord Campbell all agreed in the opinion that the rule should be discharged.

THE WAR.

ADVANCE OF THE ALLIED TROOPS.

Marshal St. Arnaud, Lord Raglan, and the Seraskier returned to Constantinople on the 23rd, after having conferred with Omer Pacha, and visited the camp at Schumla. The result of the conference was an immediate order for the advance of the Anglo-French army to Varna; and no time was lost in carrying the order into execution. On the evening of the 24th, the first British troops sailed from Gallipoli for the immediate seat of war. The corps honoured by this precedence was that of the Sappers and Miners. In ten hours from receiving their orders, without a hint beforehand to hold themselves in readiness, the officers managed to get pontoon train, horses, and everything on board. On the 29th, Sir George Brown, with a division of the Rifles, and 7000 men, left Scutari for Varna; and the rest of the English troops there were to follow as speedily as possible. It was expected that the last of the 23,000 men would have embarked by the 10th inst.

Marshal St. Arnaud arrived at Gallipoli on the 26th, in order to hasten, by his presence, the departure of the French troops to Varna. The French squadron, under the command of Admiral Brust, then in the roads of Gallipoli, was to embark the first division of the army, under General Canrobert; and the second division, under the command of General Bosquet; the third division, which is under the command of Prince Napoleon, is to proceed by easy marches along the banks of the Sea of Marmora. The orders given were, that the troops should not be over-fatigued, and that their marches should not exceed four or five leagues per day. They would arrive at Constantinople on the 5th of June, but they would remain in that capital only for a short time, as the intention was, that they should follow their comrades by sea to Varna as soon as the necessary number of transports could be placed at their disposal.

The brigade of cavalry, under General d'Allonville, the military equipments, the train of artillery, and the medical stores, were to take the route by Adrianople towards the Balkans. They will not be able to join the rest of the army before the 15th or 20th inst.

THE INVESTMENT OF SILISTRIA.

Up to the 30th of May, Silistria still held out against the formidable assaults of the Russian army. From the 20th ult. hardly a single day had passed without Prince Paskiewitsch attempting some new project for making himself master of this formidable fortress; but all of them had failed. The orders of the Czar were, that Silistria must be taken immediately, at whatever cost of life, and the Russian commander has evidently followed up the instructions of his master as far as he was able. The loss of life has been very great. Some accounts say that not less than 8000 Russians have fallen before Silistria. On the 21st ult., Mussa Pacha, the Turkish Commander-in-Chief at that place, addressed the following letter to Omer Pacha, from which it will be seen that he was at that time quite aware of the deadly nature of the assaults which were about to be made:

SILISTRIA, May 21.—Yesterday, the Russians sent some troops against the outer posts. We immediately sent men to repulse them, and succeeded in doing so, after a slight loss. The Russians had upwards of 150 men killed, and a great number wounded. This day the Russians again attacked the outer fortifications. During the action, two Mussulman Circassians, lieutenants of cavalry, named Osman and Hassan, quitted their posts and passed over to us, in order to inform us through love for Islamism, of the plans and movements of the Russians. According to what they assure us, the enemy has advanced on Silistria, with three *corps d'armée*. This day, they are determined either to carry Silistria, or to leave their troops annihilated, and they are taking all the measures which they think necessary to arrive at that object. At the moment that I am writing, the enemy appears desirous to attempt a general attack against the place. However, the fire from the ramparts not permitting him to approach, he has halted his battalions beyond the distance of a cannon-shot. As to us, our troops have been so distributed over the fortifications as to be able to sustain the attack and repel it.

Between the 27th and the 29th ult. the Russians had made several attempts to carry some of the outworks of the fortress by assault, but had been defeated in every instance with tremendous slaughter. On the morning of the 30th the Turks made a sortie, killed between 1500 and 1800 of the enemy, and spiked a number of their guns. With such lessons as these, it is no wonder that the Russians are beginning to be rather tired of running their heads against a stone wall for the glory of the Emperor. The latest accounts speak of them as not showing their usual alacrity; and Prince Paskiewitsch is said to have given it as his opinion, that Silistria cannot be taken by storm without a sacrifice of from 20,000 to 25,000 men. Under these circumstances it is not surprising that the Russian Commander should have resolved to adopt the slower and safer process of mining. How far that plan is likely to succeed or not, may be partly gathered from the following letter from Vienna:—

It will be remembered, as regards the comparative situation now and then, that everything is in favour of the Turks; and yet the fortress held out, in 1828, from the 19th May to the 30th June, that is, six weeks from the day of complete investment and breaking ground until that of capitulation. Nor did the latter ensue until the then raw and ill-organized Nizam army had been completely defeated in open battle by General Diebitsch, near Kuleitscha, and the garrison thereby deprived of all hope of succour The fortress has, since that time, been greatly strengthened; and, in spite of the inherent defects of all Turkish fortifications—that is, overlong curtains, over-lofty scarps, and insufficient flank fire, with ill-proportioned ravelines, horn-works, and counter-guards—it is ten times stronger than it was in 1828, and has a sturdy commander and brave garrison, with every encouragement to hold out to the death, from the prospect of succour, and the experience they have that the enemy's Danube batteries can produce no great effect upon the *enceinte*. Approach by mining is talked of, as having been struck out by General Schilder as an infallible process. So it would be if the approaches to it reached the foot of the glacis. But weeks would be required to mine up to the distance of 300 yards, and, meantime, it is to be supposed that the garrison would not fail to countermine to such a distance at least as would secure their counterscarps. The garrison has also an advantage in the periodical flooding of the Danube, which about this time is much swollen by the melted snows conveyed into its bed by the Save, Theiss, and twenty other great affluents. These inflations of the waters must render the maintenance of bridges more difficult, inundate the island batteries and the trenches, and greatly enhance the difficulty of approaching upon the river side. Indeed, it would seem that the attacks upon the fortress are intended to be as much pressed as may be possible, in order to anticipate these embarrassments. Meantime a letter has been received here from an impartial eye-witness in the Russian camp, who states that the vigour of the defence during the recent three fruitless assaults was so determined, and the fire so murderous, that upon the third attempt the storming columns could not be brought up to close range, and were driven back by the most valiant example, and cavalry stood close in the rear to prevent their falling back. The letter says that the Russian troops do not evince their usual readiness for combat.

With respect to the relief of Silistria, it is said that the plan of Marshal St. Arnaud is to detach 24,000 French, 15,000 English, and 30,000 Ottomans of Omer Pacha's army for that service. 55,000 Russians are on the right bank of the Danube employed in investing the place. These 25,000 will be placed between two fires, and will, it is hoped, be driven into the Danube, or made prisoners.

THE AUSTRIAN NOTE TO RUSSIA.

The Austrian Summons to the Czar to quit the Ottoman territory appears to be a very mild document, indeed it is rather a request than a summons. In the Vienna note—Austria for herself, that is as a great European Power, strongly *advises* the evacuation of the Turkish territories. After referring to the treaties existing between Russia and the Porte, the Imperial Cabinet, in the clearest language, expresses its opinion that the passage of the Pruth was an unjustifiable act. It then goes on to say that a longer occupation of the Turkish provinces will increase the danger of a general war, and under existing circumstances, would be a crime. The Imperial Cabinet, therefore, calls on the Russian Government to name the time at which its troops will quit the two Principalities and the other Turkish provinces. The concessions which have been made to the Christians by the Porte are brought into strong relief in the body of the note.

The official reply to the Austrian note is expected at Vienna some time between the 20th and 24th inst. Among the anti-Russian party in Germany, the prevailing belief is that the whole affair is a "mere farce," in which Austria plays into the hands of Russia, with a view to promote some diplomatic intrigue by which the Czar may escape from the perils in which his unbridled ambition has involved him.

THE BALTIC FLEET.

The news from the Baltic since our last publication contains nothing of much importance. The delay of the French fleet is explained by the statement that some time was required to exercise the crews at great guns before bringing them into action. Many of the men have never served on board line-of-battle ships before, and are, consequently, unused to manœuvre on a large scale. On the 30th ult. the fleet left Kiel, and next day sailed for Gothland, there to await further information as to the movements of Sir Charles Napier.

On the 27th the English fleet was still in Hango Roads, waiting, as was understood, the arrival of the French squadron, which would be a week, probably, before it reached him. The following extracts are from a letter dated Hango Roads, May 27 :—

We have not yet made the pine-woods of Hango re-echo with the booming of a broadside of our heaviest artillery. The Admiral is evidently reserving his full force and strength for more important opponents than the batteries of Hango. The taking of such fortifications as those would, with the force now lying before them, be a work of very little time; but it is quite clear that we consider them somewhat beneath our notice, and wish to preserve our strength unimpaired to deal out our biggest blows to antagonists more worthy of our size. Whether those be the ships of war or principal strongholds, or both combined, yet remains to be told. Therefore, there appears to me an unwillingness on the part of the Commander-in-Chief to risk a single ship being disabled until he has fought an action with the more formidable adversaries. We have no docks at hand wherein to repair damages, should we receive any, and we are far from England; hence the necessity for caution.

Two deserters from the Russian gun-boats at Eckness, sulled on board the flag-ship on the morning of the 25th, in a small shallop. As well as I have been able to hear the news, these men state that there are now ten gun boats near the town, with crews of about forty men, amongst whom are a few regular troops and sailors, but the major part of them are pressed men. The deserters are Finlanders, who had been pressed. They represent that the *Arrogant* and *Hecla* caused great slaughter amongst the troops in fighting their way up to Eckness. The *Basilisk* was sent away on a reconnoitring expedition towards Sveaborg. She looked into the harbour, and saw the Russian ships at anchor. The *Cruiser* arrived to-day. She has made some prizes, which she has left at Faro.

THE ALLIED FLEETS IN THE BLACK SEA.

Nothing further has been done in the Black Sea, except the capture of a few Russian vessels. The Czar's fleet still lies snug at Sebastopol, nor is there any chance of its leaving those safe quarters, seeing that it is not, according to the most recent accounts, as strong in number and weight of metal as the force it would have to encounter. The Russians have not destroyed all their forts on the Circassian coast, as was lately represented. They still hold Anapa and Soukum-Kalé, where they have concentrated all their force, which is about 12,000 men; and Anapa has seventy guns mounted. No important movement is likely to be attempted by the fleets in the Black Sea till a collision has taken place between the Russian and the Allied armies.

Admiral Hamelin, Commander-in-Chief of the French Fleet in the Black Sea, has made the following report to his Government:—

Ville de Paris, Baltchik, May 21.

Monsieur le Ministre—Having left the Bay of Kavarna on the 17th of April, in order to commence mi itary operations in the Black Sea, the two combined squadrons cast anchor on the 20th inst., before Baltchik, where they are now taking in water and necessary provisions.

It is no fault of ours if this cruise of more than a month has not been marked by events of war more numerous and more important; but the naval forces of the Russians have been so closely shut up in Sebastopol under the shelter of the thousand guns of that port, that during twenty days spent at a short distance before them, we have not been able to induce a single ship so much as to engage one of our small steamers employed in reconnoitring. On the other hand, our steam cruisers have roamed the whole extent of the Black Sea, and, since the opening of hostilities, have brought in as prizes a large number of vessels carrying the Russian flag; and more, the division of ships and frigates sent on a mission to the coasts of Circassia, have found that the Russians themselves have abandoned the sixteen forts, reared only after so much toil and so many battles, on the 200 leagues of the coast which extends from Anapa, near the Sea of Azof, nearly to the port of Batoum—a new check, in my opinion, for the Muscovite power.

Finally, sir, if you will consider that the Imperial Port of Odessa has been completely destroyed by our screw ships; that the Russian fleet, challenged in its own ports, has not dared to issue forth to avenge this blow; that the Russian flag is unable to venture out in the Black Sea, of which the Czar pretended to make a Muscovite lake; that all the Russian possessions on the Circassian coast have been destroyed or abandoned, and that, in consequence, the flank of the Russian army in Asia is exposed, you will perceive that this first phase of our operations has produced notable result, to the advantage of the Western Powers and to the detriment of Russian influence in the Black Sea. I am, &c., HAMELIN.

CHANGES IN THE TURKISH MINISTRY.

According to accounts received from Constantinople, vià Vienna, Mehemet Kepreali Pacha, who not long since was called from the Government of Adrianople to be Minister of Marine, has been raised to the rank of Grand Vizier. The new Grand Vizier belongs to the modern school of Turkish statesmen; is well acquainted with European politics, and formerly represented the Sultan at the Court of St. James's. He is succeeded in the ministry of Marine by Halil Pacha, brother-in-law of the Sultan. Letters from Constantinople give reason to expect further changes in the Ottoman Cabinet.

AUSTRIA has succeeded in obtaining a footing for her army on Turkish ground. The last accounts from Constantinople say that orders have been transmitted to the Turkish authorities in Albania to receive the troops which Austria is about to send there.

ALL the German States have lately increased the effective strength of their armies. That of Bavaria now consists of 75,000 men.

RUSSIA is said to be making great preparations for war in Poland. The Russian journals state that there are 250,000 soldiers in Poland; but that must be a gross exaggeration.

ACCORDING to a statement made by Sir James Graham to Mr. Duncan, M.P., the other day, it is not the intention of Government to blockade Archangel. He thinks it will probably remain open all the season.

THE number of Greek pirates captured or destroyed by the vessels of England and France up to the 25th ult. was calculated at twenty-seven, and the vigour of the assaults made upon them has already diminished the number of the acts of piracy. About 5000 English and French trading vessels are sent annually into the Greek seas.

THE Russian ship-of-war, *Aurora*, forty-four guns, arrived at Callao on the 16th of April from Rio.

THE French have had some fighting on the river Senegal with the natives. They took Podor at the point of the bayonet, and intend to construct a fort there, to serve as the point d'appui of new combinations for extending French commerce with the population on both sides of the river higher up.

LETTERS from Singapore state that the Admiral on that station had arrived at that port, and was collecting a small squadron, with the view of looking after the Russian vessels-of-war in the China Seas, on learning the declaration of war.

MEAT is becoming very scarce and dear in Memel, on account of the prohibition of the exportation of cattle from Russia. One of the objects of that prohibition is, no doubt, to prevent the English getting supplies.

THE Governments of France and England having informed the Court of Morocco of the state of war existing between them and Russia, and the obligations resulting therefrom for neutral States, the Emperor has expressed to the Chargés d'Affaires of the two Governments at Tangiers the satisfaction which that communication has given him, and has declared that no Russian vessel, or vessel bearing a flag friendly to Russia, shall be received in the ports of his empire during the war.

THE CONSTITUTION FESTIVAL was held at Copenhagen, on Monday, by fifty thousand persons. It passed off without accident or commotion. The Court was absent.

AUSTRIA has resolved to raise the military cordon on the frontier of Freiburg, the Swiss Federal Council having given satisfactory assurances for a future good understanding.

THE Envoys of France and Austria have had private audiences of the King of Sweden, for the purpose of laying before him the views of their respective Sovereigns as to the conditions of Sweden's publicly joining the Western Powers, and taking an active part in the war. The French Ambassador was the bearer of an autograph letter of Napoleon III., which contained the proposed basis of Swedish co-operation.

A SECTION of the metropolitan police are under orders for Constantinople to assist the Commissariat. The men have volunteered from the different divisions, and each constable receives a bounty of £12 and a stipend of 4s. per diem.

THE WAR ON THE DANUBE.

(From our Special Correspondent.)

VARNA, May 18, 1854.

I HAVE been so busy sketching, that I have had no time to write; but in truth there is nothing new, except that Omer Pacha arrived here today from Schumla. The Generals in Chief are expected here every moment; and I will write a full letter, with the account of their reception, and the ceremonies here.

I rode here yesterday in twelve hours from Schumla—a hard ride of ninety miles, without stopping. You see I am getting hardened. I was here twenty-four hours before Omer Pacha, who reached this day, at three p.m.

[The Sketches forwarded by our Correspondent will appear in the ILLUSTRATED LONDON NEWS of Saturday next.—EDITOR.]

CONSTANTINOPLE, May 24, 1854.

My last letter doubtless prepared you for the intelligence of the investment of Silistria. Convoys despatched from Schumla, and returning from whence they came flying rumours of the capture of the fortress—were certain symptoms which official denial could not conceal. It was under these circumstances that Omer Pacha left Schumla for an interview with Marshal St. Arnaud and Lord Raglan, at Varna. He started in the night of the 17th-18th, and arrived in about four or six hours. The road, which leads through Yeni Bazar and Pravadi, is one of the pleasantest that can be taken on that side of the Balkan. The vale which Pravadi is supposed to defend is a little Paradise of cultivation, which contrasts singularly, by the varieties of colour which its crops present, with the bare monotonous plains common to the rest of Bulgaria. As for Pravadi itself, it is a place of desolate aspect—destroyed by the Russians in 1828, and never since rebuilt. In front of it are lines of feeble merit as works of art; and the heights are covered on each side by a fort. The town behind has nothing in it but heaps of ruins; and the soldiers inside the lines and forts have the lugubrious aspect of watchers in a city of the dead. The sensations which are experienced on entering this place are such as to banish the pleasing effect of the landscape outside; and the traveller does not recover his equanimity until he finds himself at a considerable distance on the way to Varna, contemplating the beautiful lake which winds its way from Devna to the sea, with its varied beauties of forest, rock, reed, and greensward—its flocks of storks and ducks, and its buffaloes wallowing in the mud. The view of Varna itself was not prepossessing on that day; a thick fog was drifting over it, pushed by a wind from the Black Sea. A sensation of cold and damp struck one on entering the fog, which at the same time veiled everything from sight. The Black Sea is frequently visited in spring by vapours of this kind, which render the navigation extremely dangerous. Omer Pacha, on entering Varna, alighted at the Custom-house, where he was received with all the honours, and the guns of the harbour saluted with nineteen guns. He then took up his quarters for the night at a palace prepared for him.

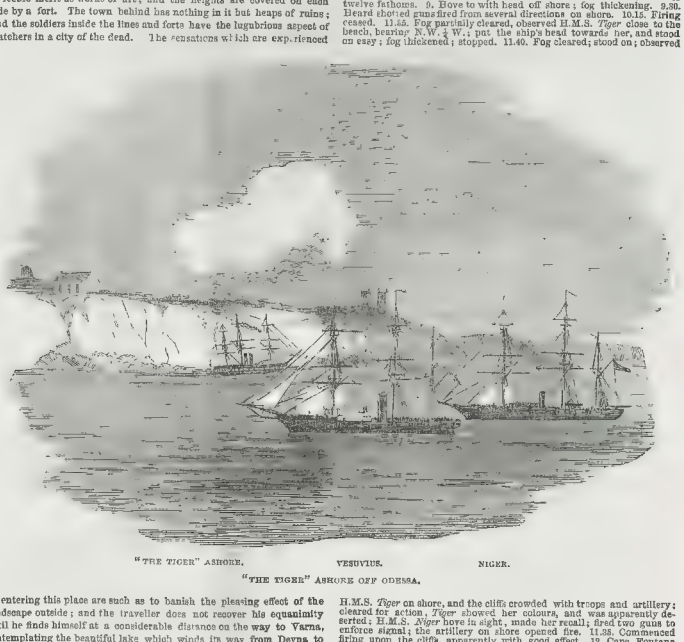
Early on the 19th the signal was given—a steamer in sight; and at about nine o'clock the *Caradoc*, having on board Lord Raglan, Brigadier-General Tylden, Admiral Boxer, and their staff, cast anchor. She was followed by *Le Berthollet*, carrying Marshal St. Arnaud and his staff, and by the Turkish steamer *Chek Per*, with Reza Pacha and Mehemet Pacha on board. Omer Pacha, who had been waiting in the quarantine building, immediately entered a boat manned by sixteen rowers, and went on board the Turkish steamer, where a conference was held between the Generals and the Ministers of War and Marine. The conference lasted about three hours, when Lord Raglan landed and received the usual salute; and was shortly followed by Marshal St. Arnaud and his staff, who received similar honours.

As pressing despatches were sent shortly afterwards to Gallipoli, and the *Caradoc* was dispatched to Constantinople immediately, it was supposed that instant orders had been given to press the departure of the several European forces with the utmost speed.

At Constantinople, where I arrived at the same time as the *Caradoc*, the news of the investment of Silistria was not known, and considerable doubts were entertained, and expressed, whether the English troops could be sent to Varna, as they were still in want of much in the shape of stores and ammunition; but to-day there are evident symptoms that a move is in prospect. To-night several transports will leave Constantinople for the Black Sea.

In the meanwhile, we have now to regret the loss of one of our fine steam-frigates, the *Tiger*, of 16 guns and 400 horse power, which was wrecked off Cape Fontana Lighthouse, on the morning of the 12th inst. Cape Fontana is a point about five miles from Odessa, where a fort existed, which the *Arethusa* lately destroyed. The *Tiger* was cruising before Odessa, in company with the *Vesuvius*, 6, paddle, Commander Powell, and the *Niger*, screw, 16, when she went ashore in a thick fog, at the mouth of a small bay. The Russians on the cliffs were not long in discovering her helpless state; and messengers having been dispatched to Odessa, three batteries of artillery came out with all speed to attack her. The crew, in the meanwhile, were endeavouring to get the ship off, but without success; and the *Vesuvius* and *Niger* were, unfortunately, unable, from the thickness of the fog, to give her any assistance. At one moment the commander of the *Vesuvius* found the spot where the *Tiger* lay clearing from fog, and forthwith became himself embedded in the mist. At another the mist cleared off from around the *Vesuvius*, and remained obstinately within the bay where lay the *Tiger*. The Russians, who were near the scene of the disaster, began firing into the *Tiger* at about eight o'clock, with twenty-four guns and musketry, and the wreck returned the fire as it best could. Towards eleven o'clock the *Tiger* was first observed from the *Vesuvius*. The cliffs above were crowded with people and soldiers, on whom she fired and killed several. Her shells were thrown with such precision that they told greatly, and a great number of people were to be observed running away and taking refuge in an edifice on the right, which, turning out to be a church, was respected by our commander. The crew of the *Tiger* had already surrendered, after setting fire to the ship. Captain Giffard had one leg carried off by a shell, and his nephew killed near him. Two sailors were also killed and several wounded. The rest of the crew, about 200 in number, were made prisoners and taken to Odessa, where they were treated with every respect. The following extracts from the log of the *Vesuvius*, as well as the enclosed Sketch, will best conclude the description of this melancholy disaster. The Sketch was copied from one made on the spot by Mr. Goodden, of the *Vesuvius*.

12th May, 5.30.—Observed land on the port bow. Sounded in five fathoms. Heard two guns; answered with one. Head off shore and steered S.E.; stood in shore, and observed land on the port bow; heard a gun answered with two guns and musketry; stopped, and proceeded as for thirteen; and cleared away. 8.30. Stood off and on shore, seven to twelve fathoms. 9. Bore to with head off shore; for thickening. 9.30. Heard shotted guns fired from several directions on shore. 10.15. Firing ceased. 11.15. Fog partially cleared, observed H.M.S. *Tiger* close to the beach, bearing N.W. ½ W.; put the ship's head towards her, and stood on easy; fog thickened; stopped. 11.40. Fog cleared; stood on; observed



"THE TIGER" ASHORE. VESUVIUS. NIGER.

"THE TIGER" ASHORE OFF ODESSA.

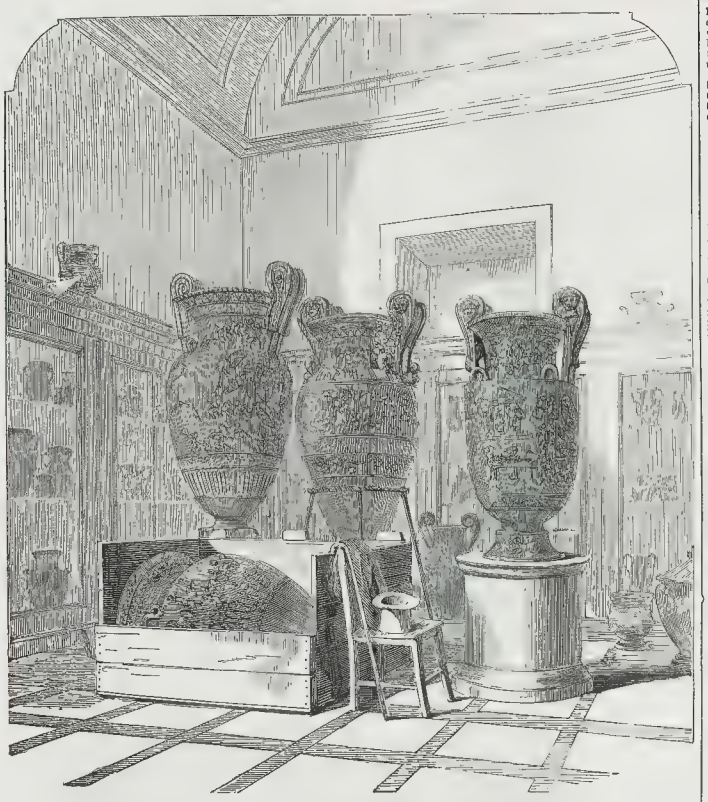
H.M.S. *Tiger* on shore, and the cliffs crowded with troops and artillery; cleared for action, *Tiger* shoved her colours, and was apparently deserted; H.M.S. *Niger* bore in sight, made her recall; fired two guns to enforce signal; the artillery on shore opened fire. 11.55. Commenced firing upon the cliffs, apparently with good effect. 12. Cape Fontana Lighthouse W. ½ W. half a mile. 12.30. Captain went on board the *Niger*. 12.45 Observed the enemy to fire shell on the *Tiger*. 1.30. Ceased firing on the troops; observed fire to break out on board the *Tiger*. 2. *Niger* sent boat ashore with flag of truce. 3. Boat returned to *Niger*; observed the *Tiger's* mainmast fall, and several explosions took place on board.

To-day, being the Queen's birthday, there was a grand parade at Scutari; and fireworks and games were organised for the pleasure of the men. It was a splendid sight to see our troops wheel upon the broken ground, preparatory to passing before the Generals and their staff. The Highlanders and the Guards especially distinguished themselves by the precision of their movements. There were numbers of people on the ground, mostly English and Greek. The Turks were absent, and appeared unwilling to be moved from their ordinary apathy by the ceremonies in honour of the birthday of our Queen. Lord Raglan, the Duke of Cambridge, Sir De Lacy Evans, and the other Generals, were on the ground; and Lord Cardigan appeared, fresh from Europe, walking about with an opera-glass slung to his shoulders. Several fresh arrivals of troops were announced during the review.

THE KING OF PORTUGAL.—The King of Portugal disembarked on Saturday morning, in the Royal Barge of the Southampton Docks, and, with his brother and suite, proceeded at nine a.m. in the Queen's state carriages, which were drawn up in readiness to receive his Majesty on the wharf, direct to London. All the ships in the docks were handsomely dressed with flags, and as the Royal party stepped on shore the guns from the Platform Battery commenced firing a Royal salute. Don Pedro V., of Portugal, who is nearly seventeen years of age, was born on the 16th of September, 1837. His brother, the Prince Don Luiz Filippe (Constable of the kingdom), is a year younger, and was born on the 31st of October, 1838. The Royal party are accompanied by the Duke of Terceira, the Viscount Carreira, the Baron Sarmento, Colonel Foloucque, and by a son of the Marquis of Ficalho, who is about the same age as the young King. The squadron was escorted as far as Cape Finisterre by the French war-steamer *Newton*. The King of Portugal and his brother are to stay a short time on a visit with Queen Victoria and Prince Albert, and will then proceed to France and Belgium, and to such other European Courts as they may be able to visit before the winter sets in; when their father, the King-Regent of Portugal, is anxious for their return to Lisbon.

A RUSSIAN MAN-OF-WAR BUILDING IN NEW YORK.—A New York paper states that Mr. Webb, the shipbuilder, of that city, has resolved, under the advisement of those high in authority, to continue the building of the Russian man-of-war now in progress of construction in his shipyard.

THE 12th East Suffolk regiment has formed its head-quarters, and will immediately proceed to Melbourne. The first division will embark on board the *Camperdown*.



NEW ROOM AT THE ROYAL MUSEUM, AT NAPLES, WITH THE GIANT VASES.

THE NEW ROOM IN THE ROYAL MUSEO BORBONICO, AT NAPLES.

(From our own Correspondent.)

THOSE who have visited the Royal Museum of Naples will remember that, after they have passed through the series of chambers devoted to the interesting collection of domestic Roman Bronzes, they entered the rooms devoted to the so called Etruscan Vases. Very recently, an additional chamber has been thrown open to the public, containing some of the most remarkable fictile terra cottas yet known, both as regards size and historical associations.

The large illustration shows this new room, with the four giant vases from Cumæ and Canosa. As is usual, they all display a black ground: the figures are dead red, while being very sparingly used here and there for the details. The drawing is of the highest order, and the composition of the groups worthy of the best periods of Greek art. The subject illustrated on the left hand vessel is that of the Battle of the Amazons. Above, the presiding deities are represented in council. The lower and upper portions of this vase are occupied with decorations, simple and elegant: height, 4 feet 8 inches, independent of the handles. The upper circle of the central terra-cotta is occupied with sea-horses, and other grotesque marine figures. Two females are sitting on hippocampi, with tridents; whilst in the middle of the group is seen a double-headed monster, probably Scylla and Charybdis. Below, are represented Diana, and other personages, in chariots, divided by a palm-tree, and surrounded by dolphins (the legend, in Greek, is written above). Height of the body of this vase 4 feet 8 inches. The right hand vessel shows on its upper circle a chariot, and a figure carrying a huge tazza. The middle section is filled up with the portion of a temple, in and around which, are several figures. Again, below these is seen a *lectisternium*, and a dead body thereln, with a legend in Greek—*Archemoros*. Round about figures are employed in performing the usual Pagan offices of burial: height, without handles, three feet nine inches. The fourth vase, which has not yet been elevated, is occupied with Homeric subjects, and is remarkable for its fine drawing—one figure, pouring a libation into a tripod, has all the simplicity and grandeur of the very highest efforts of sculpture: height, four feet two inches. Altogether, these wonderful examples of Greco-Italian art, considering their size and excellence of form, are the most remarkable illustrations yet known of the perfection to which the settlers of Magna Græcia had brought plastic creation.

TERRA-COTTA RIBBED ARCHAIC VASE.

SUPPOSED HUNTING-TIGER ON VASE.

ANTELOPE ON ARCHAIC VASE.

Yet more interesting, in an historical point of view are the terra cottas occupying the glass cases which surround this room. They are the earliest examples of pottery yet known, and have been found in tombs below the level of the Greek graves. They were evidently produced by the earliest emigrants to the shores of the Mediterranean, and have been called arbitrarily by some Phœnician, by others Egyptian, vessels, but without much authority or proof.

Mr. Ashpitel, the well-known antiquary, suggests that they were the productions of the inhabitants of Cumæ, in Asia Minor, who joined a body from Chalcis, and, according to the authority of Strabo (lib. 5), first colonised the classical shores of Naples. We immediately commenced a careful investigation of any salient peculiarities which could throw light on the matter. The vessels are made of a light yellow-brown earth, generally with a globosity of form. (See Illustration.) Sometimes they are decorated with geometrical designs, and the Greek meander border, or rather a suggestion of the same; or they represent birds, like turkeys, elk-like beasts, and very frequently an animal of the feline species, very like the cheetah, or hunting tiger of the East—a beast appropriated even now to royal and noble personages. In one vase these animals are seen in the lower circle, above which is a chariot with four horses, containing warriors, with foot attendants—in design, and even in execution, resembling the sculpture of Nineveh.

Mr. Ashpitel strongly urges a study of this group of vases, as likely to lead to the most interesting results. It might add another link to the chain of discovery so ardently longed for by ethnologists and philologists, viz., whether Europe received its arts and civilisation from Nineveh to Lycia, from Lycia to Æolia, and from thence, as we may infer, from Strabo to Greece; or whether science and civilisation passed directly northward, from Egypt to Italy?

One thing is certain—that now, for the first time, a distinct collection has been made of the works of a period anterior to the Italo-Greek times. Cumæ is affording many examples. In fact, the archæologist, it is hoped, will shortly have materials for study, which may prove second only in interest to the late discoveries of Egypt, Assyria, Lycia, and

ORNAMENT ON TERRA-COTTA VASES.

Etruria. They may have a Biblical as well as a Classical interest; they are certainly amongst the earliest records of mankind, and the emblems painted on these singular vases may prove to be the alphabet of a belief which grew into such exquisite poetry in the hands of the Greeks.

It would seem the tide of civilisation has flowed either from the East to Nineveh—branching, perhaps, to Egypt in one line, and in another to Asia Minor—then to Greece, then to Italy; or it may have been that these arts originated in Egypt, and flowed westward to Nineveh, and northward to Italy. The chain alone can be traced from the pictorial remains on such singular terra-cottas, which may, in time, convert speculation into history.

If we turn it to proper account, there is now much material awaiting the student. Bonucci is employed on the Royal excavations at Canosa. H.R.H. the Prince of Syracuse is doing much at Cumæ; whilst Fiorelli, the eminent archæologist, records and publishes, from time to time, the result of the Prince's labours. The pens of Professors Quarantu and

ORNAMENT ON TERRA-COTTA VASES.

Minervini are continually employed on the same subject, and the French and Germans are not idle. But, hitherto, I am not aware that any attempt has been made to use the objects of discovery as the stepping-stone of history, or as a means of filling up the blanks of chronology.

[The accompanying Illustrations are all from the pencil of Mr. Ashpitel, who is giving the subject every attention, with a view to insertion in the Journal of the British Archæological Association. The vases are all yellowish brown; the figures red and brown, mixed; the light lines are merely scratches, with a sharp point.]

THE TOMBSTONE OF BLUSUS.

THE Museum at Metz, although little known, possesses the richest store of Roman antiquities in Germany. Among these is the Tomb tone of Blasus, which was found at Weisenau, a village in the neighbourhood of Mentz. The inscriptions of this stone have the peculiarity that the one on the front is repeated on the back, with the omission of a few words. The inscription on the front is somewhat obliterated, and would not be quite intelligible were it not repeated on the back. The front inscription is as follows:—

BLVSVS ATVS
AN LXXV H S E V M
NIS F AN VXSO
SATO VERN
F PARENTIBVS P

The inscription on the reverse is:—

BLVSVS ATVSIRI F
NAVTA AN LXXV H S E
MENIMANI BRIGIONIS F AR
VXSOR VIVA SIBI FECIT ET MVS P
PARENTIBVS PIO PIETATE POSIT

Blusus, Atusiri filius,
Nauta, annorum septuaginta quinque, hic situs est.
Menimani, Brigionis filia, annorum , uxor
Viva sibi fecit,
Sato verna . . .
Filius parentibus pietate posuit.

(Blusus, son of Atusir, mariner, seventy-five years old, rests here. Menimani, daughter of Brigion, years old, his wife, erected this monument in her lifetime. Sato the slave . Primus the son has placed this, in final love of his parents.)

So reads the completed inscription on the front, except that one word is not clearly defined.

While the other lines of the front inscription are easily repaired by the back inscription, the question now is, how the words "SATO VERN" have to be combined with those following. In the inscription on the reverse, which was no doubt cut at a later time, these words are omitted; because, not the slave Sato, but, by this time, the son Primus, super-

THE TOMBSTONE OF BLUSUS.

STATION OF THE TRIESTE-VIENNA RAILWAY, AT TRIESTE.

ntended the bas-relief and the inscription. The blank left for the age was never filled up.

The sculpture belongs, probably, to the better period of the Roman Empire, at least before the end of the third century; but it will be safer to place the time of the erection of this monument in that of the first Frankish Kings.

The ancients were accustomed to place the effigies of the defunct above the inscription; but it is uncertain whether the Romans sculptured the portraits of living persons upon the same stone with those of the dead. The wife of Blusus is here represented in a costume rarely found in ancient art; but differing very little from that which we see on sculptures found in this part of Germany. The tunic, ruff, and ruffles, are rarely worn by ancient female figures. The *stola* does not cover the bosom; and equally peculiar is the head-dress. The cloak (*palu*) reaches down to the knees. The jewellery is superb: the neck ornament bears a rosette; there are likewise a brooch, finger-ring, and armlets. These rich ornaments are rarely found on monuments, and seldom so prominently as upon this stone. Meninani holds in her right hand a ball of thread, in her left a spindle. In her lap sits a little dog, the only instance known to the writer of a monument bearing a lap dog, the keeping of which, however, was a classic custom. The husband of Meninani is dressed with equal simplicity: he wears an undercoat and a cloak Between his father and mother is the bust of the son, Primus. He is dressed in a tunic, and wears a bulla round his neck.

THE TRIESTE-VIENNA RAILWAY.

At the present time two great undertakings in Trieste are fast approaching completion—namely, the Railway Station, on the north; and Lloyd's Arsenal, on the south part of the town.

It is evidently of the greatest importance that the portion of the above Railway which lies between Laibach and Trieste should be finished, as by this means the whole of the line through Central Europe will be completed; thus connecting the two great and important seas the Baltic and Adriatic, and offering the greatest advantages to commerce as well as to the tourist. The difficulties in the construction of this part of the line were very great, from Trieste lying in a valley, and rendering it necessary to provide an incline of 1 in 100, which causes it to take a round of four miles before arriving on the carse with which the town is surrounded.

To procure land for the Station, it was requisite to remove a considerable portion of an adjoining hill, and fill up about 400 feet of the sea, in which operation 60,000 cubic feet of earth were employed.

The Station will have its own dock, capable of containing about 100 vessels.

Thus far the Railway works. Directing our attention next to the south part of the town, where the foundation-stone of Lloyd's New Arsenal was laid in May last, we find a long row of warehouses already erected, as well as wet and dry docks in process of construction.

The chief entrance of the Arsenal, in the form of a tower, is halt

THE AUSTRIAN LLOYD'S NEW ARSENAL, AT TRIESTE.

finished; as is also the engine-house for raising the vessels. Altogether, the construction of this Arsenal is on as grand a scale as that of the Railway Station.

The designs, which are very tasteful, are by Mr. L. Hanson,; and the superintendence of their execution has been intrusted to the engineer-in-chief, Heyder.

When finished, these two great undertakings will form in the flourishing seaport of Trieste two worthy monuments of the inventive genius of its former fellow-citizen, his Excellency the present Internuncio at Constantinople, Baron de Bruck, who, through his unremitting energy, overcame the formidable obstacles which the execution of these projects at first presented.

CALENDAR FOR THE WEEK.

SUNDAY, June 11.—Trinity Sunday. St. Barnabas.
MONDAY, 12.—Wat Tyler killed in Smithfield, 1381.
TUESDAY, 13.—Battle of Naseby, 1645. Battle of Marengo, 1800.
WEDNESDAY, 14. Battle of Saragossa, 1809.
THURSDAY, 15.—Trinity Term ends. Magna Charta signed, 1215.
FRIDAY, 16.—Duke of Marlborough died, 1722.
SATURDAY, 17.—John Wesley born, 1703

TIMES OF HIGH WATER AT LONDON-BRIDGE

TO CORRESPONDENTS.

M. P., Andover.—The Engraving of the Baltic Fleet Post-office, in last week's ILLUSTRATED LONDON NEWS, is from a Sketch, not a Photograph.
DECLINED.—G. O., near Bremen; M. W. C.; Z. Z.; J. M. G., Great Malvern; and Z. Z. (music.)
ERRATUM.—In our Journal of last week, the inscription line on Mr. Cooke's picture should have read "Zuyder Zee Botter—Returning to Port."
*** The Illustration of the Southwark Clock-tower will appear next week.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, JUNE 10, 1854.

THE war begins to look ominous for the Emperor of Russia, Thrice, if not four times, his troops have been repulsed from before Silistria—on each occasion with heavy loss. The British and French armies, large detachments of which began to leave Constantinople for Varna on the 29th of May, have, ere this, advanced beyond Schumla to the relief of Silistria, either to raise the siege, if its gallant Ottoman defenders still hold out; or to recapture it from the Russians, if the latter have, by dint of desperation, succeeded in taking it. The main interest of the war is at present concentrated in that fortress. It appears certain that no attempt will be made upon Sebastopol until the naval operations of Admirals Dundas and Hamelin can be seconded by a military force in the Crimea. There will be no force available for the purpose, until the defeat of the Russians, before, or in Silistria, shall have been accomplished; and the public need not therefore expect to hear, for some time, any news of importance from the Black Sea—unless, perhaps, there should be a renewed attack upon Odessa. Should there be any truth in the rumour, that such an attack is contemplated, it is tolerably certain that the commercial, as well as the fortified part of the city, will fall under the range of our guns, and that the Russians will not be allowed a second opportunity of making prisoners of any gallant English or French seamen, whose ships may be driven, in fog or in storm, upon the enemy's coast. One such disaster is quite sufficient, and the delivery of the officers and crew of the *Tiger*, or the total destruction of Odessa will probably be the alternative submitted to the judgment of the brave, but mendacious, Oster-Sacken and his Imperial master. The Circassians, under the guidance of the veteran Schamyl, are well supplied with arms and ammunition, and have already done much to distract the councils of Russia, and to afford a diversion in favour of the Sultan. The forts abandoned on the coast have all been seized, and some of them reconstructed by the Circassians. Georgia has been declared independent, and the Georgians, in several important towns, have placed themselves under the protection of the Ottoman flag.

The insurrections in Albania, Epirus, and Montenegro—fomented by Russian intrigue—have been suppressed, with the entire concurrence and partial support of Austria; and the King of Greece has received the well-deserved punishment of seeing his territories, if not his capital, occupied by the troops of the Allies; and of knowing himself disgraced and humiliated in the eyes of his people. Doubtless, the Allies will not trouble themselves to dispossess King Otho of his sovereignty; but will leave the Greeks themselves to arrange matters with a Monarch who has proved himself unable to govern them in peace, or to protect them in war. Nor are these the only clouds that have gathered upon the fortunes of the Czar. His attached friends the Emperor of Austria and the King of Prussia have been securely drawn into the alliance against him. They may dislike the necessity, but they have yielded to it, and have already been dragged so far into the irresistible vortex of events as to have demanded of the Emperor the evacuation of the Danubian Principalities, as a measure essential to the security of Germany, and his refusal of which, within a reasonable time, to be fixed by himself, will be regarded by both Powers as a *casus belli*. Austria and Prussia flatter themselves, in all probability, with the hope that they will be enabled to save the Czar from the consequences of his crimes against Europe, to the extent of securing the integrity of his empire. But events, slow as they may have appeared to the impatient public in this and in other countries, have been too rapid for such a compromise. A few months ago it might have been possible to have engaged Great Britain and France to such an understanding. But that day has passed. Belligerents, before the victory of one, and the defeat of the other, may listen to many suggestions which become utterly idle and useless after blood has been shed. Whatever may be the feeling in the German Courts, there is no feeling of mercy towards Russia in the popular mind of the Western Allies. On the contrary, there is a very strong feeling that mercy would be unwise, and that the only security the world can have against a renewal of such wicked attempts to disturb it, is a partial dismemberment of the Russian Empire, by the restoration of Finland and the Crimea to their rightful owners. If the Czar should yield to the well-meant representations of his German friends, and consent to the immediate evacuation of the Turkish territories, a new difficulty would doubtless arise between Russia and Germany on the one side, and Great Britain and France on the other. But his haughty refusal to listen to terms is much more probable than his acquiescence in a compromise. In this case, Austria and Prussia will be compelled, by their own recorded sentiments, by their foregone proceedings, and by the overpowering current of events, to take a still more decisive part against him, and to obey the leadership of France and England in the future conduct of the struggle. In the meantime, the Czar's prospects in the Baltic are not less gloomy than they are in Bulgaria, in the Crimea, and in Asia. The gallant achievement of Captain Hall at Bekness is but a foretaste and specimen of what British sailors are prepared to do in those regions—and may well increase the anxiety which the people of St. Petersburg begin to entertain with regard not only to Cronstadt, but to the capital itself.

We believe, that up to the commencement of the present week, there were only two armies in the world, of which the Colonels or other officers were permitted to eke out their incomes by pickings and "cabbagings" from the clothing of the soldiers. Those armies were the Russian and the British. Thanks to the force of public opinion long and earnestly expressed, and swelling to its greatest volume in the presence of war and danger, the British Army has been removed from this evil companionship. By Royal warrant, dated Tuesday last, and issued under the auspices of Mr Sidney Herbert, the active and able Secretary at War, the scandal attaching to the British army, from this cause, has been abolished. No one ever pretended that the Colonels of our regiments were overpaid; but it was keenly felt by those gentlemen themselves, that the mode of payment was objectionable; and that it was a hardship upon them to be compelled to make up the fair allowance which was their due, by what was technically called the "off reckonings" upon the clothing of the men under their command. The country will rejoice to learn, that the difficulties, which under the *régime* of the Duke of Wellington were found to be insurmountable, have been effectually conquered; and that in future the Colonels of the British Army will receive a fixed allowance, in lieu of the varying profits derived from the former unsolidierly, but very tailorly practice. No one, we may be certain, will more sincerely rejoice at this change than the Colonels themselves, and no unpopularity will for the future be attached to any grade of the British Army for practices which gentlemanly feeling and sound economy alike condemned. It may be anticipated, however, that the rank and file of the Army will be the greatest gainers by the change. Already the uncomfortable stock has gone to the limbo of other absurdities, and will, in a few weeks, be a portion of attire as purely historical as the cocked hats and pigtails of Marlborough and Wolfe. Other reforms in costume will follow in due course; and perhaps the kilt itself will be found to be a garment as unsuited to countries where musquitoes are abundant as it is to the colder climate, where it is erroneously supposed to have been invented and to be in daily use. If the French alliance had produced no other benefit, it would not have been altogether fruitless, in proving, as it has done, to the military authorities and martinets of this country that comfort and common sense in dress are valuable adjuncts to the success of armies in the field; and that the British soldier, always good and sturdy, may be made still better and more serviceable if he be not distressed and "worried" by needless and oppressive articles of attire.

THE COURT.

The Court has been enlivened this week by the arrival, on a visit to her Majesty as the Queen Consort, of the King of Portugal and his brother the Duke of Oporto, both of whom are Knights of the Garter. His Majesty arrived at Buckingham Palace on Saturday morning. Lord de Tabley and Colonel Wylde were in attendance, and conducted the illustrious visitors to Buckingham Palace, where they arrived at half-past eleven o'clock. They were received by her Majesty at the door of the grand hall. The Queen was accompanied by the Duchess of Kent, but Majesty and the Duke of Oporto paid visits to her Royal Highness the Duchess of Kent, in the afternoon, at Clarence House, St. James's; to her Royal Highness the Duke of Gloucester, at Gloucester House; and to her Royal Highness the Duchess of Cambridge, at her residence, in St. James's Palace. In the evening her Majesty and the Duke of Oporto accompanied the Queen and the Prince, to witness the performance of the French Play.

On Sunday the Queen and Prince Albert, the Prince of Wales, the Princess Royal, the Princess Alice, and the Duchess of Kent attended Divine Service in the private chapel of Buckingham Palace. The Hon. and Rev. Gerald Wellesley preached and administered the Holy Sacrament. The King of Portugal and the Duke of Oporto went in the forenoon to attend the service in the chapel of the French Embassy in Hanover street, Portman-square.

On Monday his Royal Highness Prince Albert, with the Prince of Wales and Prince Alfred, accompanied by the King of Portugal and his brother the Royal Highness the Duke of Oporto, left Buckingham Palace, at twelve o'clock, for Eton College, for the purpose of being present at the delivery of the speeches. In the evening the Queen and Prince Albert received and entertained at dinner the King and the Duke of Oporto, honoured the Royal Italian Opera with their presence.

On Tuesday the Queen, attended by the Hon. Eleanor Stanley, Major-General Buckley, and Captain Du Plat, visited her Royal Highness the Duchess of Gloucester, at Gloucester House, and later visited her Royal Highness the Duchess of Kent. In the forenoon, Prince Albert, the King of Portugal, and the Duke of Oporto inspected the Wellington Barracks. Prince Albert afterwards rode on horseback, accompanied by the Prince of Wales, and inspected the new hotel at the Paddington Station of the Great Western Railway. At one o'clock the King of Portugal and the Duke of Oporto left the Palace, for the residence of Count Lavradio, the Portuguese Minister, in Gloucester-place, where his Majesty had a diplomatic levee for the reception of the foreign Ministers resident at the Court of Great Britain. Later afterwards returned at four o'clock to Buckingham Palace. In the evening the Queen and Prince Albert, accompanied by the King of Portugal and the Duke of Oporto, honoured the Marchioness of Ormonde and Mrs. Cavendish with their company at a grand ball, at their residence, in Piccadilly.

On Tuesday the Queen held a Privy Council, at which the Marquis of Anglesey and Lord Belhaven were sworn in respectively as Lords-Lieutenant of Anglesey and Wigtonshire.

The Countess of Mount Edgecumbe has succeeded the Viscountess Canning as the Lady in Waiting. Lord Camoys and the Hon. Mortimer West have succeeded the Marquis of Ormonde and Mr. F. Cavendish, as Lord and Groom in Waiting.

Her Royal Highness the Duchess of Cambridge and the Princess Mary visited her Royal Highness the Duchess of Kent, at her residence, Clarence-house, St. James's, on Wednesday.

The Duke of Devonshire was seized with an attack of paralysis at an early hour on Friday, at Chatsworth. The attack was less serious than was at first imagined; and his Grace, having been placed in his carriage by his own desire, was taken to London direct, in order to secure the best medical advice. It is feared that his Grace's right side will be permanently affected.

Lieut. John O'Reilly, R.N., had an interview with Colonel the Hon. C. Grey, at Buckingham Palace on Tuesday, to submit drawings by his son, Lieutenant Montagu O'Reilly, of her Majesty's ship *Retribution*, of Odessa, Varna, the Sulinch mouth of the Danube, and the bombardment of Odessa, for the inspection of his Royal Highness Prince Albert.

THE GREEK INSURRECTION IN TURKEY.

A BLUE BOOK, containing nearly three hundred pages of official correspondence with reference to the Greek Insurrection in Turkey, has recently been laid before Parliament. These documents—consisting principally of letters addressed by Mr. Wyse, the British Ambassador at the Court of Athens, to the Earl of Clarendon, and his Lordship's replies—are full of information, and, we may add, of warning.

The conduct of King Otho from the commencement of the Eastern crisis has been distinguished by duplicity. His pledge that every officer in his army who joined the insurgent troops should be expelled his service, was rendered worthless shortly afterwards by the fact that General Tzavellas, who placed himself at the head of the rebels, retained his position as Inspector-General of the Greek Army; and the assurances of the Ministry as to the desire of the King to prevent his subjects from joining in the insurrection, were belied by the acts of his Generals, who were at the same time, openly and with his concurrence, aiding the insurgents. But King Otho, in taking upon himself the difficult task of covertly co-operating with the Emperor of Russia, while openly professing to be on the most friendly terms with the Porte and her Allies, over estimated his powers of deception. The Governments of England and France were not to be trifled with. The insurrection in Albania, Thessaly, and Epirus was but another phase of the great Russo-Turkish Question; the Government of Greece was but an instrument in the hands of the Czar, and the struggle for independence of the Greeks was but a cloak to cover a diversion in favour of Russia.

In a letter, dated March 17, 1854, Mr. Wyse made known to the Earl of Clarendon the answer of the Greek Ministry to the demands for explanation made by the English and French Governments. M.M. Tricoupe and Metaxa represented, on behalf of King Otho, that the Government had incurred unpopularity by its efforts to prevent the people from taking part in the insurrection; that the nature of the constitution of the country was such as to render the Government unable to take more efficient means, but that it was willing to do its best with that object "if only allowed a little breathing time."

Nor are these misrepresentations (continued Mr. Wyse) confined to diplomacy. The press, too, has been tampered with. * * * It is the nation, in their colonies, which bears forward the reluctant Government; but it is the Government as we too truly know—that bears forward the hesitating and reluctant nation.

Mr. Wyse was fully aware of, and emphatically denounced, the conduct of the King of Greece from the very first; and already, at that early period of the negotiations, spoke of it as "differing in nothing from open war, except in the preliminary ceremony of a proclamation." In a letter, also bearing the date of March 17th, his Excellency informed the Earl of Clarendon of an interview which had taken place between M. Rouen, on the part of the French Government, and the King and Queen of Greece:—

In the four hours M. Rouen spent in endeavouring to convince them of the obligations by which they were bound, the responsibilities which they accepted, and the dangers to which they were exposed, he could perceive no other impression had been made than a feeling of resentment at the course pursued by England and France, and a fixed determination to abide by it, with unconquerable resistance to their counsels. The King he did not find received a Divine commission to protect the Greek race against Mahometan oppression by every means in his power; and all warning of impending peril he regarded as menaces affecting his dignity and independence. Gentle means might win him, but against threats he was inflexible.

It was in vain that M. Rouen deprecated these unmerited misinterpretations; he left him more than ever resolved to identify his course with that of his people—in other words, to lead on, if possible, and to extend the movement.

The Queen was, if possible, more excited (*emportée*). She indulged in the strongest invective against M. Rouen and the French Government; and, when he ventured to suggest that the movement was not national, but emanated from an intrigue of the Court, both started up, with tears in their eyes, and the King exclaimed, "What! not national? It is the whole nation as one man; and such language proves only you do not comprehend us or the Greek nation."

In another letter, dated March 27th, Mr. Wyse mentioned the fact of the King having summoned a Council of his Ministers, at the commencement of the outbreak in which the following questions were proposed:—

1. Whether the revolt, as the Radoviza quarrel was interpreted, was national?
2. Whether the King of Greece should take part in it?
3. Whether it should be done openly or secretly?

The two first questions (said Mr Wyse) were decided in the affirmative, and on the third it was determined the King should proceed secretly. There is now (he added) question of longer any question of remaining with reserve to the insurrection on the part of the Greek Government; * * * on the power it has been for many years in preparation to raise, at the head of which are the King and Queen of Greece, and the instruments of which are partisan Russian Ministry, is clear to the commonest observer.

The reply of the Earl of Clarendon, to these and other less important despatches, contains a concise statement of the whole policy of the English Government with regard to Greece:—

Let the Greek Government (said his Lordship, under date April 22nd) publicly disavow the criminal acts of those who have ostensibly quitted its service to swell the ranks of the insurgents, or at least a period, limited to a few days, within which every person now or hereafter in its service, who has proceeded to take part in the insurrection, must return into the Greek territory under pain of future punishment, in case the warning is disregarded; let it officially declare that it will never again admit into its service any persons who have so left it, dismissal from it, in order to join the insurrection, and in case it refuse to release from his obligations toward it, any person who may apply for permission to retire, but whose motives for making the application are not at all open to suspicion. Above all, let the language of the Court and its adherents correspond with that of the professions of the Government, and let it not be supposed that the King of Greece is so unmindful of the obligations of his position towards England and France as deliberately to encourage practices opposed to their policy, or insensible to the perils which he will have to encounter, if he braves the resentment of those two Powers.

The Government of Greece may rest assured that England and France will not allow it with impunity to thwart their firm resolution to uphold the Turkish Empire; and it cannot doubt that those Governments have the means of making their determination respected. If, as the result of the employment of these means, the throne of Greece should crumble away, and the present dynasty give place to another form of government less subject to the caprices of ambition, and more disposed to devote its operations to the legitimate development of the resources which, from its geographical position, the Greek State counts as within its power to realize, there is no liability for any such result, and for the consequences which may ensue will rest with those whose misconceived views and unfriendly conduct will have converted an enemy into a friend, which England and France would be the last to maltreat or forsake.

On the 11th May, 1854, Mr Wyse announced the seizure, during the skirmish at Petra, of certain important correspondence between the leaders of the insurrection and the Greek Government. The principal portion of this correspondence consisted of two letters—one from General Grivas, to a friend whose name was not specified, the other from Tzavellas to the private secretary of the King of Greece. The first of these letters, bearing the date of April 2nd, contained no information of any consequence, and was written at a time when the Government had not openly taken part with the insurgents. The writer after expatiating on the "glorious struggle" for the independence of Greece, in which he and his confederates had embarked, deplored the bad condition of the troops, and blamed the Government for not "appointing proper persons to a regular army at a regular pay." The letter of General Tzavellas was more to the point. It was dated April 13 (25), and was evidently intended for the perusal of King Otho. It contained, besides various details as to the condition of the troops, a request that several battalions should be sent forthwith to Arnino, *with orders to desert immediately* on their arrival, and place themselves under his command." This General, it should be remembered, was at this time in the service of the Greek Government.

Armed with these proofs of the guilty participation of King Otho and of the Greek Government in the outrage against the Porte, the Allied Powers proceeded to carry out their policy with respect to Greece, as exposed in the letter of the Earl of Clarendon, from which we have quoted. An ultimatum was accordingly presented to the Greek Government on the part of England and France; which the King at first rejected, alleging as his excuse that his Ministry had resigned; but which, on the arrival of sixteen English and French ships on the shores of Epirus, and the landing of the Allied troops, he duly and formally signed.

As long as the Grecian territory continues to be thus occupied, the world has a guarantee for the good behaviour of King Otho. We doubt whether he could be depended upon for one moment after the withdrawal of the Allies.

IMPERIAL PARLIAMENT.

HOUSE OF COMMONS.—THURSDAY.

The Exchequer-bonds (£8,000,000) Bill was read a third time, and passed.

THE WAR MINISTER.

On the order of the day for the House resolving itself into a Committee of Supply,

Lord J. RUSSELL entered into explanations respecting the more efficient administration of military affairs during a time of war, and stated that it was the opinion of the Government that the management of the War Department should be separate from that of the Colonies—with which it was now united. The Government had, therefore, come to the conclusion that the appointment of a War Minister would be expedient. The financial department would, however, be still left to the Secretary at War. It was not deemed advisable to abolish the office of Commander-in-Chief, which the Government, after a careful consideration, regarded as a most useful and necessary appointment.

Mr. HUME expressed a hope that the Government would be able to lay on the table some definite plan, before asking for any further estimates. He was always desirous that there should be one head to the War Department, who should be a Cabinet Minister. He objected to the plan of entrusting the Treasury with the management of the Commissariat; and, in conclusion, he expressed a hope that the clothing of the Army would be immediately altered.

Mr. E. ELLICE thought the statement of the noble Lord far from satisfactory, although he quite agreed that there should be a head of the Military Department responsible to that House for the expenditure of the Army. The present arrangement might do, if intended to last only through the war; but, if it were designed to make it permanent, he urged that there ought to be one head of the War Department responsible to the House for the general expenditure.

Mr. RICH thought the statement of the noble Lord so far satisfactory, that he would not proceed with the motion on the subject of which he had given notice.

Colonel DUNNE thought that the person to be appointed ought to be a military man.

After a few words from Mr. M. GIBSON and Mr. WILLIAMS, the subject dropped; and the House went into Committee of Supply.

Several votes of the Civil Service Estimates were agreed to.

Upon the vote £8,676, to Defray the Charges of Salaries and Expenses of the Two Houses of Parliament and Allowances to Retired Officers, a discussion of some length ensued; in which it was contended —by Mr. Hume, Mr. French, Mr Spooner, and other hon. members—that, before any more more money was granted, an estimate of the total cost of the works should be furnished.

Upon a division, the vote was carried by a majority of 57 to 35.

HOUSE OF LORDS.—FRIDAY.

THE WAR.

In reply to the Earl of Hardwicke, the Duke of NEWCASTLE said that an ambulance corps had been established by this country for the first time. The object of this corps was to render more effectual the necessary assistance on the field of battle, in conveying the wounded soldiers with the utmost care possible to the nearest place for their relief. A screw steamer was engaged by the Government, which would start with this corps for the East the day after to-morrow.

NEW SECRETARY AT WAR.

The Earl of DERBY asked whether it was true that Lord J. Russell had accepted the office of President of the Council? and he wished further to ask, in regard to the new office of Minister of War, whether the noble Earl at the head of the Government was prepared to explain to the House and the country what were the precise functions and duties proposed in connection with that office? (Hear, hear).

The Earl of ABERDEEN said, his noble friend, the member for London, had accepted the office of President of the Council, and would continue in the House of Commons. He had further to inform the noble Earl that it had been decided that the separation of the functions of the Secretary of State for the War and the Colonies should be carried into effect before the next meeting of the House. The functions of the new Minister of War would be the same as those now discharged by the Secretary of State for the Colonies. What further changes hereafter might take place in the administration of the Military Department he was not prepared to state. The War Secretary would possess all those powers and functions now held by his noble friend near him.

The Earl of DERBY asked whether the new Secretary of State was to have anything to do with the control of the financial department?

The Earl of ABERDEEN: The new Minister will have nothing whatever to do with the control of the financial department.

Lord PANMURE expressed his gratification at this arrangement of the Government.

The Earl of DERBY asked the noble Earl, whether the new Minister would have anything to do with the finances of the Army, or with the patronage of the Army; and whether it was intended only to appoint this Minister during the war?

The Earl of ABERDEEN said that the new Minister would possess neither the one power nor the other. The Minister of War would have control over the administration of the Army. And this he (the Earl of Aberdeen) thought would be found quite sufficient to occupy his utmost attention. "As to what may happen in time of peace—if that happy day should ever come (Laughter)—the noble Earl will have the goodness to wait for that event before it will be necessary to determine what are to be the functions of the new Minister during a time of peace."

THE ORDER OF THE GARTER.

The Earl of ALBEMARLE moved for the appointment of a Select Committee to inquire into the administration of the funds of charities connected with the Military Order of St. George and the Garter; and more especially with the Royal Grant of King Edward III., commonly called the "Old Dotation," and that of Queen Elizabeth, commonly called the "New Dotation." The noble Earl, in a speech of much length, brought the case of the Knights of Windsor before the House.

The LORD CHANCELLOR opposed the motion on the ground that this was a case for the ordinary legal tribunals of the country, rather than for their Lordships' House.

The motion was ultimately withdrawn.

The Nuisances Removal Bill and the Dublin Port Bill severally passed through Committee.

The Consolidated Fund (£8,000,000) No 2 Bill was read a third time and passed.

The High Treason (Ireland) Bill and the Income-tax No. 2 Bill, were severally read a second time.

The Industrial and Provident Societies Bill and the Church Buildings Acts Amendment Bill, were read a second time.

HOUSE OF COMMONS.—FRIDAY.

LORD J. RUSSELL'S APPOINTMENT.

Upon the motion of Mr. HAYTER, a new writ was ordered to issue for the election of a representative for the city of London, in the room of Lord John Russell, since his election, has accepted the office of Lord President of the Council.

THE FALKLAND ISLANDS.

Mr. G. DUNDAS asked the Under Secretary for the Colonies, whether any official information had been received regarding a fracas, said to have occurred at the Falkland Islands, in which the American whaler *Rachel* was seized by her Majesty's ship *Express*; and also asked whether there was any objection to place the correspondence connected with the subject on the table of the House?

Mr. PEEL said that the whole of the circumstances of the case were under the consideration of the Government; and it would at the present time be very inconvenient to lay the correspondence on the table.

THE NEWSPAPER STAMP.

In reply to Mr. M. Gibson, the CHANCELLOR of the EXCHEQUER said that the state of the law in reference to the periodical press and the Newspaper Stamp was still under consideration.

SUPPLY.

The House then went into Committee of Supply upon the Civil Service Estimates.

The greater portion of the night was occupied by a discussion upon the different votes proposed.

At a quarter past twelve o'clock the House resumed, the chairman reported progress, and asked leave to sit again.

The Common Law Procedure Bill, and the Bills of Exchange Bill, were severally read a second time.

LATEST INTELLIGENCE.

AUSTRIA AND PRUSSIA.

The Emperor of Austria and the King of Prussia were to meet yesterday (Friday) at Chemnitz or Tetschen, on the Bohemian frontier. Counts Buol Schauenstein and Alvensleben, from Vienna, and Count Thun, from Berlin, had been suddenly summoned by telegraph to attend this unexpected conference. Baron Manteuffel accompanied the King. Count Arnim was also summoned, but illness prevented him from attending. The object of this meeting is totally unknown, but it is conjectured to have some relation to Russian proposals. As the King of Prussia is known to have expressed a decided reluctance to engage in hostile demonstrations against the Emperor of Russia, it is supposed that he has proposed a conference with the view of making important modifications in the Austro-Prussian treaty. If that were the case, however, M. de Manteuffel is not the man whom he would have taken with him, for it was under the advice of that Minister that he agreed to the treaty.

THE RUMOURED ADVANCE OF THE RUSSIANS.

The news of the advance of the Russians towards the position of the Allied armies created considerable uneasiness in the moneyed world of Paris on Thursday. The French Funds fell nearly 2 per cent, and the Railway Shares followed the course of the public securities, though not quite in the same proportion. The determination of the Russian General to bring his adversaries into action as soon as possible is looked upon not only as an indication of confidence in his own strength, but of his determination, if he can, to meet Omer Pacha in the field before the arrival of the English and French armies. It is not likely, however, that Omer Pacha will be induced to fight a pitched battle until the arrival of his powerful auxiliaries; or that the English Generals will hazard an encounter under disadvantageous circumstances. It is, in fact, not yet known whether the object of the English army, in advancing Varna, is to make a diversion in favour of Silistria, or to cover Schumla in the event of Omer Pacha being forced to retreat. The semi official journals of Germany declare that the Russian army on the Danube is 250,000 strong.

GREECE.

Letters from Athens, of June 1, state that the Ministry has taken the oath, and that all its acts are of a nature to give complete satisfaction to the Porte. Epirus is pacified, after a fresh advantage gained by the Turks at Badowitz. The accounts from Thessaly are not so satisfactory. Nothing is known of the state of affairs in Macedonia. The presence of the French troops has produced an excellent effect: their appearance is admirable. The accounts from the provinces are tranquillising.

The private telegraphic despatch, announcing that the Ottoman troops had suffered a defeat in Thessaly, is said to have been strangely exaggerated. The engagement in question had not the importance ascribed to it. Reinforcements, moreover, have been sent to Thessaly, and it was hoped that in that province, as well as in Epirus, the odious projects of the rebels would be defeated.

THE BREVET.—The 20th of June, the anniversary of her Majesty's Accession to the Throne, is the day fixed upon for the approaching Brevet.

Note. The sign — denotes below the average.

The corrected reading of the barometer decreased from 29·66 inches at the beginning of the week, to 29.62 inches by the afternoon of the 2nd; increased to 30.08 inches by the morning of the 5th, and decreased to 29.66 inches by the afternoon of the same day, increased to 30.09 inches by the afternoon of the 7th; and decreased to 29·99 inches by the end of the week. The mean for the week, at the height of eighty-two feet above the level of the sea, was 29·905 inches

The mean temperature of every day has been much below its average, and that of the week was 51·6°, being 5·6° below the average of the corresponding week during 28 years.

The range of temperature during the week was 22·2°, being the difference between the lowest reading of the thermometer on the 4th and the highest on the 8th.

The greatest daily range of temperature during the week was 21·9°, on the 8th; the least, on the 4th, was 10·6°.

Rain fell during the week to the depth of rather more than one tenth of an inch.

The Weather has been dull and cold, the sky has been overcast almost constantly.

Lewisham, June 8, 1854. JAMES GLAISHER.

HEALTH OF LONDON.—Within the week ending June 3, the births of 739 boys, and of 735 girls, were registered, these numbers exceed the averages of the same week in the nine preceding years, by 84 and 49 respectively. The deaths registered within the same period were 561 males and 529 females, exceeding the average of the preceding ten years, corrected for increase of population, by 83. The long-run per cent of cold weather, which has now continued for seven weeks, with temperature lower than usual, has been accompanied with a high mortality. In the past week no less than 269 deaths were caused by epidemic diseases, while in the previous week 214.

REMOVAL OF CITY CHURCHYARDS.—A very numerous and influential meeting of clergymen and other parochial members of the City of London, on the provisions of the Church Buildings Acts Amendment Bill, was held on Wednesday, in the large room of the London Coffee House, Ludgate-hill. Mr. Bothamley, Esq., presided, and addressed the meeting at some length. The Church Building Amendment Act, 1851, was a measure which was introduced under false colours. That bill proposed to come between them and the clergy, and the member of their churches, and carry their places of worship away without reference to their wishes. The provisions relating to the churchyards were also opposed to the interest and feeling of the community, who would regard its operation as a desecration of the dwellings of the dead. The meeting was afterwards addressed by Mr. R. S. Thompson, Messrs. J. J. Toogood, Rector of St Andrew's, and other gentlemen; and, after some opposition, various resolutions were passed in condemnation of the bill. It was also resolved to petition Parliament to reject the bill.—A meeting of the Fellows of Sion College is summoned to be held at the College Hall on Tuesday next, to take into consideration the measures proposed relative to the churches and burial grounds of the city of London, in the Church Building Acts Amendment Bill, now before the House of Commons.

THE HORTICULTURAL SOCIETY.—On Saturday last the second fortnightly exhibition of the Horticultural Society was held at Chiswick. The weather, though fine, was cool, and scarcely propitious for a floral exhibition; and consequently, though some 4000 or 5000 persons were assembled, the company was not so numerous as might have been expected. The flower-beds and shrubs in the Gardens, and the trees and turf are in a most flourishing order. The specimens exhibited for the prizes were of the highest excellence, the fruits being particularly fine.

SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS.—The annual general meeting of the friends and supporters of this society took place on Tuesday, at the Hanover-square Rooms, the Marquis of Westminster in the chair. It appeared from the secretary's report of the proceedings of the Society during the past year that upwards of 200 cases of cruelty had been prosecuted under the superintendence of the society, and conviction had in most instances been obtained. The financial statement of the past year was highly satisfactory, upwards of £1000 having been bequeathed to the funds by various individuals, who were formerly supporters of the society.

ST. BARTHOLOMEW'S HOSPITAL.—At a meeting of the governors of this hospital, on Wednesday afternoon, Dr. W. S. Kirkes was elected Assistant Physician, after one of the severest contests in the annals of hospital electioneering; beating his opponent, Dr. Hue, by 20 votes. Mr. Coote was elected Assistant Surgeon.

MURDER AT NEWINGTON.—On Tuesday last a woman named Rosa Murray was murdered by one of her lodgers, a man named Simmons, who has been committed to Newgate.

TOWN AND TABLE TALK ON LITERATURE, ART, &c.

ARTISTS and connoisseurs in art, who admire and copy Mr. Cuningham, are putting themselves in a very unnecessary flutter about the arrival of Dr. Waagen in England. The learned Doctor, we are told, is the author of a well-known work called "The Treasures of Art in England;" he is, also, the Director of the Berlin Gallery—above all, he has come, the papers assure us, on a visit to Prince Albert. How easy it is to couple unconnected and never-to-be-connected circumstances. This visit of the Doctor's is preliminary, we are told, to his appointment as the salaried director of the National Gallery. At least thirty Royal Academicians are in a sad way about the present keeper. Mr. Coningham is indignant at the notion of a German being appointed to so responsible an office. All this indignation is premature. Dr. Waagen has arrived in England to pay a visit to his friends, Sir Charles and Lady Eastlake, and to receive—what is so well due to him—the congratulations of his friends in this country on the publication of his most useful work, "The Treasures of Art in England." For our own parts, we confess we should not be sorry when we heard that Dr. Waagen had been actually appointed Director, and on a good salary. He would do his work well. The appointment, as the Commons' Committee recommended, was not to be for life, but during good conduct. Now, is it likely that a man so distinguished as Dr. Waagen would throw up a most honourable office for life in his own country, to receive a temporary appointment in this? We think not. Much as we should like to see Dr. Waagen the new Director of our Gallery, we should—chiefly for his own sake—in some degree regret the appointment. He would, we repeat, do his work well; but he would subject himself to more unnecessary annoyances than his sensitive nature would well endure. Mr. Panizzi has outlived his calumniators; abuse has done him good, and made him render extra services to the country that employs him; but it is not every one who possesses his abilities—and, above all, his determination not to give in.

The Guild of Literature and Art has obtained its bill; and all its operations will now be regulated "pursuant to Act of Parliament." We are glad of this: the Guild is now in a better position than the Literary Fund. It is true that the Fund has a large funded property; and that the Guild has only a small capital, won by the persevering exertions of some dozen or sixteen authors and artists. But the same means to increase its funds is now open to the Guild, that for half a century, at least, has been open to the Fund. Not that the Guild is started to lessen the useful exertions of the Literary Fund—there is ample room for both—but to do its usefulness in its own circle, and to set the Fund a better example. Mr. Dickens, it will be remembered, is one of the leading managers of the Guild: he helped to start it, he has watched it through infancy and boyhood, and now sees it attain manhood with a fine field for good before it.

The west and last relief of the Nelson Column, just erected, is not the worst. It embodies an incident connected with the Battle or St. Vincent; was designed by the late Mr. M. L. Watson, whose fine statue of Flaxman is an enduring example of his genius, and carried out, many of our readers may be glad to know, after his death by his friend, Mr. Woodington. When are we to see the four lions at the four angles? Oddly enough, the largest contributor to the Nelson Monument in Trafalgar-square, was the present Emperor of Russia. We taught the Romulus of Russia the art of ship building; he left his nation a great people; we sold our ships and guns to (shall we call him?) the Augustus of Russia, and Nicholas turns those very arms against us. Truly (if we are to fall), we are much in the condition of the poet Waller:—

> That eagle's fate and mine are one
> Which on the shaft that made him die,
> Perceived a feather of his own,
> Wherewith he wont to soar so high!

But our fates will not be altogether the same. We have no fear of the result.

The Mirrors of the month are not particularly brilliant: *Blackwood* hits Ruskin hard; and *Fraser* is up to his mark. A new Miscellany (the "National"), now in its fourteenth number, has a readable but too short article on "Newspaper Stamps." Here is something which our readers will like to hear about the *Times* and ourselves:—

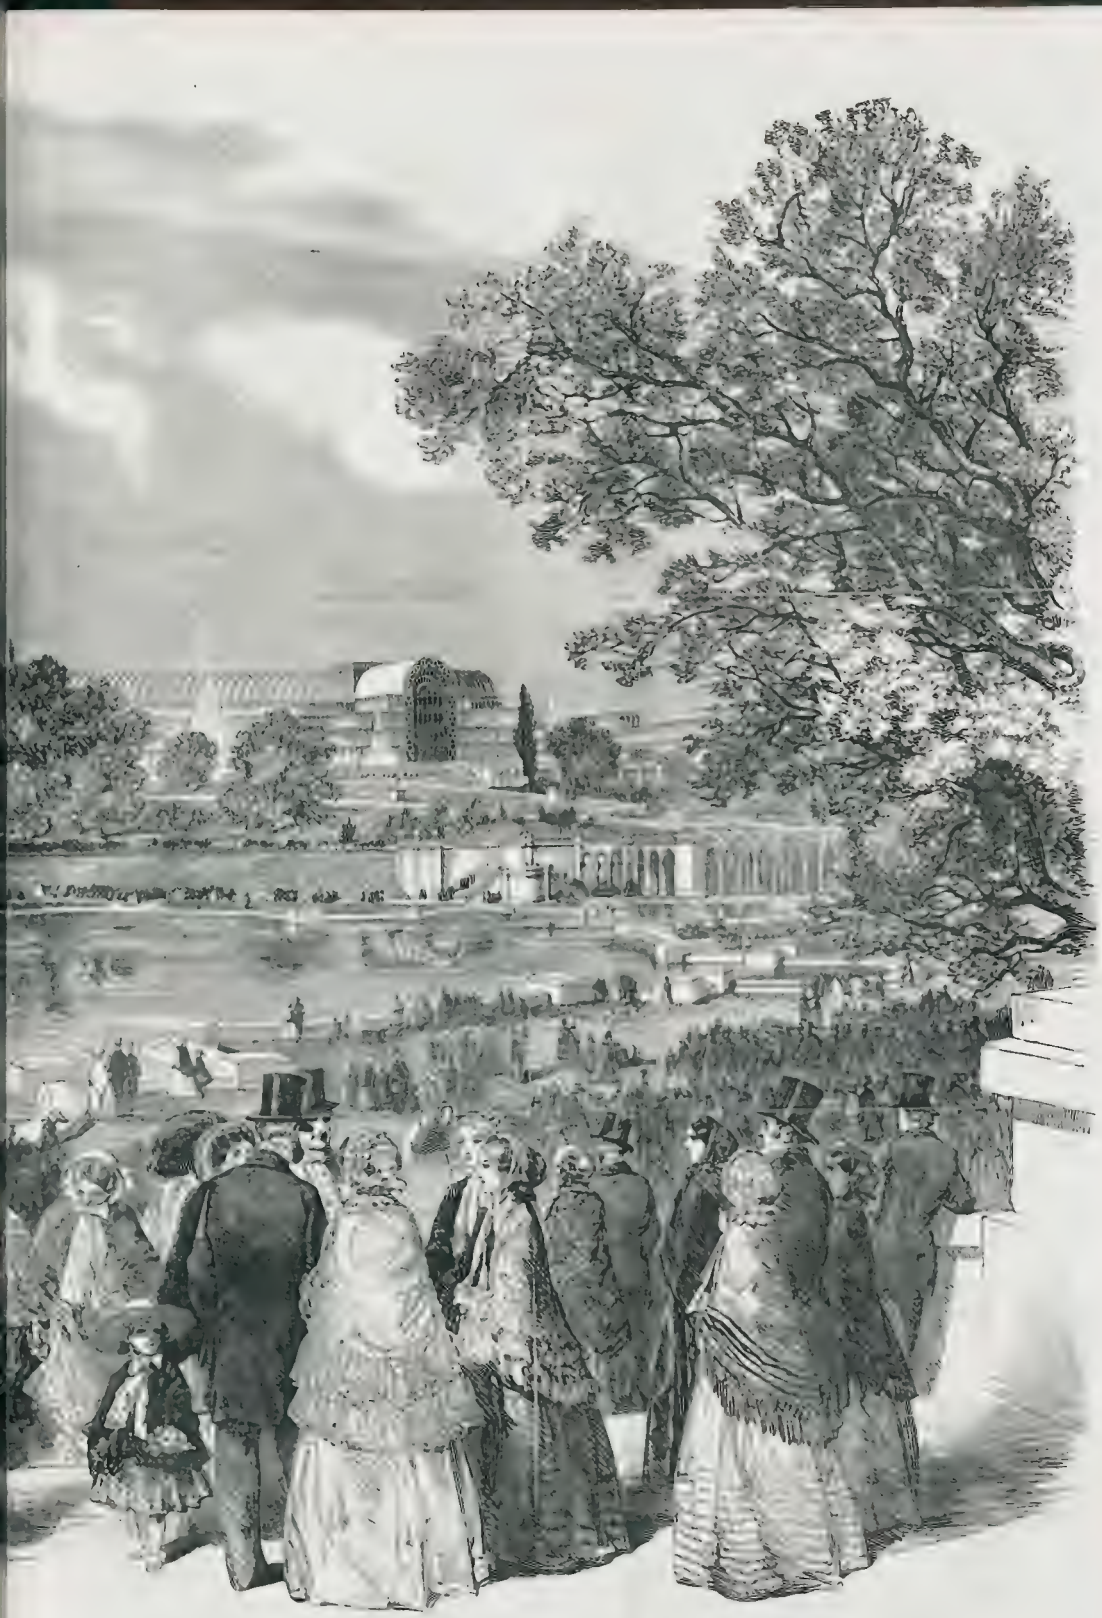
The sale for the *Times* during the three years over which the return extends, shows something like an increase of nearly a million a year. In the year 1852 the number of stamps issued to it was, in round numbers, fourteen millions. The daily sale, therefore, is something like 45, 00 copies, which, large as the enumeration is, is nearly a third of a London paper, is something insignificant compared with the population of Marylebone or Tower Hamlets, to say nothing of the great city in which it is published. To our thinking, nothing is more curious in the history of this great paper, than the smallness of the number of its necessary and intelligent for the eyes of the world. Who does not see the *Times*? Who fancies himself up to the information of the day who does not read the *Times*? We have seen other daily papers, and have admired but not satisfied. The ablest man who ventures to talk of politics and news at a public table or in private life, and who has not seen the *Times*, is only too apt to hear his facts contradicted, and perhaps overthrown by a man of very inferior talents, or no talents at all, who has seen the *Times*. And yet forty-five thousand copies are found sufficient for the world! By how many people the *Times* is read for the forty-five thousand how many are there to one who buys a copy—one to one house, to one club, or to one public library—it is impossible to say. We would form a curious piece of statistics. Before every public tavern is one copy of the *Times* (or by how many times is it seen before the tavern under the auspices of the post!), and before it is one of the other great London papers through the post. How many have read the *Times* in the course of its life? England for Australia or New South Wales? We confess that figures staggered us when we attempted the computation. Jedediah Buxton would quail before the calculation, and Babbage's machine, should it attempt its solution, would become, if possible, more useless than it is at present.

After the sale of the *Times*, nothing is more curious in the return than the sale of the ILLUSTRATED LONDON NEWS. Apparently it is decreasing in sale; for the return shows a decrease, without accounting for it. We say apparently, for the decrease is accidental, as the increase was casual. In 1851 we find an issue to it of seven millions of stamps; in 1853, of only five millions, and in 1854, of only four millions odd. The decrease has been accounted for in a most unanswerable manner. A paper that depends for its sale upon illustrations will have its sale regulated by the number and price of the events of the events requiring illustration. Thus, the Exhibition of 1851 swelled the daily sale to an additional three millions; and in 1852, the Duke of Wellington's death and funeral carried its sale to more than an extra million. The year 1853, in spite of Chobham, was all but barren of events demanding pictorial illustration. The paper then fell back upon its large, independent, and steady circulation. The year 1854, with the Black Sea and the Baltic, Sebastopol and Napier, Bomarsund and Odessa, is, we are assured, and know, swelling the sale to its Great Exhibition and Wellington circulation. What odd things affect the sale of a public paper! A bet was once made, in the days of the well-known Jack of Norfolk, and that able editor, Mr. Barnes, whether the sale of a daily paper was greater or not when the party whose principles it advocated was or was not in power. As in all matters where bets are introduced, opinions varied very much, a referee was named. The referee was Mr. Black, of the *Morning Chronicle*, who still lives in his retirement in Kent, and who told us, not many months ago, Black, with his great experience, favoured, and unprejudiced, facts in favour of those who said that a journal was better when its own opinions "You have your own party, as purchasers," said Mr. Black, "and you have the discontented (always an increasing body), who are dissatisfied with whatever party is in power."

Should this brief allusion to Mr. Black reach his eyes in the Weald of Kent, he will not be displeased with our remembrance of his many services to newspaper literature.

James Montgomery, the poet, has left several handsome legacies to charitable institutions in Sheffield. Poets do not die in debt in our day. We shall have them (and why not?) becoming rich men. Goldsmith died three thousand pounds in debt. "Was ever poet," said Johnson, "so trusted before?" But this was a long time ago. The Nestor of our generation of poets is a rich banker.

THE CRYSTAL PALACE, AT SYDENHAM,



WILL APPEAR WHEN COMPLETED.—(SEE NEXT PAGE.)

OPENING OF THE CRYSTAL PALACE.

THE Crystal Palace of 1854—the second and improved edition of the "World's Fair" Fabric of 1851—opens this day, with honours that have not often been before granted to a commercial enterprise. The Queen, with her Royal Family, and her kinsman, the King of Portugal, join, assist, and dignify the inauguration of the Palace and Park which have grown out of the little Victoria Regia Conservatory at Chatsworth. But these are old stories. On this day it is not writing, however eloquent, that our readers require: those who live within a reasonable distance will prefer a railway ticket to any number of adjectives; and those who study our pages in regions too far removed to dream of visiting Sydenham by land or sea, will, in the first instance, turn to our Illustrations in preference to our descriptions. Under these circumstances, the favourite studies of Mr. Gradgrind, "Facts," will be considered most appropriate by all classes.

People want to know how to get to the Crystal Palace, and something of the plan and geography, and curiosities of the place, when they get there. This information, with the help of an accurate Plan, prepared from actual measurement, we will endeavour to supply.

The railway from the London-bridge Station will commence running special trains up to the South Wing of the Palace at ten o'clock a.m. At eleven o'clock, Exhibitors provided with cards will be admitted; and at two o'clock, Exhibitors' Assistants; but the Assistants will only be admitted at one entrance—viz., the Railway Station, at the Norwood end.

In addition to those who, traversing the intermediate distance by carriage or by steam-boats to London-bridge, will there take the rail, a large number of persons may be expected to find their way to Sydenham by the road in private carriages, and these will have a remarkably pleasant route, clear of the usual obstructions of slow traffic from the end of the town west of Charing-cross.

For the benefit of those coachmen who have not yet ventured into regions so unfashionable, as well as for cab-drivers leaving "the stones" for the first time, we give the following directions:—

FROM BELGRAVE-SQUARE TO THE CRYSTAL PALACE.

Drive to *Vauxhall-bridge*, thence by Kennington Turnpike or the Wandsworth-road, to Brixton Church; leave the Church on the right hand, and when you reach the George Canning Tavern, with its compo statue of that statesman, turn sharp to the left, and then on, passing a narrow bridge over the dirty Effra; go on past the Half Moon through the village of Dulwich, taking care, as there are several cross-roads, to leave the Church on the left hand, and the Greyhound Inn and Dulwich College on the right; keep straight on through a turnpike—and thus so far you can travel without a single hill, with galloping ground from the moment you left the stones. On passing the turnpike, the hill on which the Palace stands, rises visibly. A few minutes brings you, if you are a season ticket holder or exhibitor, to the North Transept. If an invited guest to the Central Transept, there, after descending, your coachman will find attendants in the Crystal Palace livery stables to take charge of your carriage and horses.

It is understood that the road just described will be that adopted by the Royal carriages, and will be stopped up beyond Dulwich after one o'clock. In that case a deviation may be made, to the right or left, by the more hilly roads, all leading to the north or south entrances of the Crystal Palace.

To those not likely, in full evening dress, still be the rule, but may well go on horseback, it may, however, be as well to mention that for the latter half (somewhat more than half) of the delightful ride (of which nearly half is over grass) by Wandsworth-common, up the Wandsworth-road, over Clapham-common, to Balham-hill, and then turning into Clapham-road, keeping to the right, across by a bridle road into the upper part of Tooting-common, and so on, through the trees, to Streatham Church; at Streatham, dropping to the right for a quarter of a mile along the Croydon-road, you reach Streatham-common; turning sharp to the left across the common, you proceed on to Gipsy-hill, and then through Norwood past the Nunnery, reach the Gipsy-hill station, which have "dropped out" under the patronage of the Crystal Palace workmen and visitors.

THE PALACE.

The new Palace stands on the slope of a steep hill, running nearly north and south, parallel with the Brighton Railway. This position rendered it necessary to raise the rear of columns facing the garden terrace on brick pillars and in this rear a basement story, sometimes called the Paxton Tunnel, has been formed, running the whole length of the Building. In this tunnel the steam apparatus for warming fifty miles of pipe has been erected; and a light and convenient space has been provided for exhibiting heavy machinery in motion and agricultural implements. Near the two extremities of this basement, north and south, two wings extend, each 576 feet in length, flanking the garden terrace. A tower rises, in the form of a Greek cross, at the extremity of each wing; and each tower contains at its summit a tank containing 200 tons of water, which can be easily distributed, for any purpose, throughout the Building.

The North Wing affords a way to the garden, from the Queen's private apartments, as well as, also for exhibitions of a private nature. The South Wing forms a cover way from the railway station.

The present Building is rather so long nor so broad as that in Hyde Park, being 1608 feet in length, and 384 feet broad at the widest part—the Central Transept.

The area of the main building covers 22 acres, that of the wings three acres more. If the glass were laid side by side, it would extend to a distance of nearly 30 miles; and if laid end to end, to 200 miles.

The ground floor and wings afford a superficial area of nearly 600,000 feet.

The effect of the diminished length and breadth of the Sydenham Building is increased by the additional height of the arched, or waggon roof and the three transepts—two being of the same dimensions as the one in Hyde-park; the third, or Central Transept, one of the largest areas in the world. The top of the lantern in the Nave is 110 feet from the ground, and 200 from the basement: that is to say, about the same height as the interior of the dome of St. Sophia, Constantinople. The span of the Transept is 120 feet, or twenty feet larger than the span of St. Peter's, at Rome.

Above the principal floor are a gallery of twenty-four feet in width, a second gallery eight feet in width, and in the Central Transept a third gallery of the same dimensions. The last gallery alone is at present let to tenants for the exhibition and sale of goods. On the present occasion we shall confine our description to the principal floor.

In the Central Transept the Queen's Dais has been erected. Behind the Dais, hiding for the present the colossal Montezuma's horse, the amphitheatrical orchestra, for the accommodation of a chorus and bands of music amounting to 1500 persons, has been erected. At the four corners of the Nave stand colossal statues of the Farnese Hercules; of Rubens, the Flemish painter; of Duquesne, the French admiral, and as a temporary substitute—waiting the arrival of the Farnese "Flora"—Marochetti's Sir Robert Peel. Two Norfolk Island pines (presents from the Duke of Devonshire) cast a green shade on the Rubens and Duquesne. In front of the Dais, under the garden gallery, are colossal bronzed copies of the modern Italian sculptor, San Giorgio's "Castor and Pollux." In the galleries rise the seats prepared for distinguished foreign visitors.

The Central Transept marks the division of the main floor between Art and Commerce. The rents derived from the southern half must pay interest on the capital expended on the northern.

But before examining the interior, it may not be amiss to take a survey of the surrounding country. From the main Transept is an open corridor, covered by the overhanging roof, from which a fair view may be had of the gardens, and the whole country rising beyond the railway to the summit of the Kentish hills; and each of the other two Transepts has a similar open corridor: than which it would be impossible to imagine more agreeable resorts, for rest, on one of the half-million seats provided by the Company, after an exploration of the miles of glass and fountain, covered walks amid flowers and statues, and stalls for the sale of every imaginable luxury. On either side of the open corridors staircases, 23 feet in extent, conduct to the basement, and by 21 feet of ascent to the gallery.

Turning from the Central Transept to the northern arm of the Nave, we have before us an open path of nearly 700 feet, between beds of rich flowering shrubs and evergreens, with statues and groups marble-like, if not marble, interspersed at regular intervals; and, as a background, on either hand the outside walls of the two series of Courts, in which are illustrated specimens of art and architecture from Nimrod to Michael Angelo—the Greek, the Roman, the Moor, Byzantine, Mediæval, Renaissance, and Italian.

On the left hand is the series of Courts executed under the direction of Mr Owen Jones—the first being Egyptian, reduced to the scale of one-fifth. It is well worth while to pause before entering the massive door of the Tomb Temple, and look through the long colonnade of pillars, adorned with brilliant hieroglyphics; on through the Greek and through the Roman Courts, to where the honey-combed arch of the Alhambra closes in the vista, giving but a narrow glimpse of the solid monument beyond.

Vistas, arranged with great art and admirable effect, form one of the most remarkable features of the Crystal Palace.

The Great Nave, with its trees, flowers, and fountains; the long square galleries, and the tunnel-like rangs of the highest galleries, afford one series of effects in simple colours;—the Courts, viewed in their length and in their breadth, where every age and style is mingled, another. We must not pause now to describe the Courts in detail, or to note the progressive styles of Egyptian Art, or to dilate upon the half-deciphered particoloured writing. Passing the kings and gods of Egypt—passing the rich blue roof powdered with stars, and the pictorial chronicles of the walls—passing the mouth of the Tomb of Abou Simel—we reach the Greek Courts, where are concentrated copies of all the most glorious remains of Greek art—in groups, in single figures, in bust, on friezes. The walls are adorned with copies of the frieze from the Parthenon, now in the British Museum. This is divided into three portions—the first painted like a picture, the second, white on a blue ground; the third, pure white. The question as to the truth and wrong of this arrangement is hotly disputed; but it is involved in too much doubt to be dismissed in a few words. The ceiling of the Greek Courts—a diapering pattern, in blue, red, and gold—is an object of very general admiration; and in the contents of these Courts we have, for the first time, an opportunity of comparing original casts of the most famous statues—the three celebrated Venuses of three periods of Greek art, the Laocoon group, Achilles, and the Dying Gladiator; besides numerous busts of poets, orators, and and philosophers, heroes, and demigods. We dwell on these with more pleasure than on imperfect representations and models of the Parthenon and other triumphs of Greek architecture, because that architecture owed so much to proportion, size, situation, material, and atmosphere, that any copy must be unsatisfactory, however beautiful as a shell for the series of sculpture's work.

The Roman Courts, which follow, have walls of rich-coloured marble and arched roofs, decorated in the same style as the Pompeian Court. Also in the Roman Courts form the chief ornaments; while, fronting the Nave, are the white statues embowered in beds of flowers and flowering shrubs. Among the series of busts are to be found portraits of the most celebrated Roman Emperors, and the women, too, of Rome, famous or infamous. It is startling to find them so like the women that one sees every day.

The Alhambra follows the Roman Courts, where no statue, nor bust, no painting of any living thing, is to be found, but covered with rich detailed ornament, by the multiplication of simple mathematical figures in strong relief, coloured in blue and red and gold, and with such a rich variety which can only be compared to a good collection of Indian shawls, or Persian prayer-rugs.

We venture to foretell that the Alhambra will share with the Pompeian the favour of the great majority of the visitors. The perfect simple colouring—the gorgeous arcades of the Court of Lions—the marble fountains—the beds of flowers—form a combination of natural beauty as new as surprising. The cast of the Court of Lions is about half the size of the original. The other Courts represent, on a reduced scale, the "Hall of Justice"—made so familiar to the many by the pen of Washington Irving; and to the comparatively students of architecture, by the work of the architect, published at a period when he could never have hoped to execute in brick, plaster, and marble, what he has so successfully copied in his portfolio. The walls of these Courts are covered with sentences from the Koran and Mahometan ejaculations, repeated again and again, in gold characters.

Next to the Alhambra Court stands the Fox Talbot Court, with two Alto Chaud figures, which, seated, raise their heads to the top of the Northern Transept, seventy-two feet. Assisted and supported by the mere size. While looking up at them from their comparative pigmy Sphinxes and palm-trees, we can imagine the original objects among the flat Nubian desert, against the clear azure of an Eastern sky, with the Nile flows at our feet.

Beyond the monsters of Egyptian art, Assyrian colossi, the prodigies of Nineveh, the sculptures of the Assyrian Court—composition executed by Mr. Layard—the remains of Persepolis and Nineveh—the sacred bulls and all the mythical illustrations—are to be found, brought from the cellars of the British Museum, are re-produced, and the whole family, can arranged in a manner which almost gives them a new interest.

A fountain, designed and executed by Rafael Monti, and a marble basin for aquatic plants, divide the Assyrian Court from the Byzantine Court, which is the first of the series executed under the direction of Mr. Digby Wyatt. The Byzantine Court is rich in restorations of Christian architecture of the earliest date. The doorways of Kilpeck Church and of Shobden Church (in Herefordshire), and the doors of Hildersheim—all three present on their panels strange rude specimens of symbolic religious art. The cloisters of the Court, rich in particoloured marble columns and golden and coloured decorated roofs, redeem the ugliness of the architectural forms.

Then follow Court of the Lofty German Gothic art, British Gothic, and Italian and Renaissance, each of which would occupy a fervent student and admirer for days, not days, but weeks; doing carvings are restored to their former crispness and brilliancy. The "long-drawn aisle and fretted vault" we have not; but we have carving and colour in perfection.

The Renaissance Court follows, full of beauty and interest; to which, on an opening day, only a passing glance can be given—but that glance must not omit the famous Gwynne Court.

The Italian Courts will include complete the series, and bring us back to the Central Transept, where it will be as well to pause; then descend the stairs to the basement, and take the air upon the Terraces of eighteen acres, which form the first section of the Crystal Palace Park.

The Commercial Courts we shall leave themselves, as to their destination. In due course they will be described, with their contents.

Our illustration is taken from the Lower Terrace of the Gardens, and presents a scene which may be fairly expected, when time has enabled Sir Joseph Paxton and Mr. Gibbs to complete their designs for the fountains and waterworks. In the meantime, we shall have the Crystal Palace Company to finish their work before we say anything of their Gardens.

OFFICIAL PROGRAMME OF THE OPENING.

Holders of season tickets only, or of special cards of invitation (which are confined to foreign Ambassadors, her Majesty's Ministers, and others specially invited—limited on her Majesty), will be admitted to the Palace and Park on this occasion.

Holders of season tickets will be admitted at the North and South Transepts, and by the railway, between the hours of eleven and two o'clock.

They will be allowed to take their places, subject to such regulations, as in part of the Building, except the parts reserved in the Central Transept and Nave for the purposes of the ceremonial, and in the reserved seats.

A limited number of seats will be reserved for the *corps diplomatique*, her Majesty's Ministers, Members of both Houses of Parliament, Commissioners, and their families, and for the families of other persons who are present officially to assist at the ceremonial.

Holders of cards of invitation, on cards for reserved seats, will be admitted at a private entrance at the Central Transept, between the hours of eleven and two o'clock.

Exhibitors' Assistants who have been sanctioned by the Directors, will be admitted at the railway station after two o'clock, and will immediately take their places by the counters or objects exhibited by their employers.

A Dais has been raised on an elevated platform in the Central Transept, on which a chair of state will be placed.

The Directors, with the principal officers and others connected with the undertaking, will assemble at half past one o'clock in the Central Transept, opposite the Dais, in levee dress, or in full evening dress.

His Grace the Archbishop of Canterbury, her Majesty's Ministers and Officers of State, and the Foreign Ambassadors and Ministers, will take their places on the platform to the right and left of the chair of state, in levee dress, at half-past two o'clock.

The Lord Mayor and Sheriffs of London, the Mayors, Provosts, and other representatives of the municipal bodies of the kingdom, will take their places before half-past two o'clock, in their robes of office, in a space reserved for them in front of the Dais.

Places immediately adjoining will be reserved for their families.

The Foreign Commissioners, the Royal Commissioners of the Exhibition of 1851 and of the New York Exhibition, the Representatives of the Dublin Exhibition and of the Paris Exhibition of 1851, and the Presidents of the principal learned societies, will take their places, in levee dress or in full evening dress, at half-past two o'clock, in a space reserved for the purpose in the Central Transept, fronting the Dais.

Places immediately adjoining will be reserved for their families.

Places will be reserved for members of the House of Peers and their families in the Front Gallery on the right hand of the Dais, and for members of the House of Commons and their families in the Front Gallery on the left.

Her Majesty, with the Royal Family, and her suite, will leave Buckingham Palace, so as to arrive at the Central Transept of the Crystal Palace precisely at three o'clock. She will ascend the Dais and take her seat in the chair of state.

On her Majesty's arrival, the chorus, comprising 400 instrumental and 600 vocal performers of the various musical societies of the kingdom, in addition to two regimental bands, and the band of the company—the whole under the direction of Signor Costa—will perform "God Save the Queen."

On the Queen taking her seat, and when the music has ceased, the Directors of the Company will proceed to the Dais, and the Chairman will read to her Majesty a short address, describing the origin and objects of the undertaking, which he will then deliver to her Majesty.

Her Majesty will be graciously pleased to return an answer.

Mr. Fuller will present to her Majesty a series of medals struck to commemorate the occasion.

Sir Joseph Paxton will present to her Majesty the general handbook descriptive of the Palace and Park.

Mr. Owen Jones will present to her Majesty handbooks descriptive of his Fine Arts Courts.

Mr. Digby Wyatt will present to her Majesty handbooks descriptive of the Fine Arts Courts.

Mr. Phillips will present to her Majesty the handbook of the Portrait Gallery, and the remaining series of general handbooks.

Mr. Ferguson will present to her Majesty the handbook descriptive of the Assyrian Court.

Professor Owen will present to her Majesty the handbook descriptive of the Geological department.

Professor Forbes and Dr. Latham will present to her Majesty the handbook descriptive of the Zoological and Ethnological department.

A Royal procession will be formed as follows:—

Superintendents of Works and Principal Foremen.
Contractors.
Architect, Engineer, and Secretary.
Principal Executive Officers.
Directors.
Sir Joseph Paxton. Mr Laing, M.P.

THE QUEEN.

H.R.H. the Prince Albert. The King of Portugal. Her Royal Family. H.R.H. the Duke of Oporto, and their respective Suites.
The Archbishop of Canterbury. The Cabinet Ministers.
The Foreign Ambassadors and the Foreign Ministers.

The procession will turn to the right, move to the south end of the Nave by its west side, returning by its east side; will then pass round the east side of the Central Transept, and down the north end of the Nave by its east side, returning by the west side to the Central Transept.

All persons not forming part of the procession will keep their places during it.

On the return of the procession her Majesty will again take her seat on the Dais; and the Ministers and Ambassadors will take their places as before.

His Grace the Archbishop of Canterbury will then say a prayer, asking God's blessing upon the undertaking; and the orchestra will perform the "Hallelujah Chorus."

When the music ceases, her Majesty will declare "The Crystal Palace opened." The orchestra will then perform "God Save the Queen," during which her Majesty will retire.

The barriers which had kept the Nave and Transept clear will then be thrown open, and the public will be allowed to circulate through the Palace and Park.

CHESS.

CHESS NOTES.

A GUARDSMAN.—The St. George's Chess-club is at 53, St. James-street. The rules of the Club, the list of members, and all particulars respecting the subscription, &c., may be had on application at the Rooms.

P. A., of Edinburgh.—It admits of a second solution: and is, in other respects, below our mark.

W. D., Notting-hill.—It is quite out of reason to expect we can find space to reply to such a variety of questions as you propound. Why do you not procure some elementary work on the game? Those books pounds, before attempting to play? Get the "Chess-player's Handbook," published by Bohn, or one of Lewis's Treatises on the game.

EDMUND T.—The proposed alterations in the Chess Rules, we should think, had at last ripened to the effect Chess and Science.

E. F. H., Cambridge.—It shall be re-examined.

J. M.—The beautiful "Perse Chess-men" are for sale by the manufacturer, Meshi, of Long-street.

A Subscriber.—If the Queen and the odds of the marked Pawn, are considered to be [illegible] value. We won't pretend to decide which is the greater.

J. [illegible].—I have but one set to spare, and that is engaged. Country Chess Players' Association, 53, St. James-street.

E. Your [illegible] no mention on next week.

R. [illegible].—The present is the [illegible]. Applications for tickets, and the programme of the arrangements of the Liverpool Meeting, must be made to the Honorary Secretary, Morton Sparke Esq., Liverpool.

W. M. WITNEY, Oxon.—His is the examiner's hands.

SOLUTIONS OF PROBLEM No. 836 by Alexander, S. P. Q. R., "Beleta," Omega Philo-Chess Subaltern, True Blue, Feabes, Milo C. P. Q., T. J. of Hanworth, Dervon, Edmund Fox, Dover, Dora, Cris, Addison, F. H. C., C. H. R., Oxford, E. H. W. Stockwell, Cantab, Chris, F. T. R., Major, Hylax, Medicus, A. Z., R. S. P., Mercator, Tipdon, G. W. M., are correct.

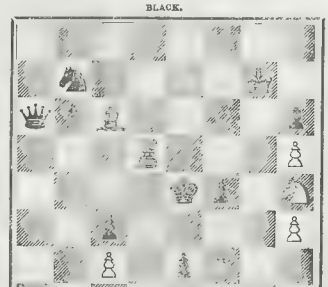
SOLUTIONS OF PROBLEM No. 837, by Dervon, Phiz, Beigie, S. T. M., Omicron, E. H., An Old Subscriber, J. F. M., are correct.

SOLUTIONS OF ENIGMAS, by Dervon, O. P. Q., Philo-Chess, Miles, E. H. of Norwich, Georgia, D. D., F. P., Rugby-boy, M. F., J. M. of Shoreburn, Crib, are correct. All others are wrong.

PROBLEM No. 838.

By Mr. W. GRIMSHAW.

BLACK.



WHITE.

White to play, and mate in three moves.

A GUIDE TO THE CRYSTAL PALACE (Routledge and Co.)—*In tempore ad* Sydenham *venit*, would not be an inappropriate motto for this well-filled volume, issued upon the eve of the opening of the vast Temple of Industrial Sciences, with whose marvels it seeks to familiarise the reader. Within the compass of some 200 pages, we here have the origin and object of the People's Palace, at Sydenham, attractively explained, and the construction narrated. Then follow a popular synopsis of the contents of the several Courts, stored with the choicest productions of fine art and industrial ingenuity. Thus far, the proceedings may have been the first Exhibition of 1851; but the Sydenham succes-or supersede important educational objects in the departments of Natural History and Ethnology, and Geology. From the wonders of ancient and modern art, the visitor passes to models of the stupendous creatures with which palæontology has peopled this Exhibition—upon a portion of the very ground, the Wealden itself, which, from the number of gigantic fossils which it contains, has been called the metropolis of the "Dinosaurians," or monster lizards. The terraces, fountains, and park, and their picturesque groupings, are ably described, and, throughout the work, the illustrative accompaniments possess descriptive power and beauty far above the Catalogue routine; and the book will excite interest far beyond that of the visit to the Exhibition, which, however, it shows to be the mainspring of immense good.*

NATIONAL SPORTS.

MANCHESTER RACES.—WEDNESDAY.

Meiklam Handicap.—Haxlenut, 1. Blanco, 2.
Sapling Stakes.—Lord Alfred, 1. Sicily, 2.
Union Handicap.—Dervish, 1. Viper, 2.
